TITLE	The 1998 Guide to the Evaluation of Educational Experiences in the Armed Services. 2: Navy.
INSTITUTION	American Council on Education, Washington, DC.
SPONS AGENCY	Defense Activity for Non-Traditional Education Support (DOD), Pensacola, FL.
ISBN	ISBN-1-57356-103-7
PUB DATE	1998-00-00
NOTE	590p.; For volumes 1 and 3, see CE 077 410-412.
CONTRACT	N00140-97-C-H168
PUB TYPE	Guides - Non-Classroom (055)
EDRS PRICE	MF03/PC24 Plus Postage.
DESCRIPTORS	*Armed Forces; *College Credits; *Course Content; Enlisted Personnel; Higher Education; Military Service; *Military Training; Officer Personnel; *Prior Learning
IDENTIFIERS	Navy

ABSTRACT

This guide is the standard reference work for recognizing learning acquired by military personnel for conversion to academic credit in degree work at colleges and universities. This volume contains recommendations for formal courses offered by the Navy in 1990 and later years. Fourteen sections provide the following information: (1) how to find and use Navy course exhibits; (2) sample course exhibit; (3) how to find and use Navy rating exhibits; (4) sample Navy rating exhibit; (5) how to find and use Navy warrant officer and limited duty officer exhibits; (6) sample Navy warrant officer and limited duty officer exhibit; (7) how to find and use Navy enlisted classification (NEC) exhibits; (8) sample Navy enlisted classification exhibit; (9) questions and answers; (10) course exhibits; (11) Navy enlisted rating exhibits; (12) Navy limited duty officer exhibits; (13) Navy warrant officer exhibits; and(14) Navy enlisted classification (NEC) exhibits. Each course exhibit includes some or all of the following: course number, title, location, length, dates, learning outcomes, instruction, occupational group, description, career pattern, related occupations, and credit recommendation. The guide also contains seven appendixes that cover the evaluation systems, sample military records, occupation title index, keyword index, course number index, request for course recommendation form, and request for Navy general rate, rating, warrant officer, and limited duty officer exhibits form. Foreword

For more than a half century the *Guide to the Evaluation of Educational Experiences in the Armed Services* has been the standard reference work for recognizing learning acquired in military life. Since 1942, the American Council on Education has worked cooperatively with the U.S. Department of Defense, the armed services and the U.S. Coast Guard in helping hundreds of thousands of individuals earn academic credit for learning achieved while serving their country.

The ACE *Guide* evaluation system enables students to apply their experience, training, and expertise to their degree work at colleges and universities. While this is a sound educational practice, it is also an efficient use of financial and educational resources.

Special recognition must be paid to the many faculty members who have served as subject-matter experts on ACE evaluation teams and to their institutions for their wholehearted cooperation in this effort. For all this generous support and assistance, we are deeply indebted.

We are pleased to commend this *Guide* to you as you work with servicemembers and veterans in helping them to integrate ACE *Guide* recommended credit into their degree programs.

Stanley O. Ikenberry
President
American Council on Education

How to Find and Use Navy Course Exhibits

This volume contains recommendations for formal courses offered by the Navy with exhibit dates of 1/90 and later.

The instructions that follow provide a step-by-step procedure for finding and using the exhibits and recommendations. Readers unfamiliar with ACE evaluation procedures should read Appendix A.

Step 1

Have the applicant complete a Request for Course Recommendation form.

A *Request for Course Recommendation* form appears at the back of this volume. It is to be reproduced and should always be filled out by the applicant, using the information provided on official and personal records, as well as the applicant's own knowledge of the service course. *Applicants should not refer to the Guide while completing the form.*

Step 2

Verify course completion from military records.

It is the responsibility of the school official to verify course completion. The following military records are used to verify successful completion of course requirements:

- DD Form 295, *Application for the Evaluation of Learning Experiences During Military Service*. This is available to active-duty service personnel and Reservists from military education officers. (Form must be certified by an authorized commissioned officer or his/her designee in order to be official.)
- DD Form 214, *Armed Forces of the United States Report of Transfer or Discharge*. If the veteran does not have a copy, one can be obtained, together with other in-service training records, from the National Personnel Records Center (Military Personnel Records), 9700 Page Avenue, St. Louis, MO 63132-5100. The veteran may request service records by submitting U.S. Government Standard Form 180, which is available from a state veterans affairs office, the Veterans Administration, the National Personnel Records Center, or reproduced from this volume (Appendix B).
- *Course Completion Certificates*. These may be used to complement other records or when service courses are not recorded on official records.

Refer to the Sample Course Exhibit when reading the following steps.

Step 3

Find the course exhibit by identifying the American Council on Education (ACE) ID number in the Course Number Index or the Keyword Index.

- *Course Number Index*. All available military course numbers are listed in the Course Number Index in alphanumeric sequence. If the applicant's military course number cannot be located in the Course Number Index, search for the course title in the Keyword Index.
- *Keyword Index*. Identify all possible keywords within a course title. For example, the keywords in the title "Digital, Analog, and Hybrid Computer Fundamentals" are *Digital, Analog, Hybrid,* and *Computer*. Find one of those keywords in the Keyword Index, and search the listing under the keyword for the course title. If the title cannot be found under one keyword, search all other possible keywords.
- *Identify ACE ID number*. When the title or military course number has been located, note the corresponding ACE ID number. This number refers to the course exhibit's location in the *Guide*. The two-letter prefix refers to the specific service, i.e., NV = Navy. ACE ID numbers are presented in numeric sequence.

Step 4

Match the course-identifying information with the corresponding data in the course exhibit.

First determine that the dates of attendance fall within the dates in the exhibit, and select the appropriate version. Other course-identifying information includes the official military title, military course number, length of course, dates of attendance, location, etc. This information is provided by the applicant on the *Request for Course Recommendation* form. It is important to match all items.

Step 5

Read the course description.

Consideration should be given not only to the amount of credit and to the subject area, but also to the learning outcomes, or course objectives, and instruction cited in the course exhibit. These portions of the exhibit outline the course content and scope and also provide essential information about the nature of the course. This information will help you determine the appropriate placement of credit for each individual student within the requirements and programs at your institution.

Step 6

Award credit as appropriate.

Users are free to modify the credit recommendations in accordance with institutional policy and the educational goals of each applicant.

Step 7

If assistance is required, contact the American Council on Education.

Whenever problems arise and assistance is needed, the school official should submit a properly completed *Request for Course Recommendation* form to:

Military Evaluations Program
American Council on Eduction
One Dupont Circle NW, Suite 250
Washington, DC 20036-1193
(202) 939-9470
FAX (202) 775-8578
E-mail: mileval@ace.nche.edu

For course exhibits before 1/90, see the *1954–1989 Guide to the Evaluation of Educational Experiences in the Armed Services.*

Sample Course Exhibit

NV-2202-0165

RECRUIT TRAINING
(Basic Training)

Course Number: *Version 1:* X777-7770. *Version 2:* X-777-7770.

Location: *Version 1:* Recruit Training Command, Great Lakes, IL. *Version 2:* Recruit Training Command, San Diego, CA; Recruit Training Command, Orlando, FL; Recruit Training Command, Great Lakes, IL.

Length: *Version 1:* 8 weeks (169 hours). *Version 2:* 8-9 weeks (367-480 hours).

Exhibit Dates: *Version 1:* 1/95–Present. *Version 2:* 10/91–12/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the graduated recruit will demonstrate knowledge of general military and Navy protocol, first aid, personal health and safety; will demonstrate basic swimming, firefighting and damage control, seamanship, and water survival skills; and will meet prescribed standards for physical fitness. *Version 2:* Before 10/91 see NV-2202-0014. Upon completion of the course, the graduated recruit will demonstrate knowledge of military and Navy protocol, first aid, personal health and safety; will demonstrate basic swimming, firefighting, and water survival skills; and will meet prescribed standards for physical fitness.

Instruction: *Version 1:* Course includes lectures, demonstration, and performance exercises in military protocol and drill, seamanship, firefighting, first aid, safety, health, and physical conditioning. *Version 2:* Course includes lectures, demonstration, and exercises in military protocol and drill, seamanship, firefighting, first aid, safety, health, and physical conditioning.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in personal fitness/conditioning, 1 in personal/community health, and 1 in first aid and safety (5/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in personal fitness/conditioning, 1 in personal/community health, and 1 in first aid and safety (3/92).

ID Number. An identification number assigned by ACE to identify each course.

Title. Version 1 (if applicable) is the more recent. If course has only one version, version number is omitted throughout exhibit.

Military Course Number. The number assigned to the course by the military. Listed by version, if appropriate.

Location. By version. The service school, military installation, state.

Length. The length of the course in weeks, with contact hours in parentheses. Listed by version.

Exhibit Dates. Listed by version. Training start date on materials evaluated and, if applicable, the date the training was eliminated. "Present" denotes publication cut-off for this edition of the Guide (4/98). The earliest start date in this edition is 1/90.

Learning Outcome. Competencies students acquire during the course. Older courses have *Objectives.*

Instruction. Description of instruction, including teaching methods, facilities, equipment, major subject areas covered.

Credit Recommendation. By version. Recommended in four categories: vocational certificate, lower-division baccalaureate/associate degree, upper division baccalaureate, and graduate. Expressed in semester hours. (See Appendix A for detailed explanation of credit categories.)

Evaluation Date. Date when the credit recommendation was established. Month and year are given in parentheses following each recommendation.

BEST COPY AVAILABLE

How to Find and Use Navy Rating Exhibits

This volume contains exhibits for Navy enlisted general rates and ratings with exhibit dates of 1/90 and later.

The instructions that follow provide a step-by-step procedure for finding and using Navy general rates and ratings exhibits and recommendations. Readers unfamiliar with how the Navy enlisted system is structured, and how occupational proficiency is demonstrated should read Appendix A.

Step 1

Have the applicant submit official documentation.

- NAVPERS 1070/604, *Navy Occupation/Training and Awards History.*, Navy men and women sometimes refer to this form as "page 4" of the service record. Item 1 lists the sailor's Navy Enlisted Classification (NEC) codes (primary code and secondary code) and the effective date of the NEC. Item 8 contains the general rate or rating from which advanced or changed, the new general rate or rating, and the effective date of the advancement or change.
- DD Form 295, *Application for the Evaluation of Learning Experiences During Military Service.* It has a section entitled Military Occupational History. A person still in active or reserve service may request that a DD Form 295 be completed by designated personnel and certified by the personnel officer at the activity maintaining custody of the person's military records.
- DD Form 214, *Armed Forces of the United States Report of Transfer or Discharge*, is also acceptable for documentation. However, it does not contain the occupational history, which you may need.

Navy records must be requested by the individual. Records can be obtained as follows:

Active-duty Navy men and women. Either the Navy unit to which they are assigned or the activity maintaining custody of their military records.

Navy Reservist (nondrilling) or retired personnel. The Naval Reserve Personnel Center (Code 41), 4400 Dauphine Street, New Orleans, LA 70149.

Navy Veteran. The originals of the *Navy Occupation/Training and Awards History* form and the DD Form 214 are given to the veteran at time of discharge. If the veteran does not have them, duplicate copies may be obtained from National Personnel Records Center (Military Personnel Records), 9700 Page Avenue, St. Louis, MO 63132-5100. The veteran may request service records by submitting U.S. Government Standard Form 180, which can be obtained from a state's veterans affairs office, the Veterans Administration, or the National Personnel Records Center.

Step 2

Verify each occupational specialty the person has successfully held.

Eligibility for the credit recommendation for enlisted general rates and ratings is easily determined. Advancement means that the person is automatically eligible for the general rate or rating recommendation; that is, to be advanced, the person had to demonstrate occupational proficiency by meeting all the requirements for advancement, including passing written examinations and performance tests.

If the letters PNA (passed-but-not-advanced) appear on the DD Form 295, credit should be awarded for the higher rank. Passed-but-not-advanced means that the person has passed the required written and performance examinations and is qualified for advancement. However, time in service, time in rate, and awards received also contribute to a person's total advancement score, which is the basis used in determining who is selected to fill existing openings in a given rate. In other words, PNA persons have demonstrated their occupational proficiency but were not advanced either because they had an insufficient number of points from sources other than examinations to compete successfully for the openings in a given rate, or because there were no openings for their particular rate.

For individuals in paygrade E-6, successful completion of a written examination is needed to progress to E-7. If an individual has not been promoted, check the Examination Profile Information sheet to determine whether the examination was passed. If so, the credit for E-7 should be granted. For paygrades E-7 and E-9, a written advancement examination is not required for promotion to E-8 and E-9. If the individual has been recommended for advancement by the commanding officer (recorded on NAVPERS 1070/609), the credit for the higher paygrade should be granted.

Find the information necessary for locating the correct exhibit(s): occupational designations and the date of advancement to each.

Step 3

Find the appropriate exhibit in the Guide.

The exhibit can be found when the designation is known. Each exhibit is assigned an ACE ID number that has three components. The first component in a Navy rating exhibit is NER. This identifies the exhibit as one that pertains to Navy enlisted general rates and ratings. The second component consists of the general rate or rating designation, e.g., SN, QM, or AME. The third component, a three-digit, sequentially assigned number, e.g., 001, uniquely identifies the exhibit. The exhibit ID numbers have either eight or nine characters, depending on the rating designation, e.g., NER-QM-002 and NER-AME-001.

If you know the title of an occupational specialty, the exhibit ID number can be found by referring to the Occupational Title Index.

There may be more than one exhibit for some designators. Each time there is a new recommendation, there is a new exhibit. The oldest exhibit for a rating, the first to be evaluated, is assigned -001 as the last three characters. The last exhibit for a rating, the exhibit assigned the highest number, is the most recent.

When the time period that a person held a rating skill level spans more than one exhibit for the rating, exercise your own judgment in deciding which exhibit is more appropriate. If the credit granted in the earlier exhibit does not appear in a later exhibit, the credit that was dropped may be awarded. This is based on the fact that since that skill was required during the earlier time frame, it should not be taken away from the individual just because it is no longer a requirement of that rating.

Step 4

Read the entire exhibit.

Before applying a given recommendation, read the entire exhibit. Each item in the exhibit has been prepared to help you interpret the credit recommendations. (See the sample exhibit.)

The descriptions, which are similar to learning outcome statements of postsecondary courses and programs of study, provide essential information about the learning required for proficiency in the occupation. Comparing the description with a description of the course or program of study that the student will pursue will help you

- determine how much of the recommended credit applies to the course or program of study at your institution;
- identify additional areas of possible credit;
- resolve problems with duplication of credit when the applicant has applied for credit for more than one military learning experience; and
- place the student at the appropriate point in the course sequence or program of study.

Step 5

Award credit as appropriate.

The credit recommendations are advisory. They are intended to assist in placing Navy active-duty personnel and veterans in postsecondary programs of study and jobs. The recommendations may be modified.

When an applicant has applied for credit for more than one military learning experience, you may find that you will have to reduce the total amount of credit recommended to avoid granting duplicate credit.

Step 6

If assistance is required, contact the American Council on Education.

Whenever problems arise and assistance is needed, the school official should submit a properly completed *Request for Navy General Rate, Rating, Warrant Officer, and Limited Duty Officer Exhibit* form to:

Military Evaluations Program
American Council on Education
One Dupont Circle NW, Suite 250
Washington, DC 20036-1193
(202) 939-9470
FAX(202) 775-8578
E-mail: mileval@ace.nche.edu

For rating exhibits before 1/90, see the *1954–1989 Guide to the Evaluation of Educational Experiences in the Armed Services.*

Sample Navy Rating Exhibit

ID Number. An identification number assigned by ACE to identify each exhibit.

NER-AG-002

AEROGRAPHER'S MATE

Title. The official Navy title of the general rate or rating during the period of the exhibit dates.

AG3
AG2
AG1
AGC
AGCS
AGCM

General Rate/Rating Designation. The official Navy system of identifying occupations and their levels; listed in ascending order according to rate.

Exhibit Dates: 1/91–Present.

Exhibit Dates. Start and end dates by month and year. The term "Present" indicates that the exhibit is current as of 4/98. "Pending evaluation" means that the general rate or rating is scheduled to be evaluated. The earliest start date in this edition is 1/90.

Occupational Field: 23 (Meteorology)

Occupational Field. Two-digit number and title designating a group of related ratings.

Career Pattern

AN: Airman (E-3). *AG3:* Aerographer's Mate, Third Class (E-4). *AG2:* Aerographer's Mate, Second Class (E-5). *AG1:* Aerographer's Mate, First Class (E-6). *AGC:* Chief Aerographer's Mate (E-7). *AGCS:* Senior Chief Aerographer's Mate (E-8). *AGCM:* Master Chief Aerographer's Mate (E-9).

Career Pattern. Path of advancement. Shows prerequisite general rate and subsequent progression in a rating; the designation is provided for each rate, followed by the title and paygrade (in parentheses).

Description

Summary: Observes, collects, records, and analyzes meteorological and oceanographic data; computers are used whenever applicable; makes visual and instrumental observations of weather and sea conditions; conducts briefings. *AG3:* Identifies the types .... *AG2:* Able to perform the duties required for AG3; checks surface observations for accuracy prior to transmission.... *AG1:* Able to perform the duties required for AG2; prepares short-range (up to 24 hours) environmental forecasts; identifies and .... *AGC:* Able to perform the duties required for AG1; interprets ocean thermal structure and factors affecting .... *AGCS:* Able to perform the duties required for AGC; evaluates recent meteorological and .... *AGCM:* Able to perform the duties required for AGCS; prepares statistical analyses of ....

Description. Summary applying to all rates and a separate description of the skills, competencies, and knowledge required for proficiency in each rate.

Recommendation. By rate. Only the recommendation for the *highest* rate held should be used; the recommendations should *not* be added.

Educational credit is expressed in semester hours and recommended in four categories: vocational certificate, lower-division baccalaureate/associate degree, upper-division baccalaureate, and graduate degree. (See Appendix A for category definitions.)

Recommendation, AG3

In the lower-division baccalaureate/associate degree category, 2 semester hours in meteorology, 2 in meteorology laboratory, and 3 in computer familiarization (3/91).

Date of Evaluation. Date when recommendation was established. Month and year are given. Appears in parentheses following the recommendation for each rate.

Recommendation, AG2

In the lower-division baccalaureate....

Recommendation, AG1

In the lower-division baccalaureate....

Recommendation, AGC

In the lower-division baccalaureate....

Recommendation, AGCS

In the lower-division baccalaureate....

Recommendation, AGCM

In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorology, 3 in atmospheric environment, 3 in meteorology laboratory, 3 in climatology, 3 in oceanography, 3 in personnel supervision, 3 in computer familiarization, and 3 in computer applications. In the upper-division baccalaureate category, 1 semester hour in atmospheric physics, 2 in measurement and data systems, 3 in weather station management, 3 in organizational management, and 3 in management problems (3/91).

How to Find and Use Navy Warrant Officer and Limited Duty Officer Exhibits

This volume contains exhibits for Navy warrant officers and limited duty officers with exhibit dates of 1/90 and later.

The instructions that follow provide a step-by-step procedure for finding and using exhibits for Navy warrant officer and limited duty officer specialties and recommendations. Readers unfamiliar with the Navy officer system, how it is structured, and how occupational proficiency is demonstrated should read Appendix A.

Step 1

Have the applicant submit official documentation.

- NAVPERS 601-4, *Navy Occupation/Training and Awards History.* Check for the officer designation. Section 5 lists training courses completed and NECs held. Fitness Reports, objective appraisals of performance by the commanding officer, should also be used.
- DD Form 295, *Application for the Evaluation of Learning Experiences During Military Service.* It has a section entitled *Military Occupational History.* A person still in active or Reserve service may request that a DD Form 295 be completed by designated personnel and certified by the personnel officer at the activity maintaining custody of the person's military records.
- DD Form 214, *Armed Forces of the United States Report of Transfer or Discharge*, is also acceptable for documentation. However, it does not contain the occupational history, which you may need.

Navy records must be requested by the individual. Records can be obtained as follows:

Active-duty Navy men and women. Either the Navy unit to which they are assigned or the activity maintaining custody of their military records.

Navy Reservist (nondrilling) or retired personnel. The Naval Reserve Personnel Center (Code 41), 4400 Dauphine Street, New Orleans, LA 70149.

Navy Veteran. The originals of the Navy Occupation/Training and Awards History form and the DD Form 214 are given to the veteran at time of discharge. If the veteran does not have them, duplicate copies may be obtained from National Personnel Records Center (Military Personnel Records), 9700 Page Avenue, St. Louis, MO 63132-5100. The veteran may request service records by submitting U.S. Government Standard Form 180, which can be obtained from a state's veterans affairs office, the Veterans Administration, or the National Personnel Records Center.

Step 2

Verify each occupational specialty the person has successfully held.

- Warrant officers and limited duty officers have normally progressed through the enlisted ranks and are technical specialists in their fields. Determine eligibility for the credit recommendation by consulting the individual's Fitness Report or NAVPERS 601-4.
- Find the information necessary for locating the correct exhibit(s): occupational designations and the date of advancement to each.

Step 3

Find the appropriate exhibit in the Guide.

The exhibit can be found when the designation is known. Each exhibit is assigned an ACE ID number that has three components. The first component of a warrant officer exhibit is NWO, for limited duty officer, LDO. The second component consists of the four-digit designator, e.g., 641X, 720X. As with the enlisted exhibits, the third component is a three- digit number that uniquely identifies the exhibit. These exhibits have nine characters (NWO-720X-001, LDO-641X-001).

If you know the title of an occupational specialty, the exhibit ID number can be found by referring to the Occupational Title Index.

There may be more than one exhibit for some designators. Each time there is a new recommendation, there is a new exhibit. The oldest exhibit for a rating, the first to be evaluated, is assigned -001 as the last three characters. The last exhibit for a rating, the exhibit assigned the highest number, is the most recent.

Step 4

Read the entire exhibit.

Before applying a given recommendation, read the entire exhibit. Each item in the exhibit has been prepared to help you interpret the credit recommendations. (See the sample exhibit.)

The descriptions, which are similar to learning outcome statements of postsecondary courses and programs of study, provide essential information about the learning required for proficiency in the occupation. Comparing the description with a description of the course or program of study that the student will pursue will help you

- determine how much of the recommended credit applies to the course or program of study at your institution;
- identify additional areas of possible credit;

- resolve problems with duplication of credit, when the applicant has applied for credit for more than one military learning experience; and
- place the student at the appropriate point in the course sequence or program of study.

Step 5

Award credit as appropriate.

The credit recommendations are advisory. They are intended to assist in placing Navy active-duty personnel and veterans in postsecondary programs of study and jobs. The recommendations may be modified.

When an applicant has applied for credit for more than one military learning experience, you may find that you will have to reduce the total amount of credit recommended to avoid granting duplicate credit.

Step 6

If assistance is required, contact the American Council on Education.

Whenever problems arise and assistance is needed, the school official should submit a properly completed *Request for Navy General Rate, Rating, Warrant Officer, and Limited Duty Officer Exhibit* form to:

Military Evaluations Program
American Council on Education
One Dupont Circle NW, Suite 250
Washington, DC 20036-1193
(202) 939-9470
FAX (202) 775-8578
E-mail: mileval@ace.nche.edu

For exhibits before 1/90, see the *1954–1989 Guide to the Evaluation of Educational Experiences in the Armed Services.*

Sample Warrant Officer/Limited Duty Officer Exhibit

ID Number. An identification number assigned by ACE to identify each exhibit. The first three digits for warrant officers are "NWO" and for limited duty officers "LDO."

Exhibit Dates. Start and end dates by month and year. The term "Present" indicates that the exhibit is current as of 4/98. "Pending evaluation" means that an evaluation is scheduled. The earliest start date in this edition is 1/90.

Description. The skills, competencies, and knowledge required for proficiency in the officer specialty.

Recommendation. Educational credit is expressed in semester hours and recommended in four categories: vocational certificate, lower-division baccalaureate/associate degree, upper-division baccalaureate, and graduate degree.

NWO-744X-001

CRYPTOLOGIC TECHNICIAN
744X

Exhibit Dates: 1/90–Present.

Career Pattern

May have progressed to Cryptologic Technician Warrant Officer from Cryptologic Technician, Administrative (CTA); Cryptologic Technician, Interpretive (CTI); Cryptologic Technician, Maintenance (CTM); Cryptologic Technician, Communications (CTO); Cryptologic Technician, Collection (CTR); or Cryptologic Technician, Technical (CTT).

Description

Serves as an officer technical specialist in all phases of operations conducted by the Naval Security Group Command, including signals intelligence, signals security, and electronic warfare; responsible for administration, personnel support, electronic maintenance, communications, and technical research in support of the operating forces and the national cryptologic effort; provides overall technical supervision, in accordance with appropriate directives required in employing equipment and manpower resources; supervises the installation and maintenance of electrical, electromechanical, and electronic equipment and the conduct of communications, administrative, or communications security functions; writes technical reports and personnel evaluation reports.

Recommendation

In the lower-division baccalaureate/associate degree category, 3 semester hours in technical communication and 3 in personnel supervision. In the upper-division baccalaureate category, 3 semester hours in principles of management, 3 in management problems, and 3 for field experience in management (2/86).

Title. The official Navy title during the period of the exhibit dates.

Designation. The official Navy system of identifying warrant officers and limited duty officers. The fourth digit, X, may be a number from 0-9.

Career Pattern. Shows the various possible career paths for the warrant officer or LDO. Titles and designators are provided.

Date of Evaluation. Date when recommendation was established. Month and year are given. Appears in parentheses following the recommendation for each occupation.

BEST COPY AVAILABLE

How to Find and Use Navy Enlisted Classification (NEC) Exhibits

This volume contains recommendations for Navy Enlisted Classifications (NECs) with exhibit dates of 1/90 and later.

The instructions that follow provide a step-by-step procedure for finding and using NEC exhibits and recommendations.

An NEC, a four-digit code, identifies qualifications acquired in addition to skills required in a rating. The majority of NECs are narrow in scope and have not been evaluated. ACE has evaluated those NECs that require a full-time assignment. The individual must also maintain proficiency in a rating. A sailor is required to pass rating advancement examinations to qualify for promotion. Thus individuals are eligible to receive credit for both ratings and NECs.

Step 1

Have the applicant submit official documentation.

Several records may be used for NEC verification. A servicemember or veteran should submit to you one of the following forms:

- NAVPERS 1070/604, *Navy Occupation/Training Awards History*. See Section 1 for the NEC designator and the date it was awarded. This form is commonly referred to as "page 4" of the service record.
- NAVPERS 1616/24, *Enlisted Performance Evaluation Report*. See Section 54 for the NEC title and description of duties; Section 2 carries the rating designator, but the evaluation is based on performance in the NEC.
- NAVPERS 1070/613, Page 13, Administrative Remarks. Indicates the date of certification and the NEC title.
- Letter of Designation. Letter from commanding officer designating the NEC and/or position title.
- DD Form 295, *Application for the Evaluation of Learning Experiences During Military Service*. This is available to active-duty service personnel and Reservists from military education officers. (Form must be certified by an authorized commissioned officer or his/her designee in order to be official.)
- DD Form 214, *Armed Forces of the United States Report of Transfer or Discharge*. If the veteran does not have a copy, one can be obtained, together with other in-service training records, from the National Personnel Records Center (Military Personnel Records), 9700 Page Avenue, St. Louis, MO 63132-5100. The veteran may request service records by submitting U.S. Government Standard Form 180, which is available from a state veterans affairs office, the Veterans Administration, the National Personnel Records Center, or reproduced from this volume (Appendix B).

For sample copies of these forms, see Appendix B.

The NEC code consists of four digits following the individual's rating designator. For example, a code of EA-5501 indicates that the individual holds the rating of Engineering Aid (EA) and the NEC of Construction Inspector (5501).

Step 2

Verify each NEC the person has successfully held.

Eligibility for the credit recommendation for NECs is determined using the documentation in Step 1. The sailor is required to demonstrate the applicable skills before the NEC is awarded.

Step 3

Find the appropriate exhibit in the Guide.

The exhibit can be found when the designation is known. Each exhibit is assigned an ACE ID number that has three components. The first component is NEC. The second component is the four-digit designator, such as 2186. The third component, a three-digit sequentially assigned number, e. g., -001, uniquely identifies the exhibit. Thus an ACE exhibit number might be NEC-2186- 001. (See sample exhibit.)

When only the title of an NEC is known, refer to the Navy Enlisted Classification Index for the exhibit ID number.

Step 4

Read the entire exhibit.

Before applying a given recommendation, read the entire exhibit. Each item has been prepared to help you interpret the credit recommendations.

The descriptions, which are similar to learning outcome statements of postsecondary courses or programs of study, provide essential information about the learning required for proficiency in the NEC. Comparing the description with a description of the course or program of study that the student will pursue will help you

- determine how much of the recommended credit applies to the course or program of study at your institution;
- identify additional areas of credit;
- resolve problems with duplication of credit, when the ap-

plicant has applied for credit for more than one military learning experience; and

- place the student at the appropriate point in the course sequence or program of study.

Step 5

Award credit as appropriate.

The credit recommendations are advisory. They are intended to assist in placing Navy active-duty personnel and veterans in postsecondary programs of study. The recommendations may be modified.

If an applicant has applied for credit for more than one military learning experience, you may have to reduce the total amount of credit recommended to avoid granting duplicate credit.

Step 6

If assistance is required, contact the American Council on Education.

Whenever problems arise and assistance is needed, the school official should submit a properly completed *Request for NEC Exhibit* form to:

Military Evaluations Program
American Council on Education
One Dupont Circle NW, Suite 250
Washington, DC 20036-1193
(202) 939-9470
FAX (202) 775-8578
E-mail: mileval@ace.nche.edu

For NEC exhibits before 1/90, see the *1954–1989 Guide to the Evaluation of Educational Experiences in the Armed Services.*

Sample Navy Enlisted Classification (NEC) Exhibit

ID Number. An identification number designed by ACE to identify each NEC exhibit.

Exhibit Dates. Start and end dates by month and year. The term "Present" indicates that the exhibit is current as of 4/98. The earliest start date in this edition is 1/90.

Recommendation. Educational credit is expressed in semester hours and recommended in four categories: vocational certificate, lower-division baccalaureate/associate degree, upper-division baccalaureate, and graduate degree. (See Appendix A for category definitions .)

NEC-9506-001

CURRICULUM AND INSTRUCTIONAL STANDARDS SPECIALIST

Exhibit Dates: 1/90–Present.

Career Pattern

Individuals holding NEC 9506 are in paygrades E-5 to E-9 and may hold any rating. The NEC may be awarded either by formal training or on-the-job training. Six months are usually required to attain a wide range of competency in all areas of the NEC. May have taken the Training Materials Development System (TMDS) Curriculum Developer course (A-012-0015).

Description

Develops group-paced instructional materials in accordance with Navy curriculum development standards and guidelines; advises subject-matter experts on development procedures and formatting; evaluates curriculum documents and instructional delivery procedures; performs instructional assessment, test construction, review and validation of course competencies, and consistency of format for review of existing courses or the design of new courses.

Recommendation

In the upper-division baccalaureate category, 2 semester hours for a practicum/field experience in curriculum design or development (3/92).

Title. The official Navy title of the NEC during the time period of the exhibit dates.

Career Pattern. Shows prerequisite skills and training necessary for the award of the NEC and advancement in it.

Description. The skills, competencies, and knowledge required for proficiency in the NEC.

Date of Evaluation. Date recommendation was established. Month and year are given. Appears in parentheses following the recommendation for each NEC.

Questions and Answers

This section is designed to answer questions that may arise about using the Guide and awarding credit.

1. I have several editions of the *Guide to the Evaluation of Educational Experiences in the Armed Services*. Do I need to keep all of these?

The *Guide to the Evaluation of Educational Experiences in the Armed Services* has been published biennially since 1974. Each edition replaces the previous edition, which should be discarded.

ACE has now published the *1954–1989 Guide*, which contains courses and occupations with exhibit dates of 1/54 through 12/89. The *1998 Guide* contains courses and occupations with exhibit dates of 1/90 and later.

Please retain the *1954-1989 Guide* as a permanent reference and use it with your current *Guide*.

2. Which *Guide* do I use if the course spans the years 1989-1990?

If the student began the course anytime in 1989, use the *1954-1989 Guide*. If records show the student began the course 1/90 or later, use the *1998 Guide*.

3. Where do I find course and occupation exhibits dated prior to 1954?

The Military Evaluations Program began evaluating military training and experience in 1940. For credit recommendations for courses offered before 1954, send a completed *Request for Course Recommendation* form (found in the back of this volume) to ACE. The earliest occupation evaluations date back only to the 1960's and are in the *1954–1989 Guide*.

4. What is the *Handbook to the Guide to the Evaluation of Educational Experiences in the Armed Services*?

The *Handbook to the Guide* provides credit recommendations for courses and occupations evaluated since the latest *Guide* was printed. The *Handbook* also includes information on examination evaluations, ACE, forms and instruction, and helpful hints. The *Handbook* is distributed to military education offices and civilian institutions three times between publication of the *Guides*.

5. Which learning experiences have been evaluated for the Navy?

Formal courses offered by the Navy are eligible to be evaluated. In addition, Navy general rates, ratings, and selected NECs (Navy Enlisted Classification) have been evaluated. Courses and occupations with start dates of 1/90 or later are in this volume.

6. An applicant at my institution has submitted a DD Form 214 with abbreviated course titles that I cannot decipher. The form does not contain enough information for me to find the courses in the *Guide*. What should I do?

Military records often provide insufficient information for civilian education officials to properly identify courses. Require students to complete the *Request for Course Recommendation* form found in the back of this volume. Applicants for credit should interpret the information on their records and present the data in readable form. You may also use course completion certificates and other training records to supplement information on the DD Forms 214 and 295. If you need help, submit the completed request form to ACE. *No abbreviations please.*

The submission of a *Request* form does *not initiate* an ACE evaluation. Evaluations are conducted in the field using teams of subject-matter specialists. They are not evaluated at the request of a student or institution.

The purpose of these forms is to locate an evaluation that may have been conducted after the *Guide* publication date or to locate an exhibit you might have missed in your own search.

Please do not to submit forms for courses or occupations already in the *Guide*.

7. Why aren't all military courses in the *Guide*?

The course evaluations conducted by ACE do not include all courses offered by the armed services. Many cannot be evaluated. It is the responsibility of each military school to provide ACE with materials for all new and all revised courses. In general, courses evaluated and published in the *Guide* are those offered on a full-time basis. After 1981, ACE began evaluating courses that are 45 academic contact hours in length. Prior to that time, courses evaluated were at least of two weeks duration; or, if less than two weeks in length, the courses had to include a minimum total of 60 contact hours of academic instruction. Before 1973, the minimum length requirement was three weeks or 90 contact hours. Another requirement for evaluation is that a course meet servicewide training requirements and be cited in the formal school listing for the service. This requirement generally excludes locally organized and command-level training programs, as well as courses offered on a one-time basis. Classified courses cannot be evaluated unless they are sanitized.

Keep in mind that the *Guide* is constantly updated. Courses evaluated after the publication date are printed in the *Handbook to the Guide to the Evaluation of Educational Experiences in the Armed Services*. If you cannot locate the exhibit in either publication, submit a completed *Request for Course Recommendation* form.

8. Are Navy correspondence courses evaluated?

The Navy, with few exceptions, has not established an ongoing proctored end-of-course examinations program, one of ACE's criteria for reviewing correspondence courses. Those evaluated are listed in the Keyword Index under *Correspondence* for easy identification.

9. What is the purpose of the *Request for Course Recommendation* form?

One purpose of the *Request for Course Recommendation* form is to obtain information about a course from the student, (verified by official records), based on personal knowledge or memory of the course. With this firsthand information, you may find the correct course exhibit in the *Guide*.

The form should be completed by the applicant and submitted to the institution official or military representative, who will then locate the appropriate course exhibit. If assistance is needed, the institution official or military counselor can send the request form to ACE.

ACE staff will use this information to search its extensive database and files for matching information. When students attempt to identify a course taken years ago by extracting current titles or course numbers from the *Guide*, they may in fact be identifying a similar course but not the one they actually completed. A form filled out by a student who copies information from the *Guide* cannot be used for research purposes because that information only duplicates published data. Do not ask the student to find course listings in the *Guide*. *Only accurate and verified information is to be submitted.*

While we can provide credit recommendations to applicants at their request, we encourage them to apply through their schools. We do not normally send a credit recommendation to a college at the request of a student applicant or a military counselor.

Remember that it is your responsibility to verify course completion; ACE has no access to individual records and does not verify course completions.

10. Why is so much information needed on the *Request for Course Recommendation* form?

You cannot be sure that you have identified the correct exhibit in the *Guide* unless all the information on the form matches the corresponding items in the course exhibit. The course title, course number, name and location of the service school, and length of the course shown on the form should be identical to the information in the exhibit. In addition, the date the student started the course must fall within the exhibit dates. All items must be identical if an accurate identification is to be made.

11. What do I do when the information on the *Request for Course Recommendation* form does not exactly match the information in the course exhibit?

Send the completed form to ACE. Do not give it to the student to submit. If just one item differs from that in the exhibit you have located (for example, length), circle the item to bring it to the attention of the research staff. Send *copies* of military records only if they provide useful additional information. If the staff cannot identify the course and supply a credit recommendations, you may still grant credit to the applicant by conducting your own assessment of the applicant's learning.

12. What is the significance of the date that appears after each credit recommendation?

That date represents the month and year the credit recommendation was established. Each time an evaluation is conducted, a date is provided to indicate when the course or occupation was last considered for a credit equivalency so that you can judge the currency of the credit recommended. This information is particularly useful in subject areas where state of the art is important in determining the applicability of credit. You can also use the evaluation date when your institution has established a statute of limitations for acceptance of transfer credit. The date is provided for your information; do not confuse the date with exhibit dates.

13. An applicant completed a course in 1991, but the *Guide* exhibit dates are 5/92 to present. Should I grant credit based on the *Guide*?

First, check the keyword or course number index to see if another exhibit is referenced. The exhibit dates indicate the time period for which ACE has information on the course. The course may have been offered for several years prior to the exhibit start date, but since the service branch did not submit information on the course during that time period, we cannot backdate the exhibit to cover it. If you can be reasonably sure, from other information provided by the applicant (length, course content description), that the course was the same or similar to the course listed in the *Guide*, then you may want to grant credit similar to the *Guide* recommendation. You may be able to grant credit based on a comparison of the applicant's information with the descriptive information in the *Guide*. ACE encourages you to conduct your own assessment of courses for which no credit recommendation is available. For older courses, ACE may be able to provide you with military formal school catalog course descriptions for periods of time outside the exhibit dates. This should help you determine whether you might apply the credit listed in the *Guide* exhibit based on your own comparison.

14. Can a servicemember receive credit for a course that has been completed after the exhibit end date?

Yes, as long as the student started the course during the time span listed in the exhibit dates, credit may be granted. For example, when a new edition of a Coast Guard correspondence course is brought on line, the Coast Guard grants a window of 26 weeks to allow the student to complete the older edition, provided the Education Services Officer has the end-of-course examination for that edition in stock. The official student record which can be obtained from the Coast Guard Institute will verify that the member completed a particular edition of the course. ACE exhibit dates show the date the new course was instituted.

15. I found the correct exhibit in my *1998 Guide*, but under Credit Recommendation it says "Pending evaluation." What should I do?

Check the *Handbook to the Guide*. Staff members regularly conduct site evaluations. When a course or occupation is listed as "Pending evaluation," and does not appear in the *Handbook*, you can call to find out if a credit recommendation is available, or send in the *Request for Course Recommendation* or *Request for Navy Occupations* form. The *Guide* system is constantly growing as courses and occupations are added to the data base.

16. Can you offer some tips on locating courses by title?

You can generally locate an exhibit by searching in the Keyword Index under the main words in the title. Generic terms such as Repair and Officer are not keywords.

Keywords may consist of two or three words. For example, *Electronics Technician*, *Aviation Electronics*, and *Air Traffic Control* are keywords.

The computer's system of alphabetizing places abbreviations and acronyms at the end of a sequence. For example,

Nurse
Nursing
NBC
NCO

Numbers are arranged in the following sequence:

Mk 1
Mk 1A
Mk 10
Mk 100
Mk 108
Mk 11
Mk 111
Mk 119
Mk 12

As you can see, 12 appears after 100. Letters appear before numbers.

17. One of my students completed a formal military course but does not have a DD Form 295 or DD Form 214. Should I grant credit for the course? How can I verify that the student actually completed the course?

The requirement that school officials use the DD 295 or DD 214 to verify successful completion of a service course is not intended to exclude those individuals who do not have access to the forms. These forms are unavailable to civilians attending military courses. In such cases, alternative forms of certification, such as course completion certificates or other records of training, may be used to verify eligibility for credit. The DD 295 is available to Reservists and National Guard members through their education services officers.

Veterans may use *Request Pertaining to Military Records*, Standard Form 180, available from Veterans Administration offices, and reproduced in Section G in this volume, to obtain records of their military training.

18. When credit is recommended in more than one category, what should I do?

Credit is sometimes recommended in more than one category. One reason for multiple-category recommendations is that the scope of a given rating or course may reflect learning in several subject fields at different levels of complexity.

A thorough reading of the exhibit will help you to determine which category to apply. Compare learning outcomes or course objectives and content with those of your own institution.

Credit recommended in a given subject field that is applied to two or more categories should not be added. Determine how the credits apply to the student's program of study at your institution.

For example:

In the vocational certificate category, 15 semester hours in electricity or electronics. In the lower-division baccalaureate/associate degree category, 10 semester hours in electricity or electronics. In the upper-division baccalaureate category, 5 semester hours in electricity or electronics (6/75).

Compare the exhibit description with the outcomes of electricity or electronics or related courses and programs of study at your institution. Award credit based on comparison of these outcomes.

This example may occur in older exhibits found in the *1954-1989 Guide*.

Evaluators now place the credit in a given subject area in the highest, most appropriate category. If credit is placed in more than one category, specific subjects will be cited. Some military courses may reflect competencies at the lower division, such as personnel supervision, as well as more advanced competencies at the upper division, such as human resource management. Thus it would be appropriate to grant credit at both levels.

As a general rule, you should read the course or occupation description and then award credit as it best applies to the student's program of study, as determined through academic counseling.

19. Should a two-year college use only lower-division credit recommendations? And should a four-year college use only upper-division credit recommendations?

Not necessarily. Evaluators place a course recommendation in the highest appropriate category. If your institution teaches a given course at a different level, you are encouraged to grant credit at that level. Depending on the recommendation, the programs of study at the institution, and the objectives of the student, all types of institutions can use any or all of the four credit categories. See Appendix A.

20. Do I have to grant credit *exactly* as it appears in the recommendation?

The use of ACE recommendations is the prerogative of education officials and employers. The recommendations are provided to assist you in assessing the applicability of military learning experiences to an educational program or occupation. You may modify the recommendations in accordance with your institution's policies and practices.

Credit may be applied to a student's program in various ways: (1) applied to the major to replace a required course, (2) applied as an optional course within the major, (3) applied as a general elective, (4) applied to meet basic degree requirements, or (5) applied to waive a prerequisite. Credit granted by a postsecondary institution will depend on institutional policies and degree requirements.

The learning of some service personnel may exceed the skills, competencies, and knowledge evaluated for a specific course or occupation. In these cases, you may wish to conduct further assessment.

For additional help in this area, see the "Elements of a Model Policy on Awarding Credit for Extrainstitutional Learning" in Volume 3.

21. May I conduct my own assessment of an applicant's learning?

In a sense, you are *always* conducting your own assessment, even when you use the recommendations in this book. The *Guide* is one reference available to assess what an applicant has learned and how that learning can be applied to a specific program of study at your institution. When you cannot find a recommendation in the *Guide* or the *Handbook*, or cannot obtain one from ACE, we encourage you to use other means to assess what the person has learned.

There is a wide variety of assessment techniques that you can use: written examinations, oral examinations, faculty committee assessment, evaluation of materials supplied by the applicant, personal interviews, performance tests, and standardized examinations such as CLEP. A combination of several techniques will usually result in a reliable assessment of the person's learning.

Learn more about assessment techniques through the publications of the Council for Adult and Experiential Learning (CAEL). Publications may be purchased from CAEL, 243 South Wabash Avenue, Suite 800, Chicago, IL 60604 (312-922-5909).

The ACE Guide Series now comprises this *Guide*, the *1954-1989 Guide*, and companion volumes, *The National Guide to Educational Credit for Training Programs* (which lists recommendations for courses offered by business and industry, government agencies, professional and voluntary associations, and labor unions) and *The Guide to Educational Credit by Examination* (which provides descriptions and credit recommendations for nationally recognized testing programs). *The National Guide* is available from Oryx Press, (800) 279-6799. The *Guide to Educational Credit by Examination* may be purchased from the American Council on Education (202-939-9434).

22. We have received a transcript from a military service school listing semester credits and carrying the statement that the school is accredited by one of the regional accrediting associations. How do we handle this?

Although some military schools are accredited, these are the only ones with degree-granting status at publication time.

- Community College of the Air Force, Maxwell Air Force Base, AL, accredited at the two-year community college level;
- Army Command and General Staff College at Fort Leavenworth, KS, accredited to grant an MA;
- Air Force Institute of Technology at Wright-Patterson Air Force Base, OH, accredited through the doctoral level;
- Joint Military Intelligence College (formerly Defense Intelligence College), Washington, DC, accredited to grant an MA;
- Naval Postgraduate School, Monterey, CA, accredited through the doctoral level;
- Naval War College, Newport, RI, accredited to grant an MA;
- Uniformed Services University of the Health Sciences School of Medicine, Bethesda, MD, accredited through the doctoral level;
- the National Defense University's National War College, accredited to grant an MA;
- Industrial College of the Armed Forces, accredited to grant an MA; and the service academies.

23. I am an employer. How will the *Guide* be useful to me?

You may find the exhibits helpful in identifying the skills and knowledge of veterans when hiring and placing them in jobs. The recommendations and descriptions enable you to compare a veteran's training and experience with the qualifications and requirements for the particular job. The recommendations relate learning to postsecondary courses and curricula.

A new document, *DD Form 2586, Verification of Military Experience and Training*, has been designed specifically for your use. Although not appropriate for the granting of credit, this form is a comprehensive listing of military education and training and is ideal for an employer.

24. Why does ACE end-date some courses that are still offered?

First, check the Keyword or Course Number index to determine whether another exhibit is referenced. If not, the exhibit may be end-dated because the military school has not provided information on the course in ten years. Other course exhibits may be end-dated when ACE receives military documentation showing a course has changed significantly. The modified course may appear as a new exhibit or as a new version of an old exhibit.

25. Why are most Defense Language Institute (DLI) courses end-dated in 1990? What do I do for foreign language courses taken after that time?

Credit recommendations are now based on successful completion of the Defense Language Proficiency Test (DLPT) end-of-course examination.

ACE's Credit by Examination Program began evaluating DLI's end-of-course examinations in October 1990. Credit recommendations are now based on successful completion of the DLPT III and IV series. These examinations may be taken by servicemembers who complete the DLI courses, as well as by servicemembers who must demonstrate on-going language proficiency without having taken formal training. Evaluation of the tests is a way to ensure that both groups receive appropriate recognition. See the Defense Language Proficiency Test charts in volume 3 for the credit recommendations.

An official DLI transcript listing the test results is available to the examinee from Commandant, Defense Language Institute, Foreign Language Center, ATTN: ATFL-DAA-AR, The Presidio of Monterey, Monterey, CA 93944-5006. Test scores are available by writing to DLI/FLC, The Presidio of Monterey, Monterey, CA 93944-5006, ATT: ATFL-EST-M (DLPT Score Reports). Or you may call (408) 242-5291 for the Office of the Provost, or (408) 242-5825 or -6459 for the Registrar's office. For information about the status of a transcript, call (408) 242-5366. The Fax number is (408) 242-5146.

Additional information on these examinations may be obtained from ACE's *Guide to Educational Credit by Examination*, 4th edition.

26. What are USAFI and DANTES? Should I grant credit for the courses and tests listed on an applicant's USAFI or DANTES military test reports?

USAFI was the United States Armed Forces Institute, which offered an extensive educational program to active-duty personnel. USAFI correspondence, seminar, self-study courses, end-of-course tests, and Subject Standardized Tests (SSTs) were made available to servicemembers worldwide until 1974, when USAFI was disestablished. Credit recommendations for USAFI courses and examinations are listed in the *Handbook to the Guide*.

The Defense Activity for Non-Traditional Education Support (DANTES) was established in 1974, and that agency continues the development and administration of SSTs and other educational services. ACE continues to recommend credit for USAFI offerings and DANTES SSTs. Credit recommendations for DANTES SSTs are found in the *Handbook to the Guide*. Detailed descriptions are found in the *Guide to Educational Credit by Examination*, which is available from the ACE Credit by Examination Program.

In verifying completion of USAFI or DANTES courses or tests, the military test report should not be considered official. That report is given to all servicemembers who have taken a course or test. To obtain official USAFI or DANTES transcripts, refer to the addresses provided in Appendix A, under "Other Resources."

27. I have looked up the exhibits for several courses and occupations for one applicant. It appears that a lot of credit recommended is in the same subject area. How can I avoid granting duplicate credit to this person?

You may grant credit for any combination of learning experiences. In doing so, however, you must be alert to the possibility of overlapping credit recommendations. When the student is applying for credit for more than one learning experience, the credit recommendations might cover some of the same learning. In such cases, awarding a simple total of the recommended credit could result in the award of more credit than the learning merits.

To determine how much credit should be awarded without duplication, use the following steps:

- Using official military records, locate the appropriate course and occupation exhibits in the *Guide*.
- Read and compare all the descriptions, and, on the basis of the person's program of study, identify the appropriate recommendations in each exhibit.
- Read and compare all the recommendations. It may be necessary to obtain additional information from the individual through interview or further assessment.
- Make decisions on how much credit might be awarded without duplication. Credit should be awarded as appropriate to the educational goals of the individual and the policies of the institution.

If you cannot determine whether duplication exists, contact ACE.

28. A Navy student I'm counseling has taken an Air Force course not in the *Guide*. What should I do?

Any servicemembers who started an Air Force course prior to March 31, 1996 can obtain a CCAF transcript. Servicemembers who take courses after this date should contact CCAF for information on transcripting availability. The transcript may be used to request transfer of credit to another institution or to otherwise document college credit. CCAF does not award credit for all Air Force courses, but only those regularly attended by Air Force enlisted personnel and taught by CCAF-affiliated schools.

To obtain a CCAF transcript, send a completed AF Form 2099 or a brief letter requesting transcript service to CCAF/RRR, Simler Hall, Suite 128, 130 West Maxwell Boulevard, Maxwell Air Force Base, AL 36112-6613. A certificate of training must accompany the request. DD Form 214 is not acceptable. Specify the type of transcript (personal or official) and the address to which the transcript is to be mailed. Provide full name and social security number, and ensure that the person whose transcript is requested signs the request form. The transcripts are free. Official transcripts will be mailed only to institutions.

29. I've found exhibits for most enlisted occupations, but not for the Air Force and Marine Corps. How come?

Air Force enlisted personnel should write to the Community College of the Air Force (CCAF) to obtain a transcript, which will include credit for the Air Force Specialty Codes (AFSCs) (occupations) held. The address is listed in question 28.

Selected Marine Corps MOS recommendations are included in the *Guide*. At present, evaluations have been conducted for MOS's in the aircraft maintenance and avionics occupational fields.

30. How can I distinguish among the terms paygrade, general rate, rating, and rate?

A paygrade is a position from 1 to 9 on the Navy's pay scale for enlisted personnel; in referring to a paygrade, the letter E (enlisted) precedes the number (E-1, E-2, E-3 through E-9). A general rate is an apprenticeship that indicates eligibility for entrance into various ratings. A rating is an occupation, e.g., Air Controlman. A rate is an identifying term or title associated with a given paygrade, for example, the rate petty officer third class. A rate may also be associated with a specific rating; for example, a petty officer third class whose rating is Air Controlman will usually refer to his or her rate as Air Controlman Third Class. Navy men and women usually refer to themselves by their rate. Refer to Appendix A for a description of the Navy Enlisted Rating Structure.

31. Do all ratings provide paths of advancement and career development for paygrades E-4 through E-9?

Although most ratings begin at paygrade E-4 and culminate at paygrade E-9, there are some exceptions. For example, the Legalman rating consists of paygrades E-5 through E-9. In this case, a person progresses to paygrade E-5 from paygrade E-4 of the Yeoman rating. At the other end of the spectrum, some ratings are structured so that a person holding a rating that consists only of paygrade E-9 (e.g., Master Chief Constructionman) may have progressed from any one of several related ratings that terminate at paygrade E-8. Paths of progression are provided in each exhibit in the *Career Pattern* section.

32. Should persons be granted credit for their Navy general rate (paygrade E-3) as well as rating (paygrades E-4 to E-9)?

Yes. Anyone holding a rating is also eligible for the credit recommended in the general rate exhibit. The six general rates are Airman, Constructionman, Dentalman, Fireman, Hospitalman, and Seaman. The item *Career Pattern* in the rating exhibit will indicate the general rate the individual held prior to progressing to the rating. The general rate exhibit should then be located and the credit recommended considered in conjunction with the credit recommendation for the rating.

33. A student has asked for credit for an NEC. What are NECs and have they been evaluated?

An NEC (Navy Enlisted Classification), a four-digit code, identifies qualifications individuals acquire in addition to skills required in their rating. A majority of the NECs are narrow in scope and have not been evaluated. Several NECs, however, require full-time assignment.

NECs are evaluated using the same procedures ACE has used for the evaluation of occupations. NECs are listed in Section 5-1 in numeric order. If the title alone is known, refer to the Navy Enlisted Classification Index.

See the *How to Find and Use Navy Enlisted Classification (NEC) Exhibits* section for a list of documents used to verify the NEC. You need to check only one of those documents. Keep in mind that individuals must also maintain proficiency in their rating. They are required to pass the rating advancement examination to qualify for promotion. They are thus eligible to receive credit for both the rating and the NEC.

34. I've checked both this *Guide* and the *1954–1989 Guide*, and my student held an occupational specialty prior to the start date of the exhibit. Should I still use the recommendation?

Probably not. You need to do some additional investigating to help you decide whether to accept or modify the recommendation. The start date established by ACE is based on how far back we can verify that the occupation was the same as it was when our team evaluated it. The verification is based on official documentation provided by the Navy. We do not have the means to confirm that an occupation was the same before the start date, but you might. There are two steps to follow in making your decision:

1. Ask the person to provide a copy of the Navy Regulation pertaining to occupational qualifications or standards that were in effect when he or she held the specialty. Use the qualifications or standards to identify the learning outcomes represented by the general rate or rating. Individuals may request a description of their ratings from the publication NAVPERS 1 8068F. This description is available from the Naval Military Personnel Command, Arlington Annex, Arlington, VA 20350. Please include the title of the rating and dates held.
2. Determine how much credit might be granted. Remember that advancement connotes occupational proficiency. A careful comparison of the description in the occupation exhibit and the qualifications or standards obtained in step one may reveal if there was a substantive difference. If not, the credit recommendation in the exhibit may be appropriate. If specific differences are identified, then the recommended credits need to be modified accordingly. One approach to modifying the credit recommendation is to have faculty members in appropriate subject areas assess the person's learning, identifying the discrete learning outcomes achieved by the person and relating them to the educational objectives of courses and programs of study. Equivalent credit should be granted when the person has demonstrated achievement of the same learning outcomes for which the faculty members grant credit to their students.

35. Why is the number of credits recommended for the occupation greater than the number recommended for the course that leads to it?

It is rare for the subject matter covered in a course to perfectly coincide with the learning represented by occupational proficiency. In most cases, there is quite a difference in scope, both in the subject matter and in the depth and breadth of the learning. Usually the scope of a course is narrower than that of the occupation. Most Navy courses are designed to prepare Navy sailors to function on the job or to take on additional tasks. As such, the courses normally provide entry-level occupational skills and competencies. Occupational proficiency is predicated on the additional factor of work experience and/or extensive self-instruction.

Course Exhibits

NV

NV-0326-0003

Organizational Effectiveness Specialist
(Human Resource Management Specialist)

Course Number: A-500-0045.

Location: Leadership and Organizational Effectiveness School, Millington, Memphis, TN.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–9/95.

Objectives: To provide graduates with the knowledge and skills necessary to select and apply organizational technologies as a consultant to the US Navy.

Learning Outcomes: Upon completion of the course, the student will be able to analyze and diagnose organizational problems with attention to organizational culture, values, power, leadership, authority, decision making, and group process; conduct self-assessment in personal development; gather and analyze organizational data using selected (inferential and descriptive) statistics; design and and present a data driven organizational effectiveness implementation; understand and communicate systemic dimensions of complex organizations; and design and plan organizational change.

Credit Recommendation: In the graduate degree category, 6 semester hours in organizational development and organizational effectiveness and 3 in practicum in organizational consulting (2/85).

NV-0326-0004

Organizational Effectiveness Advanced Consultant Course

Course Number: None.

Location: Leadership and Organizational Effectiveness School, Millington, Memphis, TN.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–9/95.

Objectives: To provide participants with advanced concepts and skills in organizational diagnosis and analysis.

Instruction: The course provides a brief overview of organization theory and addresses standard topics found in the study of organizational effectiveness, including systems theory and models, marketing theory and strategy, strategic planning, organizational design and change, and confrontation and negotiation. The student is taught to function as an organizational consultant capable of designing organizational change strategies to enhance an organization's effectiveness.

Credit Recommendation: In the graduate degree category, 2 semester hours in organizational diagnosis and change (4/85).

NV-0401-0001

Unaccompanied Personnel Housing Management, Class C1
(Bachelor Quarters Management)

Course Number: A-800-0021.

Location: Air Technical Training Center, Memphis, Millington, TN; Training Center, San Diego, CA; Training Center, Norfolk, VA.

Length: 3 weeks (110-120 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to apply knowledge of housekeeping, front office, personnel practices, and accounting in lodging operations.

Instruction: Course includes lectures and performance exercises in room assignment, guest relations, personnel management, financial accounting and management, and budgeting.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in hotel (lodging) operations and/or rooms management (6/94).

NV-0401-0002

Public Quarter/Flag Operations

Course Number: A-800-0023.

Location: Service School Command, San Diego, CA.

Length: 1 week (40-45 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will operate a small full-service (bed and breakfast) executive residence.

Instruction: This lecture course emphasizes all aspects of the operation of an executive residence, including service procedures, equipment maintenance and operation, sanitation, etiquette, security, and lodging.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in food service, lodging, and management (2/90).

NV-0501-0001

Job Oriented Basic Skills, Strand 1

Course Number: A-651-0085.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate improved reading, study, and note taking skills and written and oral communication skills needed for admission to entry-level technical training courses.

Instruction: These lectures and performance activities are designed to improve study skills, attention to detail, discipline, and motivation as related to engineering terminology and concepts, measuring instruments, engineering drawings and diagrams, and propulsion engineering.

Credit Recommendation: Credit is not recommended because the course is remedial and not at the postsecondary level (6/91).

NV-0501-0002

Job Oriented Basic Skills (JOBS), Class AP-1, Operations Ratings, Strand 2

Course Number: A-100-0059.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, student will demonstrate those math/English skills which will allow them to qualify for entry into entry-level technical training.

Instruction: The course is composed of training in reading comprehension, study skills, basic mathematics skills, graphing/tables, and basic concepts on specific topics. The course is composed of periods of instruction and amplifying exercises.

Credit Recommendation: Credit is not recommended because this material is developmental (11/95).

NV-0501-0003

Job Oriented Basic Skills (JOBS), Class AP-1, Electronics Ratings, Strand 4

Course Number: A-100-0060.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be academically prepared to qualify for entry-level electricity/electronics training.

Instruction: Course includes lectures and practical exercises in study techniques, reading comprehension, basic math skill development, and basic electricity theory.

Credit Recommendation: Credit is not recommended because material is developmental (11/95).

NV-0501-0004

Job Oriented Basic Skills (JOBS), Class AP-1, Mechanical Ratings, Strand 7

Course Number: A-603-0001.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Upon completion of the course, the student will be academically prepared to qualify for entry-level technical training in mechanical ratings.

Instruction: Course includes lectures and practical exercises in basic math skill develop-

BEST COPY AVAILABLE

ment, reading comprehension, and study techniques.

Credit Recommendation: Credit is not recommended because the material is developmental (11/95).

NV-0505-0001

VERDIN INTEGRATED SUBMARINE AUTOMATED BROADCAST PROCESSING SYSTEM (ISABPS) SHORE COMMUNICATIONS SYSTEM OPERATOR

Course Number: A-260-0035.

Location: Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–1/93.

Objectives: After 1/93 see NV-0505-0004. To train enlisted personnel to operate an automated submarine broadcast system.

Instruction: Lectures and practical exercises cover the operation of the AN/URC-62 digital data system, AN/FRQ-87(V) data processing system, and the peripheral equipment in LF/VLF broadcast operations, including the various modes and different conditions, the procedures for handling operating failures, and operating malfunctions of the equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in broadcast system operations (9/83); in the lower-division baccalaureate/associate degree category, 1 semester hour in broadcast system operations (9/83).

NV-0505-0002

AN/SYQ-7(V)3 NAVAL MODULATED AUTOMATED COMMUNICATIONS SYSTEM OPERATOR

Course Number: A-260-0037.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–6/91.

Objectives: After 6/91 see NV-0505-0003. To train personnel to operate a particular modular automated communications system.

Instruction: Lectures and practical exercises in system activation including program loading and normal and contingency operating procedures of the AN/SYQ-7(V)3 modular automated communications system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronic equipment operation for broadcast communications (9/83); in the lower-division baccalaureate/associate degree category, 1 semester hour in electronic equipment operation for broadcast communications (9/83).

NV-0505-0003

AN/SYQ-7(V)3 NAVAL MODULAR AUTOMATED COMMUNICATIONS SYSTEM

Course Number: A-260-0037.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 2-3 weeks (99-120 hours).

Exhibit Dates: 7/91–Present.

Learning Outcomes: Before 7/91 see NV-0505-0002. Upon completion of the course, personnel will be able to operate a computerized message processing system for automation of messages received and transmitted, using both satellite and conventional HF paths and using the naval modular automated communications system, AN/SYQ-7(V)3.

Instruction: Exercises in the operation of automated message system cover step-by-step processing of messages and contingency operations due to power failure and loss of equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronic equipment operation for broadcast communications (6/94); in the lower-division baccalaureate/associate degree category, 1 semester hour in electronic equipment operation for broadcast communications (6/94).

NV-0505-0004

VERDIN INTEGRATED SUBMARINE AUTOMATED BROADCAST PROCESSING SYSTEM SHORE COMMUNICATIONS SYSTEM OPERATOR

Course Number: A-260-0035.

Location: Fleet Training Center, Norfolk, VA.

Length: 4 weeks (144 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Before 2/93 see NV-0505-0001. Upon completion of the course, the student will be able to operate an automated submarine broadcast system.

Instruction: Lectures and practical exercises cover the operation of the AN/URC-62 digital data system, AN/FYQ-87(V) data processing system, and peripheral equipment in LF/VLF broadcast operations. Course includes operating the equipment in various modes and under various conditions and the procedures for handling operating failures and malfunctions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hour in broadcast system operation (11/95).

NV-0701-0008

DENTAL LABORATORY TECHNICIAN, MAXILLOFACIAL, CLASS C

Course Number: B-331-0018.

Location: Dental Clinic, Bethesda, MD.

Length: 26 weeks (1040 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to assist a dentist in a variety of prosthodontic procedures and independently fabricate maxillofacial appliances, including intraoral, extraoral, ocular, nasal, facial, auricular, and orbital prostheses.

Instruction: Course of study includes lecture, discussions, laboratory practice, and extensive supervised clinical practice in sculpting, carving, modeling, impressions, stone molds, stents, carriers, positioners, cranial implants, and maxillary obturators. Major emphasis is placed on the materials and construction of intraoral, extraoral, auricular, and ocular prostheses.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in impression, mold, and model making, 6 in ocular prostheses, 8 in extradental prostheses, and 5 in intraoral prosthesis (10/90).

NV-0701-0010

DENTAL LABORATORY TECHNOLOGY BASIC, CLASS C

Course Number: B-331-0016.

Location: School of Dental Assisting and Technology, San Diego, CA.

Length: 24 weeks (840 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to fabricate basic dental prosthetic appliances.

Instruction: Lectures, discussions, and clinical practice cover complete dentures, removable partial dentures, and fixed partial dentures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in complete dentures, 7 in removable partial dentures, and 4 in fixed partial dentures (7/90).

NV-0701-0011

DENTAL LABORATORY TECHNOLOGY ADVANCED, CLASS C

Course Number: B-331-0017.

Location: School of Dental Assisting, San Diego, CA.

Length: 24 weeks (840 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform advanced dental fabrication techniques and demonstrate managerial skills.

Instruction: Lectures, discussions, and clinical practice covers advanced complete, removable partial, and fixed partial denture techniques and dental laboratory management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in advanced complete denture techniques, 5 in advanced removable partial denture techniques, 14 in fixed partial denture techniques, and 1 in dental laboratory management (7/90).

NV-0701-0012

DENTAL ASSISTANT BASIC, CLASS A

Course Number: B-330-0010.

Location: School of Dental Assisting and Technology, San Diego, CA.

Length: 12 weeks (479 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to assist the dentist at the chairside; perform tasks in dental radiology; carry out office procedures; and perform emergency medical treatment.

Instruction: Course includes lectures, individualized instruction, and clinical experience in basic dental sciences, preventive dentistry, dental emergencies, general casualty care, radiography, and chairside assisting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic dental sciences, 3 in chairside assisting, 2 in dental radiology, 2 in office procedures, and 2 in emergency medical treatment (7/90).

NV-0701-0013

DENTAL ADMINISTRATIVE TECHNICIAN, CLASS C

Course Number: B-330-0011.

Location: School of Dental Assisting and Technology, San Diego, CA.

Length: 24 weeks (840 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to carry out administrative aspects of dental assisting.

Instruction: Lectures and practical exercises cover the administrative aspects of dental assisting, including communication skills, personnel management, office management, dental facility administration, financial management, principles of accounting, and the use of office machines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in advanced office and administrative procedures (7/90).

NV-0702-0007

Hemodialysis/Apheresis Technician, Class C

Course Number: *Version 1:* B-311-0022. *Version 2:* B-311-0022.

Location: School of Health Sciences, Bethesda Detachment, Portsmouth, VA.

Length: *Version 1:* 26 weeks (1040 hours). *Version 2:* 26 weeks (1040 hours).

Exhibit Dates: *Version 1:* 9/90–Present. *Version 2:* 2/90–8/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate and maintain hemodialysis/apheresis equipment and assist the physician with treatment procedures, patient care, and patient monitoring of acute and chronic disorders. *Version 2:* Upon completion of the course, the student will be able to operate and maintain hemodialysis/apheresis equipment and assist the physician with treatment procedures, patient care, and patient monitoring of acute and chronic disorders.

Instruction: *Version 1:* Methodologies include lectures, practical exercises, and clinical training. Course includes instruction in performing acute/chronic hemodialysis, peritoneal dialysis, continuous arteriovenous hemofiltration, hemoperfusion, plasmapheresis, plateletpheresis, leukopheresis, plasma exchanges, perioperative autologous blood salvage, and therapeutic bleedings. Course instruction includes equipment operation and maintenance, proper storage of blood products, disinfection and preventive maintenance of equipment, standard infectious disease protocols, and assurance and quality control measures. *Version 2:* Methods include lectures, practical exercises, and clinical training. Course includes instruction in performing acute/chronic hemodialysis, peritoneal dialysis, continuous arteriovenous hemofiltration, hemoperfusion, plasmapheresis, plateletpheresis, leukopheresis, plasma exchanges, perioperative autologous blood salvage, and therapeutic bleedings. Course instruction includes equipment operation and maintenance, proper storage of blood products, disinfection and preventive maintenance of equipment, standard infectious disease protocols, and assurance and quality control measures.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to dialysis (6/93); in the upper-division baccalaureate category, 6 semester hours in hemodialysis, 3 in peritoneal dialysis, 3 in hematology, 9 in clinical practice, and 3 in hemipharesis (6/93). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to dialysis (9/92); in the upper-division baccalaureate category, 6 semester hours in hemodialysis, 3 in peritoneal dialysis, 8 in apheresis, and 8 in clinical practice (9/92).

NV-0702-0009

Cytology Technician
(Cytotechnologist)

Course Number: B-311-0036.

Location: National Naval Medical Center, Bethesda, MD.

Length: 52 weeks (1938 hours).

Exhibit Dates: 1/90–2/92.

Objectives: After 2/92 see NV-0702-0014. To train individuals to prepare, examine, and evaluate slide presentations of cellular materials for diagnostic purposes.

Instruction: Lectures, laboratory and clinical practice cover cytology specimen preparation, including techniques for collection, fixation, and preparation of materials; examination and evaluation of cellular materials obtained from a variety of tissue sites; and diagnostic determinations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in orientation to cytotechnology, 3 in cellular and human development, 14 in female genital tract, 5 in respiratory tract, 2 in serous body cavities, 2 in cerebrospinal fluids, 2 in oral cavity and gastrointestinal tract, 2 in cytology of the breast, 2 in urinary tract, 2 in fine needle aspiration cytology, 2 in cytopreparatory techniques, and 10 in clinical rotation (2/84).

NV-0702-0010

Transplantation Technician Training

Course Number: B-322-0015.

Location: School of Health Sciences, Bethesda, MD.

Length: 34-35 weeks (1360-1400 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To provide enlisted personnel with the basic knowledge required to assist with the clinical transplantation of organs and tissues.

Instruction: Lectures and laboratory instruction cover tissue banking, transplantation surgery, blood component support, and hemodialysis. Graduates will function as part of a transplantation team and perform specialized skills in tissue procurement and storage and care of experimental animals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in tissue banking, 2 renal dialysis, 3 in anatomy and physiology, 2 in chemistry, 2 in tissue culture, 2 in microbiology, 3 in blood component therapy, 2 in experimental surgery, 4 in basic immunology, 3 in bone marrow transplant, and 12 hours in clinical practicum (2/84).

NV-0702-0011

1. Urology Technician, Class C
2. Urology Technician

Course Number: *Version 1:* B-300-0025. *Version 2:* B-300-0025.

Location: *Version 1:* School of Health Sciences, Portsmouth, VA. *Version 2:* School of Health Sciences, San Diego, CA; School of Health Sciences, Portsmouth, VA.

Length: *Version 1:* 15-16 weeks (616 hours). *Version 2:* 26 weeks (1040 hours).

Exhibit Dates: *Version 1:* 5/96–Present. *Version 2:* 1/90–4/96.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will assist the urologist in the examination and medical and surgical treatment of urology patients.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures cover anatomy, physiology, urology operating room techniques, cytoscopic room techniques, and urology-radiologic procedures. Course includes 7 units from the operating room technician course.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in anatomy and physiology, 3 in urology surgical procedures, 2 in radiography, 2 in clinical urology, 1 in clinical practice, 1 in introduction to operating room techniques, 1 in introduction to environmental control in the operating room, 2 in surgical supplies and equipment, 1 in operating room circulator activities, 1 in scrub technician activities, and 3 in advanced surgical/anatomy procedures (7/90).

NV-0702-0012

Medical Laboratory Technician Advanced, Class C
(Medical Laboratory Technician, Advanced)

Course Number: B-311-0018.

Location: School of Health Sciences, Bethesda, MD; School of Health Sciences, San Diego, CA.

Length: 52 weeks (1948-2080 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic and advanced medical laboratory procedures; process blood donors; and perform techniques of blood banking.

Instruction: Lectures, laboratories, and clinical rotation cover urinalysis, hematology, clinical chemistry, clinical microbiology, parasitology, serology, and blood banking.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in urinalysis, 8 in hematology, 4 in general chemistry, 6 in clinical chemistry, 4 in parasitology, 3 in serology, 8 in microbiology, 8 in blood bank, and 16 in clinical rotation (7/95).

NV-0702-0013

1. Deep Sea Diving Independent Duty Corpsman, Class C
2. Deep Sea Diving Independent Duty Corpsman, Class C
3. Deep Sea Diving Independent Duty Corpsman

Course Number: *Version 1:* B-300-0001. *Version 2:* B-300-0022. *Version 3:* B-300-0022.

Location: *Version 1:* Undersea Medical Institute, Bethesda Detachment, New London, Groton, CT. *Version 2:* Submarine Base, New London, Groton, CT; Undersea Medical Institute, Bethesda, MD. *Version 3:* Submarine Base, New London, Groton, CT; Undersea Medical Institute, Bethesda, MD.

Length: *Version 1:* 45 weeks (1881 hours). *Version 2:* 44 weeks (1745 hours). *Version 3:* 38 weeks (1515 hours).

Exhibit Dates: *Version 1:* 3/94–Present. *Version 2:* 11/91–2/94. *Version 3:* 2/90–10/91.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will demonstrate proficiency in basic laboratory science; pharmacology; physical diagnosis; clinical anatomy and physiology; medical diagnosis and treatment; medication administration; environmental/occupational health; diving medicine; and computer skills. *Version 3:* Upon completion of the course, the student will apply basic laboratory science; identify the essential components of pharmacology; demonstrate knowledge of physical diagnosis; identify the basic elements of clinical anatomy and physiology; demonstrate knowledge of medical diagnosis, treatment, and clinical skills; demonstrate knowledge of the elements of medication administration; identify the basic elements of environmental/occupational health; identify the basic elements of diving medicine; demonstrate computer skills.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures, discussions, and clinical experience cover pharmacology, physical diagnosis, anatomy and physiology, medical diagnosis and treatment, clinical skills, medication administration, environmental and occupational health, diving medicine, and computer science. *Version 3:* Lectures, discussions, and clinical experience cover pharmacology, physical diagnosis, anatomy and physiology, medical diagnosis and treatment, clinical skills, medication administration, environmental and occupational health, diving medicine, and computer science.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 4 in clinical laboratory procedures, and 3 in microcomputer applications (6/93); in the upper-division baccalaureate category, 5 semester hours in physical assessment, 5 in pharmacotherapeutics, 5 in clinical pathology, 3 in sanitation and hygiene, 3 in prevention and safety, 10 in clinical management of medical and surgical conditions, and 3 in hyperbaric physiology (6/93). *Version 3:* In the lower-division baccalaureate/associate degree category, 1 semester hour in computer science and 4 in anatomy and physiology (9/92); in the upper-division baccalaureate category, 4 semester hours in clinical laboratory, 2 in pharmacology, 7 in physical diagnosis, 20 in medical diagnosis and treatment, 3 in clinical skills, 2 in medication administration, 4 in environmental and occupational health, 3 in diving medicine, and 6 in clinical rotation (9/92).

NV-0702-0014

1. Cytotechnologist, Class C
   (Cytotechnology, Class C)
2. Cytology Technician, Class C

Course Number: *Version 1:* B-311-0037. *Version 2:* B-311-0037.

Location: School of Health Sciences, Bethesda, MD.

Length: *Version 1:* 52 weeks (2080 hours). *Version 2:* 52 weeks (2080 hours).

Exhibit Dates: *Version 1:* 11/96–Present. *Version 2:* 3/92–10/96.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Before 3/92 see NV-0702-0009. Upon completion of the course, the student will be able to prepare and evaluate slide presentations of cellular materials for diagnostic purposes.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures, laboratories, and clinical practice cover cytology specimen preparation, including techniques for collection, fixation, and preparation of materials; examination and evaluation of cellular materials obtained from a variety of tissue sites; and diagnostic determinations.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the upper-division baccalaureate category, 8 semester hours in anatomy and physiology, 9 in histology, 9 in cytology, 1 in orientation to cytology, 9 in histology techniques, 10 in clinical experience, and 3 in microbiology (6/93).

NV-0703-0007

Surgical Technologist
(Operating Room Technician, Class C)

Course Number: B-301-0033.

Location: School of Health Sciences, Oakland, CA; School of Health Sciences, San Diego, CA; School of Health Sciences, Portsmouth, VA; School of Health Sciences, Bethesda, MD.

Length: 26-27 weeks (1056 hours).

Exhibit Dates: 1/90–8/96.

Learning Outcomes: Upon completion of the course, the student will be able to prepare and maintain operating rooms for surgery, assist with surgical procedures, and maintain an appropriate operating room environment.

Instruction: Lectures, discussions, and clinical experience cover operating room preparation and techniques, environmental control, activities of the operating room circulator and scrub technician, and advanced surgical anatomy/operative procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to operating room techniques, 1 in environmental control in the operating room, 2 in surgical supplies and equipment, 1 in activities of the operating room circulator, 1 in activities of the scrub technician, 3 in advanced surgical anatomy/operative procedures, 1 in preclinical orientation and evaluation, and 15 in clinical rotation (4/93).

NV-0703-0008

Hospital Corpsman
(Basic Hospital Corps)

Course Number: *Version 1:* B-300-0010. *Version 2:* B-300-0010.

Location: School of Health Sciences, San Diego, CA; Hospital Corps School, Great Lakes, IL.

Length: *Version 1:* 14 weeks (560 hours). *Version 2:* 14 weeks (470 hours).

Exhibit Dates: *Version 1:* 1/96–Present. *Version 2:* 1/90–12/95.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to perform as an entry-level provider of basic and emergency patient care.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures cover anatomy and physiology, first aid and minor surgery; hygiene and sanitation; pharmacology; toxicology; medical laboratory and patient care techniques and principles; nuclear, biological, and chemical safety; and trauma management and treatment. Course includes very limited clinical training.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 4 semester hours in emergency care, 7 in basic patient care procedures, and 1 in pharmacology (7/90); in the lower-division baccalaureate/associate degree category, 3 semester hours in anatomy and physiology (7/90).

NV-0705-0006

Basic X-Ray Technician

Course Number: B-313-0025.

Location: Naval Regional Medical Center, Oakland, CA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–11/91.

Objectives: After 11/91 see NV-0705-0010. To instruct enlisted personnel to operate basic diagnostic medical X-ray and film processing equipment and to perform routine medical and administrative procedures.

Instruction: Lectures and clinical experience cover darkroom procedures, radiographic positioning, radiation safety, radiographic techniques, and anatomy.

Credit Recommendation: In the vocational certificate category, 2 semester hours in anatomy, 2 in radiographic techniques, 2 in radiographic positioning, 1 in darkroom procedures, and 6 in clinical practice (9/92).

NV-0705-0007

1. Advanced X-Ray Technician, Class C
2. Advanced X-Ray Technician

Course Number: *Version 1:* B-313-0026. *Version 2:* B-313-0026.

Location: *Version 1:* Naval School of Health Sciences, San Diego, CA; Naval School of Health Sciences, Portsmouth, VA. *Version 2:* School of Health Sciences, San Diego, CA; School of Health Sciences, Portsmouth, VA.

Length: *Version 1:* 52 weeks (2080 hours). *Version 2:* 52 weeks (1902 hours).

Exhibit Dates: *Version 1:* 7/93–Present. *Version 2:* 1/90–6/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform as an X-ray technologist. *Version 2:* Upon completion of the course, the student will perform as an X-ray technician.

Instruction: *Version 1:* Lectures, laboratories, practice, and clinical experience in mathematics, medical ethics and law, radiobiology, imaging equipment, radiation protection, pathology, introduction to computers, quality assurance, patient care and procedures, physics, and exposure and film processing. The student is eligible to take ARRT certification examination upon completion of 4,000 radiologic procedures in clinical practice. *Version 2:* Lectures, laboratories, and/or simulated practice cover mathematics, anatomy, positioning, radiologic physics, radiography, ethics, darkroom procedures, radiation biology, alternate imaging, radiation safety, radiologic pathology, ultrasound imaging, computer literacy, and quality assurance. Students become ARRT board eligible upon completion of 4,000 procedures in clinical practice.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in survey of mathematics, 16 in radiographic procedures, 6 in radiographic physics, 3 in radiographic exposure, 1 in medical ethics and law, 2 in radiobiology, 2 in imaging equipment, 1 in radiation protection, 1 in pathology, 1 in introduction to computer literacy, 1 in quality assurance, and 16 in clinical education (10/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in survey of mathematics, 6 in radiologic physics, 3 in radiographic techniques, 1 in medical ethics, 2 in darkroom procedures, 2 in alternate imaging, 1 in radiation safety, 2 in radiologic pathology, 6 in ultrasonography, 16 in anatomy and and positioning, and 1 in quality assurance (7/90).

NV-0705-0008

CLINICAL NUCLEAR MEDICINE TECHNICIAN

Course Number: B-311-0016.

Location: School of Health Sciences, Bethesda, MD.

Length: Phase 1, 20 weeks (792 hours); Phase 2, 32 weeks (1288 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will serve as an advanced clinical nuclear medicine technologist, assist physicians in preparing and conducting clinical nuclear medicine in vivo and in vitro procedures, independently organize and administer nuclear medicine clinics, operate and maintain clinical nuclear medicine instrumentation, and perform related computer analysis.

Instruction: Phase 1 includes lectures, discussions, and laboratory practice in mathematics, chemistry, radiation safety, instrumentation, radiopharmacology, diagnostic imaging, radionuclide dilution, thyroid therapy procedures, radiation biology, and radioimmunoassay. Phase 2 is clinical practice.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in physical science, 3 in radiation safety, and 6 in diagnostic imaging (10/90); in the upper-division baccalaureate category, 2 semester hours in radiation biology, 2 in radioimmunoassay, 3 in radiation instrumentation, 30 in clinical practice, and 3 in radioisotope technology (10/90).

NV-0705-0009

RADIATION HEALTH TECHNICIAN, CLASS C

Course Number: *Version 1:* B-322-0010. *Version 2:* B-322-0010.

Location: Submarine Base, New London, Groton, CT; Undersea Medical Institute, Bethesda, MD.

Length: *Version 1:* 8 weeks (320 hours). *Version 2:* 8 weeks (315 hours).

Exhibit Dates: *Version 1:* 8/90–Present. *Version 2:* 1/90–7/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to identify describe radiological fundamentals and controls, demonstrate beginning competencies in dosimetry and medical surveillance, identify the basics of radiation health administration and personnel training; demonstrate knowledge of medical casualty response and radiation safety, and demonstrate computer skills. *Version 2:* Upon completion of the course, the student will be able to describe the essentials of radiology and controls, demonstrate beginning competencies in dosimetry and medical surveillance, identify the basics of radiation health administration and personnel training, demonstrate knowledge of medical casualty response and radiation safety, and demonstrate computer skills.

Instruction: *Version 1:* Lectures, discussions, and clinical practice cover radiological fundamentals and controls, personnel, radiation dosimetry, health administration, medical surveillance and personnel training, medical casualty response, radiation safety, and computer science. *Version 2:* Lectures, discussions, and clinical practice cover radiological fundamentals and controls, radiation dosimetry, health administration, medical surveillance and personnel training, medical casualty response, radiation safety, and computer science.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in microcomputer applications (6/93); in the upper-division baccalaureate category, 3 semester hours in occupational health, 3 in radiation physics, and 3 in health administration (6/93). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in physics (10/90); in the upper-division baccalaureate category, 2 semester hours in radiology, 2 in occupational health and safety, and 2 in health administration (10/90).

NV-0705-0010

BASIC X-RAY TECHNICIAN, CLASS C
(Basic X-Ray Technician)

Course Number: B-313-0025.

Location: School of Health Sciences, Oakland, CA.

Length: 12 weeks (480 hours).

Exhibit Dates: 12/91–Present.

Learning Outcomes: Before 12/91 see NV-0705-0006. Upon completion of the course, the student will be able to operate basic diagnostic X-Ray and film processing equipment and perform other routine medical and administrative procedures.

Instruction: Lectures and practical applications cover darkroom procedures, radiographic positioning, radiation safety, radiographic techniques, and anatomy.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radiographic techniques, 2 in radiographic positioning, 1 in darkroom procedures, 1 in radiation safety, and 5 in clinical practice (7/95).

NV-0706-0005

OPTICIAN, CLASS C

Course Number: B-311-0023.

Location: Ophthalmic Support and Training Center, Yorktown, VA.

Length: 26 weeks (1040 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to fabricate lenses, maintain and repair surfacing equipment, screen for common diseases and disorders of the eye, and perform selected clinical procedures.

Instruction: Methods of instruction include lectures, discussions, and clinical practice in the physics of diseases and disorders of the visual system, administration of ocular pharmaceutical agents, geometrical optics, optical math, ophthalmic lens design, mechanical optics, spectacle fabrication, equipment repair and maintenance, clinical procedures, ophthalmic dispensing, and administration and clinical management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in physics, 3 in diseases and disorders of the visual system, 1 in the administration of ophthalmic pharmacological agents, 1 in geometric optics, 2 in optical mathematics, 3 in ophthalmic lens design, 3 in mechanical optics, 3 in spectacle fabrication, 3 in equipment repair and maintenance, 1 in clinical procedures, 2 in ophthalmic dispensing, and 1 in administrative course and clinical management (7/90).

NV-0706-0006

OCULAR TECHNICIAN

Course Number: *Version 1:* B-300-0021. *Version 2:* B-300-0021.

Location: School of Health Sciences, San Diego, CA.

Length: *Version 1:* 14 weeks (650 hours). *Version 2:* 22 weeks (888 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 1/90–7/95.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will assist an ophthalmologist in the diagnosis and medical and surgical treatment of eye diseases and disorders.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures, discussions, and clinical practice cover diseases and disorders of the visual system, ocular medicine, ophthalmic optics, visual testing procedures, and clinical management. Also includes operating room preparation and techniques; operating room environmental control, surgical supplies, and equipment; activities of the operating room circulator and scrub technician; and advanced surgical anatomy/operative procedures.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 5 semester hours in diseases and disorders of the visual system, 2 in ocular medicine, 1 in ophthalmic optics, 2 in visual testing procedures, 1 in ophthalmic surgical equipment, 2 in clinical practice, 1 in introduction to operating room techniques, 1 in introduction to environmental control in the operating room, 2 in surgical supplies and equipment, 1 in activities of the operating room circulator, 1 in activities of the scrub technician, and 3 in advanced surgical anatomy/operative procedures (7/90).

NV-0707-0002

PREVENTIVE MEDICINE TECHNICIAN, CLASS C

Course Number: *Version 1:* B-322-0012. *Version 2:* B-322-0012.

Location: *Version 1:* School of Health Sciences, San Diego, CA. *Version 2:* School of Health Sciences, Oakland, CA.

Length: *Version 1:* 26 weeks (1040 hours). *Version 2:* 26 weeks (1040 hours).

Exhibit Dates: *Version 1:* 10/94–Present. *Version 2:* 1/90–9/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to use basic disease prevention measures and promote public health, using techniques in occupational safety and health, environmental microbiology, medical entomology, and pest control. *Version 2:* Upon completion of the course, the student will be able to use basic disease prevention measures and promote public health, using techniques in occupational safety and health, environmental microbiology, medical entomology, and pest control.

Instruction: *Version 1:* Lectures, demonstrations, discussions, and practical exercises cover microbiology, immunology, mathematics, statistics, epidemiology, and environmental sanitation. *Version 2:* Lectures and practical exercises cover microbiology, immunology, mathematics, statistics, epidemiology, and environmental sanitation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in public health microbiology; 3 in water/waste water management; 5 in occupational safety and health; 1 in biostatistics; 3 in medical parasitology; 5 in food sanitation technology; 5 in epidemiology and communicable disease control; 2 in health care facility sanitation; 2 in lesson development and presentation; 1 in chemical, biological, and radiological medical defense; 8 in medical entomology and pest control; 3 in public health administration; 2 in habitability and related service areas; 2 in mathematics; and 2 in operational sanitation (10/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in public health microbiology; 3 in water/waste water management; 5 in occupational safety and health; 1 in biostatistics; 3 in medical parasitology; 5 in food sanitation technology; 5 in epidemiology and communicable disease control; 2 in health care facility sanitation; 2 in lesson development and presentation; 1 in chemical, biological, and radiological medical defense; 8 in medical entomology and pest control; 3 in public health administration; 2 in habitability and related service areas; 2 in mathematics; and 2 in operational sanitation (7/90).

NV-0707-0003

ENGINEERING COMMON CORE

Course Number: A-651-0118.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 3/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify basic engineering auxiliary system components and procedures and apply principles of general industrial safety.

Instruction: Lectures, laboratory training, and practical exercises cover power plant components, safety hazards, and safe engineering practice.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in industrial safety (12/95).

NV-0709-0001

NUCLEAR SUBMARINE MEDICINE TECHNICIAN

Course Number: B-300-0012.

Location: Health Sciences Education and Training Center, New London, Groton, CT.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–6/93.

Objectives: To train hospital corpsmen to serve on submarines independent of a medical officer.

Instruction: This course is a combination of a three-week Basic Submarine course, an eight-week Radiation Health course, and a four-week Submarine Medicine course. The main emphasis of the course is in radiation fundamentals, radiation safety, radiation biology, radiation physics, radiation health administration, and advanced corpsman skills adapted to the nuclear submarine environment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in radiation fundamentals, 1 in radiation safety, 2 in radiation biology, 3 in radiation health physics, 3 in radiation health administration, and 3 in nuclear submarine medical procedures (6/83).

NV-0709-0003

AEROSPACE MEDICINE TECHNICIAN

(Aerospace Medical Technician, Class C)
(Aviation Medicine Technician, Class C)
(Aviation Medicine Technic)

Course Number: B-300-0017.

Location: Aerospace Medical Institute, Pensacola, FL.

Length: 10 weeks (350 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To train selected hospital corpsmen in aerospace medicine.

Instruction: Lectures and practical exercises cover anatomy and physiology, circulatory and respiratory systems, aviation physiology, psychology, emergency medical procedures, aviation safety and investigation, ophthalmology, and clinical laboratory practice in physical examinations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in anatomy and physiology, 1 in optometry, 1 in administrative procedures, 4 in health record administration, 1 clinical procedures, and 1 in first aid (4/85).

NV-0709-0004

AEROSPACE PHYSIOLOGY TECHNICIAN

Course Number: B-322-11; B-322-0011.

Location: Aerospace Medical Institute, Pensacola, FL.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To train enlisted personnel to assist in the indoctrination of personnel in aerospace physiology.

Instruction: Lectures and laboratory experiences cover the procedures for inside instructors and observers in hypobaric chambers, the aeromedical aspects of flight, visual problems and spatial orientation in aviation, naval aviation personal protective and life support equipment, emergency egress systems, aeromedical aspects of ejection, operation and maintenance of aerospace physiology training devices, and basic instructor techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in aerospace physiology and aviation environment procedures (5/85).

NV-0709-0012

PHYSICIAN'S ASSISTANT

Course Number: B-300-0031.

Location: Naval School of Health Sciences, Portsmouth, VA; Naval School of Health Sciences, San Diego, CA.

Length: 52-60 weeks (2080-2400 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To provide experienced personnel with the technical knowledge and skills to assist physicians in evaluation, primary care, and disposition of patients.

Instruction: Lectures and clinical rotations are aimed at developing student abilities to perform complete historical and physical examinations, order and interpret routine radiographic studies, perform minor surgery, provide emergency health care, and exercise a degree of independent judgement in treatment and therapy procedures, all under the supervision of a medical officer. The program includes course work in basic and clinical health sciences.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in anatomy and physiology, 3 in biochemistry, 2 in microbiology, 4 in pharmacology, ! in musculoskeletal/orthopedics, 1 in cardiovascular, 1 in genitourinary and renal, 1 in infectious diseases, 1 in gastrointestinal medicine, 1 in otolaryngology, 1 in pediatrics, 1 pulmonary medicine, 1 in clinical pathological carrelation (CPC), 1 in radiology, 1 in electrocardiography, 2 in emergency medicine and surgical procedures, 2 in human behavior (psychiatry), 4 in clinical assessment (physical diagnosis), 1 in issues in health care, 3 in medical electives (neurology, endocrinology, hematology, oncology, dermatology, obstetrics/gynecology, ophthalmology, substance abuse, and communication processes), and 10 in clinical rotation (4/85).

NV-0709-0016

OTOLARYNGOLOGY TECHNICIAN, CLASS C

Course Number: *Version 1:* B-300-0024. *Version 2:* B-300-0024.

Location: School of Health Sciences, San Diego, CA.

Length: *Version 1:* 12 weeks (480 hours). *Version 2:* 22 weeks (880 hours).

Exhibit Dates: *Version 1:* 1/96–Present. *Version 2:* 1/90–12/95.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to assist physicians in the medical and surgical care and treatment of patients for ear, nose, and throat conditions by demonstrating proficiency in operating room techniques, audiological diagnostic testing, and clinical skills.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures, laboratory practice, surgical, audiological, and clinical rotation cover clinical experiences in medical and surgical procedures of ear, nose, and throat. Course contains seven units of the operating room technician course.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in anatomy and physiology, 2 in otolaryngology procedures/techniques, 8 in clinical practice, 1 in introduction to operating room techniques, 1 in introduction to environmental control in the operating room, 2 in surgical supplies and equipment, 1 in operating room circulator activities, 1 in scrub technician activities, and 3 in advanced surgical/anatomy procedures (7/90).

NV-0709-0017

DERMATOLOGY TECHNICIAN, CLASS C

Course Number: B-300-0029.

Location: School of Health Sciences, San Diego, CA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to assist a physician in diagnosing and treating all types of skin diseases and demonstrate proficiency in specific diagnostic methods and procedures.

Instruction: Lectures and laboratories cover dermatology assisting, including basic laboratory techniques, basic bacteriology, serology, hematology, pathology, mycology, and parasitology; diagnosis of common dermatoses; medical records and reports; operating room techniques; and special treatment procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in medical laboratory techniques, 2 in basic dermatology, and 8 in clinical practice (7/90).

NV-0709-0018

1. Cardiovascular Technician, Class C
2. Cardiovascular Technician, Class C
3. Cardiopulmonary Technician, Class C

Course Number: *Version 1:* None. *Version 2:* B-300-0018. *Version 3:* B-300-0018.

Location: *Version 1:* School of Health Sciences, Bethesda, MD. *Version 2:* School of Health Sciences, San Diego, CA; School of Health Sciences, Bethesda, MD. *Version 3:* School of Health Sciences, San Diego, CA; School of Health Sciences, Bethesda, MD.

Length: *Version 1:* 52 weeks (2111 hours). *Version 2:* 52 weeks (2108 hours). *Version 3:* 52 weeks (2112 hours).

Exhibit Dates: *Version 1:* 8/92–Present. *Version 2:* 6/91–7/92. *Version 3:* 1/90–5/91.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to perform invasive and noninvasive cardiology and critical care life support and assist the physician in cardiac catheterization. *Version 3:* Upon completion of the course, the student will be able to perform noninvasive cardiology, pulmonary function testing, and critical care life support and assist the physician in cardiac catheterization.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures, laboratories, and clinical practice cover anatomy, cross sectional anatomy, physiology, electrocardiography, pharmacology, blood gas analysis, cardiac catheterization, hemodynamic monitoring, cardiopulmonary radiography, echocardiography, and invasive cardiovascular techniques. *Version 3:* Lectures, laboratories, and clinical practice cover anatomy, cross sectional anatomy, physiology, electrocardiography, pharmacology, respiratory care, blood gas analysis, cardiac catheterization, hemodynamic monitoring, cardiopulmonary radiography, echocardiography, pulmonary function testing, invasive cardiovascular techniques, and ventilatory support.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in cardiovascular anatomy and physiology, 3 in pulmonary anatomy and physiology, 3 in cardiovascular pharmacology, 3 in arterial blood gas analysis, 4 in cardiovascular radiography, 6 in invasive cardiovascular techniques, 4 in physical science, 6 in noninvasive cardiovascular techniques, 8 in cardiac catheterization, 4 in hemodynamic monitoring, 4 in echocardiography, and 4 in electrocardiography (6/93). *Version 3:* In the lower-division baccalaureate/associate degree category, 3 in cardiovascular anatomy and physiology, 3 in pulmonary anatomy and physiology, 3 in radiography, 3 in pharmacology, 4 in mechanical ventilation, 3 in blood gas analysis, 6 in pulmonary function, 4 in critical care, 8 in cardiology, 4 in physical science, and 12 in cardiac catheterization (7/90).

NV-0709-0019

Surface Force Independent Duty Corpsman,
Class C
(Advanced Hospital Corpsman, Class C)

Course Number: *Version 1:* B-300-0019. *Version 2:* B-300-0019.

Location: School of Health Sciences, San Diego, CA; School of Health Sciences, Portsmouth, VA.

Length: *Version 1:* 50 weeks (2000 hours). *Version 2:* 46 weeks (1840 hours).

Exhibit Dates: *Version 1:* 9/91–Present. *Version 2:* 1/90–8/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will perform minor surgery, diagnostic and basic clinical laboratory procedures, emergency care, industrial hygiene and safety, health education services, and related resource dissemination. *Version 2:* Upon completion of the course, the student will perform minor surgery, diagnostic and basic clinical laboratory procedures, emergency care, industrial hygiene and safety, health education services, and related resource dissemination.

Instruction: *Version 1:* Lectures, laboratories, and clinical practice in medical and surgical topics, including record management; materials management; education and teaching methods; alcohol and drug abuse; communicable diseases; pest control and sanitation; industrial hygiene and safety; radiation safety and health; anatomy and physiology; physical assessment; pharmacology; clinical laboratory; dental procedures; basic cardiac life support; basic trauma life support; and appropriate standards of care in diagnosis, triage, and treatment. *Version 2:* Lectures, laboratories, and clinical practice cover medical and surgical topics, including record management; materials management; education and teaching methods; alcohol and drug abuse; communicable diseases; pest control and sanitation; industrial hygiene and safety; radiation safety and health; anatomy and physiology; physical assessment; pharmacology; clinical laboratory; dental procedures; basic cardiac life support; basic trauma life support; and appropriate standards of care in diagnosis, triage, and treatment.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 4 in clinical laboratory procedures, 3 in dental procedures, 3 in medical records, and 3 in microcomputer applications (6/93); in the upper-division baccalaureate category, 5 semester hours in physical assessment, 5 in pharmacotherapeutics, 5 in clinical pathology, 3 in sanitation and hygiene, 3 in prevention and safety, 4 in radiation health and safety, and 10 in clinical management of medical and surgical conditions (6/93). *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 4 in clinical laboratory procedures, 2 in dental procedures, 2 in medical records (9/92); in the upper-division baccalaureate category, 4 semester hours in physical assessment, 4 in pharmacotherapeutics, 4 in clinical pathology, 8 in clinical practice, 2 in sanitation and hygiene, 2 in prevention and safety, 3 in radiation health, and 10 in clinical management of medical and surgical conditions (9/92).

NV-0709-0020

Electroencephalography Technician

Course Number: B-301-0043.

Location: School of Health Sciences, Bethesda, MD.

Length: 26-27 weeks (1064 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an electroencephalography technician in a health care institution, including EEG, evoked potentials, and polysomnography.

Instruction: The course of study includes lectures, discussions, laboratory practice, and extensive clinical practice in the nervous system, medical instrumentation, wave pattern interpretation, evoked potentials, and related neurological testing procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in medical instrumentation (10/90); in the upper-division baccalaureate category, 12 semester hours in clinical practice, 12 in electroencephalography, and 3 in neuroanatomy and physiology (10/90).

NV-0709-0021

1. Submarine Force Independent Duty
   Corpsman, Class C
2. Submarine Force Independent Duty
   Corpsman
3. Submarine Force Independent Duty
   Corpsman

Course Number: *Version 1:* B-300-0001. *Version 2:* B-300-0001. *Version 3:* B-300-0001.

Location: *Version 1:* Undersea Medical Institute, Bethesda Detachment, New London, Groton, CT; Submarine Base, New London, Groton, CT. *Version 2:* Submarine School, New London, Groton, CT; Undersea Medical Institute, Bethesda Detachment, New London, Groton, CT. *Version 3:* Undersea Medical Institute, Bethesda Detachment, New London, Groton, CT; Submarine Base, New London, Groton, CT.

Length: *Version 1:* 56 weeks (2168 hours). *Version 2:* 50 weeks (1995 hours). *Version 3:* 52 weeks (1982 hours).

Exhibit Dates: *Version 1:* 3/94–Present. *Version 2:* 11/91–2/94. *Version 3:* 1/90–10/91.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to provide general primary care, including clinical laboratory procedures, emergency care, health education services, radiation surveillance, physical diagnosis, and minor surgery. *Version 3:* Upon completion of the course, the student will be able to give medical care aboard nuclear and conventional submarines.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures, discussions, and clinical practice cover radiation technology, medical surveillance, clinical laboratory science, pharmacology, physical diagnosis, anatomy and physiology, medical diagnosis and treatment, clinical skills, health/medical administration, environmental and occupational health, and introduction to computer sciences. *Version 3:* Lectures, discussions, and clinical practice cover radiation technology, medical surveillance, clinical laboratory science, pharmacology, physical diagnosis, anatomy and physiology, medical diagnosis and treatment, clinical skills, health/medical administration, environmental and occupational health, and introduction to computer sciences.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 4 in clinical laboratory procedures, 3 in medical records, and 3 in microcomputer applications (6/93); in the upper-division baccalaureate category, 7 semester hours in radiation safety and health, 5 in pharmacotherapeutics, 5 in physical assessment, 3 in sanitation and hygiene, 3 in prevention and safety, 5 in clinical pathology, and 10 in clinical management of medical and surgical conditions (6/93). *Version 3:* In the lower-division baccalaureate/associate degree category, 3 semester hours in physics, 3 in anatomy and physiology, and 1 in computer science (10/90); in the upper-division baccalaureate category, 2 semester hours in radiation science, 8 in occupational and environmental health, 5 in health administration, 4 in clinical laboratory, 2 in pharmacology, 7 in physical diagnosis, 19 in medical diagnosis and treatment, 3 in clinical skills, and 6 in clinical rotation (10/90).

NV-0709-0022

Special Operations Technician

Course Number: A-431-0021.

Location: Special Warfare Center, San Diego, CA.

Length: 2 weeks (67-80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe anatomy and physiology as they relate to diving disorders, operate a hyperbaric chamber in the treatment of diving disorders, conduct a neurological examination and test diving accident victims according to Navy Diving Manual, and serve as a diving medical technician.

Instruction: Laboratories, lectures, and performance evaluations are course methods.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in diving medicine and treatment and 1 in hyperbaric chamber operation (3/92).

NV-0709-0023

Special Warfare Mk 15 Underwater Breathing Apparatus

Course Number: K-431-0082.

Location: Special Warfare Training Center, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to dive using Mk 15 mixed gas apparatus, set up and maintain equipment, and navigate underwater.

Instruction: Lectures and laboratory exercises using an extensive student guide are course methods.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/92).

NV-0799-0007

Navy Substance Abuse Prevention Program
(Navy Alcohol/Drug Safety Action Program (NASAP/NDSAP))

Course Number: None.

Location: Various training facilities, worldwide.

Length: 1-2 weeks (36 hours).

Exhibit Dates: 1/90–9/95.

Objectives: To provide instruction on alcoholism and drug abuse with emphasis on personal health and responsibility.

Instruction: Discussions focus on the implications of alcohol/drug use and abuse, values clarification, decision making, stress management and coping, and personal responsibility for lifestyle choices.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in substance abuse prevention and health promotion (7/87).

NV-0799-0008

Pharmacy Technician, Class C

Course Number: B-312-0025.

Location: School of Health Sciences, San Diego, CA; School of Health Sciences, Portsmouth, VA.

Length: 23 weeks (815 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to assist physicians and pharmacists in the compounding, calculation, dispensing, and administration of pharmacological preparations.

Instruction: Lectures, discussions, and clinical practice cover the compounding, pharmacology, administration, calculation, and dispensing of a variety of preparations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in compounding, 12 in pharmacology, 3 in pharmacy administration, 4 in sterile products, 2 in clinical rotations, 3 in dispensing, 3 in computer/typing applications, and 6 in pharmaceutical calculations (7/90).

NV-0799-0009

Navy Correctional Counselors

Course Number: A-831-0002.

Location: Naval Institute of Correctional Administration, Ft. McClellan, AL.

Length: 5 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to counsel prisoners in the development of human behavior skills, communication skills, and the counseling process.

Instruction: Lectures, demonstrations, and performance exercises cover stress management, psychology of human behavior, reality therapy, group counseling, suicide risks, and mental status and terminology.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in correctional counseling and 3 in human behavior (6/92).

NV-0801-0009

Operational Water Chemistry and Radiological Controls

Course Number: L-4H-0027.

Location: Guided Missile School Detachment, Norfolk, VA; Fleet Ballistic Submarine Training Center, Charleston, SC; Submarine Base, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2 weeks (73 hours).

Exhibit Dates: 1/90–1/97.

Objectives: To provide training in nuclear propulsion plant water chemistry and radiological controls with emphasis on the evaluation and solution of plant problems.

Instruction: Course covers operational water chemistry control, operational radiological control, casualty procedures, and radiological problems encountered and proposed actions.

Credit Recommendation: In the vocational certificate category, 1 semester hour in chemical technology laboratory (11/85).

NV-0801-0010

Aftercare Program Management

Course Number: S-501-0001.

Location: Training Center, New London, Groton, CT; Drug Rehabilitation Center, San Diego, CA; Training Center, Washington D.C; Training Center, Philadelphia, PA; Training Center, Pearl Harbor, HI; Training Center, Jacksonville, FL; Training Center, Yokosuka, Japan; Training Center, Rota, Spain; Training Center, Norfolk, VA.

Length: 2 weeks (70 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to assist recovering substance abusers in the process of conforming to aftercare prescription protocols, participate in the conducting of substance abuse education programs, and provide minimal support services to family members.

Instruction: Course introduces student to beginning skills in substance abuse counseling, communication, data management, interviewing, and case management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to substance abuse counseling (7/87).

NV-0801-0011

Navy Drug and Alcohol Counselor

Course Number: S-501-0002.

Location: Drug Rehabilitation Center, San Diego, CA.

Length: 10-11 weeks (400-440 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to screen and evaluate persons with substance abuse problems and determine appropriate treatment programs, conduct counseling sessions, and assist in the management of substance abuse programs.

Instruction: Methods of instruction include lecture, demonstration, video review, and group process. Topics include group development, counseling, behavior modification, substance abuse, child/spousal abuse, an abnormal psychology. A practicum is included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to psychology (7/87); in the upper-division baccalaureate category, 3 semester hours in abnormal psychology, 3 in counseling theory and practice, 3 in group process theory and practice, and 3 in substance abuse counseling (7/87).

NV-0801-0012

Shipboard Chemical, Biological, and Radiological Defense Operations and Training Specialist

Course Number: A-495-2062.

Location: Construction Training Center Detachment, Ft. McClellan, AL.

Length: 2-3 weeks (104 hours).

Exhibit Dates: 9/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to understand radiac theory; measure radiation effects using various instruments and analysis procedures; assess chemical and biological hazards; perform decontamination processes; and to train others about radiological, chemical, and biological hazard assessment and decontamination.

Instruction: Lecture and demonstration cover radiological theory, use of radiological measuring instruments, analysis of impacts of radiation, assessment of chemical and biological hazards, and performance of decontamination processes. Learners design, develop, deliver, and evaluate a learning experience on radiological, chemical, and biological hazards.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in radiological, chemical, and biological hazards containment and decontamination and 1 in instructional methods (4/97).

NV-0801-0013

Disaster Preparedness Operations Specialist

Course Number: A-494-0006.

Location: Construction Training Center Detachment, Ft. McClellan, AL.

Length: 5 weeks (200 hours).

Exhibit Dates: 4/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to manage a disaster preparedness program, including radiological, chemical, and biological hazard response procedures; assess hazards; and perform decontamination processes.

Instruction: Lecture, demonstration, and discussion cover disaster preparedness program planning and management, response procedures, use of radiological measuring instruments, analysis of impacts of radiation, chemical and biological hazard assessment, and decontamination procedures.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in disaster preparedness management, 2 in radiological hazards, 2 in biological hazards, and 2 in chemical hazards (4/97).

NV-0802-0011

Disaster Recovery Training Chemical, Biological, and Radiological

Course Number: A-494-0004.

Location: Construction Training Center, Gulfport, MS.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to practice protective measures against chemical/biological agents including the use of masks, protective clothing, detection devices, decontamination equipment, chemical surveys, and warning and communications. Field exercises are also included.

Instruction: Lectures and practical exercises cover disaster preparedness for chemical/biological agents, shelters and shielding, decontamination, medical effects, and protective devices.

Credit Recommendation: In the vocational certificate category, 3 semester hours in civil defense (3/91).

NV-0802-0012

Disaster Recovery Training

Course Number: A-494-0005.

Location: Construction Training Center, Gulfport, MS.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform multimedia first aid and cardiopulmonary resuscitation, describe the characteristics and effects of various types of natural disasters, tie various knots used in rescue operations, apply mechanical advantage principles, describe various types of field rigs, and use the special tools and equipment required for rescue operations.

Instruction: Lectures and practical exercises cover disaster recovery, including types and effects of various natural disasters, first aid, rescue operations, and tools and equipment used in rescue operations.

Credit Recommendation: In the vocational certificate category, 3 semester hours in civil defense (3/91); in the lower-division baccalaureate/associate degree category, 1 semester hour in basic first aid (3/91).

NV-0803-0003

Rescue Swimming Refresher, Class F1

Course Number: Q-050-0604.

Location: Helicopter Anti-Submarine Squadron One, Naval, Jacksonville, FL; Helicopter Combat Support Squadron Three Resc, San Diego, CA.

Length: 2 weeks.

Exhibit Dates: 5/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a surface rescue swimmer; using advanced swimming skills rescue swimmer equipment; perform day or night escapes and rescue from parachute water entry; and perform practical first aid and lifesaving in accordance with current American Red Cross standards.

Instruction: Lecture, laboratory, pool and open water demonstrations, practical exercises are methods used. Skill tests will be used to evaluate performance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic swimming rescue techniques, first aid, and lifesaving. This credit duplicates that of Q-050-0600 and Q-050-0500 (8/97).

NV-0803-0004

Rescue Swimmer, Class C

Course Number: Q-050-0600.

Location: Air Station, Pensacola, FL.

Length: 4 weeks (148-152 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a surface rescue swimmer, including physical conditioning, swimming skills, aircraft egress rescue swimmer equipment, day or night escapes, and rescue from parachute water entry, and perform practical first aid and lifesaving in accordance with current American Red Cross standards.

Instruction: Lecture, laboratory, pool and open water demonstrations, practical exercises are methods used, and skill tests will be used to evaluate performance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic swimming, rescue techniques, first aid, and lifesaving. This credit duplicates that in Q-050-0500 (4/98).

NV-0803-0005

Basic Water Survival Instructor

Course Number: A-012-1014.

Location: Air Station, Pensacola, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 12/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to train beginning swimmers in basic swimming and survival skills, including abandon ship procedures, flotation devices, surface and submerged burning oil; meet all requirements to be certified in first aid and CPR for the professional rescuer; meet all requirements to be basic lifeguard certified; demonstrate knowledge of sea survival, including types of naval life rafts, and their current uses; and identify high-risk elements involved in water survival.

Instruction: Lecture, laboratory, and demonstrations include pool and open water practical experiences. Both written and performance tests are used to demonstrate proficiency.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in lifesaving and water survival (8/97).

NV-0803-0006

Amphibious Reconnaissance Corpsman

Course Number: A-431-0076.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 3 weeks (119 hours).

Exhibit Dates: 7/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to properly diagnose diving related injuries; perform medical treatment due to diving casualties; perform the functions of a hyperbaric chamber operator; and prepare and complete all required diving, medical, and administrative records.

Instruction: Lectures, laboratories (including chambers), projects, written and practical examinations are methods of instruction.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in marine diving physiology (8/97); in the upper-division baccalaureate category, 2 semester hours in diving medical emergency treatment (8/97).

NV-0803-0007

Diver First Class

Course Number: A-433-0025.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 8 weeks (314 hours).

Exhibit Dates: 1/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform advanced deep air surface-supplied diving; understand the use of hyperbaric chambers and perform as a supervisory member of a recompression chamber team; supervise the certification of diving systems; act as a supervisor of diving medicine; and diagnose and treat diving sickness and accidents.

Instruction: Lectures, written examinations, chamber shams and other practical exercises, and at-sea supervisor training using scenarios cover advanced diving, diving medicine, and diving supervisor topics and skills.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in advanced scuba diving (8/97); in the upper-division baccalaureate category, 1 semester hour in diving supervision and 2 in diving medicine (8/97).

NV-0803-0008

Basic Diving Officer

Course Number: A-4N-0024.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 16 weeks (633 hours).

Exhibit Dates: 11/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect and maintain open-circuit scuba equipment; plan dives; dive using Mk 20 (Aqua Mask) and Mk 21 (Superlight 17) diving equipment; use underwater tools to perform cutting, welding, salvage, demolition, and hull maintenance procedures; apply knowledge of diving physics and medicine and advanced hyperbaric medicine.

Instruction: Lectures, written assignments, exams, informal quizzes, practical exercises, and performance tests to check job skills are methods of instruction. Part of a divemaster function is learned by on-the-job supervision.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic scuba diving, 1 in divemaster, 1 in marine diving physiology, and 1 in underwater hull husbandry (8/97).

NV-0803-0009

Marine Corps Combatant Diver

Course Number: A-433-0052.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 8 weeks (323 hours).

Exhibit Dates: 1/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform first aid and CPR; apply knowledge of diving physics and use decompression tables; identify and perform initial treatment for diving diseases and injuries; operate, under supervision, hyperbaric chamber; function as a diver/team member for open-circuit scuba lung automatic regenerated V underwater breathing apparatus; and perform bottom and hull inspections.

Instruction: Lectures, laboratories, tank and open water projects, and written and performance tests are methods of instruction.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic scuba and 2 in advanced scuba (8/97).

NV-0803-0010

Medical Deep Sea Diving Technician

Course Number: A-433-0020.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 24 weeks (960 hours).

Exhibit Dates: 10/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform first aid and CPR; apply knowledge of diving physics and use decompression tables; operate a hyperbaric chamber; function as a diver/dive team member for open-circuit scuba operations including maintenance of equipment; dive with shallow water surface-supplied (Mk 20/Aqua Mask) air equipment; dive with deep water surface-supplied (Mk 21/Superlight 17) air equipment; use hydraulic and hand tools safely; perform hull and ship appendage inspections including cleaning; perform underwater cutting using appropriate techniques and observing safety precautions; diagnose and treat diving accidents and injuries; perform patient evaluation including neurological/examinations; and perform necessary diving medical administration.

Instruction: Lectures, laboratories, tank, open water, and medical emergency projects, and performance tests and evaluations of medical problems are methods of instructions.

Credit Recommendation: In the vocational certificate category, 6 semester hours in marine diving technology (8/97); in the lower-division baccalaureate/associate degree category, 2 semester hours in basic scuba, 2 in advanced scuba, 2 in lightweight surface supplied diving, 2 in helmet/deep surface supplied diving, 3 in underwater ships husbandry including hull and appendage inspection and cleaning, and 3 in underwater cutting (8/97); in the upper-division baccalaureate category, 1 semester hour in marine diving physiology (8/97).

NV-0803-0011

Diver Explosive Ordnance Disposal

Course Number: A-431-0083.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 13 weeks (487 hours).

Exhibit Dates: 9/96–Present.

Learning Outcomes: Before 9/96 see NV-2202-0151. Upon completion of the course, the student will be able to apply knowledge of basic physics, diving medicine, and decompression tables to the diving process; qualify as an explosive ordnance disposal diver underwater on three breathing apparatus rigs: scuba, Mk 21 (Superlight 17), and Mk 16 (underwater rebreathing apparatus); and perform underwater search techniques.

Instruction: Lectures, discussion, physical conditioning, written tests and underwater performance evaluation cover underwater breathing apparatus certification on three diving rigs and basic underwater search techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic scuba diving and 3 in advanced scuba diving (8/97).

NV-0803-0012

Aircrewman Candidate, Class A

Course Number: Q-050-1500.

Location: Air Station, Pensacola, FL.

Length: 5 weeks (186 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate competence and mastery in aircraft operations and survival of aviation mishaps using personal performance skills, management of aircraft equipment, and lifesaving skills.

Instruction: The course utilizes lecture and demonstration (practice and evaluation) in aircraft equipment, and personal fitness, wellness, and survival techniques. Students also must successfully complete survival exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in outdoor safety and survival, 3 in physical training, and 2 in lifesaving (8/97).

NV-0803-0013

Surface Rescue Swimmer

Course Number: Q-050-0500.

Location: Air Station, Jacksonville, FL; Fleet Training Center, San Diego, CA; Air Station, Pensacola, FL.

Length: 4 weeks (148 hours).

Exhibit Dates: 4/94–Present.

Learning Outcomes: Upon completion of the course, the student will perform as a surface rescue swimmer. Duties include physical conditioning, swimming skills, rescue swimmer equipment, day or night escapes and rescue from parachute water entry; and perform will practicum first aid and lifesaving in accordance with current American Red Cross course standards.

Instruction: Lecture, laboratory, pool and open water demonstrations, practical exercises and skill tests will be used to evaluate performance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic swimming, rescue techniques, first aid and life saving. This credit duplicates that in Q-050-0600 (8/97).

NV-0804-0001

Basic Underwater Demolition/SEAL Training

Course Number: K-431-0024.

Location: Special Warfare Center, San Diego, CA.

Length: 25 weeks (1000 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to treat basic first aid illnesses and injuries as prescribed by the American Red Cross, apply basic physical training safety regulations, improve cardiovascular fitness through an extensive running program, improve overall muscular fitness, improve cardiovascular fitness through an extensive swimming program, perform in a stressful aquatic setting in a safe and efficient manner, perform rescue techniques, perform drown proofing techniques, use handguns safely and accurately, recognize diving disorders and effects of pressure, apply diving physics, perform free ascent, perform free descent; use open-circuit diving equipment, practice safety precautions in accordance with the Navy Diving Manual, complete repetitive dives following Navy procedures, and recognize dangers in marine environments.

Instruction: Lectures and practical exercises include firing range practice and diving. Tests are written and performance based.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in first aid, 2 in physical fitness and conditioning, 1 in aquatic fitness, 1 in marksmanship, and 2 in scuba techniques (3/92).

NV-0804-0002

Special Warfare Diving Equipment Maintenance and Repair

Course Number: K-431-0050.

Location: Special Warfare Training Center, San Diego, CA.

Length: 3 weeks (100 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, repair, and calibrate scuba (open circuit and mixed-gas) equipment, including tanks, regulators, and buoyancy compensators/life jackets using the Navy Diver's manual and equipment manufacturer's technical data. Student would qualify for scuba maintenance certificate.

Instruction: Lectures and laboratories use the Navy Diver's Manual and appropriate manufacturer's technical manuals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in scuba equipment maintenance certification (3/92).

NV-1002-0002

Builder Tool and Equipment Maintenance Technician
(Builder Tool and Equipment Maintenance)

Course Number: A-712-0010.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: 9 weeks (351-360 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, repair, and maintain carpenter and shop equipment and blade reconditioning equipment; repair and recondition gasoline engine driven hand tools; recondition blades, knives, and bits for carpenter shop tools and equipment; and establish preventive maintenance schedules.

Instruction: Lectures, audiovisuals, and extensive laboratory exercises cover preventive maintenance, reconditioning, and repair of carpenter shop machinery and builder hand tools.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in shop equipment and tool repair and maintenance and 2 in shop safety (4/97).

NV-1107-0001

Strategic Weapons System (SWS) Electronic Mathematics

Course Number: A-121-0482.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To provide naval personnel with the basic technical mathematics skills needed to perform required duties.

Instruction: Lectures and practical exercises cover technical mathematics, including whole numbers, fractions, decimals, signed numbers, exponents, roots, radicals, ratios, proportions, percentages, algebraic formulae, use of nonprogrammable calculators, trigonometric functions, Pythagorean theorem, Cartesian coordinates, vectors, complex numbers, plane vectors, vector algebra, and algebraic expressions.

Credit Recommendation: In the vocational certificate category, 3 semester hours in technical mathematics (11/83); in the lower-division baccalaureate/associate degree category, 2 semester hours in technical mathematics (11/83).

NV-1107-0002

Ship's Inertial Navigation System (SINS) Theory and Analysis

Course Number: *Version 1:* A-193-0370. *Version 2:* A-193-0370.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: *Version 1:* 2 weeks (51 hours). *Version 2:* 1-2 weeks (55-56 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate a ship's inertial navigation system. *Version 2:* Upon completion of the course, the student will be able to operate a ship's inertial navigation system.

Instruction: *Version 1:* Lectures and practical exercises cover the ship's inertial navigation system. *Version 2:* Lectures and practical exercises cover the ship's inertial navigation system.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in mathematics/physics (4/96). *Version 2:* Credit is not recommended because of the limited, specialized nature of the course (10/89).

NV-1205-0001

Music, Class A, Basic
(Basic Course, Class A)
(Naval School of Music, Class A, Basic)
(Bandsman Basic (Army))

Course Number: 450-F1; A-450-0010.

Location: School of Music, Little Creek, Norfolk, VA.

Length: 23 weeks (416-602 hours).

Exhibit Dates: 1/90–9/92.

Objectives: After 9/92 see NV-1205-0009. To provide Navy musicians with essential performance skills and with basic knowledge of theory, harmony, and ear training for purposes of instrumental technique improvement.

Instruction: Course covers fundamental notation; directions for performance and dance band devices; elementary phrase and triad construction; transposition and instruments; dance band notation reading; marching signal recognition; tuning, ensemble, and sight reading; marching position and drills; elements of music including aural and written rhythms and tonal relationships; transposing; self-study discipline and private instruction; and indoctrination in the history, structure, and procedures of Navy School of Music.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in elementary theory/harmony (excluding four part writing), 1 in ear training/sight singing, 2 in jazz theory/improvisation, 2-4 in applied performance (individual instruction) (2/79); in the upper-division baccalaureate category, 2 semester hours in performing ensembles (2/79).

NV-1205-0002

Music Advanced, Class C7
(Assistant Bandleader)
(Music, Class B, Advanced)
(Advanced, Class B)

Course Number: A-450-0014.

Location: School of Music, Amphibious Base, Norfolk, VA; School of Music, Little Creek, Norfolk, VA.

Length: 40 weeks (1200 hours).

Exhibit Dates: 1/90–6/91.

Objectives: After 6/91 see NV-1205-0006. To train student bandleaders to plan and prepare a Navy unit band for any of its wide variety of commitments, conduct with skill any engagement performed by a Navy unit band; effectively administer a Navy unit band; plan and conduct an effective in-service training program; apply the correct procedures for supplying a Navy unit band with instruments and accessories; arrange music for a band and its components; perform basic fundamentals on all band instruments; make minor repairs on all band instruments; and provide the student bandleader with training in the theories, principles, and mechanics of conducting; the importance and methods of good band administration; the techniques of arranging; and the theories of advanced harmony.

Instruction: The course comprises block courses in band administration, including instruction in band locations, leader billet allowance, organization and instrumentation, regulations, instrument supply, and personnel records; basic repair of wind instruments; advanced band management including personnel and public relations; advanced band administration, covering rules for ceremonies, reviews, parades, and presentations; instrument class, covering performance on percussion, woodwind, and brass instruments: drum majoring, covering baton and instrument positioning and general principles of marching bands; advanced arranging, including instruction on notation, melodic and harmonic analysis, instrumentation, principles of scoring and styles, and project completion and analysis; advanced ear training, including instruction in aural recognition, sight singing of diatonic melodies, scale fingering, basic keyboard harmony, and solfeggio, melodic, and harmonic dictation; advanced harmony, covering a review of basic harmony, secondary dominants, chromatically altered chords, and advanced modulation; advanced dance band rehearsal techniques, including performance devices, rehearsal techniques, materials, physical setup and transportation, and dance band literature; advanced conducting, including rehearsal psychology, choral and accompaniment techniques, complex beat patterns, showmanship, and practical experience conducting from a full score; rehearsal planning and techniques, covering practical application of conducting skills during daily rehearsals; advanced leadership and speech, covering basic leadership skills, public speaking, and military subjects; and dance band rehearsal techniques, including practical application of all rehearsal techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in advanced theory/harmony/ear training, 1 in elementary class piano, and 1 in instrument techniques (brass, woodwind and percussion) (2/79); in the upper-division baccalaureate category, 4 semester hours in advanced arranging, 4 in advanced conducting, 3 in dance band techniques, 3 in band management as an elective, 2 in public speaking, and 3 in personnel management as an elective (2/79); in the graduate degree category, 2 semester hours in advanced conducting based on institutional evaluation (2/79).

NV-1205-0003

Music Intermediate, Class C-1
(Music Intermediate, Class C)
(Music, Class C, Refresher)
(Naval School of Music, Class C, Refresher)

Course Number: 450-F2; A-450-0012.

Location: School of Music, Little Creek, Norfolk, VA.

Length: 23 weeks (960 hours).

Exhibit Dates: 1/90–12/90.

Objectives: After 6/91 see NV-1205-0008. To advance performance skills and to provide student musicians with a refresher course in the proper care of musical instruments; development of effective approaches to tone production and techniques; knowledge of written and sounding ranges of all instruments of the band; transposition of melodies for all instruments of the band; basic mechanics of transcribing and scoring for military marching and dance bands; performance of baton signals and positions; methods of aligning and maneuvering marching bands on fields; techniques of conducting beat patterns at varying dynamic levels; and basic knowledge of music theory, harmony, and sight singing; and to prepare student musicians for the leadership of concert, marching, or dance bands.

Instruction: The course comprises block courses in individual instrument instruction and individual practice, including instruction designed to fit the capabilities of each student and technical instruction in embouchure formation, breathing, attack and release, tone, intonation, articulation, flexibility, instrumental and dynamic range, rudiments, and sight reading; theory, harmony, ear training, covering a review of music theory and analysis, four-part writing, figured bass for dealing with triad inversions, dominant seventh chords, secondary triads, chord progressions, nonharmonic tones, diatonic seventh, higher dominant discords, simple modulation, and secondary dominant chords; instrumentation, covering the unique properties and scoring problems of each instrument of the band through discussion of theoretical practice, part and score analysis, and simple scoring for small groups of instruments; arranging, covering scoring for woodwind choirs, brass choirs, marching bands, and dance bands; drum majoring, including baton signals and their use in marching formations; conducting, including basic beat patterns, preparatory beats, tempo changes, and honors music; leadership, including principles of leadership, command responsibilities, and special functions of petty officers; concert band, including rehearsals of standard and current publications for military and concert bands; and dance band, including rehearsals of standard and current publications for dance bands.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in intermediate theory/harmony/ear training; 2 in applied music (individual instruction on principle instrument); 1 in applied music, woodwind, percussion, or brass (secondary instrument), 2-4 in concert performing ensembles, and 2 in marching band (2/79); in the upper-division baccalaureate category, 2-3 semester hours in instrumental arranging and 1 in elementary conducting (2/79).

NV-1205-0006

Enlisted Bandleader

Course Number: *Version 1:* A-450-0014. *Version 2:* A-450-0014.

Location: School of Music, Little Creek, Norfolk, VA.

Length: *Version 1:* 21 weeks (740 hours). *Version 2:* 17 weeks (680 hours).

Exhibit Dates: *Version 1:* 7/91–Present. *Version 2:* 1/91–6/91.

Learning Outcomes: *Version 1:* Before 7/91 see NV-1205-0002. Upon completion of the course, the student will be able to prepare a military band for any of its wide variety of commitments; conduct with skill any engagement performed by a military band; effectively administer a military band; apply the correct procedures for supplying a band with instruments and accessories; arrange music for a band and its components; perform basic fundamentals on all band instruments; and exhibit an understanding of the theories, principles, and mechanics of conducting; the importance and methods of good band administration; the techniques of arranging; and the theories of advanced harmony. *Version 2:* Upon completion of the course, the student will be able to plan and prepare a military band for any of its wide variety of commitments; conduct with skill any engagement performed by a military band; effectively administer a military band; apply the correct procedures for supplying a band with instruments and accessories; arrange music for a band and its components; perform basic fundamentals on all band instruments; and exhibit an understanding of the theories, principles, and mechanics of conducting; the importance and methods of good band administration; the techniques of arranging; and the theories of advanced harmony.

Instruction: *Version 1:* The course comprises block courses in band administration, including instruction in band locations, leader billet allowance, organization, instrumentation, regulations, instrument supply, personnel records, and audition procedures; advanced band administration, including rules for ceremonies, reviews, parades, concert performances, and presentation and general principles of marching bands; advanced arranging, including instruction on notation, melodic and harmonic analysis, instrumentation, principles of scoring and styles, and project completion and analysis; advanced ear training, including instruction in aural recognition, sight singing of diatonic melodies, scale fingering, basic keyboard harmony, and solfeggio, melodic, and harmonic dictation; advanced harmony, covering a review of basic harmony, secondary dominants, chromatically altered chords, and modulation; advanced dance band rehearsal techniques, including materials, physical setup and transportation, and dance band literature; advanced conducting, including rehearsal psychology, complex beat patterns, showmanship, and practical experience conducting from a full score; rehearsal planning and techniques including practical application of conducting skills during daily rehearsals; and advanced speech. *Version 2:* The course comprises block courses in band administration, including instruction in band locations, leader billet allowance, organization, instrumentation, regulations, instrument supply, and personnel records, and audition procedures; advanced band administration, including rules for ceremonies, reviews, parades, concert performances, and presentation and general principles of marching bands; advanced arranging, including instruction on notation, melodic and harmonic analysis, instrumentation, principles of scoring and styles, and project completion and analysis; advanced ear training, including instruction in aural recognition, sight singing of diatonic melodies, scale fingering, basic keyboard harmony, and solfeggio, melodic, and harmonic dictation; advanced harmony, covering a review of basic harmony, secondary dominants, chromatically altered chords, and modulation; advanced dance band rehearsal techniques, including materials, physical setup and transportation, and dance band literature; advanced conducting, including rehearsal psychology, complex beat patterns, showmanship, and practical experience conducting from a full score; rehearsal planning and techniques including practical application of conducting skills during daily rehearsals; and advanced speech.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6-8 semester hours in advanced theory/harmony/ear training and 1 in elementary class piano (2/93); in the upper-division baccalaureate category, 4 semester hours in advanced arranging, 4 in advanced conducting, and 1 in public speaking (2/93). *Version 2:* In the lower-division baccalaureate/associate degree category, 4-6 semester hours in theory/harmony/ear training and 1 in elementary class piano (2/93); in the upper-division baccalaureate category, 4-6 semester hours in advanced arranging, 4 in advanced conducting, and 1 in public speaking (2/93).

NV-1205-0007

Music Preparatory, Class AP

Course Number: A-450-0015.

Location: School of Music, Little Creek, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify pitches and rhythms; construct and identify major and minor scales, intervals, and triads; perform transposition; construct melodies; vocally reproduce and score musical notation to sound; perform in military concert and stage band; perform instrumental technical and flexibility exercises; prepare solos, etudes, and instrumental/vocal related literature; and interpret different musical styles. Students will be able to play Grade III music for concert band, stage band, military marching band, and solo performance as well as musical selections on assigned major instrument at the 2.0 level or above.

Instruction: Topics covered in theory include grand staff, notation, rhythm and meter, major and minor scales, and key signatures. Topics covered in the band performance techniques portion of the course include individual instrumental instruction, basic ensemble performance techniques, and sight reading.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in elementary music theory and 1 in band performance (2/93).

NV-1205-0008

1. Section Leader, Class C1
2. Music Intermediate, Class C

Course Number: *Version 1:* A-450-0012. *Version 2:* A-450-0012.

Location: School of Music, Little Creek, Norfolk, VA.

Length: *Version 1:* 21 weeks (801-840 hours). *Version 2:* 17 weeks (544 hours).

Exhibit Dates: *Version 1:* 7/91–Present. *Version 2:* 1/91–6/91.

Learning Outcomes: *Version 1:* Before 7/91 see NV-1205-0003. Upon completion of the course, the student will be able to play musical selections on assigned major and minor instruments at the 2.9 level or above for major instrument and 2.7 or above for minor instrument (using a 4-point scale with 4 being the highest level); play in concert band, military marching band, stage band, popular music combo, improvisational application, and solo performance; rehearse, at the 2.7 level or above, an ensemble section and a small popular music combo using effective rehearsal techniques; assemble and guide, at the 2.7 level or above, a military marching band performing music, including the US national anthem, honors, and marches through a parade and stationary ceremony, while using oral commands, mace signals, and basic conducting techniques; produce a usable, original, four-horn musical arrangement at the 2.7 level or above; apply, at the 2.7 level or above, principles and guidelines contained in appropriate directives, manuals, and references to military band administration procedures. *Version 2:* Before 1/91 see NV-1205-0003. Upon completion of the course, the student will be able to play musical selections on assigned major and minor instruments at the 2.9 level or above for major instrument and 2.7 or above for minor instrument (using a 4-point scale with 4 being the highest level); play in concert band, military marching band, stage band, popular music combo, improvisational application, and solo performance; rehearse, at the 2.7 level or above, an ensemble section and a small popular music combo using effective rehearsal techniques; assemble and guide, at the 2.7 level or above, a military marching band performing music, including the US national anthem, honors, and marches through a parade and stationary ceremony, while using oral commands, mace signals, and basic conducting techniques; produce a usable, original, four-horn musical arrangement at the 2.7 level or above; apply, at the 2.7 level or above, principles and guidelines contained in appropriate directives, manuals, and references to military band administration procedures.

Instruction: *Version 1:* Topics include instrumental instruction, ear training (syncopation, subdivision, diatonic, and modal melodies), instrumental voicing techniques (traditional figured bass, chord progression analysis, chord scales, rhythm section scoring, concept of three-horn writing, principles of four-way voicing), improvisation (diatonic and modal progressions, song analysis, diminished seventh chords, altered chords, solo improvisation), applied concert band rehearsal and performance, applied stage band rehearsal performance, drill band, drum majoring, section leader rehearsal techniques, ceremonial conducting, band administration, supervised instrumental practice, and concert performance. *Version 2:* Topics include instrumental instruction, ear training (syncopation, subdivision, diatonic, and modal melodies), instrumental voicing techniques (traditional figured bass, chord progression analysis, chord scales, rhythm section scoring, concept of three-horn writing, principles of four-way voicing), improvisation (diatonic and modal progressions, song analysis, diminished seventh chords, altered chords, solo improvisation), applied concert band rehearsal and performance, applied stage band rehearsal performance, drill band, drum majoring, section leader rehearsal techniques, ceremonial conducting, band administration, supervised instrumental practice, and concert performance.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 8 semester hours in intermediate theory/harmony/ear training, 2 in applied music (private instruction on instrument), 1 in applied music on secondary instrument (woodwind, brass, or percussion), 2-4 in concert performing ensembles, and 2 in marching band (2/93); in the upper-division baccalaureate category, 2 semester hours in instrumental arranging and 2 in conducting (2/93). *Version 2:* In the lower-division baccalaureate/associate degree category, 8 semester hours in theory/harmony/ear training, 1 in applied music (private instruction on instrument), 2 in concert performing ensembles, and 1-2 in marching band (2/93); in the upper-division baccalaureate category, 2 semester hours in conducting (2/93).

NV-1205-0009

Music Basic

Course Number: A-450-0010.

Location: School of Music, Little Creek, Norfolk, VA.

Length: 23 weeks (709-960 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Before 10/92 see NV-1205-0001. Upon completion of the course, the student will be able to play grade IV music (for major instrument) and grade III-IV music (for minor instrument) for concert band, stage band, military marching band, popular music combo, improvisational application, and solo performance. Student will also be able to play musical selections on assigned major and minor instruments at the 2.7 level or above for major instrument and 2.5 level or above for minor instrument.

Instruction: Topics in theory include fundamental notation; major and minor scales; intervals, triads, and inversions; transposition; cadences; nonharmonic tones; melody construction; seventh chords; altered chords; rhythmic and melodic organization; ear training; and sight singing. Topics in applied performance include instrumental instruction, band rehearsal, sight reading in concert band repertoire, and maintenance and tuning of instruments. Topics in jazz theory include swing rhythm, popular music combo techniques, lead sheets, popular song forms, simple arranging and improvisation, and analysis of popular forms.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in music theory, 2 in ear training/sight singing (musicianship), 2-4 in applied performance, and 1 in jazz theory and improvisation performance (2/93).

NV-1303-0001

Machinist's Mate, Class A1 (600 PSI)

Course Number: A-651-0015; A-651-0082.

Location: Service School Command, Great Lakes, IL.

Length: Self-paced, 4 weeks (160 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train personnel in the basic operation of high-pressure steam plants and associated equipment.

Instruction: Lectures and practical exercises cover the duties of machinist's mates, including refrigeration, auxiliary plant operation, lubrication, and propulsion systems. Self-paced instruction includes steam turbines, turbo-generators, and duties of watchstanding.

Credit Recommendation: In the vocational certificate category, 3 semester hours in steam plant orientation (1/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in steam plant orientation (1/82).

NV-1303-0002

Machinist's Mate, Class A1 (1200 PSI)

Course Number: A-651-0015; A-651-0053.

Location: Service School Command, Great Lakes, IL.

Length: 9 weeks (277 hours).

Exhibit Dates: 1/90–12/90.

Objectives: To train personnel in the operation of a steam propulsion plant.

Instruction: Lectures and practical exercises cover the principles, operation, and maintenance of a high-pressure steam propulsion plant, including boilers, combustion theory, steam systems, water chemistry, lubricating oil systems, electrical systems, and fire fighting systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic marine engineering or 3 in power plant fundamentals (1/86).

NV-1303-0003

AN/AVR-2 Laser Detecting Set (LDS)
Intermediate Level Maintenance

Course Number: C-102-4023.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 2 weeks (80 hours).

Exhibit Dates: 12/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, maintain, test, and troubleshoot the AN/

AVR-2 laser detecting set and the TS-4321/AVR-2 laser detecting test set.

Instruction: Course covers laser function, purpose, safety, and theory of operation including ESD sensitive handling and materials. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in applied physics (7/94).

NV-1304-0007

Ocean Systems Technician Equipment Maintenance

Course Number: A-130-0241.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 23 weeks (920 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train personnel in the operation, theory, maintenance, and troubleshooting of a variety of computer subsystems and peripherals.

Learning Outcomes: Upon completion of this course, the student will be able to maintain, test, and repair computer systems; test and repair computer peripherals, including terminals, disk drives, printers, and multiplexers; and perform routine maintenance on computers and peripherals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer system troubleshooting, maintenance, and repair and 3 in computer peripheral devices (8/83).

NV-1304-0008

Ocean Systems Operational Procedures Officer

Course Number: S-2G-0405.

Location: Readiness Training Facility, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to oversee the integrated undersea surveillance system.

Instruction: Lectures and practical exercises cover topics specific to the surveillance system, including communications, data and signal processing equipment interface, and watch coordination. Only units 1, 5, and 6 were evaluated; the remainder of the course is classified.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1304-0009

Ocean Systems Operational Procedures Enlisted

Course Number: S-210-0400.

Location: Readiness Training Facility, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a specific undersea surveillance system.

Instruction: Lectures and practical exercises relate to the operation of the undersea surveillance system. Topics include signal flow, operations, message receipt and routing, and plot and status board operations. Only units 1, 5, and 6 were evaluated; the remainder of the course is classified.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1304-0010

Ocean Systems Advanced Acoustics

Course Number: S-210-0401.

Location: Readiness Training Facility, Virginia Beach, VA.

Length: 14 weeks (560 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to tactically deploy signal and data processing equipment and apply basic mathematical models (logarithms and Fourier series) to the analysis of sound wave propagation in seawater.

Instruction: Lectures and practical exercises cover mathematics, basic oceanography, equipment signal flow, automated data processing, and acoustic signal analysis. Topics also include statistical means, standard deviation, Fourier series, characteristics of seawater, and sound wave propagation in sea water. Only units 1-33 were evaluated. The remaining units were classified.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics (3/90); in the upper-division baccalaureate category, 3 semester hours in ocean acoustics (3/90).

NV-1304-0011

Meteorological Equipment Maintenance, Class C1, USMC

Course Number: C-198-3899.

Location: Naval Detachment, Chanute AFB, IL.

Length: 14-15 weeks (488 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain selected meteorological and oceanographic equipment, aboard ship and at naval shore activities, with minimal supervision.

Instruction: Lectures and practical exercises cover logic circuits, the maintenance and repair of facsimile receivers, surface observation equipment, runway visibility equipment, weather radars, soldering, weather satellites, and weather data recorders.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic systems troubleshooting and maintenance and 4 in computer systems troubleshooting and maintenance (3/91).

NV-1304-0012

1. Aerographer's Mate, Class A1
   (Marine Corps Weather Observer)
2. Aerographer's Mate, Class A1 (Navy unique portion)

Course Number: *Version 1:* C-420-2010; E3ABR1WO31 008. *Version 2:* C-420-2010.

Location: *Version 1:* Technical Training Unit, Keesler AFB, MS. *Version 2:* Navy Detachment, Chanute AFB, IL.

Length: *Version 1:* 11-12 weeks (472 hours . *Version 2:* 5-6 weeks (214 hours).

Exhibit Dates: *Version 1:* 10/92–Present. *Version 2:* 1/90–9/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will have the knowledge and skills to understand basic meteorology/oceanography and to observe, record, and analyze weather and oceanographic elements as necessary for naval operations. *Version 2:* Upon completion of the course, the student will be able to observe, record, and analyze weather and oceanographic elements as necessary for naval operations.

Instruction: *Version 1:* Instruction includes studies in basic meteorology; techniques of weather observation; recording and transmission of weather data; operation of communications equipment; decoding and plotting of surface and upper air codes; use of meteorological satellite data; basic oceanography, including oceanographic circulation, temperature profiles, and surface distribution; sea states; sound and electromagnetic propagation; encoding and analysis of bathythermographic data; and mixed layer depths. *Version 2:* Instruction includes studies in basic meteorology; techniques of weather observation; recording and transmission of weather data; operation of communications equipment; decoding and plotting of surface and upper air codes; use of meteorological satellite data; basic oceanography, including oceanographic circulation, temperature profiles, and surface distribution; sea states; sound and electromagnetic propagation; encoding and analysis of bathythermographic data; and mixed layer depths.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in basic meteorology, 2 in basic physical oceanography; for Navy personnel only 3 in meteorological observations or for Marine Corps personnel only, 4 in basic weather observations (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in basic meteorology, 1 in meteorological observation, and 2 in basic physical oceanography (3/91).

NV-1304-0013

1. Aerographer's Mate, Class C1
   (Meteorological and Oceanographic Analyst/Forecaster)
2. Aerographer's Mate, Class C1 (Navy unique portions)

Course Number: *Version 1:* C-420-2011; 3AAR1W70 009. *Version 2:* C-420-2011.

Location: *Version 1:* Technical Training Unit, Keesler AFB, MS. *Version 2:* Naval Detachment, Chanute AFB, IL.

Length: *Version 1:* 31 weeks (1272 hours). *Version 2:* 10 weeks (404 hours).

Exhibit Dates: *Version 1:* 10/92–Present. *Version 2:* 8/90–9/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to obtain and use meteorological and oceanographic data to provide necessary environmental data for manual operations conducted at sea, in flight, and during times of war. *Version 2:* Upon completion of the course, the student will be able to obtain and use meteorological and oceanographic data to provide necessary environmental forecasts for naval operations.

Instruction: *Version 1:* Lectures, discussions, demonstrations, and performance are methods of instruction. Topics include atmospheric physics, physical oceanography, skew-

T analysis, climatology, weather analysis, radar and satellite interpretation, oceanography, severe weather analysis, advanced Doppler radar, tropical weather systems, forecast weather elements, warfare operations, tropical/southern hemisphere analysis, aviation weather, tactical environmental support system operations, and atmospheric dynamics. *Version 2:* Lectures and practical exercises cover marine and aviation weather forecasting, analysis of tropical/southern hemisphere weather, typical warfare operations, equipment hazards and personnel safety, general study of the oceans, hydroacoustics, and techniques for weather briefing.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 in climatology, 3 in warfare operations, 4 in weather forecasting, 3 in aviation weather, 2 in atmospheric physics, and 2 in marine acoustics; for Navy personnel only, 3 semester hours in applied physical oceanography or 2 in computer applications Marine Corps personnel only (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in applied physical oceanography, 3 in aviation weather, and 3 in climatology (3/91); in the upper-division baccalaureate category, 3 semester hours in applied marine acoustics (3/91).

NV-1304-0014

Aerographer's Mate, Class C1, Weather Forecaster USMC (Navy/Marine Corps unique portion)

Course Number: C3AAR2517 007.

Location: Navy Detachment, Chanute AFB, IL.

Length: 6-7 weeks (275 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to obtain and use meteorological and oceanographic data to provide environmental forecasts for Navy and Marine Corps operations.

Instruction: Lectures and practical exercises cover the analysis of tropical/southern hemisphere weather systems, aviation weather, special warfare operations, general physical oceanography, hydroacoustics, use of radar, and instruction to enable student to provide marine and climatological briefings.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in applied physical oceanography, 3 in aviation weather, and 3 in climatology (3/91); in the upper-division baccalaureate category, 3 semester hours in applied marine acoustics (3/91).

NV-1304-0015

Technical Training Marine Corps Weather Observer PIBAL Equipment and Operation

Course Number: C3ABR25130 003.

Location: Naval Detachment, Chanute AFB, IL.

Length: 7-8 weeks (430 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to make necessary observations and encode and transmit, as well as receive and decode, oceanographic and meteorological data necessary for Navy/Marine Corps operations.

Instruction: Instruction includes lectures and practical exercises in the use of most standard types of weather instrumentation, such as a weather station, wind recorders, wind speed/direction sensors, precipitation recorders, psychrometric computers, electric and hand-operated psychrometers for measurement of relative humidity, barographic instrumentation, cloud height measuring systems, printers, transmissometers for visibility determination, as well as miscellaneous auxiliary equipment. Instruction also includes lectures on basic oceanography, weather parameters, and use of codes for transmission of data.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in applied weather radar, 2 in basic meteorological oceanography, and 3 in weather observation (3/91).

NV-1304-0016

Basic Oceanography Accession Training

Course Number: S-5A-0011.

Location: Construction Training Center, Gulfport, MS.

Length: 11 weeks (392 hours).

Exhibit Dates: 5/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the present state of the atmosphere and ocean (nowcast) using proper technical terms and brief others on the probable future state (forecast) using computer output from a central forecast facility. In addition, the student will be familiar with basic concepts in bathymetry and associated methods of marine surveying, submarine acoustics, and satellite/surface remote sensing technology.

Instruction: Instruction is basic classroom lectures supplemented by laboratory exercises in short-range (time) oceanographic and meteorological forecasting. Regular written examinations and oral practicums are given.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorology and 2 in oceanography (5/95).

NV-1304-0017

Reserve Aerographer's Mate Forecaster Module A

Course Number: R-420-0003.

Location: Construction Training Center, Gulfport, MS.

Length: 2 weeks (80 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use the basic concepts and characteristics of oceanic circulation and sound; propagation; climatology; air masses; fronts and primary frontal zones; surface and upper air analysis of plotted charts; atmospheric stability; and interpretation of codes, messages, and facsimile charts required for aviation weather briefings. Student will analyse and interpret data and brief people on surface and upper air weather features.

Instruction: Course consists of 70 hours of lecture and 10 hours of laboratory. Topics covered include oceanography and hydroacoustic concepts, meteorology, analysis, Skew-T, codes and facsimile charts, satellites, and briefing techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in synoptic meteorology laboratory. Credit should be granted only after successful completion of modules A, B, C, and D, for a total of 4 laboratory credits (5/95).

NV-1304-0018

Reserve Aerographer's Mate Forecaster Module B

Course Number: R-420-0004.

Location: Construction Training Center, Gulfport, MS.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will understand Skew-T; use computers to analyze and predict weather; understand and be able to identify voracity, convergence/divergence, warm/cold air advection, and their relationships to horizontal and vertical air motions; describe numerical modeling and regional area forecast systems; describe pressure systems and fronts; determine air system movement empirical aids for constructing prognoses of synoptic features based on movement and intensity; describe the basic feature of satellite imagery; identify basic concepts of severe convective weather systems; and understand the basics of electro-optics, refractivity, topical meteorology, and TESS (3).

Instruction: Lecture and laboratory instruction cover Skew-T, analysis and forecasting of air systems, convergence/divergence, advection, air movement effects, atmospheric waves, blocking and cut-off systems, surface/upper air systems, satellites, severe weathers, and new equipment/instrumentation. Performance evaluations and criterion tests are required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in synoptic meteorology laboratory. Credit should be granted only after successful completion of modules A, B, C, and D, for a total of 4 laboratory credits (5/95).

NV-1304-0019

Reserve Aerographer's Mate Forecaster Module C

Course Number: R-420-0005.

Location: Construction Training Center, Gulfport, MS.

Length: 2 weeks (80 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to brief others on current synoptic weather conditions; forecast visibility, precipitation, surface winds, and pressure, on short time scales; assemble aviation weather information; and issue weather warnings based on centralized forecasts.

Instruction: Instruction is basic classroom lectures supplemented by laboratory exercises in decoding weather data, using standard computer programs, and issuing forecasts. Regular written examinations and oral practicums are given.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in synoptic meteorology laboratory. Credit should be granted only after successful completion of modules A, B, C, and D, for a total of 4 laboratory credits (5/95).

NV-1304-0020

Reserve Aerographer's Mate Advanced Forecaster Module D

Course Number: R-420-0006.

Location: Construction Training Center, Gulfport, MS.

Length: 2 weeks (80 hours).

Exhibit Dates: 2/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use automated meteorology systems, including CONTEL meteorological workstation, PCGRAFAX, and the naval satellite display system; be familiar with meteorological/oceanographic products provided by regional oceanography centers; describe principles and uses of hydroacoustics and operational oceanography; use computer-generated products; recognize and forecast tropical weather systems; interpret weather satellite data; and have a basic familiarity of NEXRAD radar and use of the SHARP workstation.

Instruction: Lectures and laboratory instruction cover meteorological systems, meteorological/oceanographic computer-generated products, environmental services, operational oceanography, tropical weather systems, satellite interpretation, radar systems, and SHARP workstation. Course includes criterion tests.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in synoptic meteorological laboratory. Credit should be granted after successful completion of modules A, B, C, and D, for a total of 4 laboratory credits (5/95).

NV-1401-0004

Joint Uniform Military Pay System (JUMPS) Pay Entitlements and Procedures

Course Number: A-542-0012.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Objectives: Upon completion of the course, the student will be able to maintain military pay records, including leave and earnings statements, personnel financial records, and pay entitlements.

Instruction: Lectures and performance tests include the filling-out and maintaining of pay forms and transfers.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/89).

NV-1401-0005

Senior Disbursing Clerk Enlisted Refresher

Course Number: A-542-0015.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 5 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will perform duties of a disbursing clerk in processing travel and payments, disbursing military pay and allowances, processing financial returns, and maintaining the cashbook.

Instruction: Classroom lectures, discussions, workbook exercises, quizzes, and a final exam cover organization of the Navy pay and accounting system including supporting publications, public vouchers, foreign currency conversion, financial returns, automated military pay disbursing system, military leave, and travel payments and allowances.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in accounting procedures (military pay and allowances) (12/89).

NV-1401-0006

Disbursing Clerk, Class A1

Course Number: A-542-0011.

Location: Technical Training Center, Meridian, MS.

Length: 7 weeks (288 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain payroll, prepare and review payroll documents and leave statements, and compute pay entitlements.

Instruction: Course includes publications, fund disbursing procedures, accounting, pay and allowances, insurance, income tax, savings deposits, document control, public funds, typing, and correspondence. Methodology includes lectures, discussions, and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in clerical finance, 2 introduction to payroll accounting, and 2 in keyboarding (11/92).

NV-1402-0008

Fleet Data Processing Officers Training

Course Number: A-8B-0016.

Location: Supply Corps School, Athens, GA.

Length: 3-4 weeks (120-180 hours).

Exhibit Dates: 1/90–12/93.

Objectives: To train officers in ADP operations management, analysis, and programming.

Learning Outcomes: Upon completion of the course, the student will be able to match computer concepts with appropriate computer terminology; develop a flowchart of at least 25 symbols; write a computer program using the BASIC language; and manage a computer center, including managing resources, supervising personnel, and providing services to users.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to data processing (7/83).

NV-1402-0010

DD-963 Naval Tactical Data Systems (NTDS) Data Input

Course Number: K-221-0075; J-221-0075.

Location: Fleet Combat Training Center, Pacific, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 2-3 weeks (70-105 hours).

Exhibit Dates: 1/90–12/96.

Objectives: To train selected enlisted personnel in the skills related to the data collection area of the DD-963 Naval Tactical Data System.

Instruction: Classroom lectures and laboratory exercises cover NTDS equipment, input functions, user functions, data links, and mock-up/chalk talk.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (6/86).

NV-1402-0018

Data Analysis, Class C1

(Data Analysis, Class C)

(Aviation Maintenance Data Analysis, Class C)

Course Number: C-555-2011.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 4-6 weeks (174-200 hours).

Exhibit Dates: 1/90–9/95.

Objectives: To train enlisted personnel and officers in the field of maintenance data analysis.

Instruction: Lectures cover graphic presentations, data documentations, descriptive and inferential statistics, control charts, work measurement, linear correlation, and analytical projection.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in business statistics (8/92).

NV-1402-0023

DD-963 Naval Tactical Data System (NTDS) Data Utilization, Class C2

(Naval Tactical Data System (NTDS) (Data Utilization))

(DD-963 Naval Tactical Data System (NTDS) Data Utilization)

Course Number: K-2G-0074; J-2G-0074.

Location: Fleet Combat Training Center, Pacific, San Diego, CA; Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 2-3 weeks (70-105 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train officers and senior petty officers in the current operating procedures, capabilities, and limitations of the DD-963 Naval Tactical Data System.

Instruction: Classroom lectures and laboratory exercises in NTDS equipment, user function, input functions, data links, and mock-up/chalk talk. Course includes functional capabilities and front panel controls of the tactical data system and subsystems, such as I/O console, monitors, decoders, weapon control panel, and data links. Proper operating procedures are stressed along with the interaction with and responsibilities of other weapons control personnel.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/91).

NV-1402-0026

Central Navigation Computer (CNC) (Input/Output)

Course Number: A-193-0249.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Submarine Training Center, Charleston, SC.

Length: 3 weeks (90 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train navigation electronics technicians to understand and maintain CP-890/UYK digital navigation computers input/output sections.

Instruction: Lectures and practical exercises cover functions of the CNC input/output controllers and the function of all input/output circuits, essential events and their timing relationships for all input/output operations, and logic circuits for input/output instruction executions. Laboratory exercises cover operational and self-test features, interpretation of malfunctions, fault isolation, and repair procedures.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in computer organization (I/O channels) (3/81).

NV-1402-0048

Cryptologic Systems Software

Course Number: A-532-0028.

Location: Security Group Activity, Skaggs Island, Sonoma, CA.

Length: 12 weeks (360 hours).

Exhibit Dates: 1/90–1/93.

Objectives: To train personnel to operate and program a PDP-11 computer by developing programming skills in FORTRAN, the MACRO-11 assembly languages, and the RSX-11M operating system.

Instruction: The course, which is divided into four areas, includes an introductory section in computer science, including number systems, arithmetic operations, computer architecture, peripheral devices, interunit communications, logic flow charts, and computer languages. The second section is a complete FORTRAN programming course on language syntax. The third section covers PDP-11 assembly language. The last section of the course covers PDP-11 operating systems. Two hundred seven hours are devoted to developing programming language skills and computer operating techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer operating systems—PDP-11, 3 in introduction to data processing, 3 in FORTRAN programming, and 3 in assembly language programming for the PDP-11 (7/80).

NV-1402-0054

AN/USM-449(V) Intermediate Maintenance

Course Number: C-198-3018.

Location: Air Station, Jacksonville, FL; Air Station, Moffett Field, CA.

Length: 16-17 weeks (640-680 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide experienced technicians with the knowledge and theory to operate, program, troubleshoot, and repair electronic systems using a specific computer-controlled automatic test set.

Instruction: Lectures, demonstrations, and practical exercises cover computer organization, programming (using machine and the ATLAS and DETOL languages), and interfacing; analyzing circuits; and operation. Programming and interfacing at the peripheral test equipment level for both analog and digital devices is emphasized as well as fault identification in tested systems and the computer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer organization and functions, 3 in computer system interface and operation, and 2 in computer laboratory (3/93).

NV-1402-0055

P-3A/B TAC/NAV Mod Organizational Maintenance

Course Number: C-102-3569.

Location: Air Station, Moffett Field, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–1/93.

Objectives: To provide maintenance personnel with training in system operation, troubleshooting, and component replacement for navigational equipment AN/ASN-124.

Instruction: Lectures and practical exercises cover the basic operation of the AN/ASN-124 and AN/AQA-7(V)5 systems, including signal processing, analog to digital conversions, system operation, and function of inertial navigation subsystems; omega navigation; power distribution; and operational checks including built-in digital computer self-test checks.

Credit Recommendation: In the vocational certificate category, 3 semester hours in operation and repair of analog/digital systems (7/81).

NV-1402-0056

AN/USM-449(V) Intermediate Operator

Course Number: C-198-3017.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–1/93.

Objectives: To prepare technicians to operate and program, under limited supervision, the AN/USM-449(V) test set.

Instruction: Lectures and laboratory exercises cover the control and operating procedures for the test set which performs computer-controlled testing of analog and digital systems. Course includes procedures for loading, editing, and running programs; programming techniques using the DETOL language; program structure; instruction format; operations and expressions; error codes; and interfacing of the computer to tested systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/81).

NV-1402-0057

Digital Fundamentals

Course Number: C-000-3178.

Location: Air Station, Miramar, San Diego, CA; Air Station, Beaufort, SC; Air Station, El Toro, CA; Air Station, Jacksonville, FL; Air Station, Oceana, Virginia Beach, VA; Air Station, Cecil Field, FL.

Length: 2 weeks (76 hours).

Exhibit Dates: 1/90–1/93.

Objectives: To introduce the concepts of basic digital circuits, number systems, and basic logic devices.

Instruction: Lectures cover basic computer concepts; binary, octal, and hexadecimal number systems; base conversion; basic logic gates; multivibrators; registers; counters; program concepts; and flow charts.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to electronic digital circuits or 1 semester hour in basic digital concepts for electrical engineering majors (3/82).

NV-1402-0062

AN/SYR-1 Weapons Direction System (WDS) Mk 14 Maintenance

Course Number: A-150-0230.

Location: Combat Systems Technical Schools Command, Mare Island, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 17 weeks (600 hours).

Exhibit Dates: 1/90–1/93.

Objectives: To train qualified personnel in the operation and repair of the WDS Mk 14 system and its subsystems.

Instruction: Lectures and practical exercises cover the operation, maintenance, and repair of the SYR-1 system and related subsystems, including number conversions (digital to octal to binary), binary and octal additions, subtraction, complementing procedures, logic functions (AND, OR, XOR, NAND, and NOR), and digital flowcharting; programming, including addressing (8 bit and 16 bit), formatting, transfer procedures, registers, loop instructions, subroutine calls, indirect addressing, and I/O instructions (series and parallel); mag tape fundamentals, including loading, tape systems, and formatting and maintenance procedures; operating instructions; and maintenance and repair procedures using standard electronic equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in logic systems, 3 in computer systems, and 5 in electronic systems troubleshooting (11/83).

NV-1402-0063

AN/GYK-22 (BITMAN) Maintenance

Course Number: A-102-0115.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (237 hours).

Exhibit Dates: 1/90–1/94.

Objectives: To provide personnel with training to perform preventive and corrective maintenance on the BITMAN computer system.

Learning Outcomes: Upon completion of the course, the student will be able to write and run simple maintenance programs on digital computer systems, trace the operations of the various subgroups (control, memory, I/O, and peripherals), and troubleshoot to the component level using system trouble indicators and test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer system maintenance (1/84).

NV-1402-0065

Cryptologic Technician Communications—Communications Systems Operations, Control, and Management

Course Number: A-260-0029.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 19 weeks (753 hours).

Exhibit Dates: 1/90–1/94.

Objectives: To provide personnel with knowledge and skills in communications systems, operations, control, and management.

Learning Outcomes: Upon completion of the course, the student will be able to describe an extensive communication system, including radio receiver and transmitter, teletype machine, landlines, satellites, and digital computers; describe the basics of radio communications, including modulation, multiplexing, and normal tests and adjustments; operate a digital computer including data and program entry from console keyboard or tape/deck drives; and interpret error messages and follow appropriate diagnostic procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in communications survey and 1 in computer operation (1/84).

NV-1402-0066

Cryptologic Technician (Technical) ELINT Operator

Course Number: A-231-0028.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–12/97.

Objectives: To provide the student with the knowledge and skill necessary to operate data collection equipment and to evaluate and disseminate the appropriate information.

Learning Outcomes: Upon completion of the program, the student will be able to intercept 88 percent of available signals and measure such things as radio frequency, pulse duration, pulse repetition frequency, and line of bearing and compute radar characteristics, such as minimum range, maximum unambiguous range, and beam width.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/87).

NV-1402-0067

Cryptologic Technician M, Outboard Maintenance

Course Number: A-102-0208.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 29 weeks (1177 hours).

Exhibit Dates: 1/90–1/95.

Objectives: To provide training for preventive and corrective maintenance on a specialized piece of equipment.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance, per appropriate manuals, on equipment in the OUTBOARD suite, including the AN/SLR-16, AN/SLR-19, AN/UYQ-23 and associated units and describe digital computer basics including the functions of a microprocessor.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in survey of microprocessor systems and 3 in electronic systems troubleshooting and maintenance (1/84).

NV-1402-0068

Cryptologic Technician M, Wideband System Maintenance

Course Number: A-102-0230.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 26 weeks (1024 hours).

Exhibit Dates: 1/90–1/90.

Objectives: After 1/90 see NV-1402-0197. To provide technicians with training in preventive and corrective maintenance on a computer controlled wideband receiver signal processor.

Learning Outcomes: For the course at a later date, see NV-1402-0197. Upon completion of the course, the student will have a knowledge and understanding of a signal digitizer and processor, memory, translator/recorder, display power supplies and a maintenance philosophy of a computerized wideband radio signal processor; and be able to perform maintenance and troubleshooting, to the component level, using basic knowledge of digital/computer principles and specific knowledge of system operation and subsystems.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in computer controlled digital operating systems (6/87).

NV-1402-0069

Cryptologic Technician M, Universal Cryptologic Processor Maintenance

Course Number: A-102-0290.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–2/90.

Objectives: After 2/90 see NV-1402-0177. To provide technicians with the entry-level knowledge of PDP-11 digital computer required for entry into specialized DEC equipment maintenance courses.

Learning Outcomes: Upon completion of the course, the student will be able to describe the architecture, instructions, addressing, timing, and operation of the PDP 11-35/40 computer system, including control unit, core memory, memory management, and interfacing and troubleshoot down to the component level using system diagnostics, digital test equipment, and standard test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in PDP-11 35/40 system maintenance and troubleshooting (7/87).

NV-1402-0070

Cryptologic Technician M Universal Cryptologic Processor Wideband Subsystem Maintenance, Class C

Course Number: A-102-0291.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–11/90.

Objectives: After 11/90 see NV-1402-0198. To provide technicians with training in preventive and corrective maintenance on the PDP 11 35/40 and associated equipment used in the wideband radio receiving system.

Instruction: For the course starting 12/90, see NV-1402-0198. Upon completion of the course, the student will have an understanding of the operation of a PDP 11-34 computer system, including extended instruction set, floating point option, core memory, bootstrap loader, asynchronous interface, DEC writer, DMA, interprocessor link, bug repeater, disk system and system diagnostics; will be able to maintain, troubleshoot, and repair the computer to the component level; will have knowledge of system instructions, addressing, timing, architecture and system diagnostics; and be able to use digital test equipment and standard test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in digital computer system maintenance and troubleshooting (6/87).

NV-1402-0071

Cryptologic Technician O, Class A

Course Number: A-260-0030.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–5/91.

Objectives: After 5/91 see NV-1402-0199. To provide technicians with the essential knowledge and skills necessary to perform at the apprentice level in radio printer communications.

Learning Outcomes: Upon completion of the course, the student will be able to type up to 35 wpm at 95 percent accuracy and read teletypewriter tape at 50 wpm; extract, format, transmit, and route messages in accordance with appropriate Navy cryptographic and other operating procedures; and operate various cryptographic communications equipment including teletypewriters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic typing skills (7/87).

NV-1402-0072

Digital Training

Course Number: A-102-0235.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (140 hours).

Exhibit Dates: 1/90–10/92.

Objectives: After 10/92 see NV-1715-1657. To provide students with knowledge of the fundamentals of digital logic and microprocessors.

Learning Outcomes: Upon completion of the course, the student will be able to convert between and perform arithmetic operations on decimal, hexadecimal, BCD, excess-3, binary, and octal numbers; use integrated circuits to construct and analyze logic circuits, such as adders, subtractors, decoders encoders, counters, and registers; understand the function and architecture of basic computer units, i.e. control, ALV, memory, and I/O; write elementary machine language programs for the MC6800 microprocessor; describe memory-mapped I/O; and perform simple interfacing exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital logic and microprocessors (7/87).

NV-1402-0075

Electronic Warfare Technician AN/SLQ-32(V2) Electronic Surveillance Measures (ESM) Maintenance

Course Number: A-102-0215.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 11 weeks (440 hours).

Exhibit Dates: 1/90–2/90.

Objectives: After 2/90 see NV-1715-1653. To provide training for preventive and corrective maintenance of specific military equipment.

Learning Outcomes: Upon completion of the course, the student will be able to describe complex electronic signal processing systems which include analog and digital signals with digital computer controls; troubleshoot equipment malfunctions to the component level; and use test equipment, such as oscilloscopes, signal generator, and frequency meters for alignment and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital system troubleshooting (7/87).

NV-1402-0079

COMPUTER CP-890A, B/UYK INPUT/OUTPUT CONTROLLER MAINTENANCE

Course Number: A-193-0338.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 3 weeks (112 hours).

Exhibit Dates: 1/90–7/94.

Objectives: After 7/94 see NV-1402-0234. To provide electronics technicians with knowledge and skills necessary to perform maintenance on a navigation computer.

Instruction: Lectures and laboratory exercises cover the functional descriptions of the computer input/output controller, master clock, timing chain and sequencer, master clear circuitry, real-time clock and control memory operations, external function/output data operations, input data operations, external interrupt operations, and the computer input/output controller special operations. Slightly over one-third of the course is spent in maintenance and troubleshooting laboratory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer input/output operations and troubleshooting (8/84).

NV-1402-0080

COMPUTER DP-890A AND B/UYK PROCESSOR MAINTENANCE 2

Course Number: A-193-0337.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–7/94.

Objectives: After 7/94 see NV-1402-0235. To provide electronics technicians with the knowledge and skills necessary to perform maintenance on a navigation computer.

Instruction: Group-paced lectures, practical demonstrations, and laboratories cover the functional descriptions of the processor add-subtract, nonsequential, interrupt, repeat, shift, complex arithmetic, floating-point operations; and the processor replace instruction group. Approximately one-third of course time is spent in laboratory work on corrective maintenance and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer CPU theory and troubleshooting (8/84).

NV-1402-0083

LAUNCHER CONTROL AND MONITORING EQUIPMENT
(Missile Launcher Control and Monitoring Equipment)

Course Number: A-121-0469.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (116 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance on the Trident missile launcher pressurization system control, control and monitoring panel, and ventilation alarm and monitoring panel; describe the functional operation of the systems; explain systematic fault isolation; and describe the procedures required for disassembly, repair, and reassembly of the VAMP and CAMP.

Instruction: Lectures and laboratory exercises cover systems operation, theory, and troubleshooting. Troubleshooting makes use of computer-aided diagnostics and troubleshooting flow charts to the board level, including work on the pneumatic, hydraulic, and digital/computer component subsystems. The ability to use basic digital/computer theory and system knowledge is emphasized.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital systems troubleshooting (3/89).

NV-1402-0087

TRIDENT DEFENSIVE WEAPONS SUBSYSTEM/COMMAND SUBSYSTEM LEVEL 2

Course Number: A-130-0228.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 11 weeks (363 hours).

Exhibit Dates: 1/90–9/95.

Objectives: To prepare electronics technicians to perform preventive/corrective maintenance procedures on a computer control system.

Instruction: See NV-1402-0126 (A-150-0251), NV-1402-0127 (A-150-0216), NV-1402-0128 (A-150-0252), NV-1715-1326 (A-130-0232). This is a pipeline course.

Credit Recommendation: Please refer to the individual exhibits as noted above for credit recommendation (2/89).

NV-1402-0088

TRIDENT DEFENSIVE WEAPONS SUBSYSTEM/COMMAND SUBSYSTEM LEVEL 3

Course Number: A-130-0229.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 5 weeks (124 hours).

Exhibit Dates: 1/90–9/95.

Objectives: To prepare experienced electronics technicians to operate and maintain a defensive weapons system.

Instruction: See NV-1402-0124 (A-130-0233) and NV-1402-0125 (A-130-0231). This is a pipeline course.

Credit Recommendation: Please refer to the individual exhibits as noted above for credit recommendation (2/89).

NV-1402-0089

MISSILE TEST AND READINESS EQUIPMENT MK 7 MOD 4 ADVANCED CIRCUITRY
(Missile Test and Readiness Equipment (MTRE) Mk 7 Mod 4 Advanced Theory and Maintenance)

Course Number: A-121-0492.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (119 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the basic operation of each of the six functional areas of the Mk 7 Missile test and readiness equipment; describe the electromechanical operation of the six functional areas, including basic logic, tape format, signal flow, and response evaluation; and perform mechanical alignment and adjustment using special tools and test equipment.

Instruction: Lectures and laboratory exercises cover the functional operation, to the block diagram level, of specialized missile equipment. Topics include power supplies, display and panel controls, system verification tests, paper tape input, and printer operation and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital equipment maintenance (4/96).

NV-1402-0090

ANTISUBMARINE WARFARE (ASW) MODULE DATA PROCESSING TECHNICIAN

Course Number: J-531-0373.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 13 weeks (379 hours).

Exhibit Dates: 1/90–12/94.

Objectives: To train data processing technicians in the theory, operation, and maintenance of automated data processing equipment associated with an ASW system.

Learning Outcomes: Upon completion of the course, the student will be able to use data processing equipment, such as magnetic tape storage units, high speed printer, disk storage units, teletypewriter, and input/output operator console; perform limited maintenance, by fault isolation, on problems through system symptom recognition; and use diagnostic programs and system error messages for diagnosis of system faults. Maintenance is limited to operating procedures and determination of system/program faults.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in data processing (9/84).

NV-1402-0091

ANTISUBMARINE WARFARE (ASW) MODULE DATA SYSTEMS TECHNICIAN

Course Number: J-150-0372.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 15 weeks (525 hours).

Exhibit Dates: 1/90–12/94.

Objectives: To train personnel in the theory, operation, and maintenance of the automatic data processing and display equipment associated with the ASW module.

Learning Outcomes: Upon completion of the course, the student will be able to describe the functions of a magnetic tape and disk subsystem and a video display subsystem, perform planned and unplanned maintenance on the data processing system and subsystems, trace electronic signals through all systems, and document maintenance actions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in the operation, maintenance, and repair of data processing equipment (9/84).

NV-1402-0092

Antisubmarine Warfare (ASW) Operations Center (ASWOC) Acoustic System

Course Number: J-102-0364.
Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.
Length: 14-17 weeks (490-650 hours).
Exhibit Dates: 1/90–12/90.
Objectives: After 12/90 see NV-1402-0158. To train aviation ASW technicians to operate, maintain, and repair the Fast Time Analyzer mainframe and peripheral computer equipment.
Learning Outcomes: Upon completion of the course, the student will be able to perform calibration procedures; use basic test equipment; describe the components, characteristics, and operation of computer peripheral equipment, including disk drives, tape drives, cassette tape disks, video terminals, and printers; interface between computers and between computers and peripheral equipment; and operate, maintain, isolate faults, and repair the Fast Time Analyzer mainframe and peripheral equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer peripheral equipment, operation, maintenance, and repair (9/84).

NV-1402-0095

Computer Programming AN/UYK-7 Assembler Language—Basic

Course Number: J-532-0063.
Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.
Length: 4-5 weeks (196-200 hours).
Exhibit Dates: 1/90–Present.
Objectives: To train personnel to write, execute, and interpret computer programs written in the ULTRA/32 assembler language for a 32 bit word AN/UYK-7 computer.
Learning Outcomes: Upon completion of the course, the student will understand programming procedures for the AN/UYK-7 computer; understand the structure and use of the ULTRA/32 repertoire of instructions; write practical programs in the ULTRA/32 assembly language; and use the I/O instruction set and hardware to run and debug programs on the AN/UYK-7 computer.
Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in assembly language programming and 1 in assembler programming laboratory (10/91).

NV-1402-0096

Computer Programming AN/UYK-20 Assembler Language Basic

Course Number: J-532-0064.
Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.
Length: 5 weeks (175-195 hours).
Exhibit Dates: 1/90–Present.
Objectives: To train personnel to program a minicomputer.
Learning Outcomes: Upon completion of the course, the student will understand the structure and use of the ULTRA-20 repertoire of instructions; write practical programs in the ULTRA/20 assembler language for the UYK-20 computer; and use the I/O instruction set and hardware to run and debug programs on the AN/UYK-20 computer.
Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in assembler language programming and 1 in assembler programming laboratory (10/91).

NV-1402-0097

Digital Computer Microprocessor Basics

Course Number: A-100-0069.
Location: Submarine Training Center, Pacific, Pearl Harbor, HI.
Length: 2 weeks (70 hours).
Exhibit Dates: 1/90–12/95.
Objectives: To train enlisted personnel in the fundamentals of digital logic and microprocessors.
Instruction: Course covers basic digital concepts, arithmetic techniques, digital codes, digital sequential circuits, analog/digital and digital/analog conversion, integrated circuits, and microprocessor fundamentals.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital logic and microprocessor theory (11/85).

NV-1402-0098

SSN Central Computer Complex (CCC) Maintenance Software

Course Number: L-150-0001.
Location: Submarine Training Center, Pacific, Pearl Harbor, HI.
Length: 3 weeks (116-120 hours).
Exhibit Dates: 1/90–12/95.
Objectives: To provide training on central computer complex software and maintenance.
Instruction: Course provides the programming and analysis background necessary to maintain the central computer complex using data flow and overall subsystem interfacing for fault isolation at the system level.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to computer systems (11/85).

NV-1402-0099

Naval Intelligence Processing System (NIPS) System Maintenance

Course Number: J-150-0988; D-150-0119.
Location: Intelligence Processing System Training Facility, Key West, FL; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.
Length: 38 weeks (1465-1520 hours).
Exhibit Dates: 1/90–5/90.
Objectives: To qualify selected data systems technicians in the maintenance and repair of electronic data processing and intelligence display equipment.
Instruction: Lectures and laboratories cover the theory of operation, corrective and preventive maintenance, and troubleshooting procedures on the equipment that comprises the naval intelligence processing system. Course also covers system interface and support equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to computers, 3 in introduction to digital techniques, 1 in introduction to digital techniques laboratory, 3 in introduction to digital circuits, 2 in introduction to digital circuits laboratory, 3 in basic semiconductor circuits, 1 in basic semiconductor circuits laboratory, and 4 in computer maintenance (1/86).

NV-1402-0100

Afloat Storage and Retrieval Operator
(Naval Intelligence Processing System
(NIPS) Afloat Storage and Retrieval
Operator)

Course Number: J-150-0963; D-150-0002.
Location: Intelligence Processing System Training Facility, Key West, FL; Air Station, Norfolk, VA; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.
Length: 8 weeks (311-320 hours).
Exhibit Dates: 1/90–5/90.
Objectives: To train data processing technicians in data base storage and retrieval and the use of associated equipment.
Instruction: Lectures and practical exercises cover the operation of an intelligence processing computer; file maintenance procedures; basic intelligence and data bases; message processing systems; generation of output display formats; and the operation of subsystems to receive, process, and display intelligence data.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in data processing principles (1/86).

NV-1402-0101

Landing Helo Auxiliary (LHA) Intelligence Center (IC) Afloat Automatic Data Processing (ADP) Operator

Course Number: J-531-0971; D-531-0120.
Location: Intelligence Processing System Training Facility, Key West, FL; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.
Length: 7 weeks (280 hours).
Exhibit Dates: 1/90–5/90.
Objectives: To train data processing technicians in data base storage and retrieval and the use of associated equipment.
Instruction: Lectures and practical exercises cover the operation of an intelligence processing computer; file maintenance procedures; basic intelligence and data bases; message processing systems; and the operation of subsystems to receive, process, and display intelligence data.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in data processing principles (1/86).

NV-1402-0102

AN/TYQ-19(V), Marine Air-Ground
Intelligence System (MAGIS)
Intelligence Analysis Center (IAC)
Computer System, Automatic Data
Processing (ADP) Communications
Operator

Course Number: J-530-0978; D-530-0101.
Location: Intelligence Processing System Training Facility, Key West, FL; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.
Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–12/90.

Objectives: To train enlisted personnel to operate various types of automatic data processing equipment in support of an intelligence analysis center.

Instruction: Lectures and practical exercises cover the start-up of computer equipment; interfacing of the equipment with external sources; operation of computer subsystems, such as magnetic tape, disk packs, paper punch/reader, display units, file utilities, and system files; and recovery procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer operations (1/86).

NV-1402-0103

AN/TYQ-19(V), Marine Air-Ground
Intelligence System (MAGIS)
Intelligence Analysis Center (IAC)
Computer System Maintenance

Course Number: J-150-0992; D-150-0130.

Location: Intelligence Processing System Training Facility, Key West, FL; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–1/90.

Objectives: To train selected personnel in the operation and maintenance of the AN/TYQ-19(V) computer system.

Instruction: Covers theory of operation and maintenance procedures of the components that comprise the AN/TYQ-19(V) system, and preventive and corrective maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer fundamentals and 3 in electronic communication systems (1/86).

NV-1402-0104

AN/TYQ-19(V), Marine Air-Ground
Intelligence System (MAGIS)
Intelligence Analysis Center (IAC)
Computer Intelligence Analyst

Course Number: J-240-0976; D-240-0101.

Location: Intelligence Processing System Training Facility, Key West, FL; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–1/90.

Objectives: To provide the basic skills needed for the intelligence analyst to operate and utilize the marine air ground intelligence system (MAGIS).

Instruction: Lectures and practical exercise in the operation and usage of the equipment comprising the MAGIS system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electronic data processing (1/86).

NV-1402-0105

Mk 152 Data

Course Number: A-113-0105.

Location: Training Center, Great Lakes, IL.

Length: 27 weeks (1080 hours).

Exhibit Dates: 1/90–6/95.

Objectives: To provide selected individuals having previous training in electronics and digital computer fundamentals with the knowledge and skills required to maintain the Mk 152 Digital computer and associated control/display panels and interfacing units.

Instruction: Lectures and laboratory exercises provide in-depth study of a 16-bit computer system using RTL logic and core memory. Study includes computer control section; arithmetic section; logic; timing; language instructions; addressing; circuitry; maintenance; control and boot-strap; operation of core memory; access times; decoding; synchro/digital, digital/synchro, and other D/A and A/D conversions; multiplexing; timing; interacting of different logic and signal levels; and use of diagnostics and other procedures for troubleshooting down to the board and/or component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer architecture and interfacing and 2 in computer maintenance and repair (1/86).

NV-1402-0106

AN/UYK-7 Data Group
(Gun Fire Control System Mk 86 Consoles and Data Group Equipment Maintenance)
(AN/UYK-7(V) Data Maintenance, Class C7)

Course Number: A-113-0099; J-113-0099.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA; Fleet Training Center, San Diego, CA; Training Center, Great Lakes, IL.

Length: 30-32 weeks (814-1280 hours).

Exhibit Dates: 1/90–6/95.

Objectives: To provide selected students with the knowledge and skills to maintain a digital computer and its peripheral equipment.

Instruction: This is an in-depth diagnostic and repair course on a 32-bit multiprocessor computer which uses the DTL logic family. Also included are instructions on troubleshooting and repair of associated and peripheral equipment, such as printers, magnetic tape units, signal data transfer buffers, wide display systems, radar signal processors, and C/O buffer systems. Machine language instruction codes are used extensively to isolate faults to the card or component level by interpreting front panel display and using an oscilloscope to verify the fault. Repairs are made to the card level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in minicomputer architecture and interface systems and 2 in computer maintenance and repair (10/91).

NV-1402-0107

Universal Cryptologic Processor Training
Classic Bowsprit Sail Maintenance

Course Number: A-102-0303.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4-5 weeks (184 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventative and corrective maintenance on a minicomputer system and a microprocessor-driven system and use diagnostics to troubleshoot the processors, printers, display terminals, other peripherals, controllers, and interfaces to the modular level.

Instruction: Lectures, demonstrations, handouts, transparencies, and lab exercises are used to teach the student how to service and maintain a minicomputer system including the processor and various peripherals and interfaces. Software and hardware diagnostics are used to teach the troubleshooting of all devices to the modular level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in minicomputer system maintenance (7/87).

NV-1402-0108

Universal Cryptologic Processor Training
PDP-11/70 Maintenance

Course Number: A-102-0293.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 10 weeks (440 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the PDP-11/70 minicomputer and its peripherals.

Instruction: Group-paced lectures, practical demonstrations, and laboratory work cover the PDP-11/70 minicomputer and diagnostic routines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in introduction to minicomputers and 4 in minicomputer maintenance (7/87).

NV-1402-0109

1. Radio Frequency Distribution Maintenance
2. Radio Frequency Distribution Maintenance, Class C1

Course Number: *Version 1:* A-102-0304. *Version 2:* A-102-0304.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 7 weeks (280 hours). *Version 2:* 5-6 weeks (200 hours).

Exhibit Dates: *Version 1:* 3/95–Present. *Version 2:* 1/90–2/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will perform preventive/corrective maintenance procedures on the AN/FRD-10 direction finder; describe the major components of the basic radio direction finding system; perform control subsystem power supply adjustment procedures; perform video display alignment; and troubleshoot the switch matrix subsystem. *Version 2:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance procedure on the AN/FRD-10 radio frequency distribution network and associated equipment.

Instruction: *Version 1:* This course includes group-paced lecture and laboratory exercises in the operation, circuit analysis, alignment, diagnostics, and performance checking of the AN/FRD-10A and AN/FRQ-25 radio frequency detection/radio frequency switch matrix systems. *Version 2:* Group-paced lectures using audiovisuals, demonstrations, and laboratory exercises teach the student preventative and corrective maintenance procedures for the AN/FRD-10 and associated equipment.

Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in electronic systems troubleshooting and maintenance (2/98). *Version 2:* Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1402-0110

Universal Cryptologic Processor Training (UNCRYPT) RSX-11M/VMS FORTRAN, Class C

Course Number: A-532-0033.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–4/91.

Learning Outcomes: After 4/91 see NV-1715-1684. Upon completion of the course, the student will be able to use the operating system RSX-11M for file manipulation, data volume preparation, intrasystem communication, and algorithm development. The student will be able to design, code, and test FORTRAN-77 programs that will initialize, maintain, sort, and print data bases.

Instruction: Lectures and supervised laboratory sessions are used to teach the student use of RSX-11M operating system and FORTRAN-77 computer language for the operation and control of data bases.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in FORTRAN programming, 2 in RSX-11 operating system, and 2 in data base management (7/87).

NV-1402-0111

Radio Frequency Switch Matrix System Maintenance, Class C1

Course Number: *Version 1:* A-102-0319. *Version 2:* A-102-0319.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 9 weeks (300 hours). *Version 2:* 12 weeks (360 hours).

Exhibit Dates: *Version 1:* 9/90–1/95. *Version 2:* 1/90–8/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to service and maintain the computerized radio frequency switch matrix. The student will be able to describe the theory of operation and perform maintenance procedures of the LSI 11/23 computer and associated disk drives, video terminals, and printers. *Version 2:* Upon completion of the course, the student will be able to service and maintain the computerized radio frequency switch matrix. The student will be able to describe the theory of operation and perform maintenance procedures on the LSI 11/23 computer and associated disk drives, video terminals, and printers.

Instruction: *Version 1:* Lectures with transparencies and a combination of demonstrations and lab exercises are used to instruct the student in the theory of operation and maintenance procedures of the LSI 11/23 computer, peripherals, and the RFSW equipment. *Version 2:* Lectures with transparencies and a combination of demonstrations and lab exercises are used to instruct the student in the theory of operation and maintenance procedures of the LSI 11/23 computer, peripherals, and the RFSW equipment.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer system maintenance (2/93). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer system maintenance (7/87).

NV-1402-0112

Cryptologic Technician M, Universal Cryptologic Processor (UNCRYPT) High Frequency Direction Finding (HFDF) Maintenance

(Universal Cryptologic Processor Training (UNCRYPT) High Frequency Direction Finding (HFDF) Maintenance)

Course Number: A-102-0292.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 5-7 weeks (216 hours).

Exhibit Dates: 1/90–10/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform board-level preventive and corrective maintenance on PDP-11 equipment contained in direction-finding subsystems of the AN/FSQ-117 wideband system, using knowledge of system instructions, timing architecture, and system diagnostics.

Instruction: Group-paced lectures, practical demonstrations, and laboratory work use the PDP-11, disk drives, DEC writer printer, and video terminal.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in minicomputer maintenance laboratory (2/93).

NV-1402-0113

Multiuser Special Intelligence Communications Maintenance

Course Number: A-102-0287.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7-15 weeks (280-600 hours).

Exhibit Dates: 1/90–1/96.

Learning Outcomes: Upon completion of the course, the student will be able to perform corrective and preventive maintenance on a PDP-11/70-based system, including peripherals consisting of asynchronous and synchronous multiplexers, microprocessor, floating-point processor, video terminal, DEC Writer II, dual programmable clock, and ML11 Megaram memory.

Instruction: Classroom instruction and laboratory exercises involve troubleshooting to the module level. Student is required, using open book, notes, manual, etc., to determine status of peripherals and faults, using self-tests, computer diagnostics, register bits, base addresses, syndromes in RAM error identification, and knowledge of system functions and operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer system maintenance and repair (11/93).

NV-1402-0115

Machinery Systems Console Maintenance

Course Number: *Version 1:* A-623-0112. *Version 2:* A-623-0112. *Version 3:* A-623-0112.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 12-14 weeks (430-540 hours). *Version 2:* 12-14 weeks (480-560 hours). *Version 3:* 27 weeks (1080 hours).

Exhibit Dates: *Version 1:* 12/94–Present. *Version 2:* 10/92–11/94. *Version 3:* 1/90–9/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to troubleshoot and perform scheduled and corrective maintenance on shipboard propulsion engineering control consoles. *Version 2:* Upon completion of the course, the student will be able to troubleshoot and perform scheduled and corrective maintenance on shipboard propulsion engineering control consoles. *Version 3:* Upon completion of the course, the student will be able to troubleshoot and perform scheduled and corrective maintenance on shipboard propulsion engineering control consoles.

Instruction: *Version 1:* Multimedia presentations and practical exercises are designed to provide Interior Electrician's Mates with the skills required to troubleshoot and maintain shipboard control consoles and automatic control systems. Topics covered include review of math, electronic test equipment, AC/DC electricity, solid state devices, operational amplifiers, digital logic, microprocessors, memory, sensors, AD/DA converters, elementary physics, basic pneumatics, multiplexing, introduction to propulsion plants, diesel propulsion plant operating systems, damage control systems, and control devices for diesel and steam-driven electrical generating systems. *Version 2:* Multimedia presentations and practical exercises are designed to provide Interior Electrician's Mates with the skills required to troubleshoot and maintain shipboard control consoles and automatic control systems. Topics covered include review of math, electronic test equipment, AC/DC electricity, solid state devices, operational amplifiers, digital logic, microprocessors, memory, sensors, AD/DA converters, elementary physics, basic pneumatics, multiplexing, introduction to propulsion plants, diesel propulsion plant operating systems, damage control systems, and control devices for diesel and steam-driven electrical generating systems. *Version 3:* Multimedia presentations and practical exercises are designed to provide Interior Electrician's Mates with the skills required to troubleshoot and maintain shipboard control consoles and automatic control systems. Topics covered include review of math, electronic test equipment, AC/DC electricity, solid state devices, operational amplifiers, digital logic, microprocessors, memory, sensors, AD/DA converters, elementary physics, basic pneumatics, multiplexing, introduction to propulsion plants, diesel propulsion plant operating systems, damage control systems, diesel-driven electrical generating systems, and steam-driven electrical generating systems.

Credit Recommendation: *Version 1:* In the vocational certificate category, 6 semester hours in automation and control systems maintenance (12/95); in the lower-division baccalaureate/associate degree category, 4 semester hours in automation and control systems technology (12/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits, 3 in AC circuits, 3 in solid state electronics, and 1 in digital principles (10/93). *Version 3:* In the vocational certificate category, 6 semester hours in computer control systems maintenance and 1 in electric power generation (6/88); in the lower-division baccalaureate/associate degree category, 4 semester hours in basic electricity/electronics, 3 in introduction to digital devices, and 3 in basic electronics laboratory (6/88).

NV-1402-0116

COMPUTER/MICROPROCESSOR FUNDAMENTALS

Course Number: A-121-0546.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (116-117 hours).

Exhibit Dates: 1/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate understanding and application of number systems, digital codes, 6800 architecture, instruction set, addressing modes, memory tapes, basic algorithm development, address decoding, basic I/O interfacing, and the 6821 PIA chip.

Instruction: Classroom instruction and laboratory exercises use Heathkit ETW 3400 Microprocessor training covering the instruction set, number systems, addressing modes, architecture, and interfacing techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in microprocessors (6/88).

NV-1402-0117

OCEAN SURVEILLANCE INFORMATION SYSTEM (OSIS) BASELINE UPGRADE COMPUTER USER

Course Number: J-243-0995.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the Ocean Surveillance Information System Baseline Upgrade (OBU) computer.

Instruction: Lectures, discussions, visual aids, and extensive student practical exercises cover OBU functional capabilities, OBU system components, computational analysis, data base management, message processing, and simulated ocean surveillance scenarios.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in data processing and 1 in computer operations (7/88).

NV-1402-0118

PROTOTYPE OCEAN SURVEILLANCE TERMINAL USER

Course Number: *Version 1:* J-243-0940. *Version 2:* J-243-0940.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 1 week (45 hours).

Exhibit Dates: *Version 1:* 11/90–9/92. *Version 2:* 1/90–10/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate the Prototype Ocean Surveillance Terminal (POST) microcomputer system. *Version 2:* Upon completion of the course, the student will be able to operate the Prototype Ocean Surveillance Terminal (POST) microcomputer system.

Instruction: *Version 1:* Lectures, discussions, visual aids, and laboratory cover system reports, editing messages, correlating data, data base functions, analysis functions, plot configuration, and system configuration. *Version 2:* Lectures, discussions, visual aids, and laboratory cover system reports, editing messages, correlating data, data base functions, analysis functions, plot configuration, and system configuration.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in microcomputer applications (7/88).

NV-1402-0119

OCEAN SURVEILLANCE INFORMATION SYSTEM (OSIS) BASELINE UPGRADE SYSTEM MANAGEMENT

Course Number: J-243-0991.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 9 weeks (368 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to manage the operation of the Ocean Surveillance Information System Baseline Upgrade (OBU).

Instruction: Lectures, discussions, visual aids, and extensive student practical exercises cover introduction to naval intelligence, OBU system capabilities, OBU system operational software programs, OBU system malfunctions, configuration and reconfiguration techniques, fault monitoring capabilities, maintenance coordination, security management, and data base management functions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in data base management systems, 2 in data processing, and 2 in computer operations (7/88).

NV-1402-0120

AEGIS FUNDAMENTALS

Course Number: *Version 1:* S-150-0240. *Version 2:* A-150-0240; S-150-0240.

Location: Aegis Training Center, Dahlgren, VA.

Length: *Version 1:* 1-2 weeks (46 hours). *Version 2:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 5/90–Present. *Version 2:* 1/90–4/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will have completed a rigorous review of digital circuits and the operation of a microprocessor control unit. Practical exercises are not provided. A physical description of the Aegis phase array combat system which uses this microprocessor is also presented. *Version 2:* Upon completion of the course, the student will be able to describe the behavior of basic logic elements, such as gates, memory, encoders/decoders, analog-to-digital/digital-to-analog conversion, and multiplexers and apply concepts of digital computer organization and programming.

Instruction: *Version 1:* A review of basic electricity, safety, number systems, and logic operations is followed by a comprehensive review and application of a central processing unit and programmable control unit. Topics include mathematical operations, functional operation of data processing equipment, programming languages down to machine code, microprocessor architecture, addressing modes, bus drivers, stack operations, registers, interfacing to peripheral equipment, memory architecture, operating system software, and diagnostic programs. *Version 2:* Course contains a brief overview of digital logic and computers.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in microprocessors (5/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in digital principles (12/88).

NV-1402-0121

1. AEGIS COMPUTER AN/UYK-7 OPERATION AND MAINTENANCE (CG-47-64)
2. FC-1114 COMBAT SYSTEM COMPUTER SYSTEM MAINTENANCE TECHNICIAN

Course Number: *Version 1:* S-150-0239. *Version 2:* S-150-0239; A-150-0239.

Location: Aegis Training Center, Dahlgren, VA.

Length: *Version 1:* 25 weeks (975 hours). *Version 2:* 20 weeks (776 hours).

Exhibit Dates: *Version 1:* 10/93–Present. *Version 2:* 1/90–9/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate and perform system maintenance and troubleshooting, including fault isolation, on a 32-bit word discrete component central processor unit, magnetic data storage unit, line printer, and related digital control panels. *Version 2:* Upon completion of the course, the student will be able to maintain a computer system used to control a complex phased array radar system. Student will be able to perform preventive maintenance and troubleshoot to the circuit card level, load software, and operate the system.

Instruction: *Version 1:* One third of the course is devoted to lecture and lab exercises on the CPU. The operation, instruction set, memory, interrupts, and input/output ports are studied in detail with the object of learning corrective maintenance procedures. Half the course is devoted to lecture and lab exercises on the operation and maintenance of peripheral equipment such as magnetic tape units, line printers, plotters, controllers, and data terminals. The remaining time is devoted to the Aegis weapon system and how it interfaces with the computer system. *Version 2:* Course includes an in-depth study of the operation and maintenance of computer control and signal processing equipment for a radar system. The course is approximately 50 percent lecture and 50 percent practical application.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in computer systems operation and maintenance and 2 in electrical/mechanical maintenance and repair (5/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in computer systems and organization and 4 in computer systems troubleshooting and maintenance (12/88).

NV-1402-0122

MAGNETIC DISK FILE THEORY AND MECHANICAL MAINTENANCE FIRE CONTROL SYSTEM (FCS) MK 98 MOD 0

Course Number: A-121-0429.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 1-2 weeks (49-52 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform all corrective maintenance on the magnetic disk file subsystem.

Instruction: Lectures and laboratories cover the theory, operation, and maintenance of disk pack, mechanical drive, hydraulic actuator, and carriage assembly of a magnetic disk file subsystem. Instruction is also included on special tools and test equipment to align, adjust, and calibrate the magnetic disk file subsystem.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer repair technology (4/96).

NV-1402-0123

Trident Defensive Weapons Subsystem/ Command Subsystem (DWS/CS) Level I

Course Number: A-130-0227.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 11 weeks (322 hours).

Exhibit Dates: 1/90–2/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain, under supervision, a command and control system.

Instruction: Lectures and laboratory exercises cover the basic theory, functions, operation, and maintenance of a computer-controlled system with multiple inputs and outputs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in the operation and maintenance of computer control system (2/89).

NV-1402-0124

Mk 118 Fire Control System Advanced Maintenance

Course Number: A-130-0233.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 3 weeks (81 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain, at an advanced level, the Mk 118 Fire Control System.

Instruction: Lectures and laboratory exercises cover the theory, operation, and maintenance of power supplies, I/O control, and test circuits of fire control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer control applications laboratory (2/89).

NV-1402-0125

Advanced Defensive Weapons Subsystem Command Subsystem Operator

Course Number: A-130-0231.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (52 hours).

Exhibit Dates: 1/90–10/92.

Learning Outcomes: Upon completion of the course, the student will be able to qualify as a console operator by demonstrating the advanced operating procedures for the battle stations fire control party.

Instruction: Lectures and laboratory exercises cover the theory, operation, and maintenance of defensive weapons subsystems. Topics include sonar displays, radar displays, and controls.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer control applications laboratory (2/89).

NV-1402-0126

Display Console OJ-326(V)/UYK and Digital Display Indicator IR-1181/UYK Maintenance Phase II

Course Number: A-150-0251.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 3 weeks (88 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform corrective maintenance on the memory and display functional areas of a display console.

Instruction: Lectures and laboratory cover the theory, operation, and maintenance of display consoles. Topics also include test equipment to perform alignment, adjustment, and calibration procedures on digital display indicators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital systems (2/89).

NV-1402-0127

Display Console OJ-326(V) 1-4/UYK and Digital Display Indicator IP-1181/ UYK Maintenance Phase I

Course Number: A-150-0216.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (105 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to provide corrective maintenance of power/cooling and interface functions of the display console.

Instruction: Lectures cover the theory, operation, and maintenance of display console with topics on logic levels, memory size and accuracy, inputs and outputs, and data multiplexing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer display systems (2/89).

NV-1402-0128

Display Console OJ-326(V)/UYK and Digital Display Indicator IP-1181/UYK Maintenance Phase III

Course Number: A-150-0252.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (48 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform corrective maintenance on the analog functions of a display console.

Instruction: Lecture and laboratory activities cover the operation and maintenance of display console with coverage inputs, outputs, data multiplexing, and display controls.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in A/D and D/A conversions (2/89).

NV-1402-0129

Target Data Processing (TDP) Maintenance, Class C

Course Number: J-130-0296.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 19-20 weeks (790 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a specific computer and its peripherals.

Instruction: Lectures and practical exercises cover the theory of operation and troubleshooting procedures for a computer, magnetic tape unit, keyset, display, printer, and plotter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer troubleshooting and maintenance and 2 in computer systems and organization (3/89).

NV-1402-0130

Automatic Data Processing Maintenance

Course Number: J-130-0298.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 13-14 weeks (503 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a specific computer system and its peripherals.

Instruction: Lectures and practical exercises cover the theory of operation and troubleshooting procedures for a computer, printer, disk drive, video display terminal, and multiplexer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization and 3 in computer systems troubleshooting and maintenance (3/89).

NV-1402-0131

Shipboard Nontactical Automatic Data Processing (ADP) Program 2 (SNAP 2) AN/UYK-62(V) Maintenance

Course Number: *Version 1:* A-150-0255. *Version 2:* A-150-0255.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: *Version 1:* 3-4 weeks (120-133 hours). *Version 2:* 3-4 weeks (145 hours).

Exhibit Dates: *Version 1:* 1/92–Present. *Version 2:* 1/90–12/91.

Learning Outcomes: *Version 1:* Upon completion of the course, personnel will be able to operate, maintain, and repair the Shipboard Nontactical Automated Data Processing System (SNAP-2) to a system level. *Version 2:* Upon completion of the course, the student will be able to operate and maintain specific shipboard data processing systems, including tape units, disk storage, keyboard, video terminal, printer, paper tape reader/punch, and power supply.

Instruction: *Version 1:* Lectures and practical exercises cover operation and preventive and corrective maintenance of the SNAP-2 system, which consists of data processing unit, tape and disk storage units, keyboard, video terminal, printer, paper tape reader and puncher, and power supply units. *Version 2:* Lecture and practical exercises cover operation and corrective/preventive maintenance of data processing systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (6/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (3/89).

NV-1402-0132

Integrated Submarine Automated Broadcast Processing System

Course Number: A-101-0140.

Location: Fleet Training Center, Norfolk, VA.

Length: 15 weeks (597 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the equipment in a submarine automated broadcast processing system.

Instruction: Lectures and practical exercises cover operation, troubleshooting, and repair of communications equipment and a computer system and its peripherals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems and organization and 3 in computer systems troubleshooting and maintenance (3/89).

NV-1402-0133

AN/WSC-6(V) Operator

Course Number: A-260-0046.

Location: Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a specific satellite communications set modem (data link).

Instruction: Lectures and practical exercises cover the operation of the communications set modem.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/89).

NV-1402-0134

Command and Control System (CCS) Advanced Level 3

Course Number: A-150-0202.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 5 weeks (134 hours).

Exhibit Dates: 1/90–1/91.

Learning Outcomes: Upon completion of the course, the trainee will be able to describe the types of signals, signal flow, inputs and output, coding, timing relationships, sequential operation, circuits, and registers found in the digital data computer CPU. Trainee will be able to perform standard and nonstandard operational tests to support maintenance at the board level.

Instruction: Lecture and laboratory exercises cover the power supply, CPU, I/O control unit, core memory unit, film memory unit, and operator control unit of the AN/UYK-7(V) digital data computer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer maintenance/operations (3/89).

NV-1402-0135

Trident Command and Control System Level 1

Course Number: A-150-0200.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 16 weeks (640 hours).

Exhibit Dates: 1/90–1/91.

Learning Outcomes: Upon successful completion of this course, the trainee will be able to state the purpose of the Trident Command and Control System (CCS); define the abbreviations, terms, and symbols used with the CCS; and describe all major and associated subsystems of the CCS and their locations.

Instruction: Laboratory and lecture cover the subsystems that comprise the CCS, including sonar, interior/exterior communications, ship control, data processing, passive RF monitoring, defensive weapon/command subsystem, tactical navigation, and monitoring subsystem.

Credit Recommendation: In the vocational certificate category, 3 semester hours in digital computer system operation and 3 in digital signal processing (3/89).

NV-1402-0136

Trident Command and Control System Level 2

Course Number: A-150-0201.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (115 hours).

Exhibit Dates: 1/90–1/91.

Learning Outcomes: Upon successful completion of this course, the trainee will be able to define the abbreviations, terms, and symbols used with the AN/UYK-7(V) to support basic corrective maintenance; describe all major and associated components of the Digital Data Computer (DDC); and describe the organization, control, and use of all technical documentation necessary for basic corrective maintenance.

Instruction: Lecture and laboratory exercises cover the subsystems of the AN/UYK-7(V) Digital Data Computer, including power supply, control processor, I/O controller unit, core memory, film memory unit, and operator control unit.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer operations (3/89); in the lower-division baccalaureate/associate degree category, 3 semester hours in computer maintenance laboratory (3/89).

NV-1402-0137

Fire Control System Mk 98 Mod 0 Advanced Technician

Course Number: A-121-0525.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–8/92.

Learning Outcomes: Upon completion of the course, the student will be able to define terms, abbreviations, and symbols associated with the Mk 98 Fire Control System (FCS), perform operational/fault isolation and repair on the FCS, and describe and use special tools and test equipment required for resolder and wire wrap connections while on patrol.

Instruction: Lectures and laboratory exercise cover the functional operation and mechanization of fire control subsystems, including power, data communications processor, master clock and timing, keyboard and display, printer, data conversion, and magnetic taper.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in data acquisition laboratory (3/89).

NV-1402-0138

Digital-to-Digital Converter CV-2342 B/UYK Maintenance

Course Number: A-193-0339.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (76 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe in detail all major and associated components of the digital-to-digital converter, describe in detail the physical interface(s) between the D/D converter and all associated equipment, and perform all authorized fault isolation and repair procedures.

Instruction: Lectures and laboratory exercises cover the theory and operation of D/D converters and support corrective maintenance procedures on the specific converter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital systems maintenance laboratory (4/96).

NV-1402-0139

Flat Panel Display Terminal Maintenance

Course Number: *Version 1:* A-193-0361. *Version 2:* A-193-0361.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 3 weeks (107 hours). *Version 2:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the functional operation and procedures necessary to support corrective maintenance of the display terminal and perform all authorized fault isolation and repair procedures. *Version 2:* Upon completion of the course, the student will be able to describe the functional operation and procedures necessary to support corrective maintenance of the display terminal and perform all authorized fault isolation and repair procedures on the terminal.

Instruction: *Version 1:* Lectures and laboratory exercises support corrective maintenance procedures on the display terminal. *Version 2:* Lectures and laboratory exercises support cor-

BEST COPY AVAILABLE

rective maintenance procedures on the display terminal and include detailed circuit analysis, inputs, and outputs.

Credit Recommendation: *Version 1:* Credit is not recommended because this course is limited to familiarization with specific pieces of equipment (4/95). *Version 2:* Credit is not recommended because of the limited, specialized nature of the course (3/89).

NV-1402-0140

MAGNETIC DISK FILE (MDF), THEORY AND ELECTRICAL MAINTENANCE FCS MK 98 MOD 0

Course Number: A-121-0428A; A-121-0428.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 3-4 weeks (79-81 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and authorized fault isolation/repair procedures on the magnetic disk file subsystem.

Instruction: Lectures and laboratory exercises support preventive and corrective maintenance on the magnetic disk file subsystem.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/96).

NV-1402-0141

COMPUTER CP-890 A&B/UYK PROCESSOR MAINTENANCE I

Course Number: A-193-0336.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 3-4 weeks (107-112 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to work problems in Boolean algebra; work with memories, I/O devices, clock circuits, registers, and other components of a basic computer; operate associated power supplies; and perform maintenance on the equipment.

Instruction: Lectures and laboratories cover the maintenance of digital computers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (4/96).

NV-1402-0142

RADIO NAVIGATION SET AN/BRN-3B DATA PROCESSOR MAINTENANCE

Course Number: A-193-0260.

Location: Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 2 weeks (71 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a special purpose computer associated with a radio navigation set.

Instruction: Lectures and practical exercises cover the maintenance of the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer systems troubleshooting and maintenance (10/89).

NV-1402-0143

DIGITAL CONTROL COMPUTER PERIPHERAL EQUIPMENT ADVANCED MAINTENANCE FIRE CONTROL SYSTEM MK 88 MOD 1

Course Number: A-121-0290.

Location: Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: .), 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform diagnostic checks, operate, and maintain the keyboard/intercomputer link, including printer and tape reader, of a special purpose computer.

Instruction: Lectures and practical exercises cover the computer and its peripherals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer systems troubleshooting and maintenance (10/89).

NV-1402-0144

COMBAT CONTROL SUBSYSTEMS MK 1 MOD 0 PIPELINE MAINTENANCE

Course Number: A-113-0132.

Location: Submarine School, New London, Groton, CT.

Length: 23 weeks (1272 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the component parts of the digital computer, including arithmetic logic unit, address registers, disk processor, controllers and drivers, input/output circuits, data bit storage, buffers, and displays. Student is able to maintain, troubleshoot, and repair a digital computer system, including fault isolation and logic tests, and is able to align, adjust, and calibrate computer equipment.

Instruction: Lectures and practical exercises emphasize computer organization and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization and 3 in computer systems troubleshooting and maintenance (10/89).

NV-1402-0145

AN/UYK-20(V) BASIC MAINTENANCE

Course Number: A-150-0267.

Location: Submarine Base, New London, Groton, CT.

Length: 2 weeks (79 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair basic data processing equipment using common and specialized test equipment.

Instruction: Lectures and practical exercises include signal flow, input/output devices, registers, processors, power supplies, and test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (10/89).

NV-1402-0146

DIGITAL-TO-DIGITAL CONVERTER CV-2342/UYK MAINTENANCE

Course Number: A-193-0252.

Location: Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 2 weeks (76 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, repair, and maintain a digital-to-digital converter.

Instruction: Lectures and laboratory exercises cover the characteristics and maintenance of a digital-to-digital converter including serial-to-parallel buffer and digital-to-analog buffer. Instruction is provided on testing, isolating faults, and repairing the converter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/89).

NV-1402-0147

DIGITAL CONTROL COMPUTER MISSILE INTERFACE FCS MK 88 MOD 1

Course Number: A-121-0291.

Location: Submarine Base, New London, Groton, CT; Submarine Training Facility, Charleston, SC.

Length: 2-3 weeks (104 hours).

Exhibit Dates: 1/90–Present.

Objectives: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot the interface circuits of a digital control missile computer.

Instruction: Theory and practical exercises cover the circuitry for operation and repair of the interface circuits of the system including digital inputs and parallel-to-serial converters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1402-0148

DIGITAL COMBAT SYSTEMS COMMON CORE

Course Number: A-113-0113.

Location: Submarine Base, New London, Groton, CT.

Length: 18 weeks (604 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair an electronic control system and general purpose computer and describe general computer architecture and data and signal flow.

Instruction: Lectures and practical exercises cover computer organization, troubleshooting, and corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization, 3 in electronic systems troubleshooting and maintenance, and 3 in computer systems troubleshooting and maintenance (10/89).

NV-1402-0149

SHIPBOARD UNIFORM AUTOMATED DATA PROCESSING SYSTEM REAL TIME OPERATIONS AND MANAGEMENT

Course Number: *Version 1:* A-551-0085. *Version 2:* A-551-0085.

Location: *Version 1:* Fleet Training Center, San Diego, CA; Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA. *Version 2:* Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 8 weeks (320 hours). *Version 2:* 10 weeks (400 hours).

Exhibit Dates: *Version 1:* 9/93–Present. *Version 2:* 1/90–8/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to supervise and operate the processes associated with an on-line real-time computer system supporting the shipboard functions of maintenance, supply, financial, and personnel administration. *Version 2:* Upon completion of the course, the student will be able to supervise and operate the processes associated with an on-line real-time computer system supporting the shipboard functions of maintenance, supply, financial, and personnel administration.

Instruction: *Version 1:* Methods include lectures, demonstrations, assignments, and examinations. Topics covered include system design, flow, element-level design and description, and internal and external interfaces to support activity for procurement, material receipt, storage, disbursement, financial reporting, and reconciliation to higher-level accounting systems. *Version 2:* Methods include lectures, demonstrations, assignments, and examinations. Topics covered include system design, flow, element-level design and description, and internal and external interfaces to support activity for procurement, material receipt, storage, disbursement, financial reporting, and reconciliation to higher-level accounting systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in automated data processing (3/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in automated data processing operations and 3 in automated data processing systems (12/89).

NV-1402-0150

Shipboard Non-Tactical Automatic Data Processing (SNAP 1) System Enlisted Supervisor/Operator

Course Number: A-532-0029.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3 weeks (116 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to supervise the operation of an automatic data processing system. This computer-based system is designed to provide for on-line, real-time interactive support of the ship's maintenance, supply, financial, and administrative functions.

Instruction: Methods of instruction used include lectures and practical exercises in the operation and use of the computer in the support functions of the ship. Topics include the supply system, computer hardware and software, computer operations, and operation of the various support subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in automated data processing (12/89).

NV-1402-0151

Shipboard Non-Tactical Automatic Data Processing (SNAP 2) System Coordinator

Course Number: *Version 1:* A-531-0018. *Version 2:* A-551-0018.

Location: *Version 1:* Fleet Training Group, Pearl Harbor, HI; Service School Command, San Diego, CA; Fleet Mine Warfare Training Center, Charleston, SC; Fleet Training Center, Norfolk, VA. *Version 2:* Fleet Mine Warfare Training Center, Charleston, SC; Trident Training Facility, Kings Bay, GA; Submarine Base, New London, Groton, CT; Trident Training Facility, Bangor, Bremerton, ,WA; Fleet Training Group, Pearl Harbor, HI; Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 8/90–Present. *Version 2:* 1/90–7/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to supervise and operate a computer-based system designed to provide for on-line, real-time interactive support of the ship's maintenance, supply, financial, and administrative functions. *Version 2:* Upon completion of the course, the student will be able to supervise and operate a computer-based system designed to provide for on-line, real-time interactive support of the ship's maintenance, supply, financial, and administrative functions.

Instruction: *Version 1:* Methods of instruction include lectures and practical exercises in operation and use of the computer in the support functions of the ship. Topics covered include the supply system, computer hardware and software, computer operations, and operation of the various support subsystems. *Version 2:* Methods of instruction include lectures and practical exercises in operation and use of the computer in the support functions of the ship. Topics covered include the supply system, computer hardware and software, computer operations, and operation of the various support subsystems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in basic computing or elements of data processing (11/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in data processing operations (12/89).

NV-1402-0152

Shipboard Non-Tactical Automatic Data Processing (SNAP 2) Storekeeper Afloat

Course Number: A-551-0093.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a specific nontactical minicomputer system. The student will be able to operate the computer to satisfy a diverse range of administrative and managerial support requirements.

Instruction: Classroom lectures, discussion, hands-on equipment exercises, in-class assignments, and examinations are the instructional methodologies. Topics include basic operation of a line printer, card reader, paper tape reader/punch, keyboard video display terminal and basic operation of the ship's nontactical computer system and subsystems, including supply and financial management, supply control, inventory, requirements and requirement processing, receipt processing, material expenditures, integrated logistics management, and reports.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer operations and 3 in inventory control procedures (12/89).

NV-1402-0153

Shipboard Non-Tactical Automatic Data Processing (SNAP) 3-M Coordinator/Inspector

Course Number: J-500-0029.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA; Submarine Base, New London, Groton, CT; Fleet Training Group, Pearl Harbor, HI; Fleet Mine Warfare Training Center, Charleston, SC; Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a specific minicomputer system to control maintenance inventory.

Instruction: Lectures, classroom discussions, exercises, equipment operation, and examinations are the methods used. Topics include concepts of a planned maintenance system, computer operation, maintenance management, maintenance data accounting, and inventory control.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer operations and 1 in inventory control procedures (12/89).

NV-1402-0154

Naval Aviation Logistics Data Analysis (NALDA)

Course Number: None.

Location: Various locations, Continental US.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe general data base concepts and write commands and programs to extract data from the data base.

Instruction: Lectures and practical exercises focus on the querying of a naval logistics data base. Topics include records, fields, keys, indexes, access time considerations, Boolean algebra, and query methods.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in data base programming (6/90).

NV-1402-0155

AN/SWG-1A Harpoon Weapon System Surface Application

Course Number: J-113-1000.

Location: Fleet Training Group, Pearl Harbor, HI; Fleet and Mine Warfare Training Center, Charleston, SC; Fleet Training Center, San

Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a guided missile launch control system.

Instruction: Lectures and practical exercises cover guided missile launch control system components, including control panel, launch control computer, operator display, missile simulator, and system power supplies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance and 3 in computer systems and organization (10/91).

NV-1402-0156

Ship Launched Cruise Missile Tomahawk Weapon Control System Operation and Maintenance

Course Number: J-121-0520.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 18 weeks (720 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the control console of a guided missile launch control system; perform the duties of a data base manager, engagement planner, and launch controller; and maintain the launch control system.

Instruction: Lectures and practical exercises cover missile data base management, operator console, troubleshooting, repair, and maintenance of the weapon system launch control console which includes a control computer, peripherals, and power supplies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer literacy, 3 in microprocessors, and 4 in computer systems troubleshooting and maintenance (10/91).

NV-1402-0157

Antisubmarine Warfare (ASW) Operations Center Data Systems Technician

Course Number: J-150-0366.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 23 weeks (920 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair the data processing computer equipment that is integrated into a weapon system operations center.

Instruction: Lectures and practical exercises cover the operation, diagnostic programming, troubleshooting, and repair of a 32-bit CPU and peripherals, including disk and tape drives, printers, CRT displays, X-Y plotters, and data communication and system memory equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer systems and organization, 7 in digital principles, 4 in assembly language programming, and 4 in computer systems troubleshooting and maintenance (10/91).

NV-1402-0158

1. Tactical Support Center Maintenance Technician
2. Antisubmarine Warfare (ASW) Operations Center Acoustic Systems Maintenance Technician

Course Number: *Version 1:* J-102-0364. *Version 2:* J-102-0364.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 17 weeks (680 hours). *Version 2:* 17 weeks (680 hours).

Exhibit Dates: *Version 1:* 11/94–Present. *Version 2:* 1/91–10/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to calibrate basic test equipment; describe the components, characteristics, and operation of computer peripherals, including disk drives, tape drives, X-Y recorder, video display terminals, and printers; and operate, maintain, and troubleshoot the Fast Time Analyzer and peripheral equipment. *Version 2:* Before 1/91 see NV-1402-0092. Upon completion of the course, the student will be able to calibrate basic test equipment; describe the components, characteristics, and operation of computer peripherals, including disk drives, tape drives, X-Y recorder, video display terminals, and printers; and operate, maintain, and troubleshoot the Fast Time Analyzer and peripheral equipment.

Instruction: *Version 1:* Lectures and practical exercises cover the operation and maintenance of computer peripherals, including fast Fourier circuitry and other digital signal processing circuits. Course includes quizzes, written tests, performance tests, and simulations. Topics include electrical/electronic theory, electrostatics, signal analysis displays, antisubmarine warfare nomenclature, magnetic tape subsystem operations and maintenance, three-lens projectors, signal processors, digital readers, laser printers, and analog-to-digital converters. *Version 2:* Lectures and practical exercises cover the operation and maintenance of computer peripherals including fast Fourier circuitry and other digital signal processing circuits.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance and 3 in electronic systems troubleshooting and maintenance (5/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer troubleshooting and maintenance and 3 in electronic systems troubleshooting and maintenance (10/91).

NV-1402-0160

Tomahawk Weapons System DD-963 Class Armored Box Launcher Configuration Operation and Maintenance

Course Number: J-121-0519.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 23 weeks (920 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, repair, and maintain a guided missile launching system including target data input and missile launch control and repair and maintain a data base computer, computer display system, data communications equipment, launch console electronics, and missile load and launch electrohydraulic mechanical system.

Instruction: This course consists of J-121-0494 (NV-1402-0162), J-121-0495 (NV-1402-0161), and J-121-0506 (NV-1715-1541). Please see the individual exhibits for descriptions.

Credit Recommendation: Please refer to the individual exhibits as noted above for credit recommendation (10/91).

NV-1402-0161

Armored Box Launcher Tomahawk Weapons System Maintenance

Course Number: J-121-0495.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a guided missile control system, including power distribution, computer circuits, and voice and data communication circuits and repair the system to the module level using automatic test equipment and standard electronic test equipment.

Instruction: Lectures and laboratory exercises cover system power supplies, power distribution, computer CPU circuits, memory circuits, CRT display circuits, communications circuits, and fault isolation techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in microprocessors, 3 in microprocessor laboratory, 3 in computer systems troubleshooting and maintenance, and 3 in electronic systems troubleshooting and maintenance (10/91).

NV-1402-0162

Tomahawk Weapons Control System Operator AN/SWG-2

Course Number: J-121-0494.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a missile fire control system including loading data to control missile trajectory and operating missile launching equipment.

Instruction: Lectures and laboratories cover missile-specific fire control equipment, entering data into the missile data base management computer, missile launch control, and documentation procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer literacy and 1 in computer applications laboratory (10/91).

NV-1402-0163

Computer Programming AN/UYK-7 CMS-2(Y) Compiler Language Basic

Course Number: J-7E-0331.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 3-4 weeks (156 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use the compiler language of the AN/UYK-7 computer to produce executable programs.

Instruction: Lectures and practical exercises cover upper-level assembler language programming techniques.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in assembler language programming and 1 in compiler language programming laboratory (10/91).

NV-1402-0164

Mk 1A Computer Operation and Maintenance

Course Number: J-113-1201.

Location: Fleet Combat Training Center, Yorktown, VA.

Length: 6 weeks (236 hours).

Exhibit Dates: 4/91–Present.

Objectives: Upon completion of the course, the student will be able to operate and perform limited maintenance on a gun fire control computer.

Instruction: Lectures and practical exercises cover the gun fire control computer.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/91).

NV-1402-0165

Antisubmarine Warfare (ASW) Module 4.2 System Operator

Course Number: J-210-0392.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 13 weeks (520 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate an antisubmarine position prediction system and generate submarine position information from system data.

Instruction: Lectures and practical exercises cover the use of the antisubmarine prediction equipment, including operator console, system computer, data display and communication, and signal processing systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer literacy (10/91).

NV-1402-0166

Carrier Antisubmarine Warfare (ASW) Module 4.2 Automated Data Processing Operator

Course Number: J-531-0394.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the data processing component of an antisubmarine detection and tracking system.

Instruction: Lectures and practical exercises cover the operation of a data processing computer and associated peripherals, including tape drives, CRT displays, operator consoles, and printers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer literacy (10/91).

NV-1402-0167

Armored Box Launching Tomahawk Weapon System Maintenance Differences and All Up Round Handling

Course Number: J-121-0507.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 5/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and perform operator maintenance on a weapon system.

Instruction: Lectures and practical exercises cover the functional description of the weapon control system and loading and unloading procedures.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/91).

NV-1402-0168

Submarine Radioman, Class A

Course Number: *Version 1:* A-101-0276. *Version 2:* A-101-0276.

Location: Submarine Base, New London, Groton, CT.

Length: *Version 1:* 16-18 weeks (559-700 hours). *Version 2:* 22 weeks (880 hours).

Exhibit Dates: *Version 1:* 9/91–Present. *Version 2:* 1/90–3/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the principles of telecommunications systems, operate them, and apply the basics of digital computers, with emphasis on special radio systems on submarines. Students will develop keyboarding skills of 36 words per minute with a maximum of 5 errors. *Version 2:* Upon completion of the course, the student will be able to operate telecommunications systems and describe the basics of digital computers with emphasis on special radio systems on submarines. Students will develop keyboarding skills of 36 words per minute with a maximum of 5 errors.

Instruction: *Version 1:* Lectures and practical exercises cover Navy-specific radio equipment, radio room operation, and typing skills on ASCII keyboard for teletype equipment. Topics include fundamentals of radio communications, including amplitude, frequency, phase and SSB modulation, wave propagation, antennas, and transmission lines. *Version 2:* Lectures and practical exercises cover Navy-specific radio equipment, radio room operation, and typing skills on ASCII keyboard for teletype equipment. Topics include fundamentals of radio communications including amplitude, frequency, phase and SSB modulation, wave propagation, antennas, transmission lines, and basics of digital computers.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in computer systems and organization; 3 in keyboarding; 6 in radio transmitters and receivers; and 3 in antennas, transmission lines, and wave propagation (10/91). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization; 3 in keyboarding; 6 in radio transmitters and receivers; and 3 in antennas, transmission lines, and wave propagation (10/91).

NV-1402-0169

Combat Control System (CCS) Mk 1 Mod 1 Combined Maintenance

Course Number: A-130-0300.

Location: Submarine Base, New London, Groton, CT.

Length: 3 weeks (97 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and repair a computer-based combat control system used to control and launch missiles from a submarine.

Instruction: Lectures and practical exercises emphasize the troubleshooting of a control system computer, attack control console, weapon monitor panel, digital missile simulator, and the emergency preset console used in a combat control system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (10/91).

NV-1402-0170

Combat Control System (CCS) Mk 1 Mod 2 Combined Maintenance

Course Number: A-130-0301.

Location: Submarine Base, New London, Groton, CT.

Length: 8 weeks (316 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and repair a computer-centered combat control system used to launch missiles.

Instruction: Lectures and practical exercises use meters, generators, and oscilloscopes to troubleshoot and repair the missile tube control panel, interface control panel, and missile interface console used in a missile combat control system on a submarine.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 3 in computer systems troubleshooting and maintenance (10/91).

NV-1402-0171

1. Radioman 21, Class A
2. Radioman, Class A

Course Number: *Version 1:* A-202-0014. *Version 2:* A-202-0014.

Location: *Version 1:* Service School Command, Great Lakes, IL. *Version 2:* Service School Command, Great Lakes, IL; Service School Command, San Diego, CA.

Length: *Version 1:* 14 weeks (420 hours). *Version 2:* 11 weeks (440 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to process information transfer with state-of-the-art technology such as fiber optics, digital microwave, and tactical and commercial satellites on a global basis; manage and provide software and hardware support for automated information systems such as mainframe, mini and microcomputers, local area networks (LANS), wide area networks (WANS), and telecommunications; and diagnose and perform maintenance of command, control, communications, computer, and intelligence systems. *Version 2:* Upon completion of the course, the individual will be able to keyboard at 40 words per minute, use basic MS-DOS commands and word processing software, operate radio communications equipment, and apply a fundamental knowledge of radio frequency communications principles.

Instruction: *Version 1:* Group-paced lectures and performance activities on computers, microcomputer hardware, and microcomputer software; microcomputer operating systems to include MS - DOS and Windows, introduction to Unix; and introduction to Local Area Networks and Novell System Software. *Version 2:* Lectures and laboratory exercises include keyboarding skills; MS-DOS; word processing; message formatting; frequency spectrum; wave propagation; fundamentals of receivers, transmitters, and antennas; system operation and optimization, and limited troubleshooting.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in microcomputer networks (10/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in keyboarding, 1 in introduction to personal computers, and 1 in communications systems (10/96).

NV-1402-0172

Shipboard Non-Tactical Automated Data Processing (SNAP) Basic Operator, Class C1

Course Number: A-532-0042.

Location: Service School Command, San Diego, CA.

Length: 3 weeks (128 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the individual will apply an in-depth knowledge of local area network operation and management, including data security, libraries, utilities, and system recovery techniques to Shipboard Nontactical Automated Data Processing Program (SNAP I) operation.

Instruction: Lectures and laboratory exercises present computer hardware and peripheral device fundamentals for network managers, network operating system (Novell) concepts, network security and hierarchy considerations, directory and file management, libraries, utilities network facilities, and system recovery techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in local area network system management (10/92).

NV-1402-0173

Data Processing Technician, Class A1

Course Number: A-531-0016.

Location: Service School Command, San Diego, CA.

Length: 10 weeks (334 hours).

Exhibit Dates: 8/90–Present.

Learning Outcomes: Upon completion of the course, the individual will have an in-depth knowledge of the operation of mini- and microcomputer systems and peripherals and the MS-DOS operating system, including batch files, configurations, and Norton's utilities. Student will also be proficient in the use of Lotus, dBase, Word Perfect and will be able to program in BASIC.

Instruction: Lectures and laboratory exercises present history and work environment of automatic data processing; data security issues; number systems and codes; operation of mini- and microcomputers; operation of peripheral devices, such as magnetic tape units, printers, and CRTs; application software such as Word Perfect, Lotus, and dBase; programming in BASIC; and concepts of data communications and local area networks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer operation, 2 in microcomputer data communications, 2 in software applications, and 1 in computer programming in BASIC (10/92).

NV-1402-0174

Marine Aviation Logistics Computer Operator

Course Number: C-531-2001.

Location: Technical Training Center, Meridian, MS.

Length: 6 weeks (240 hours).

Exhibit Dates: 6/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use computer systems and networks for business and technical applications.

Instruction: Course covers skills required for mainframe, software, and networking uses. Methods include lectures, discussions, and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to computers and 3 in computer applications (11/92).

NV-1402-0175

Religious Program Specialist, Class C (Computer Applications)

Course Number: A-561-0004.

Location: Technical Training Center, Meridian, MS.

Length: 2 weeks (80 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use ENABLE software and MS-DOS commands to use word processing, spreadsheet, graphics, and data base management applications.

Instruction: Course covers advanced microcomputer applications using ENABLE software. Methods include lectures, discussions, laboratories, and practical exercises.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in advanced computer applications (11/92).

NV-1402-0176

AN/USM(V) Versatile Avionics Shop Test (VAST) Operator

Course Number: C-198-3010.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate computer-controlled automatic test equipment; perform limited troubleshooting of the system to the major subsystem level; and understand the high-level computer language of the test equipment.

Instruction: Classroom lectures cover the test system configuration, operation, and programming language details; practical exercises cover system operation, preventive maintenance, system troubleshooting, and equipment testing.

Credit Recommendation: In the vocational certificate category, 3 semester hours in automatic test equipment operation (12/92); in the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to computers (survey course in computer science) (12/92).

NV-1402-0177

1. UNCRYPT PDP-11 Maintenance
2. Cryptologic Technician M, Universal Cryptologic Processor (UNCRYPT) Common Core Maintenance

Course Number: *Version 1:* A-102-0290. *Version 2:* A-102-0290.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 8-9 weeks (344 hours). *Version 2:* 6 weeks (240 hours).

Exhibit Dates: *Version 1:* 5/93–1/98. *Version 2:* 2/90–4/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance on PDP-11 DEO systems down to the lowest replaceable unit. *Version 2:* Before 2/90 see NV-1402-0069. Upon completion of the course, the student will be able to troubleshoot the PDP-11/40 down to the lowest replaceable unit. The student will use the appropriate technical manuals and test equipment to isolate instructor-inserted faults, while observing all standard safety precautions.

Instruction: *Version 1:* This course consists of lectures, group-paced activities, and laboratory exercises on the PDP-11 series instruction set, number systems, diagnostic programs, core memory and parity, bootstrap terminator various registers CPU, real-time clock, interface cards and system operation and troubleshooting. *Version 2:* Lectures with audiovisual equipment and laboratory experiments support classroom activities. Topics covered in this course are the PDP-11 instruction set, number systems, diagnostic programs, power supply, core memory and parity, bootstrap terminator, the various registers found in the PDP-11, the CPU, real-time clock, and interface cards.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer maintenance (2/93).

NV-1402-0178

EP-3E Software Familiarization

Course Number: C-2D-3816.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon successful completion of this course, the student will be able to use IP-1515 software in conjunction with the

10H1 generic trainer and the ULQ-16 analyzer, to process ESM signals of interest. The student will be able to load a program and configure the software for mission use.

Instruction: Group-paced lectures/laboratories use trainers to reinforce material covered in the classroom. Topics covered are system boot, software data manipulation and ESM mission scenarios using the IP-1515 software package, ULQ-16 analyzer, and 10H1 generic trainer for processing signals of interest.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer laboratory (2/93).

NV-1402-0179

MOBILE SYSTEM TECHNICAL DATA FACILITY OPERATOR

Course Number: A-231-0088.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 3 weeks (100 hours).

Exhibit Dates: 1/90–2/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate the mobile system technical data facility.

Instruction: Lectures cover operation of the mobile system technical data facility by use of menus and commands and introduction and basic operation of the VAX, mass storage server, disk drives, printer-plotter, color graphics terminal, and magnetic tape drive.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer fundamentals/applications (2/93).

NV-1402-0180

CRYPTOLOGIC SYSTEMS PROGRAMMER/MANAGER

Course Number: A-532-0035.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 13 weeks (520 hours).

Exhibit Dates: 9/91–2/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and correct system programs at the highest level as a cryptologic system programmer.

Instruction: Lectures and laboratory exercises are used to introduce the student to VAX/VMS utilities, VAX computer, DEC/VAX equipment architecture, operating system design, assembly language programming, data base management and design, and Pascal.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer programming (2/93).

NV-1402-0181

MOBILE SYSTEMS TECHNICAL DATA FACILITY/ SIGINT CLASSIFICATION OF RECOGNIZED EMITTERS MAINTENANCE

Course Number: A-102-0356.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (133 hours).

Exhibit Dates: 8/90–1/94.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on a mobile systems technical data facility.

Instruction: Group-paced lectures and laboratory exercises cover the color graphics terminal; theory, preventive maintenance, and documented corrective maintenance on the graphics terminal; alignment and adjustment procedures; tape storage system; and troubleshooting of subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer maintenance laboratory (2/93).

NV-1402-0182

1. VAX SYSTEMS MAINTENANCE TECHNICIAN
2. UNIVERSAL CRYPTOLOGIC PROCESSOR TRAINING SHORE CRYPTOLOGIC SUPPORT SYSTEM VAX MAINTENANCE

Course Number: *Version 1:* A-102-0315. *Version 2:* A-102-0315.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 20 weeks (800 hours). *Version 2:* 16 weeks (516 hours).

Exhibit Dates: *Version 1:* 6/93–Present. *Version 2:* 4/90–5/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance on DEC Vax based systems in a clustered environment which hosts local area networks. *Version 2:* Upon completion of the course, the student will be able to perform preventive and documented corrective maintenance on computer-based systems in a clustered environment which hosts local area networks.

Instruction: *Version 1:* This course includes group-paced lectures and laboratory exercises on Vax systems maintenance; digital systems, data communications, local area networks, and Vax clusters; preventive and corrective maintenance on Vax/VMS systems; ethernet local area networks, fiber optics, and DEC bridges; CD/ROM reader and laser printers; digital UNIX operating system; hardware maintenance; and troubleshooting of the Vax system. *Version 2:* Group-paced lectures and laboratory exercises are used to prepare the student to perform preventive and corrective maintenance on the system. Topics covered include introduction to computer systems; VAX/VMS hardware maintenance; console subsystem; traps, interrupts, and clock generator modules; buffers; and maintenance and troubleshooting the VAX computer.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (2/98); in the upper-division baccalaureate category, 3 semester hours in networking (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in computer maintenance laboratory (2/93).

NV-1402-0183

SIGINT CLASSIFICATION OF RECOGNIZED EMITTERS

Course Number: A-231-0092.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 3 weeks (97 hours).

Exhibit Dates: 1/90–8/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate the SCORE system at the apprentice level.

Instruction: Lectures are presented on the operation of the control processor, system console, operator console, VAX computer, and computer peripherals. The student will perform at the level of an apprentice.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer fundamentals/applications (2/93).

NV-1402-0184

OUTBOARD OPERATOR

Course Number: *Version 1:* A-231-0054. *Version 2:* A-231-0054.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 5 weeks (200 hours). *Version 2:* 10 weeks (332-333 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 1/92–7/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform cryptologic combat support and other related duties in tactical support of warfare commanders in all areas of warfare. *Version 2:* Upon completion of the course, the student will be able to perform cryptologic combat and other related support.

Instruction: *Version 1:* This course consists of group-paced lectures, demonstrations, and laboratory exercises application of non-Morse communications; application of signals analysis; theory of operation of outboard CESM equipment; description and operation of countermeasures receiving set; and basic operation of alternate communications modes. *Version 2:* Lectures and laboratories involve Morse code proficiency; electronic warfare; the combat information center; threat countries and types of platforms; US naval fleet communications; outboard reporting; technical support; signal security; tactical applications; and an introduction to the theory, function, interfacing, and operation of various types of communications, control, display, and interfacing equipment associated with cryptologic operations.

Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (2/98). *Version 2:* Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1402-0185

TACTICAL INTELLIGENCE OPERATOR

Course Number: A-231-0052.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (113 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to, with supervision, operate equipment associated with fleet tactical intelligence operations. Students will be able to operate equipment under normal and degraded operating conditions.

Instruction: Lectures, demonstrations, and hands-on laboratory cover terminology, capabilities and limitations, modes of operation and sequencing, location and function of all controls, and operational procedures. Equipment includes high-frequency direction finding, over the horizon targeting, UHF satellite communications, and computerized tactical intelligence equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/98).

NV-1402-0186

Outboard Division Chief

Course Number: A-231-0095.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 12 weeks (463 hours).

Exhibit Dates: 5/91–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to operate and manage cryptologic and other specific equipment in a combat and control environment.

Instruction: Classroom lectures and laboratories involve Morse code proficiency; cryptologic management; fleet orientation; threats; US naval fleet communications; outboard reporting; technical support; signal security; tactical applications; and an introduction to the theory, function, interfacing, and operation of various types of communications, control, display, and interfacing equipment associated with cryptologic operations.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1402-0187

Cryptologic Combat Support Division Chief

Course Number: A-231-0071.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (288 hours).

Exhibit Dates: 1/92–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to operate and manage fleet cryptographic assets, particularly the cryptographic combat control console, under normal and degraded operating conditions.

Instruction: Classroom lectures and laboratories cover cryptologic management, fleet operations/orientation, communications resources, threats, cryptologic operations, and naval warfare, with emphasis on the use and operation of the AN/SSQ-93(V) and the AN/ASQ-11.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1402-0188

Cryptologic Combat Systems Operator

Course Number: A-231-0072.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (198 hours).

Exhibit Dates: 1/92–8/96.

Learning Outcomes: Upon completion of the course, the student will be able to operate the cryptologic combat support system (CCSS) and the cryptologic combat support console (CCSC) under normal and degraded operating conditions.

Instruction: Classroom lectures and laboratories cover threat countries and platforms, naval communications, US Navy fleet support and operations, and an introduction to the use and operation of the AN/SSQ-93(V) CCSC and the AN/ASQ-111 CCSS.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1402-0189

Cryptologic Combat Support System/Console (CCSS/SC)

Course Number: A-3B-0024.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2 weeks (66 hours).

Exhibit Dates: 1/90–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to coordinate cryptologic operations; determine tactical significance of cryptologic/non-cryptologic data, and integrate that with other intelligence; identify cryptologic requirements and be familiar with cryptologic briefings; have an in-depth knowledge of and familiarity with the CCSS/CCSC system and subsystem; and be able to utilize same.

Instruction: Classroom lecture and laboratory covering organization and management of the cryptologic combat support system and the Cryptologic Combat Support Console (CCSS/CCSC) with applications.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1402-0190

Bullseye Outstation Operator

Course Number: A-231-0094.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 12 weeks (472 hours).

Exhibit Dates: 1/90–5/94.

Learning Outcomes: Upon completion of the course, the student will be able to perform the functions of a Bullseye outstation operator at the apprentice level.

Instruction: Group-paced lectures and laboratory exercises are used to provide the student with instruction on outstation operations and programs, Morse code, time code generator, sonograph, wideband system, narrowband control subsystem, and direction finding subsystem.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1402-0191

Afloat Cryptologic Management, Common Core

Course Number: A-3B-0020.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (130-132 hours).

Exhibit Dates: 5/91–3/96.

Learning Outcomes: Upon completion of the course, the student will have knowledge and understanding of fleet cryptologic assets and their management. Upon completion, student will proceed to other courses which will provide more specific training.

Instruction: Classroom lectures cover cryptologic management, fleet orientation, communications resources, threats, cryptologic operations, and naval warfare.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1402-0192

Electronic Warfare Technician CV/CVN Operations

Course Number: A-102-0211.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 3 weeks (95 hours).

Exhibit Dates: 1/90–2/93.

Learning Outcomes: Upon completion of the course, the trainee will be able to describe the theory necessary to support and understand the performance of normal operational tasks or mechanical breakdown without going into logic, circuit, or program flow diagrams on the AN/SLQ-17 and AN/WLR-1H.

Instruction: Group-paced lectures cover the course content. Laboratory instruction uses the AN/SLQ-17 and AN/WLR-1H to reinforce material covered in lecture. Topics covered include terms, abbreviations, system characteristics, various operator modes, antenna assemblies, and the correct use of built-in test equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer operations (1/93).

NV-1402-0193

Universal Cryptologic Processor Training (UNCRYPT) Flaghoist VAX Maintenance

Course Number: A-102-0360.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 5-6 weeks (180 hours).

Exhibit Dates: 1/90–11/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on all Digital Equipment Corporation components/equipment utilized in the (AN/FSQ-138) Flaghoist System.

Instruction: Group-paced lectures, video tapes, and laboratory exercises are used to prepare the student in functional and operational theory, disassembly and reassembly, and in troubleshooting the system. Topics covered include digital buses, Microvax II computer, disk drives, magnetic tape drive, and fault isolation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer maintenance (1/93).

NV-1402-0194

Cryptologic Combat Support Console Maintenance

Course Number: A-102-0297.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4-5 weeks (147 hours).

Exhibit Dates: 12/92–11/96.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the cryptologic combat support console (AN/SSQ-93(V)) to the modular level.

Instruction: Group-paced lectures and laboratory exercises are used to teach students the theory, laboratory practice, preventive maintenance, and troubleshooting needed to maintain a combat support console. Topics of instruction include the theory and operation of the console, computer/processor, fault isolation, and corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer maintenance (2/93).

NV-1402-0197

Wideband Acquisition and Analysis Systems Maintenance
(Wideband Acquisition and Analysis Maintenance)

Course Number: A-102-0230.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 25 weeks (832-850 hours).

Exhibit Dates: 2/90–11/96.

Learning Outcomes: Before 2/90 see NV-1402-0068. Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the wideband acquisition system to the component level.

Instruction: Group-paced lectures and laboratory experiences cover wideband acquisition and analysis, hardware and software operations, signal digitizers and processors, logic circuits, communications protocol, troubleshooting and maintenance to the component level, and communications controllers.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in data communications systems (2/98).

NV-1402-0198

Cryptologic Technician M, Universal Cryptologic Processor Wideband Subsystem Maintenance, Class C

Course Number: A-102-0291.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7-8 weeks (240 hours).

Exhibit Dates: 12/90–10/93.

Learning Outcomes: Before 12/90 see NV-1402-0070. Upon completion of the course, the trainee will be able to troubleshoot the PDP-11/34 down to the lowest replaceable unit. The student will also perform preventive and corrective maintenance on the Wideband Acquisition and Analysis System in accordance with approved standards and appropriate technical manuals.

Instruction: Lectures with audiovisual equipment and supervised laboratory exercises cover PDP-11/34 computer system, Wideband Acquisition and Analysis system, memory management diagnostic test, basic instruction test, bootstrap loader, and troubleshooting and repair using system diagnostics and standard test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital computer maintenance (2/93).

NV-1402-0199

1. Cryptologic Technician Communications, Class A
2. Cryptologic Technician O, Class A

Course Number: *Version 1:* A-260-0030. *Version 2:* A-260-0030.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 13-14 weeks (544 hours). *Version 2:* 9 weeks (280-336 hours).

Exhibit Dates: *Version 1:* 3/97–Present. *Version 2:* 6/91–2/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform operator level windows NT server functions, identify the components of a local area network, identify standard network topologies, define and describe asynchronous and synchronous transmission modes, state the purpose of multiplexing, identify standard ethernet components, describe the benefits of shared network applications, and identify the terms associated with computer systems technology. *Version 2:* Before 6/91 see NV-1402-0071. Upon completion of the course, the student will be able to type 35 words per minute at 96 percent accuracy, prepare naval messages in four different formats, read teletypewriter data at 50 wpm, operate cryptographic equipment, and operate cryptographic communications equipment.

Instruction: *Version 1:* Group-paced lecture and laboratory cover entry level computer operations and networking. The course includes basic computer skills including hardware, software, and operating systems; multiplexers; and modems. *Version 2:* Group-paced lectures and laboratories cover safety, touch typing, introduction to computers, message format(s), TSEC/KE 84A encryption and TSEC/KW-46 broadcast security equipment, and communications circuits and networks.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in applications and 3 in local area networks (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in typing (5/95).

NV-1402-0200

F/A-18 Enhanced Comprehensive Asset Management System Operator Organizational Maintenance
(F/A-18 Data Processing Set)

Course Number: C-150-3867.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 9/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, under limited supervision, a data processing set and data station equipment.

Instruction: Lectures and practical exercises cover data processing and data base setup and maintenance procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in computer data processing (8/93).

NV-1402-0201

AN/ASM-686 Night Attack Intermediate Avionics Test Set Operator/Maintenance

Course Number: C-102-4043.

Location: Air Maintenance Training Group, Lemoore, CA.

Length: 7 weeks (256 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform intermediate level maintenance, under close supervision, on an avionics test set.

Instruction: Lectures and practical exercises cover the operation and troubleshooting of an avionics test set.

Credit Recommendation: In the vocational certificate category, 1 semester hour in microprocessor theory (8/93).

NV-1402-0202

AN/ASM-607(V) (Series) Computer Memory Loader-Verifier Test Set Intermediate Maintenance

Course Number: C-198-3886.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 6/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, maintain, and troubleshoot the AN/ASM-607(V) series computer memory loader-verifier test set.

Instruction: Course covers the theory, function, and purpose of tape-to-tape and UV EPROM reprogramming, ESD precautions, contamination implications, computer error code messages, logic tree format, and wiring faults. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in microprocessor programming (7/94).

NV-1402-0203

Intelligence Center Maintenance

Course Number: J-150-2019.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 13 weeks (520 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain the digital computer systems, local area networks, and operating systems found in the intelligence center of large naval ships.

Instruction: Lectures, exercises, significant hands-on experiences, and troubleshooting procedures using standard test equipment provide preventive maintenance and repair services on all classes of computing equipment to be found in a shipboard intelligence center. Equipment includes the Zenith ZZA8 intelligent terminal, Xenix operating systems, graphical and imagery systems, ocean surveillance terminals, and local area networks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to local area networks, 2 in computer maintenance and repair or 2 in maintenance of electronic and computer equipment, and 2 in minicomputer operations (9/94).

NV-1402-0204

Navy Tactical Command System Afloat Integrated Data Base Analyst

Course Number: J-150-2956.

Location: Fleet Intelligence Training Center, Pacific, San Diego, CA; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 6 weeks (240 hours).

Exhibit Dates: 10/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the functions of the naval tactical command system on shipboard as it relates to intelligence gathering and processing services, communication with users relative to making data base queries on intelligence matters, and preparing reports of data received for the queries.

Instruction: Course includes lectures and extensive hands-on laboratory exercises to query, display, print, map, file, and plot the data received as a result of a data base query. Student will be exposed to UNIX, SYBASE, MS/DOS, mapping, and imagery techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to data base functions and 2 in mini-/microcomputer applications (9/94).

NV-1402-0205

NAVY TACTICAL COMMAND SYSTEM AFLOAT INTELLIGENCE CENTER MANAGER

Course Number: J-150-2957.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the functions of a shipboard intelligence center from a management perspective, including knowledge of system hardware and software, data base management, and system administration requirements.

Instruction: Lectures, demonstrations, class participation, and examinations prepare the student to manage a shipboard intelligence center, including hardware and applications software support, message drafting, processing incoming messages, and networking to facilities outside the intelligence center.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/94).

NV-1402-0206

NAVY TACTICAL COMMAND SYSTEM AFLOAT SYSTEM ADMINISTRATION

Course Number: J-150-2955.

Location: Fleet Intelligence Training Center, Pacific, San Diego, CA; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 7 weeks (280 hours).

Exhibit Dates: 10/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the function of the naval tactical command system used to support intelligence gathering activities, the hardware on which it functions, and its associated operating systems. Data base administration functions include an understanding of network architecture, system shutdown and activation, retrieval processes, menu systems, and output options.

Instruction: Lectures, class discussions, examinations, and extensive laboratory exercises are designed to familiarize students with all aspects of the data base administration functions needed to support this system, including hardware, software, operating systems, and retrieval processes. UNIX and MS/DOS operating systems, software installation and maintenance, communications interfaces, system administration, and disaster recovery are studied in detail.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in data base administration, 3 in data base systems, 2 in data base access and retrieval, and 2 in mini-/microcomputer operations (9/94).

NV-1402-0207

TACTICAL AIRCRAFT MISSION PLANNING SYSTEM (TAMPS) SYSTEM ADMINISTRATOR

Course Number: J-150-2965.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 11/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the computer-based tactical aircraft mission planning system.

Instruction: Lectures and significant hands-on laboratory experiences include signing-on, activating the system, retrieving information, and formatting reports.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (9/94).

NV-1402-0208

INTELLIGENCE ANALYSIS SYSTEM ADMINISTRATOR

Course Number: J-240-0976.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (105-106 hours).

Exhibit Dates: 11/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical and administrative support to a UNIX operating system and will have sufficient knowledge to configure the system, troubleshoot problems, monitor disk storage activity, connect peripheral devices, and provide networking of the system to locally attached workstations and to other wide area networks.

Instruction: Lectures, exercises, examinations, and significant hands-on experience provide the skills necessary to support a UNIX operating system capable of running various applications and connecting users to both locally attached systems and external networks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in UNIX, UNIX operating systems, and administering UNIX operating systems (9/94).

NV-1402-0209

INTELLIGENCE ANALYSIS SYSTEM OPERATOR

Course Number: HEZ.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (72 hours).

Exhibit Dates: 12/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a PC-based intelligence analysis system. Functions include the use of various Windows menus to retrieve and format responses to intelligence queries.

Instruction: Lectures and hands-on laboratory exercises cover using the system, understanding Windows processing, imaging, and developing spreadsheets.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in microcomputer applications (9/94).

NV-1402-0211

DATA LINK COMMUNICATION SYSTEM MAINTENANCE TECHNICIAN

Course Number: A-101-0148.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 14 weeks (560 hours).

Exhibit Dates: 3/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operational characteristics and perform corrective maintenance on a digital computer and its associated peripheral devices (magnetic tape drive, CRT display). In addition, the student will be able to perform corrective maintenance on a shipboard communications system.

Instruction: Lectures and practical exercises cover computer instruction sets, I/O and interrupt processing, magnetic tape drives, radio receivers, antenna couplers, radio transmitters, radio test sets, and a digital communications system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 3 in computer systems troubleshooting and maintenance (3/95); in the upper-division baccalaureate category, 3 semester hours in advanced computer systems and organization (3/95).

NV-1402-0212

DATA LINK COMMUNICATION SYSTEM MAINTENANCE TECHNICIAN

Course Number: A-101-0263.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 25 weeks (1000 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operational characteristics and perform corrective maintenance on a digital computer and its associated peripheral devices (magnetic tape drives, CRT display). In addition, the student will be able to perform corrective maintenance on a shipboard communications system.

Instruction: Lectures and practical exercises cover computer instruction, I/O and interrupt processing, radio transmitters, radio test sets, and a digital communications system. This course is comprised of A-101-0148, Data Link Communication Systems Maintenance Technician and A-160-0069, TSEC/KG-40 Limited Maintenance, a classified course containing instruction in the operation and preventive and corrective maintenance of equipment, assemblies, and subassemblies. That course was not evaluated.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 3 in computer systems troubleshooting and maintenance

(3/95); in the upper-division baccalaureate category, 3 semester hours in advanced computer systems and organization (3/95).

NV-1402-0213

Data Terminal Equipment Maintenance

Course Number: A-150-0017.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 17 weeks (636 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the organization and operation of a computer system and its components.

Instruction: Instruction includes theory and laboratory experiences in understanding set controls, microcomputer instructions, formats and classifications, program interpretation and execution, logic elements, controller, clock, subroutine analysis, emulation, macro programs, I/O function, interrupts, diagnostics, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (3/95); in the upper-division baccalaureate category, 3 semester hours in advanced computer systems and organization (3/95).

NV-1402-0214

LHD Exterior Communications System Maintenance

Course Number: A-101-0234.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 22 weeks (902 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be qualified to perform preventive and corrective maintenance as well as alignment of the AN/URC-109(V) communication set and AN/SSQ-33 surface ship exterior communication control system (SSECCS).

Instruction: Lectures and practical exercises in system configuration, signal detection, subsystem alignment, broad and narrow band operation, system troubleshooting, digital numbering systems, program loading, boot tape generation, computer controller consoles, power management, and antenna installation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour computer systems and organization and 6 in electronic systems troubleshooting and maintenance (3/95).

NV-1402-0215

DD-963 Computer/Peripheral Subsystem Maintenance
(DD-963 Class Ship's Computer/Peripheral Subsystem Maintenance)

Course Number: A-150-0109.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 27 weeks (1107 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Before 11/91 see NV-1715-1261. Upon completion of the course, the student will be able to operate and troubleshoot a minicomputer system; write machine language programs for the computer; use software diagnostic aides; and replace subsystem components, including I/O control consoles, magnetic tape units, digital data connectors, and data display equipment.

Instruction: Lectures and practical exercises cover the theory and troubleshooting of a general purpose computer and its peripherals. An in-depth understanding of the computer's operation, instruction repertoire, signal flow, and subsystem logic is presented. The course emphasizes fault isolation to circuit level using diagnostic programs and basic test equipment. The course includes topics pertaining to all peripheral subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer/peripheral repair (3/95); in the upper-division baccalaureate category, 2 semester hours in advanced computer architecture and 3 in computer systems and organization—peripherals (3/95).

NV-1402-0216

AN/UYK-7 FFG-7/36/61 Class Ship Computer/Peripheral Maintenance
(FFG-7/36/61 Class Ships Computer/Peripheral Subsystem Maintenance)

Course Number: A-150-0135.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 25 weeks (1049 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and troubleshoot a minicomputer system; write machine language programs for the computer; use software diagnostic aids; and replace subsystem components, including I/O control consoles, magnetic tape units, digital data connectors, and data display equipment.

Instruction: Lectures and practical exercises cover the theory and troubleshooting of a general purpose computer and its peripherals. An in-depth understanding of the computer's operation, instruction repertoire, signal flow, and subsystem logic is presented. The course emphasizes fault isolation to the circuit board level using diagnostic programs and basic test equipment. The course includes topics pertaining to all peripheral subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer peripheral repair (3/95); in the upper-division baccalaureate category, 2 semester hours in computer architecture and 3 in advanced computer systems and organization (3/95).

NV-1402-0219

AN/UYK-65(V) Shipboard Non-Tactical Automated Data Processing (SNAP-I) Maintenance System

Course Number: A-150-0250.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 23 weeks (912 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Before 2/93 see NV-1715-1265. Upon completion of the course, the student will be able to describe the theory necessary to support and understand the performance of the equipment and perform routine preventive and corrective maintenance on processor groups, communications subsystem, magnetic disk storage subsystem, magnetic tape storage subsystem, and unit recorders.

Instruction: The AN/UYK-65(V) is an Intel 80286 based computer system. There are lectures and practical exercises in computer system bootstrapping, initialization, system status verification, corrective adjustments, and card-level maintenance using software and/or firmware diagnostic routines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization and 6 in computer systems troubleshooting and maintenance (3/95).

NV-1402-0220

CV/CVN Combat Direction System (ASWM) Computer/Peripheral Subsystem Maintenance

Course Number: A-150-0260.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 25 weeks (1025 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a computer-based application system; understand system hardware components and their interfaces to the central processor; and perform first level basic and corrective maintenance, alignment, and adjustment of the system and components.

Instruction: Lectures and extensive hands-on laboratory experiences cover a computer-based applications system requiring the facilities of a large array of peripheral devices. The hardware environment includes central processors; tape, disk, and terminal devices; line printers; and links to various analog/digital line converters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer operations and 3 in computer systems and peripheral equipment maintenance and troubleshooting (3/95).

NV-1402-0221

CV/CVN/LHD Combat Direction System AN/UYQ-21 Display Maintenance Technician

Course Number: A-150-0261.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 37 weeks (1480 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be qualified to perform prevention and corrective maintenance on the AN/UYQ-21 display system. This system is a multimicroprocessor system containing a small number of functional modules.

Instruction: Lectures and practical exercises cover radar target simulation, power distribution, synchros, A/D and D/A converters, programmable array logic, basic microprocessor operation, raster and vector displays, display multiplexers, thermal printer/plotter, digital switchboard, and basic soldering techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance and 6 in electronic systems troubleshooting and maintenance (3/95).

NV-1402-0222

CG/CGN Combat Direction System Upgrade OJ-194A(V)3UYA-4(V) Display Maintenance Technician
(CG/GGN/DD-993 Combat Direction System Upgrade OJ-194A(V)3/UYA-4(V) Display Maintenance Technician)

Course Number: A-150-0262.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 37 weeks (1480 hours).

Exhibit Dates: 2/92–1/94.

Learning Outcomes: Upon completion of the course, the student will be qualified to perform preventive and corrective maintenance on the AN/UYQ-21 display system. This system is a multimicroprocessor system containing a small number of functional modules.

Instruction: Lectures and practical exercises cover radar target simulation, power distribution, synchros, A/D and D/A converters, programmable array logic, basic microprocessor operation, raster and vector displays, display multiplexers, thermal printer/plotter, digital switchboard, and basic soldering techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance and 6 in electronic systems troubleshooting and maintenance (3/95).

NV-1402-0223

CG/CGN/DDG CDS Upgrade AN/UYK-43 Computer/Peripheral Maintenance
(CG/GGN Combat Direction System Upgrade AN/UYK-43 Computer/Peripheral Maintenance Technician)

Course Number: A-150-0269.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 33 weeks (1320 hours).

Exhibit Dates: 2/92–1/94.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and operate a minicomputer system, write machine language programs for the computer, use software diagnostic aides to isolate and define problems, and replace subsystem components within the central processor.

Instruction: Lectures and extensive practical exercises pertain to the theory and troubleshooting of a general purpose computer and its peripherals. An in-depth understanding of the computer's operation, instruction repertoire, signal flow, and subsystem logic is presented. The course emphasizes fault isolation to the circuit board level using diagnostic programs and basic test equipment. Studies include experiences with all supporting peripheral subsystems, including magnetic tape units, I/O control consoles, digital data converters, disk storage devices, and data display equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer/peripheral repair (3/95); in the upper-division baccalaureate category, 2 semester hours in computer architecture and 3 in advanced computer systems and organization (3/95).

NV-1402-0224

LHD Computer and Peripheral Equipment Maintenance

Course Number: A-150-0271.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 23 weeks (910 hours).

Exhibit Dates: 4/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a microcomputer-based applications system, understand system hardware components and their interfaces to the control processor, and perform system maintenance to the level of field-replaceable modules.

Instruction: Lectures and extensive hands-on laboratory experiences cover the operation of a microcomputer-based applications system requiring the facilities of a large array of peripheral devices. The hardware environment includes a central processor; tape, disk, and terminal devices; line printers; and a data communications component that provides data input from remote locations to the central processor.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and peripheral equipment maintenance and troubleshooting, 2 in computer operations, and 2 in data communications and networking (3/95).

NV-1402-0225

Aircraft Carrier Inertial Navigation System Operation and Maintenance

Course Number: A-193-0374.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 21 weeks (826 hours).

Exhibit Dates: 7/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, and maintain an inertial navigational system. The student will also be able to interface the system with other electronic systems.

Instruction: Lectures and laboratory experiences are integrated into this course of study. Subjects addressed in this course are digital logic basic concepts, microprocessor fundamentals and timing functions, magnetic recording theorems and data formatting, basic navigation theory, inertial navigational theory, alignment/maintenance, NAVSAT/global positioning systems, and the mathematics and trigonometry needed to understand the concepts.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital logic principles, 3 in navigation theory, and 1 in trigonometry (3/95).

NV-1402-0226

Mk 74 Mod 15 Missile Fire Control System Operation and Maintenance
(Mk 74 Mod 15 (NTU) Missile Fire Control System Operation and Maintenance)

Course Number: A-104-0189.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 33 weeks (1320 hours).

Exhibit Dates: 3/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply digital logic, digital timing circuits, microprocessor systems control, and selected communications concepts.

Instruction: The course is composed of periods of both formal classroom training and accompanying laboratories. Relevant mathematics is included in the course. Problem solving and associated schematic reading is integrated throughout the course. Students accepted into the course will have already graduated from a class in which they mastered basic electronic/electrical theorems. This course includes instruction in pulse receiver/transmitters, CW receivers/transmitters, frequency, shift devices, microprocessor control, timing considerations, electrical power distribution and control, troubleshooting and fault isolation concepts, transmitter modulation concepts, waveguide theory, and various test signal/display operation and maintenance. The student will be provided extensive hands-on experience in all areas. In addition, the student will be required to demonstrate competence with various forms of test and recording equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital logic, 3 in microwave transmission, 3 in microprocessor theory, and 2 in electronic troubleshooting theory/maintenance (3/95).

NV-1402-0227

Mk 74 Mod 14 (NTU) Missile Fire Control Operation and Maintenance

Course Number: A-104-0196.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 27 weeks (1080 hours).

Exhibit Dates: 1/90–6/94.

Learning Outcomes: Upon completion of the course, the student will be able to apply digital logic, digital timing circuits, microprocessor systems control, and selected communications concepts.

Instruction: The course is composed of periods of both formal classroom training and accompanying laboratories. Relevant mathematics is included in the course. Problem solving and associated schematic reading is integrated throughout the course. Students accepted into the course will have already graduated from a class in which they mastered basic electronic/electrical theorems. This course includes instruction in pulse receiver/transmitters, CW receivers/transmitters, frequency, shift devices, microprocessor control, timing considerations, electrical power distribution and control, troubleshooting and fault isolation concepts, transmitter modulation concepts, waveguide theory, and various test signal/display operation and maintenance. The student will be provided extensive hands-on experience in all areas. In addition, the student will be required to demonstrate competence with various forms of test and recording equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital logic, 3 in microwave transmission, 3 in microprocessor theory, and 2 in electronic troubleshooting theory/maintenance (3/95).

NV-1402-0228

Tartar Weapons Direction System Mk 14 Mod 5 (NTU)

Course Number: A-150-0253.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 24 weeks (960 hours).

Exhibit Dates: 3/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the Tartar weapons direction system.

Instruction: This course of instruction is composed of formal lecture periods and associated laboratory periods. Subjects taught during this course include microprocessor architecture and operations, magnetic recording devices operation and maintenance, communications techniques (both analog and digital), antenna theory/maintenance, and overall system operation concepts.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer system troubleshooting and maintenance and 3 in applied control systems (3/95).

NV-1402-0229

Weapon Direction System Mk 14 Mod 5 New Threat Upgrade

Course Number: A-150-0268.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 24 weeks (864 hours).

Exhibit Dates: 10/91–2/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the Tartar weapons direction system.

Instruction: This course of instruction is composed of formal lecture periods and associated laboratory periods. Subjects taught during this course include microprocessor architecture and operations, magnetic recording devices operation and maintenance, communications techniques (both analog and digital), antenna theory/maintenance, and overall system operation concepts.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer system troubleshooting and maintenance and 3 in applied control systems (3/95).

NV-1402-0230

Naval Aviation Logistics Command Management Information System Aviation System Aviation Maintenance IMA Data Base Administration/Analyst

Course Number: C-555-2012.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform data entry, system security, data base configuration, statistical analysis, upline reporting, and data base troubleshooting and maintenance of naval aviation information systems, while ensuring data base integrity.

Instruction: Course includes lectures and laboratories in computer system operations, performing data base maintenance, and applying statistical analysis to aviation maintenance data derived from naval information systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer operations and 1 in software applications (1/97).

NV-1402-0231

Naval Aviation Logistics Command Management Information System Aviation Maintenance Phase 3 System Administration/Analyst

Course Number: C-555-2013.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and analyze naval aviation information systems.

Instruction: Course includes lectures and laboratories in processing source documents, installing and running system software, maintaining information system personal computers, and analyzing statistical data relative to aviation maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer operations and 1 in software applications (1/97).

NV-1402-0232

Shipboard Non-Tactical Automated Data Processing (SNAP 3) System Administration

Course Number: A-531-0021.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 9/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to effectively and efficiently manage a SNAP 3 equipped platform using procedures necessary to manage a ported SNAP 1 and a ported SNAP 2 system, administer safety regulations and safeguards associated with the SNAP 3 installation, identify the two types of JMCIS codes, and manage the eight common ashore/afloat functions provided by the JMCIS system.

Instruction: Methods include hands-on experience, homework assignments, training manuals, lectures, and demonstrations. The topics covered include microcomputer orientation, law, security systems, JMIS introduction, personal computer configuration, SNAP computer configuration, and operation and management of SNAP 3 subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic computer operation (11/95).

NV-1402-0234

Computer CP-890A B/UYK Input/Output Controller Maintenance

Course Number: A-193-0338.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 3-4 weeks (102-120 hours).

Exhibit Dates: 8/94–Present.

Learning Outcomes: Before 8/94 see NV-1402-0079. Upon completion of the course, the student will perform maintenance as required on a navigation computer.

Instruction: Lectures and laboratory exercises cover the functional descriptions of the computer input/output controller, master clock, timing chain, sequencer, master clear circuitry, real time clock, control memory operations, external function/output data operations, input data operations, external interrupt operations, and the computer input/output controller special operations. Slightly over one third of the course is spent in maintenance and troubleshooting laboratory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer input/output operations and troubleshooting (4/96).

NV-1402-0235

Computer CP-890A B/UYK Processor Maintenance

Course Number: A-193-0337.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 3 weeks (116 hours).

Exhibit Dates: 8/94–Present.

Learning Outcomes: Before 8/94 see NV-1402-0080. Upon completion of the course, the student will perform maintenance on a navigation computer.

Instruction: Lectures and laboratories cover the functional descriptions of the processor add-subtract, nonsequential interrupt, repeat, shift, complex arithmetic, floating point operations, and the processor instruction set. Approximately one half of course time is spent in laboratory work on corrective maintenance and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer CPU theory and troubleshooting (4/96).

NV-1402-0236

Command and Control Processor Subsystem Operator

Course Number: K-221-0169.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA; Fleet Combat Training Center, Pacific, San Diego, CA.

Length: 1-2 weeks (45-60 hours).

Exhibit Dates: 1/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the control information processing system and network, perform normal and abnormal operating procedures, and perform basic operator troubleshooting for a command and control computer-based system.

Instruction: Lectures, laboratories, and demonstrations are used in a group-paced instructional mode coupled with self-paced learning modules (problems) and team analysis exercises. Topics include computer and network operation descriptions, computer operating processes, basic information acquisition and processing, and basic system fault analysis.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer/network operations laboratory (5/96).

NV-1402-0237

Command Control Systems Ashore Display Operator

Course Number: J-221-2306.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the ashore operations support system, a graphical/menu driven computer-based interactive information processing and communications system.

Instruction: Classroom lectures, laboratory exercises, and demonstrations are used to create operational proficiency. Topics covered include operational description of the overall system, descriptions of system functions, descriptions of steps involved in obtaining specific information or outcomes, computer-driven plotting and tracking processes, and automated communications (data forwarding).

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/96).

NV-1402-0238

CV/CVN Combat Direction Center Operator

Course Number: J-221-0334.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA; Fleet Combat Training Center, Pacific, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the shipboard combat system and display consoles as a member of the combat information center team.

Instruction: Lectures, laboratories, demonstrations, and simulations are used to create operational proficiency and teamwork. Topics covered include teamwork; management; communications and information processing sequences and procedures; equipment operating requirements and procedures; and basic plotting, identification, charting, tracking, and controlling procedures.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/96).

NV-1402-0239

Command Control Systems Ashore System Manager

Course Number: J-221-2307.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 5/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, manage, and administer the operations support system of the ashore command and control system. The student will have a working knowledge of UNIX, SQL, and Oracle.

Instruction: Lectures, demonstrations, laboratory exercises, and written examinations are used to create knowledge and proficiency in the operation of computers using UNIX, SQL, and Oracle systems and programs. Topics covered include UNIX operating system, shell, file structure, management, editing, utility programs, job control, networking, start up, administration, and peripheral operation; Oracle relational database structure, operation, and administration; SQL *Plus commands and processes; and OSS data base administration.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in UNIX system administration and shell programming and 1 in introduction to data base programming. (Oracle and SQL) (5/96).

NV-1402-0240

Weapon Direction System Mk 14 Mod 5 Operator (Common Program)
(Weapon Direction System Mk 14 (MR) New Threat Upgrade)

Course Number: J-113-1007.

Location: Fleet Combat Training Center, Pacific, San Diego, CA; Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate an integrated automatic detection and tracking system (consisting of radar, data processor/magnetic tape recorder, recorder/reproducer, and display console) in conjunction with a weapons direction system for medium-range missiles.

Instruction: Methods of instruction include classroom, practical application, and homework assignments. Topics covered are computer console preparation/initialization, medium-range missile system initialization, battle doctrine, weapons engagement coordination operation and responsibilities, fire control console operation and responsibilities, and stand-alone operations and responsibilities.

Credit Recommendation: In the vocational certificate category, 2 semester hours in control system operations (5/96).

NV-1402-0241

Weapon Direction System Mk 14 Mod 5 Operator

Course Number: J-113-1008.

Location: Fleet Combat Training Center, Pacific, San Diego, CA; Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 11/92–10/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate an integrated automatic detection and tracking system (consisting of radar, data processor/magnetic tape recorder, recording/reproducer, and display console) in conjunction with a weapons direction system for medium-range missiles.

Instruction: Methods of instruction include classroom, practical application, and homework assignments. Topics covered include computer console preparation/initialization, medium-range missile system initialization, battle doctrine, weapons engagement coordination operations/responsibilities, fire control console operations/responsibilities, and stand-alone operations/responsibilities.

Credit Recommendation: In the vocational certificate category, 2 semester hours in control system operations (5/96).

NV-1402-0242

Navy Tactical Command System Afloat Operator

Course Number: J-221-2311.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA; Fleet Combat Training Center, Pacific, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate equipment in support of information retrieval and evaluation processes; perform basic data base management functions; describe data base system communication, organization, and exchange functions; explain data system operations and limitations; describe basic data base network functions; explain data uncertainty; and describe graphical user interface menu systems and operate them at the basic level.

Instruction: Lecture, laboratory, demonstration, and simulation are used in a group-paced environment. Topics include data base fundamentals, network fundamentals, information retrieval, system modes, information uncertainty and filtering, and drop-down and graphical user interface menu systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introductory data base/networking operations and terminology (5/96).

NV-1402-0243

1. Joint Maritime Command Information System
2. Naval Tactical Command System Afloat Maintenance

Course Number: *Version 1:* J-150-2305. *Version 2:* J-150-2305.

Location: *Version 1:* Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA; Advanced Electronics School, San Diego, CA. *Version 2:* Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA; Fleet Combat Training Center, Pacific, San Diego, CA.

Length: *Version 1:* 6 weeks (240 hours). *Version 2:* 3 weeks (120 hours).

Exhibit Dates: *Version 1:* 1/95–Present. *Version 2:* 6/93–12/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate and maintain data handling equipment associated with telecommunication information center installations and microcomputer equipment at computer command information system sites, using specialized test equipment. *Version 2:* Upon completion of the course, the student will be able to operate and maintain data handling equipment associated with telecommunication information center installations and microcomputer equipment at computer command information system sites, using specialized test equipment.

Instruction: *Version 1:* Group-paced lecture and laboratories cover various microcomputer hardware and peripherals. Topics include computer communication processor boards, data signal processing, local area networks, terminal maintenance, printer maintenance, fiber optic cable repair, and microcomputer systems. *Version 2:* Group-paced lecture and laboratories cover microcomputer hardware. Topics include computer communication processor boards, data signal processing, local area networks, and microcomputer systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 5 semester hours in computer system maintenance (5/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (5/96).

NV-1402-0244

Mk 160 Mod 4 Gun Computer System and Mk 46 Mod 0 Maintenance

Course Number: A-113-0131.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 11 weeks (440 hours).

Exhibit Dates: 4/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, diagnose, and repair a computerized gun control system to the electronic component level.

Instruction: Lectures, laboratories, and practical exercises are the methods used. Topics include computer system operation, maintenance, and repair. The course requires a student to use electronic theory to troubleshoot to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in troubleshooting computer systems and 4 in electronic servicing (5/96).

NV-1402-0245

Command and Control System Ashore Manager

Course Number: J-221-2305.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 7 weeks (280 hours).

Exhibit Dates: 5/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and manage the command and control system ashore operations support system. This is a pipeline course consisting of J-221-2306 and J-221-2307. See individual exhibits.

Instruction: This is a pipeline course; see individual exhibits for information.

Credit Recommendation: Credit is not recommended for this course; see exhibits above cited that comprise this course (5/96).

NV-1402-0246

Command and Control System Ashore Maintenance Technician

Course Number: J-221-2308.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 11-14 weeks (440-560 hours).

Exhibit Dates: 6/93–Present.

Learning Outcomes: Upon completion of the course, the student will operate and manage the command and control system ashore, and perform organizational and system level maintenance on the command and control systems ashore computer and peripheral equipment. This is a pipeline course consisting of J-221-0389 and J-150-2305. See individual exhibits.

Instruction: This is a pipeline course; see individual exhibits for information.

Credit Recommendation: Credit is not recommended for this course; see exhibits above cited that comprise this course (5/96).

NV-1402-0247

Submarine SNAP 2 Combined Maintenance (Submarine Shipboard Non Tactical Automated Data, Processing Program 2 Combined Maintenance)

Course Number: A-102-0289.

Location: Submarine Training School, Pacific, San Diego, CA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (89 hours).

Exhibit Dates: 2/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, adjust, and maintain digital computers and their associated peripherals and apply the elementary theory of digital computer operations.

Instruction: Lecture and laboratory instruction include the analysis, maintenance, and troubleshooting of the AN/UYK-62 computer system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer literacy (theory) and 1 in computer literacy laboratory (4/97).

NV-1402-0249

Navy Integrated Cryptologic Communications Systems

Course Number: A-260-0076.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 2/98–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the network troubleshooting techniques, including symptom recognition, symptom verification, determination of a course of action, and implementation of corrective action; describe network management techniques; understand the four steps to planning a new network or upgrading a network; explain routing tables as they relate to routers; and identify network devices.

Instruction: Group-paced lecture and laboratory exercises cover the network monitoring system; Fluke 675 Lanmeter, network management system, FIREBERD 6000, protocol analyzer, and time domain reflectometer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization (network management and security) (2/98).

NV-1402-0250

Wideband Acquisition and Analysis Maintenance

Course Number: A-102-0323.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 27 weeks (1081 hours).

Exhibit Dates: 4/94–1/98.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the wideband acquisition system to the component level and perform preventive and corrective maintenance on DEC PDP-11 systems down to the lowest replaceable unit.

Instruction: This course includes lectures, group-paced activities, and laboratory exercises on the PDP-11 series instruction set, number systems, and diagnostic programs; core memory and parity, bootstrap terminator and various registers found in the PDP-11; CPU, real-time clock, and interface cards; and PDP-11 system operations and troubleshooting. The course also covers wideband acquisition and analysis, hardware, software operations, signal digitizers and processors, logic circuits, communications protocol, troubleshooting and maintenance to the component level, and communications controllers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (2/98); in the upper-division baccalaureate category, 4 semester hours in data communications (2/98).

NV-1402-0251

Network Security and Vulnerabilities Technician

Course Number: A-531-0022.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7-8 weeks (303 hours).

Exhibit Dates: 10/96–Present.

Learning Outcomes: Upon completion of the course, the student will have the knowledge to secure a network against intruders and unauthorized users. Students will have an in-depth knowledge of the security aspects of various operating systems (UNIX, Windows NT, Netware) commercial, freeware, and government-owned security tools and firewalls.

Instruction: Group-paced lectures and laboratory that include netware protocols and standards, including TCP/IP, IPX, Appletalk; Novell Netware management; Netware installation and configuration; risk management, security models, security tools; identification, authentication, and access controls; malicious code; encryption; PC and UNIX vulnerabilities; UNIX tools; Windows 3.1 and 95 and UNIX operating systems; Sun UNIX/Solaris systems, and firewall basics.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in computer systems and organization (network management and security) (2/98).

NV-1402-0252

Information Systems Administration

Course Number: A-531-0046.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 10/96–Present.

Learning Outcomes: Upon completion of the course, the student will have the knowledge to manage a networked system with a focus on fault management, security, accounting, system management, performance management, configuration management, and communication.

Instruction: This course consists of group-paced lectures that include system administration responsibilities; computer hardware; network systems; network management for Windows 3.X, Windows 95, Windows NT, UNIX, and Novell Netware V3.X and V4.X; router configuration; introduction to data base management; TCP/IP addressing; and system security.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in computer systems and organization (computer information systems networking) (2/98).

NV-1403-0002

Direct Support

Course Number: A-231-0064.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (266-267 hours).

Exhibit Dates: 1/90–12/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate, under supervision, equipment in the local monitoring station under both normal and degraded conditions and copy Morse code.

Instruction: Classroom lectures, demonstrations, and hands-on laboratories cover background knowledge related to cryptographic operations in the Navy. The operation and function of various types of communication equipment in the local monitoring station are studied and the student gains hands-on experience. The student also acquires proficiency in Morse code at 20 GPM at 95 percent accuracy.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1404-0008

Radioman, Class A, Shore Duty

Course Number: A-202-0027.

Location: Service School Command, San Diego, CA.

Length: 2 weeks (56 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train personnel in shore radio operating practices.

Instruction: Lectures and operating exercises cover shore radio communications, including communications organization, message preparation, use of tape cutters, use of teletypes and video terminals, and communications practice.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in typing (5/82).

NV-1404-0009

Radioman, Class A, Sea Duty

Course Number: A-202-0026.

Location: Service School Command, San Diego, CA.

Length: 3 weeks (112 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train personnel in shipboard radio operating practice.

Instruction: Student receives operating practice in shipboard radio communications, including communications equipment orientation, patch panels, operations, and communications practice.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in communications equipment operations laboratory (5/82).

NV-1404-0010

Dynalec 200/700 Line Automatic Telephone Maintenance

Course Number: A-623-0100.

Location: Service School Command, Great Lakes, IL.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train personnel in the theory of operation, repair, and troubleshooting of an electronic automatic dial telephone system.

Instruction: Lectures and practical exercises cover the theory and operation of an electronic automatic line telephone system, including system operating procedures, calls and the switching matrix, dial tone, call completion, manual switchboard, cut-in, restricted line, ring generators, alarms, and related power supplies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic telephone systems and 1 in electronic system troubleshooting (10/83).

NV-1404-0011

Submarine Digital Teletype Combined Maintenance

Course Number: A-101-0251.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT.

Length: 4 weeks (162 hours).

Exhibit Dates: 1/90–3/92.

Learning Outcomes: Upon completion of the course, the student will be able to describe the functions of components of radio teletype transceivers and operate, troubleshoot, and repair them.

Instruction: Lectures and practical exercises cover the teletype equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in radio teletype operation and maintenance (10/89).

NV-1404-0012

Advanced International Morse Code Operator

Course Number: F-201-0210.

Location: Trident Training Facility, Kings Bay, GA; Fleet Mine Warfare Training Center, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–12/93.

Learning Outcomes: Upon completion of the course, the student will be able to transmit and receive international Morse code.

Instruction: Lectures and practical exercises are designed for student proficiency in Morse code.

Credit Recommendation: In the vocational certificate category, 3 semester hours in Morse code (10/89).

NV-1404-0013

Tactical Communications for Naval Embarked Advisory Teams

Course Number: K-201-0028.

Location: Reserve locations, US; Amphibious School, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 7/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the mission of the advisory team and describe mobilization procedures.

Instruction: Classroom and laboratory sessions use visual aids and tests to cover communications security procedures, naval control of shipping operations, operational control of merchant vessels, radio telephone procedures, rules of the road, and maneuvering board.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/92).

NV-1404-0014

Cryptologic Combat Support Console/
Cryptologic Combat Support Operations Division Officer

Course Number: A-3B-0019.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (196 hours).

Exhibit Dates: 1/90–1/94.

Learning Outcomes: Upon completion of the course, the student will be able to effectively coordinate and manage cryptologic operations using fleet cryptologic assets.

Instruction: Classroom lecture and laboratory cover cryptologic management, fleet operations, communications resources, threats, cryptologic operations, and naval warfare with emphasis on the use of the CCSC/CCSO systems and subsystems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1404-0015

Outboard Division Officer

Course Number: A-3B-0023.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (196 hours).

Exhibit Dates: 1/90–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to effectively manage Outboard resources in an operational environment.

Instruction: Classroom lectures and laboratories covering cryptologic management, fleet operation, communications resources, threats, cryptologic operations, and naval warfare with detailed emphasis on the function, operation, and management of the Outboard system and its subsystems. Course consists of A-3B-0015 and A-3B-0020.

Credit Recommendation: Credit is not recommended because of military-specific nature of the course (1/93).

NV-1405-0001

Ship's Serviceman, Class A
(Ship's Servicemen Recordskeeper)

Course Number: A-823-0011; A-823-0010; A-823-0012.

Location: Naval School, Norfolk, VA; Naval School, San Diego, CA; Technical Training Center, Meridian, MS.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/92.

Objectives: After 5/92 see NV-1405-0028. To train enlisted personnel to perform as ship's store recordskeepers.

Instruction: Lectures cover procurement and receipt of ship's store stock, inventory control, and records and returns. Emphasis is on retailing skills for ship's store operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to retailing (6/84).

NV-1405-0004

Aviation Storekeeper, Class A

Course Number: C-551-2010.

Location: Air Technical Training Center, Jacksonville, FL; Air Technical Training Center, Memphis, Millington, TN; Technical Training Center, Meridian, MS.

Length: Self-paced, 7-11 weeks (255-480 hours).

Exhibit Dates: 1/90–6/91.

Objectives: After 6/91 see NV-1405-0027. To train enlisted personnel to perform as entry-level aviation storekeepers.

Instruction: Lectures and practical exercises in entry-level aviation store keeping, including operation of adding machines, calculators, and typewriters; finance and accounting procedures; materials handling and storage; correspondence; receipt and issue procedures; and item identification.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in typing and 2 in inventory supervision (6/84).

NV-1405-0007

Marine Aviation Supply (Mechanized), Class C

Course Number: C-551-2012.

Location: Technical Training Center, Meridian, MS.

Length: 10 weeks (380 hours).

Exhibit Dates: 1/90–4/91.

Objectives: After 4/91 see NV-1405-0030. To train enlisted personnel in the performance of aviation supply duties.

Instruction: Lectures and practical exercises cover the fundamentals of aviation supply support, including introduction to aviation supply, documents, equipment, management, Shipboard Uniform Automated Data Processing System (SUADPS), functions of group aviation supply support center (GASSC) under SUADPS, systems output, SUADPS operating procedures within GASSC, GASSC operation, electronic accounting machines, and communications equipment. Course includes instruction in computer-oriented aviation supply support.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer-oriented materials management (6/84).

NV-1405-0009

Joint Aviation Supply and Maintenance Material Management

Course Number: A-8B-0020.

Location: Supply Corps School, Athens, GA.

Length: 3 weeks (105 hours).

Exhibit Dates: 1/90–7/93.

Objectives: To train commissioned officers in aviation material management.

Learning Outcomes: Upon completion of the course, the student will be able to define the most commonly used maintenance/material and supply terms, acronyms, or abbreviations relating to naval aviation; select from a list of those activities directly involved in aviation logistic support and match each with its specific functional maintenance and/or supply responsibility; describe the principles and procedures for maintenance and utilization of aviation stock control and procurement records, files, regulations, and directives in terms of their application to the supply activity; and describe the wholesale/retail concept as it applies to the management of system supply stock.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in inventory management (7/83).

NV-1405-0012

Supply Corps Officer Basic Qualification Aviation Management

Course Number: A-8B-0044.

Location: Supply Corps School, Athens, GA.

Length: 5 weeks (145 hours).

Exhibit Dates: 1/90–7/93.

Objectives: To train officers in the management of aviation supplies.

Instruction: Lectures and discussion cover basic aviation supply maintenance and material management, including aviation storage procedures, aeronautical supply distribution systems, and the management of high priority requisitions.

Credit Recommendation: In the vocational certificate category, 3 semester hours in material management (7/83); in the lower-division baccalaureate/associate degree category, 1 semester hour in material management (7/83).

NV-1405-0017

Storekeeper Supply Afloat (Independent Duty), Class C

(Storekeepers (Independent Duty), Class C)

Course Number: A-551-0011; A-551-0010.

Location: School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To train selected enlisted personnel as storekeepers aboard ship.

Instruction: Course includes training in the use of technical and administrative publications, catalogs, and allowance lists; acquisition, control, and issue of stores; financial accounting; stores storage and security; requirements determination; stores management organization; pricing and profit policies; inventory procedures; and food service sales, controls, and records.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in supply management and 1 in food service records management (11/95).

NV-1405-0019

Supply Corps Officer Basic Qualification

Course Number: A-8B-0012.

Location: Supply Corps School, Athens, GA.

Length: 26-27 weeks (720-810 hours).

Exhibit Dates: 1/90–6/93.

Objectives: To qualify officers to assume duties normally associated with supply and disbursing in the Navy.

Learning Outcomes: Upon completion of the course the student will be able to describe the integrated supply system; follow materiel management procedures for requisitioning, receiving, and inventory management; determine pay entitlements for naval personnel; determine the cash requirements and follow proper accounting procedures for operating a disbursing office; follow the procedures for procurement, receipt, pricing, and sales of merchandise for a retail operation and know the procedures for proper accounting and cash control; perform quantitative analysis including constructing a random sample of sufficient size for the degree of accuracy desired and the computation and use of standard statistical measures; design the input and output segments of an information processing system for a given situation; audit the required documentation for operating food service activities; and identify the nature and causes of problems in leadership and personnel management, list alternative solutions, and justify the selected course of action.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in retail management, 2 in food service management, 2 in introduction to statistical methods, 1 in material management, and 1 in accounting (8/83); in the upper-division baccalaureate category, 3 semester hours in industrial management, industrial psychology, leadership development, or a management elective (8/83).

NV-1405-0020

Aviation Storekeeper Advanced Training, Class C

Course Number: C-551-2016.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3-4 weeks (120-160 hours).

Exhibit Dates: 1/90–12/90.

Objectives: After 12/90 see NV-1405-0033. To provide aviation storekeepers with advanced training as related to the management of repairable items.

Learning Outcomes: Upon completion of the course, the student will be able to prepare material requisitions, daily status reports, budget reports, logs, and transmittal reports; maintain control records and status reports; validate visual information control boards against status reports; perform inventory and tool control actions and accounting and budgeting activities; manage all repairable items given required documentation; and demonstrate knowledge of both special and standard supply procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in material and/or property control record keeping (12/89).

NV-1405-0022

Integrated Shipboard Maintenance Support

Course Number: J-500-0041.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 1-2 weeks (64 hours).

Exhibit Dates: 1/90–10/94.

Learning Outcomes: Upon completion of the course, the student will be able to describe an inventory control and maintenance system, including referencing inventory control lists and microfiche; requisitioning parts; inventorying all parts for receipt, disbursement, and correction; and adjusting the system for errors or modifications.

Instruction: Classroom instruction is through lectures and projects, including completing appropriate inventory receipt, disbursement, and adjustment forms; calculating inventory allowance amounts based on usage; and accessing information from various parts manuals and microfiche.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/89).

NV-1405-0023

Ship's Store Afloat Resale Operation Management System User

Course Number: A-823-0017.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operation of the Ship's Store Afloat Resale Operation Management system and be able to operate the system.

Instruction: Methods of instruction include lectures and laboratory exercises in which the computer is set up and inputs prepared and entered. Topics include computer operation and handling of items, payments, and records in the system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in supply procedures (12/89).

NV-1405-0024

Construction Mechanic Repair Parts Storeman

Course Number: A-610-0012.

Location: Construction Training Center, Port Hueneme, CA.

Length: 4 weeks (157 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a repair parts storeroom for maintenance, current use, and restocking of parts.

Instruction: Lectures and practical exercises cover catalog utilization, parts identification, records management, and stores operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in supply/stores management (6/91).

NV-1405-0025

Submarine Leading Storekeeper

Course Number: A-551-0089.

Location: Submarine Training Center, Pearl Harbor, HI; Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Norfolk, VA; Submarine Training Facility, Charleston, SC; Submarine Training Facility, San Diego, CA; Submarine Base, New London, Groton, CT.

Length: 1-2 weeks (52 hours).

Exhibit Dates: 1/90–2/98.

Learning Outcomes: Upon completion of the course, the student will be able to control purchasing and material in a commercial or industrial setting.

Instruction: Oral discussion, multimedia, problem sheets, and policy review are used to develop aspects of purchasing responsibilities, including supply system organization, material control, use and maintenance, and financial management.

Credit Recommendation: In the vocational certificate category, 2 semester hours in purchasing (3/92).

NV-1405-0026

Marine Aviation Supply Senior Enlisted

Course Number: C-551-2014.

Location: Technical Training Center, Meridian, MS.

Length: 6-7 weeks (256 hours).

Exhibit Dates: 2/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to manage Marine aviation supply systems in a computer environment.

Instruction: Course includes a review of the Navy supply system, data processing upgrade and scheduling, material records management, inventory control systems, basic accounting concepts, and financial reporting. Methods include lectures, discussions, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester in hour in fundamentals of accounting and 3 in computer applications (11/92); in the upper-division baccalaureate category, 3 semester hours in management science (11/92).

NV-1405-0027

Aviation Storekeeper, Class A

Course Number: C-551-2010.

Location: Technical Training Center, Meridian, MS.

Length: 8 weeks (335 hours).

Exhibit Dates: 7/91–Present.

Learning Outcomes: Before 7/91 see NV-1405-0004. Upon completion of the course, the student will be able to perform administration, material control, and ashore/afloat supply operations.

Instruction: Course includes aviation store keeping; operation of adding machines, calculators, and typewriters; finance and accounting procedures; materials handling and storage; correspondence; receipt and issue procedures; and item identification. Methodology includes lectures, discussions, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in typing, 2 in clerical procedures, and 2 in supply management (11/92).

NV-1405-0028

Ship's Serviceman, Class A

Course Number: A-823-0012.

Location: Technical Training Center, Meridian, MS.

Length: 4 weeks (160 hours).

Exhibit Dates: 6/92–Present.

Learning Outcomes: Before 6/92 see NV-1405-0001. Upon completion of the course, the student will be able to perform merchandising, bookkeeping, and inventory control.

Instruction: Course covers basic retailing skills, inventory control, merchandising, laundry operations, and ship's store operations. The methods of instruction are lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to business (11/92).

NV-1405-0029

Storekeeper, Class A

Course Number: A-551-0014.

Location: Technical Training Center, Meridian, MS.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to determine customer needs; prepare documents for requisitioning standard and nonstandard materials; follow up on outstanding requisitions; prepare and process purchase, inventory, and accounting documents; and use proper format in preparing records and correspondence.

Instruction: Course covers customer relations, stock records and file systems, receipt and issue of materials, transfer shipping of materials, correspondence, customer service, and inventory control. Methods include lectures, discussions, demonstrations, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in clerical procedures, 1 in interpersonal communication, and 3 in supply management (11/92).

NV-1405-0030

Marine Aviation Supply Mechanized, Class C1

Course Number: C-551-2012.

Location: Technical Training Center, Meridian, MS.

Length: 11 weeks (416 hours).

Exhibit Dates: 5/91–Present.

Learning Outcomes: Before 5/91 see NV-1405-0007. Upon completion of the course, the student will be able to perform aviation supply tasks in a computer environment.

Instruction: Course includes typing, aviation fundamentals, supply personnel, squadron organization, correspondence, material management, introduction to data processing and software, repair part and component control, and supply accounting. Methods include lectures, discussions, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in supply management, 2 in records and information management, and 1 in introduction to computers (11/92).

NV-1405-0031

Cryptologic Outboard Division Officer

Course Number: A-3B-0015.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2 weeks (66 hours).

Exhibit Dates: 1/90–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to describe the Outboard system and its subsystem characteristics, capabilities, and limitations and manage these the system in an operational environment.

Instruction: Lecture and laboratory assignments cover subjects such as security, functions, displays, interfaces, degraded operation, antenna, filters, data processing, frequencies of the Outboard subsystems, and its operation and management. The subsystems consist of OK-324/5YQ(V), communications control group/system supervisor station; AN/SRD-19A direction finder set; AN/SLR-16A countermeasures receiving set; local monitoring station; AN/SLR-23 Harvester, Outboard communications; and antenna subsystems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1405-0032

Cryptologic Technician Administrative Advanced

Course Number: A-510-0025.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (170-205 hours).

Exhibit Dates: 5/90–8/93.

Objectives: Upon completion of the course, the student will be able to perform advanced administrative procedures to support the mission of the naval security group.

Instruction: Group-paced lecture and laboratory experiences cover writing techniques, automated data processing, security and administrative management, preparation of manpower requirements and documentation, special security office functions, and administrative office management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in industrial supervision and management (1/93).

NV-1405-0033

Advanced Aviation Storekeeper

Course Number: C-551-2016.

Location: Fleet Training Center, Norfolk, VA.

Length: 4-5 weeks (184 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Before 1/91 see NV-1405-0020. Upon completion of the course, the student will be able to perform aviation management duties for repairable items and perform inventory tasks. Students will prepare material requisitions, daily status reports, budget reports, logs, and transmittal reports; maintain control records and status reports; validate visual information control boards against status reports; perform inventory and accounting activities; and manage all repairable items.

Instruction: The method of instruction is group-paced using both lecture and laboratory. Course topics include aviation material identification and control, naval aviation logistics command management information system (NALCOMIS) material requirements, and aviation repairables management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in material and/or property control record keeping (11/95).

NV-1405-0034

Marine Air Traffic Control and Landing Systems Maintenance Management, Class M3

Course Number: C-103-2111.

Location: Air Technical Training Center, Pensacola, FL.

Length: 4 weeks (144 hours).

Exhibit Dates: 5/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a supervisor for Marine air traffic control and landing systems equipment maintenance operations and embarkation procedures during field operations.

Instruction: This course covers general administration, field maintenance operations, and personnel management for air traffic control for expeditionary airfields. Methodology includes classroom lectures, demonstrations, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in supervision (8/96).

NV-1405-0035

Aviation Maintenance Program Management, Class A2

Course Number: Q-4D-2011.

Location: Air Station, Pensacola, FL.

Length: 4 weeks (147 hours).

Exhibit Dates: 8/96–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate competence in supply and maintenance management, maintenance data systems, and aircraft weight and balance.

Instruction: This course uses lecture, laboratory, and demonstration formats, and both written and proficiency examinations.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in logistics management (8/97).

NV-1405-0036

Aviation Maintenance Program Indoctrination, Class A2

Course Number: Q-4D-2010.

Location: Air Station, Pensacola, FL.

Length: 10 weeks (374 hours).

Exhibit Dates: 8/92–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate competence and knowledge of aviation materials, production management, and procedures in maintenance organizations by developing work orders control systems, maintenance logs, and equipment operational procedures, and plan and implement procedures for shop planning, material requirements, and control.

Instruction: This course uses lectures, demonstrations, practical exercises, and written test formats for the curriculum.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in materials management and 3 in production management (8/97).

NV-1405-0037

Reserve Mobilization

Course Number: K-8A-3550.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 2 weeks (64-65 hours).

Exhibit Dates: 8/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan, supervise, and coordinate cargo transfer.

Instruction: Classroom instruction, including lectures, demonstrations, and practical exercises and three days of computer laboratory are course methods.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer applications and 1 in material management (10/97).

NV-1406-0009

Officer Instructor Indoctrination

Course Number: F-00-0014.

Location: Submarine School, New London, Groton, CT.

Length: 2 weeks (86 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train selected officers as instructors for naval training.

Instruction: Lectures and practical demonstrations cover instructional methods. The course provides an overview of learning objectives, methods of teaching, use of media, and techniques for evaluation.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in methods of instruction (3/82).

NV-1406-0013

Shipboard Instructor

Course Number: A-012-0023.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine School, New London, Groton, CT; Fleet Training Center, Norfolk, VA; Fleet Training Center, Charleston, SC; Fleet Training Center, Pearl Harbor, HI.

Length: 2 weeks (65 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train fleet personnel in instructional methods and use of materials for naval training.

Instruction: Lectures and practical exercises cover instructional techniques, including use of instructional media materials, use of learning objectives, and evaluation of student performance.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in methods and materials of instruction (3/82).

NV-1406-0016

Navy Recruiting Orientation
(Recruiter Canvasser)

Course Number: None.

Location: Recruiting Orientation Unit, Orlando, FL.

Length: 5 weeks (180 hours).

Exhibit Dates: 1/90–3/93.

Objectives: To prepare the student to enter the sales field with a thorough knowledge of the fundamentals of selling.

Instruction: Lectures, discussion, and role playing activities cover the fundamentals of selling, including the standard procedures of community research, prospect qualifying, product and/or service information, and closing a sale. Visuals and audiovisuals are used extensively in presentation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in salesmanship (3/83).

NV-1406-0019

Instructor

(Group-Paced Instructor)

Course Number: A-012-0011.
Location: Naval installations, worldwide.
Length: 3-4 weeks (128-140 hours).
Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to deliver lectures employing effective questioning, chalkboard, and communications techniques; deliver instruction employing demonstrative strategies; operate an overhead projector and video cassette system; demonstrate knowledge of instructor guides, workbooks, computerized reporting systems, evaluation, and participant materials; and develop learning outcomes for a topic.

Instruction: Participants practice constructing and delivering instruction. Lectures provide procedures and general information which is then applied in the laboratory sessions. Emphasis is placed on the instructional strategies of lecture/demonstration. An overview is provided for administrative processes, evaluation, and counseling.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in training and development (instructional methods) (1/98).

NV-1406-0020

Command Career Counselor

Course Number: A-501-0011.
Location: Fleet Training Center, San Diego, CA; Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.
Length: 4 weeks (131-160 hours).
Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to counsel personnel on all facets of career planning, including assignments, advancement, retirement, and survivor benefits.

Instruction: Methods of instruction include lectures, laboratory exercises, and examinations. Topics covered include communication skills for the counselor, counseling methods and techniques, and the entire range of career issues, including pay, health benefits, advancement opportunities, reassignment, survivor benefits and annuities, and educational benefits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in personnel counseling (6/94).

NV-1406-0021

Submarine Yeoman/Personnelman Advanced Administration

Course Number: A-510-0024.
Location: Submarine Base, New London, Groton, CT.
Length: 3 weeks (112 hours).
Exhibit Dates: 7/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to assist in the management of an administrative and personnel office at the entry level.

Instruction: Discussion-demonstration activities, oral discussion, instruction sheets, and other applied techniques are used to cover personnel processing, office supervision, records maintenance, pay systems, and general personnel administration.

Credit Recommendation: In the vocational certificate category, 3 semester hours in personnel procedures (3/92).

NV-1406-0022

Training Materials Development System (TMDS) Curriculum Developer

Course Number: A-012-0051.
Location: Various locations, US.
Length: 2 weeks (80 hours).
Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to design, develop, and maintain task-based training programs and demonstrate knowledge of learning theories, instructional strategies, and curriculum development process by building a cross section of an actual course.

Instruction: The course covers the systems approach to instructional materials design. Included are lectures and hands-on exercises dealing with planning, analysis, design, development, implementation, and evaluation.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in instructional design and curriculum development (1/98).

NV-1406-0023

Personnelman, Class A

Course Number: A-500-0014.
Location: Technical Training Center, Meridian, MS.
Length: 7 weeks (300 hours).
Exhibit Dates: 9/92–Present.

Learning Outcomes: Before 9/92 see NV-1409-0001. Upon completion of the course, the student will be able to perform personnel record keeping, document preparation, and information processing at the entry level.

Instruction: Course covers keyboarding skills (25 wpm), computer literacy, word processing, personnel record keeping, and personnel procedures. Methods include lectures, discussions, and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in keyboarding and 3 in personnel supervision (11/92).

NV-1406-0024

Religious Program Specialist, Class A

Course Number: A-561-0002.
Location: Technical Training Center, Meridian, MS.
Length: 7 weeks (256 hours).
Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a microcomputer; use software packages; format religious documents; prepare Roman Catholic, Protestant, and Jewish altars; maintain shipboard libraries; prepare accounting for the religious offering fund; and type 25 wpm.

Instruction: Course covers typing, microcomputer operations; use of software packages; office correspondence; interpersonal communication; liturgical equipment; religious records, reports, and clerical duties; shipboard library administration; and accounting. Methods include lectures, discussions, laboratories, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in keyboarding, 3 in computer applications, and 1 in introduction to computers (11/92).

NV-1406-0025

Religious Program Specialist (Advanced), Class C

Course Number: A-561-0003.
Location: Technical Training Center, Meridian, MS.
Length: 6 weeks (240 hours).
Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to design software applications using ENABLE; assist in command religious ministry support, including logistic, financial, and administrative analysis and management and planning systems; and coordinate and evaluate religious education programs and instruction.

Instruction: Course covers advanced microcomputer programs using ENABLE and MS-DOS commands to design computer applications in word processing, spreadsheets, graphics, and data base management systems; religious ministry support, including planning systems, logistic, financial, and administrative analysis and management; and coordination and evaluation of religious education programs and instructional training methods.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in advanced computer applications, 2 in training methods, and 2 for field experience in management (11/92).

NV-1406-0026

Religious Program Specialist, Class C (Religious Education)

Course Number: A-561-0005.
Location: Technical Training Center, Meridian, MS.
Length: 2 weeks (80 hours).
Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use instructional aids; develop instructional media material; prepare learning objectives; prepare instructor guides for training sessions; and instruct trainees using audiovisuals, role-playing, case studies, and questioning techniques.

Instruction: Course covers correspondence and religious education media programs. Methods include lectures, discussions, practical exercises, role playing, and case studies.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in training methods (11/92).

NV-1406-0027

Aircrewman Candidate Instructor

Course Number: Q-050-1502.
Location: Air Station, Pensacola, FL.
Length: 15 weeks (231 hours).
Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to teach aircrewman candidates survival skills, maintenance of personal aircraft equipment, and lifesaving skills.

Instruction: This course uses lectures, demonstrations, practices and evaluation in aircraft equipment, personal fitness, wellness, and survival techniques. Student instructors must successfully design and complete survival exercises.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in instructional methodology (8/97).

NV-1406-0028

Aviation Ordnance Officer Career Progression Level 1

Course Number: Q-4E-0010.

Location: Air Station, Pensacola, FL.

Length: 6 weeks (199 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate knowledge of aviation ordnance weapons systems and specifications and the supporting logistics systems. The student will be able to manage handling and storage and evaluate readiness. The student will establish work schedules, modification requests, and maintenance logs on equipment.

Instruction: This course uses lectures and practical demonstrations for handling and servicing ordnance systems.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in material management (8/97).

NV-1406-0029

Aviation Ordnance Officer Career Progression Level 2

Course Number: Q-4E-0011.

Location: Air Station, Pensacola, FL.

Length: 2 weeks (76-80 hours).

Exhibit Dates: 4/94–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate knowledge of the management of naval aviation ordnance organizations including safety procedures and investigations. Students will be able to plan, direct, control, and evaluate systems and manage change within an organization.

Instruction: This course uses lecture format for weapons requirements and management of weapons departments including safety and investigations.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in organizational management. This does not duplicate Q-4E-0012 (8/97).

NV-1406-0030

Aviation Ordnance Officer Career Progression Level 3

Course Number: Q-4E-0012.

Location: Air Station, Pensacola, FL.

Length: 2 weeks (69 hours).

Exhibit Dates: 4/95–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate progressive knowledge of management of aviation ordnance systems at major command levels, including acquisition and supply policies. Student will be able to set policy by managing staff organizations through planning, directing, coordinating, and controlling; motivate and direct subordinates; and structure section of responsibility and work relationships.

Instruction: This course uses lecture format and covers aviation ordnance systems management.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in organizational management. This course does not duplicate credit in Q-4E-0011 (8/97).

NV-1406-0031

Senior Aviation Maintenance Officer, Class C2

Course Number: Q-4D-2012.

Location: Air Station, Pensacola, FL.

Length: 2 weeks (68 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply Navy aviation maintenance and supply policies, develop and direct aviation maintenance and supply organizations, and manage systems.

Instruction: Seminar format teaches job-related technical, logistical, and systems management.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in logistics management and 1 in production management (8/97).

NV-1406-0032

Academic Instructor, Class C2

Course Number: Q-5K-0101.

Location: Air Station, Pensacola, FL.

Length: 2-3 weeks (99-100 hours).

Exhibit Dates: 8/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to conduct group-paced instruction using both verbal and nonverbal communication including the interaction of both, develop and revise curriculum and write terminal and enabling objectives, construct and evaluate methods used in measuring student performance, apply psychological factors involved in learning to specific teaching situations.

Instruction: Lecture and laboratory methods are used to present the material. Student performance is evaluated through serial and cumulative proficiency examinations.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in methods and development of instruction (8/97).

NV-1406-0033

Reserve Swimmer Instructor Training, Class P

Course Number: Q-050-0601.

Location: Air Station, Pensacola, FL.

Length: 3 weeks (123-124 hours).

Exhibit Dates: 5/92–Present.

Learning Outcomes: Upon completion of the course, the student will qualify search and rescue swimmers in water entry, first aid, CPR, parachute disentanglement, and waterborne lifesaving procedures under various environmental conditions.

Instruction: Lecture, laboratory, and demonstration including pool and open water practical experiences are course methods. Both written and performance tests are used to demonstrate proficiency.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic swimming, rescue techniques, first aid, and lifesaving (8/97); in the upper-division baccalaureate category, 3 semester hours in teaching procedures in open water lifesaving and rescue (8/97).

NV-1406-0034

Physical Training Instructor Class F2

Course Number: P-9E-1238.

Location: Air Station, Pensacola, FL.

Length: 6 weeks (128 hours).

Exhibit Dates: 5/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to instruct, coach, and perform all the physical fitness events required for preflight training, including warm-ups, physical readiness tests, cross-country and obstacle course evaluations, boxing, and nautilus equipment.

Instruction: Lectures, laboratories (including equipment use), outdoor activities, and proficiency examinations are methods used. Topics also include nutrition and heat stress.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in teaching general physical training (8/97).

NV-1407-0004

Yeoman Flagwriter, Class C

Course Number: A-511-0015.

Location: Technical Training Center, Meridian, MS.

Length: 15 weeks (596 hours).

Exhibit Dates: 2/91–Present.

Learning Outcomes: Before 2/91 see NV-1408-0028. Upon completion of the course, the student will be able to take and transcribe shorthand at 90 wpm and work independently in an office setting.

Instruction: Course includes shorthand principles, transcription, office communication, English grammar, composition, and naval protocol.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in shorthand and 2 in business English (11/92).

NV-1408-0001

Disbursing Clerk Financial Returns

(Disbursing Clerk Financial Returns, Class C)

(Disbursing Clerk, Class C (Financial Returns))

Course Number: A-542-0014.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (60-80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train rated and nonrated disbursing clerks to prepare Navy and DoD reports and financial returns.

Instruction: Lectures and practical exercises cover the preparation of collection and disbursement vouchers, reports of disbursement and collections, foreign currency reports, and deposit schedules.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

NV-1408-0002

Disbursing Clerk Travel Payments

(Disbursing Clerk, Class C (Travel Payments))

Course Number: A-542-0013.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 2 weeks (60-80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train disbursing clerks to master the intricacies of the Navy travel payment procedures.

Instruction: Lectures cover travel regulations, orders, and vouchers; travel advance and allowance; dependent travel entitlement; and dislocation allowance.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (12/89).

NV-1408-0010

COMMISSARY STORE MANAGEMENT

Course Number: A-8B-0029.

Location: Supply Corps School, Athens, GA.

Length: 4 weeks (120 hours).

Exhibit Dates: 1/90–7/93.

Objectives: To train officers in the management of a commissary.

Learning Outcomes: Upon completion of the course, the student will be able to determine the inventory and stock levels to be maintained; establish a display that will successfully promote a given product; describe the financial records to be maintained by a retail store and complete these records; complete the necessary forms for ordering, receiving, and warehousing goods to be sold in order that a sufficient stock level be maintained; and describe sanitation regulations and safety rules essential in the operation of a retail food store.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in retail management (7/83).

NV-1408-0023

NAVY EXCHANGE MANAGEMENT

Course Number: A-8B-0028.

Location: Ship's Store Office, Brooklyn, NY; Supply School, Athens, GA.

Length: 5-6 weeks (100-154 hours).

Exhibit Dates: 1/90–7/93.

Objectives: To train officers in the management of Navy exchanges.

Learning Outcomes: Upon completion of the course, the student will be able to describe the management responsibilities of a retail store manager including duties related to personnel; list procedural steps for ordering, receiving, and warehousing merchandise for a retail operation; establish a display that will promote a given product; describe financial and accounting responsibilities essential for the operation of a retail business; and give examples of various daily records which are kept.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in retail management (7/83).

NV-1408-0024

MARINE CORPS AVIATION SUPPLY OFFICER QUALIFICATION

Course Number: A-8B-0031.

Location: Supply Corps School, Athens, GA.

Length: 15 weeks (505 hours).

Exhibit Dates: 1/90–7/93.

Objectives: To provide the officer with the skills required to be a supply officer within the Marine aircraft group.

Learning Outcomes: Upon completion of the course, the student will be able to determine the stores account, type of material, and inventory manager of any item when provided with the cognizance symbol; apply problem analysis theory to a given problem; identify appropriate statistical measures and perform the related calculations necessary to problem analysis; use a program flowchart to process test data through a system; define the most commonly used aviation maintenance/supply terms, acronyms, and abbreviations relating to naval aviation; select from a list all required local support procedures for repairables, including communication of requirements, timely issue of material, control of repairable components, preparation and flow of documentation, and reconciliation of records and requirements; and identify the uses of automated data processing system for supply management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in materials management and 2 in introduction to statistical methods (7/83).

NV-1408-0025

UNIFORM AUTOMATED DATA PROCESSING (ADP) SYSTEM STOCK POINTS

Course Number: A-8B-0027.

Location: Various locations, worldwide; Supply Corps School, Athens, GA.

Length: 3 weeks (85 hours).

Exhibit Dates: 1/90–7/93.

Objectives: To provide the student with a knowledge of the supply and financial environment within which a stock point manager operates.

Instruction: Topics include the overall supply and financial organization structure; the documentation and file maintenance for the automatic data processing system; the use of the system for inventory control; and related financial accounting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in supply management or elective credit (7/83).

NV-1408-0026

SUPPLY INDOCTRINATION FOR LINE OFFICERS

Course Number: A-8B-0045.

Location: Supply Corps School, Athens, GA.

Length: 5 weeks (150 hours).

Exhibit Dates: 1/90–7/93.

Objectives: To familiarize line officers with the broad areas of naval supply encountered at their respective commands.

Instruction: Topics include disbursing, material management, food service management afloat, and management of a retail ship's store.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in material management and 1 in food service management (7/83).

NV-1408-0027

NAVY EXCHANGE/COMMISSARY STORE MIDDLE MANAGEMENT, CLASS C

Course Number: A-823-0016.

Location: Technical Training Center, Meridian, MS.

Length: 4 weeks (145 hours).

Exhibit Dates: 1/90–12/94.

Objectives: To provide the student with the knowledge and skills to be able to manage a commissary store or Navy exchange.

Learning Outcomes: Upon completion of the course, the student will be able to perform administrative duties required in operating commissary stores including procurement and receiving/warehousing; manage floor sales and meat and produce departments, cash collections, and inventory systems; apply Navy regulations as required in the performance of the above duties; and plan and implement promotional merchandising techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in introduction to marketing and retailing operations (6/84).

NV-1408-0028

YEOMAN FLAGWRITER, CLASS C

Course Number: A-511-0015.

Location: Technical Training Center, Meridian, MS.

Length: 15 weeks (596 hours).

Exhibit Dates: 1/90–1/91.

Objectives: After 1/91 see NV-1407-0004. To provide intensive training in shorthand dictation to experienced yeomen.

Learning Outcomes: Upon completion of the course, the student will be able to take shorthand dictation at 80—100 words per minute; demonstrate a high level of English grammar usage; and demonstrate skill in social and naval protocol.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, for those students holding NEC 2514, 6 semester hours in shorthand; for those students holding NEC 2512, 3 semester hours in shorthand and for both groups of students, 2 semester hours in business English (6/84).

NV-1408-0029

1. LIMITED DUTY OFFICER/CHIEF WARRANT OFFICER INDOCTRINATION, CLASS PC
2. LIMITED DUTY OFFICER (LDO) AND CHIEF WARRANT OFFICER (CWO) INDOCTRINATION TRAINING

Course Number: *Version 1:* Q-9B-0023. *Version 2:* Q-9B-0023.

Location: Air Station, Pensacola, FL.

Length: *Version 1:* 4 weeks (140-142 hours). *Version 2:* 4 weeks (153 hours).

Exhibit Dates: *Version 1:* 4/93–11/97. *Version 2:* 1/90–3/93.

Learning Outcomes: *Version 1:* Upon completion of the course, newly commissioned limited duty officers and chief warrant officers will be trained in the administrative, leadership, military law, and customs skills necessary to be an effective naval officer, with an emphasis on communication. *Version 2:* Upon completion of the course, the student will be able to train newly commissioned limited duty officers and chief warrant officers in the communication, administrative, leadership, military law and customs skills necessary to be an effective naval officer.

Instruction: *Version 1:* Lectures and practical exercises cover written communication, oral communication, naval correspondence, naval administration, military law, military customs, naval history subjects, and role of the US Navy. *Version 2:* Lectures and practical exercises cover written communication, oral communication, naval correspondence, naval administration, military law, military customs, naval history subjects, and role of the US Navy.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in business communication (8/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in business/technical communication (3/86).

NV-1408-0030

AUTOMATED TELECOMMUNICATIONS SYSTEMS TECHNICIAN, CLASS C7

Course Number: *Version 1:* A-260-0045. *Version 2:* A-260-0045.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 12 weeks (400 hours). *Version 2:* 12 weeks (480 hours).

Exhibit Dates: *Version 1:* 6/90–12/97. *Version 2:* 1/90–5/90.

Learning Outcomes: *Version 1:* Upon successful completion of the course, the student will be able to operate/supervise an automatic central office telecommunications system. *Version 2:* Upon successful completion of the course, the student will be able to operate/supervise an automatic central office telecommunications system.

Instruction: *Version 1:* Group-paced lectures and laboratory exercises cover an introduction to computer systems, peripherals and interfacing, central processing unit, software files, data processing security, and administrative management. *Version 2:* Group-paced lectures, practical demonstrations, and laboratory work. Subjects covered include introduction to computer systems, peripherals, and interfacing; message handling, routing, origination, correcting, retrieval, tracing, and journaling; software files, halts, aborts, and contingency procedures; and administrative details.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in telecommunication systems office management (7/87). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in telecommunication systems office management (2/93).

NV-1408-0031

SHIP'S STORE AFLOAT RESALE OPERATION MANAGEMENT (ROM) SYSTEM SUPERVISOR

Course Number: A-823-0015.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the functions associated with a retail operation, including stock control, ordering, receiving, return to stock, return to vendor and assume responsibility for other auxiliary retail enterprises such as barber shop and laundry.

Instruction: Classroom lectures, laboratory exercises, and examinations develop an understanding of the retail process, including operation of computer equipment for inventory control and cash register equipment, space planning, security, customer service, cash control, staffing, and preparation of balance sheet and profit and loss statements.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in retail operations and management (12/89).

NV-1408-0032

CHAPLAIN SCHOOL ADVANCED

Course Number: P-00-4300.

Location: Naval Chaplain School, Newport, RI.

Length: 39 weeks (975 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of course, the experienced, mid-career chaplain will be prepared to assume staff and supervisory functions in the Chaplain Corps. Specific competencies will be understanding the management of large, complex organizations; communicating effectively; learning the principles of effective personnel management; developing leadership skills; and developing skills in strategic planning and program management.

Instruction: Lecture, discussions, case studies, simulations, directed reading, independent research, and multimedia student presentations in the supervisory and managerial responsibilities of chaplains in the sea services. Curriculum includes studies in communications, ethics, ministry/pastoral cases, organizational psychology, management, planning and administration, and religion and society.

Credit Recommendation: In the graduate degree category, 3 semester hours in communication, 3 in ethics, 3 in ministry/pastoral care, 3 in organizational psychology, 3 in management, 3 in planning and administration, and 3 in religion and society (3/89).

NV-1408-0034

1. CONSTRUCTION PLANNING AND ESTIMATING SPECIALIST
2. CONSTRUCTION PLANNER AND ESTIMATOR

Course Number: *Version 1:* A-412-0012. *Version 2:* A-412-0012.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: *Version 1:* 10 weeks (400 hours). *Version 2:* 10 weeks (394 hours).

Exhibit Dates: *Version 1:* 5/97–Present. *Version 2:* 1/90–4/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to plan, estimate, schedule, and report on construction projects; perform essential mathematics; read blueprints and understand specifications; estimate materials in site work, concrete, masonry, metal, carpentry, moisture protection, doors, windows, hardware, finishes, and basic mechanical and electrical components; procure materials; determine time and labor requirements; establish project schedules; understand network analysis; and use computer programs to develop estimates and schedules. *Version 2:* Upon completion of the course, the student will be able to plan, estimate, schedule, and report on construction projects; perform essential mathematics; read blueprints and understand specifications; estimate materials in site work, concrete, masonry, metal, carpentry, moisture protection, doors, windows, hardware, finishes, and basic mechanical and electrical components; procure materials; determine time and labor requirements; establish project schedules; and understand network analysis.

Instruction: *Version 1:* Lectures and practical exercises with extensive laboratory exercises cover the above areas of instruction. *Version 2:* Lectures and practical exercises with extensive laboratory exercises cover the above areas of instruction.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in construction estimating and 1 in project planning/scheduling (4/97); in the upper-division baccalaureate category, 1 semester hour in computer assisted estimating and scheduling (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in construction estimating and 1 in project planning/scheduling (7/96); in the upper-division baccalaureate category, 1 semester hour in estimating and project planning/scheduling (7/96).

NV-1408-0035

CONSTRUCTION INSPECTOR

Course Number: *Version 1:* A-710-0022. *Version 2:* A-710-0022.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: *Version 1:* 8 weeks (320 hours). *Version 2:* 8 weeks (321 hours).

Exhibit Dates: *Version 1:* 8/93–Present. *Version 2:* 1/90–7/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to review and analyze project construction drawings and specifications; prepare a construction inspection plan including a check list of quality assurance inspection points for critical phases of construction and installation; verify that all materials/equipment ordered meet specifications; inspect all phases of construction, including civil, architectural and structural, electrical, and mechanical to see that they meet appropriate installation and construction practices; coordinate and observe specified tests on materials and electrical and mechanical systems to ensure that the contractor performs tasks properly; and prepare logs, records, and reports on all inspections and tests. *Version 2:* Upon completion of the course, the student will be able to review and analyze project construction drawings and specifications; prepare a construction inspection plan including a check list of quality assurance inspection points for critical phases of construction and installation; verify that all materials/equipment ordered meet specifications; inspect all phases of construction, including civil, architectural and structural, electrical, and mechanical to see that they meet appropriate installation and construction practices; coordinate and observe specified tests on materials and electrical and mechanical systems to ensure that the contractor performs tasks properly; and prepare logs, records, and reports on all inspections and tests.

Instruction: *Version 1:* Lectures and practical exercises cover the duties of construction inspector. *Version 2:* Lectures and practical exercises cover the duties of construction inspector.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree

category, 3 semester hours in codes and specifications, 3 in methods of construction, 3 in materials of construction, and 3 in mechanical/electrical equipment in buildings (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in plans and specifications, 3 in (building) construction, and 3 in (building) materials (3/91).

NV-1408-0036

Gunnery Officer

Course Number: J-2E-0100.

Location: Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 5/91–10/94.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate communication skills through written forms/reports and through oral presentations.

Instruction: Lectures and practical exercises on administrative topics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in administrative management (10/91).

NV-1408-0037

Religious Program Specialist, Class C
(Ministry Support)

Course Number: A-561-0006.

Location: Technical Training Center, Meridian, MS.

Length: 2 weeks (80 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use survey data; train command religious program volunteers; evaluate religious education programs; order teacher support materials; monitor religious program budget; dispose of plant property, minor property, and nonappropriated fund property; requisition services; contract manpower support; review manpower authorizations; and submit manpower request documents.

Instruction: Course covers religious ministry support, including planning systems; logistic, financial, and administrative analysis; and management. Methods include lectures, discussions, and practical exercises.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours for field experience in management (11/92).

NV-1408-0038

Health Resources Management

Course Number: B-300-0789.

Location: School of Health Sciences, Bethesda, MD.

Length: 2 weeks (79 hours).

Exhibit Dates: 12/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply basic management theories and identify key issues in a health care environment with a focus on providing resources and/or references for referral.

Instruction: Lectures, group exercises, videos, and writing assignments address management theory, communication skills, health care resources, conflict management, basic writing skills, legal issues, crisis intervention, and stress management.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in human relations (6/93).

NV-1409-0001

Personnelman, Class A

Course Number: A-500-0026; A-500-0015; A-500-0014.

Location: Naval Training Center, Meridian, MS; Training Center, Orlando, FL; Service School Command, San Diego, CA; Service School Command, Bainbridge, MD.

Length: Self-paced, 7 weeks (303 hours).

Exhibit Dates: 1/90–8/92.

Objectives: After 8/92 see NV-1406-0023. To train enlisted personnel as personnel strikers.

Instruction: Lectures and practical exercises cover correspondence, typing, filing, manpower utilization, and personnel testing. Typing instruction is provided only for students who enter the course as nonqualified typists. Emphasis is on manual records and forms.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in typing and 2 in business communication (6/84).

NV-1409-0002

Yeoman, Class A

Course Number: A-510-0012.

Location: Naval School, Orlando, FL; Naval School, San Diego, CA; Naval School, Meridian, MS; Naval School, Bainbridge, MD.

Length: Self-paced, 7 weeks (280 hours).

Exhibit Dates: 1/90–9/91.

Objectives: After 9/91 see NV-1409-0012. To train enlisted personnel to perform as yeomen.

Instruction: Lectures and practical exercises cover the duties of a yeoman striker, including fundamentals of typewriting, advanced typewriting, office etiquette and efficiency, publications, classified material, filing, correspondence, personnel accounting, officer records, captain's office, executive officer's office, enlisted service record, shipboard department offices and associated records, and legal records and procedures. Instruction in typing is provided for students who enter the course as nonqualified typists. Emphasis is on manual records and forms.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in business communication and 2 in typing (6/84).

NV-1409-0009

Remote Information Exchange Terminal
Operator

Course Number: A-260-0068.

Location: Service School Command, San Diego, CA.

Length: 2 weeks (65 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand all operational aspects of the RIXT/SRT systems including purpose, operational characteristics and procedures, security requirements, controls, and documentation.

Instruction: Instruction is primarily lecture accompanied by overheads and reference materials. Examinations include hands-on application. Topics include all operational aspects of the RIXT/SRT systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in keyboarding (10/92).

NV-1409-0010

Marine Aviation Operations Specialist

Course Number: C-517-2010.

Location: Technical Training Center, Meridian, MS.

Length: 9 weeks (329 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform multiple aviation functions including keyboarding, flight operations, record keeping, and correspondence.

Instruction: Course covers keyboarding, aircraft systems, materials security, record keeping, and airfield operations. Methods include lectures, discussions, and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in keyboarding and 2 in clerical procedures (11/92).

NV-1409-0011

Aviation Maintenance Administration, Class
A1

Course Number: C-555-2010.

Location: Technical Training Center, Meridian, MS.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic aviation maintenance administration; receive, distribute, file, and produce correspondence; maintain a technical library; use logs and records; control inventory; and maintain maintenance records.

Instruction: Course includes office administration, technical publications, maintenance and supply management systems, aircraft equipment accounting and reporting, and aircraft logs and records maintenance. Methodology includes lectures, discussions, and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in keyboarding, 3 in introduction to computers, 1 in office administration, and 2 in records and information management (11/92).

NV-1409-0012

Yeoman, Class A

Course Number: A-510-0012.

Location: Technical Training Center, Meridian, MS.

Length: 7 weeks (272 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Before 10/91 see NV-1409-0002. Upon completion of the course, the student will be able to type 25 wpm and prepare naval correspondence.

Instruction: Course includes touch typing, standard letters, clerical procedures. The methods include lectures, discussions, and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in typing and 3 in clerical procedures (11/92).

NV-1409-0013

Job Oriented Basic Skills (JOBS), Strand 3

Course Number: A-510-0020.

Location: Technical Training Center, Meridian, MS.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will have the English, mathematics, and typing skills necessary to enter a basic Navy career school.

Instruction: Course covers basic mathematics, correspondence, Navy supply system, pay procedures, and typing. Methods include lectures, discussions, and practice.

Credit Recommendation: In the vocational certificate category, 2 semester hours in fundamentals of mathematics and 2 in fundamentals of English (11/92); in the lower-division baccalaureate/associate degree category, 1 semester hour in typing (11/92).

NV-1511-0010

Naval War College Correspondence Course
in National Security Decision Making

Course Number: None.

Location: Naval War College, Newport, RI.

Length: Maximum, 52 weeks.

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, students will be able to utilize analytical skills with respect to decisions involving complex, resource-constrained national security issues. They will develop competence in the major behavioral and management control techniques that influence national security.

Instruction: The course is divided into three units. These consist of the force planning component which focuses on themes valuable in selecting military forces for the future; the defense analysis segment which emphasizes the decision process for dealing with complex problems of resource allocation within the Department of Defense; and the policy making and implementation unit which treats political organizational and behavioral phenomena relevant to national security decision making. Written responses to guidance questions related to the readings are utilized. Extensive critical evaluation by the faculty of the written work is provided. A proctored final examination is administered.

Credit Recommendation: In the graduate degree category, 3 semester hours in national security planning, defense analysis, or policy making and implementation (9/87).

NV-1511-0011

Naval War College Correspondence Course
in Strategy and Policy

Course Number: None.

Location: Naval War College, Newport, RI.

Length: Maximum, 52 weeks.

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the student will have the analytical skills necessary to deal systematically with broad strategic questions at a high level of generality and abstraction. Closely related to this objective, the course will provide the students with a broad historical perspective on strategic questions against which to view and analyze contemporary issues. Throughout, the student will be introduced to the ambiguities in the process of framing grand strategy.

Instruction: Instruction in this course involves heavy reading in the basic professional literature in the areas of military history, international relations, and strategy, focusing upon a series of about seven case studies. The student prepares one or more analytical papers on a topic pertaining to the case study; a detailed three to four page critique is prepared by a member of the faculty. A final, three-hour, closed-book written examination is administered in a proctored environment.

Credit Recommendation: In the graduate degree category, 3 semester hours in history, international relations, or military studies (9/87).

NV-1511-0012

Strategy and Policy (College of Naval
Warfare/Naval Command College)

Course Number: None.

Location: Naval War College, Newport, RI.

Length: 14 weeks (126 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the junior and senior student officers will have the analytical skills necessary to deal systematically with broad strategic questions at a high level of generality and abstraction. Closely related to this objective, the course will make students aware of the broad range of considerations which such strategic thinking entails, including economics, geographic, cultural, political, resource, etc., and their complex interrelationships. In addition, the course will provide a broad historical perspective on strategic questions and strategic thinking, against which to view and analyze contemporary issues. Throughout, the students will be introduced to the ambiguities in the process of framing grand strategy.

Instruction: Instruction in the course involves extensive in-house as well as external lectures, contact-heavy faculty student relations, directed and simulated seminar discussion, and heavy reading in the basic professional literature in the areas of military history, international relations, and strategy, all based upon approximately a dozen case studies. Emphasis is placed upon the relationships between a nation's political interests and goals, and the way military force has been deployed to serve those interests and goals. Major themes include service coordination, the role of allies, policy-strategy match, military-civil relations, force-strategy match, and nonmilitary factors that affect national policy making.

Credit Recommendation: In the graduate degree category, 3 semester hours in history, 3 in international relations, and 3 in military studies (9/87).

NV-1511-0013

Strategy and Policy (College of Naval
Command and Staff)

Course Number: None.

Location: Naval War College, Newport, RI.

Length: 12 weeks (108 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the junior/senior student officers will have the analytical skills necessary to deal systematically with broad strategic questions at a high level of generality and abstraction. Closely related to this objective, the course will make students aware of the broad range of considerations which such strategic thinking entails, including economic, geographic, cultural, political, resource, etc., and their complex interrelationships. In addition, the course provides a broad historical perspective on strategic questions and strategic thinking, against which to view and analyze contemporary issues. Major themes include service coordination, the role of allies, policy-strategy match, military-civil relations, force-strategy match, and nonmilitary factors that affect national policy making.

Credit Recommendation: In the graduate degree category, 3 semester hours in history, 3 in international relations, and 3 in military studies (9/87).

NV-1511-0014

National Security Decision Making for
College of Naval Warfare and Naval
Command College

Course Number: None.

Location: Naval War College, Newport, RI.

Length: 13 weeks (156-157 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the student will be able to use multidisciplinary tools of analysis in decision making and implementation situations. The student will be trained to deal with complex issues within the national security arena.

Instruction: The course is divided into three units, the force planning component focuses on themes valuable in selecting military forces for the future; the defense analysis segment emphasizes the decision process for dealing with complex problems of resource allocation within the Department of Defense; and the policy making and implementation unit treats political, organizational and behavioral phenomena relevant to national security decision making. Lectures, seminars, extensive readings, and case preparation are the primary learning methods. Oral and written reports are required. Final examinations follow the completion of each unit.

Credit Recommendation: In the graduate degree category, 3 semester hours in national security planning, 3 in defense analysis, and 2 in policy making and implementation (9/87).

NV-1511-0015

National Security Decision Making for
College of Naval Command and Staff

Course Number: None.

Location: Naval War College, Newport, RI.

Length: 13 weeks (146-147 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the student will be able to utilize multi-disciplinary tools of analysis in decision making and implementation situations. The student will be trained to deal with complex issues within the national security arena. Skills in areas such as resource allocation, force planning and management control will be developed.

Instruction: The course is divided into three units: the force planning component focuses on themes valuable in selecting military forces for the future, the defense analysis segment emphasizes the decision process for dealing with complex problems of resource allocation within the Department of Defense, and the policy making and implementation unit treats political, organizational and behavioral phenomena relevant to national security decision making. Lectures, seminars, extensive reading and case preparation are the primary learning methods. Oral and written reports are required. Final examinations follow the completion of each unit.

Credit Recommendation: In the graduate degree category, 3 semester hours in national security planning, 3 in defense analysis, and 2 in policy making and implementation (9/87).

NV-1511-0016

1. Basic Intelligence Training
2. Basic Intelligence Training Subjects

Course Number: *Version 1:* K-3A-0950. *Version 2:* J-3A-0950.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 2 weeks (78-80 hours). *Version 2:* 2 weeks (77 hours).

Exhibit Dates: *Version 1:* 12/93–3/95. *Version 2:* 1/90–11/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe military threats, intelligence systems, and sources of fundamental intelligence data. *Version 2:* Upon completion of the course, the student will be able to read maps and charts and understand introductory electronic warfare and basic operations of the Soviet military.

Instruction: *Version 1:* Lectures, examinations, laboratory experiences, and group exercises cover intelligence reports, briefing techniques, threats, missile and intelligence systems, maps and charts, naval geography, aerial photographic interpretation, introduction to terrorism, and Middle Eastern culture. *Version 2:* Lectures, exams, laboratory experience, and group exercises cover briefing, use of maps and charts, electronic warfare, intelligence collection and photography, Soviet military studies, and Third World characteristics.

Credit Recommendation: *Version 1:* Credit is not recommended because of the limited, specialized nature of the course (9/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to Soviet studies (12/87).

NV-1511-0017

Intelligence Specialist, Class A

Course Number: *Version 1:* J-242-0010. *Version 2:* J-242-0010.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 16 weeks (728 hours). *Version 2:* 11 weeks (434 hours).

Exhibit Dates: *Version 1:* 3/92–Present. *Version 2:* 1/90–9/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to analyze intelligence reports; interpret counterdrug intelligence; interpret national estimates; read, interpret, and prepare maps and charts; perform basic data processing; assess technical means of gathering intelligence; and interpret aerial photographs. *Version 2:* Upon completion of the course, the student will be able to analyze intelligence reports; interpret national estimates; read, interpret, and prepare maps and charts; perform basic data processing; assess technical means of gathering intelligence; and interpret aerial photographs.

Instruction: *Version 1:* Course includes lectures, examinations, laboratory experience, and use of basic library and technical sources for counter-drugs intelligence information. *Version 2:* Course includes lectures, examinations, laboratory experience, and use of basic library and related sources for intelligence information.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in map reading and 2 in national security or intelligence (9/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to Soviet studies and 3 in introduction to geopolitics (12/87).

NV-1511-0018

Marine Air-Ground Task Force Intelligence Officer

Course Number: *Version 1:* OJJ; G-243-4210. *Version 2:* G-243-4210.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 14 weeks (560-672 hours). *Version 2:* 11 weeks (366 hours).

Exhibit Dates: *Version 1:* 6/90–Present. *Version 2:* 1/90–5/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to utilize the current data base of combat intelligence information, manage the intelligence collection effort, manage the intelligence section, advise superior officers on intelligence aspects of unit operations, manage intelligence training, function as a target intelligence officer, serve as a unit assistant security manager, supervise unit counterintelligence effort and the administration of the intelligence section, understand the operation of intelligence gathering and interpretation, prepare national estimates, and apply geopolitical concepts. *Version 2:* Upon completion of the course, the student will be able to utilize the current data base of combat intelligence information, manage the intelligence collection effort, manage the intelligence section, advise superior officers in intelligence aspects of unit operations, manage intelligence training, function as a target intelligence officer, serve as a unit assistant security manager, supervise unit counterintelligence effort and the administration of the intelligence section, understand the operation of intelligence gathering and interpretation, prepare national estimates, and apply geopolitical concepts.

Instruction: *Version 1:* Lectures, examinations, laboratory, and field activities provide instruction in Fleet Marine Force organization, Naval Intelligence Processing System, Marine Air-Ground Intelligence System, intelligence reports and documents, intelligence collection agencies, map reading, amphibious intelligence planning and targeting, counterintelligence, electronic warfare support measures, planning and tasking documents, and management principles. Course includes a command post exercise during which students participate as members of the intelligence section of a landing force being employed in an amphibious assault. *Version 2:* Lectures, examinations, laboratory, and field activities that provide instruction in Fleet Marine Force organization, Naval Intelligence Processing System, Marine Air-Ground Intelligence System, intelligence reports and documents, intelligence collection agencies, amphibious intelligence planning and targeting, counterintelligence, electronic warfare support measures, Tactical Exploitation of National Capabilities planning, tasking documents, and management principles. Course includes a command post exercise during which students participate as members of the intelligence section of a landing force being employed in an amphibious assault.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in management problems (9/94). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in Soviet studies and 3 in management problems (12/87).

NV-1511-0019

Marine Air-Ground Task Force Intelligence Specialist Entry

Course Number: *Version 1:* OJA; J-243-4207. *Version 2:* J-243-4207.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 10 weeks (405 hours). *Version 2:* 8 weeks (401 hours).

Exhibit Dates: *Version 1:* 7/90–Present. *Version 2:* 1/90–6/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to use current data base of combat intelligence information, assist in the management of intelligence collection, assist in the processing of intelligence information, assist in the use of intelligence information for identifying targets, assist in the management of the administration of an intelligence unit, analyze intelligence reports, interpret national estimates, and read and interpret maps. *Version 2:* Upon completion of the course, the student will be able to use current data base of combat intelligence information, assist in the management of intelligence collection, assist in the processing of intelligence information, assist in the use of intelligence information for identifying targets, assist in the management of the administration of an intelligence unit, analyze intelligence reports, interpret national estimates, and read and interpret maps.

Instruction: *Version 1:* Lectures, examinations, laboratory, and field activities provide instruction in map reading; collection, production, and dissemination of intelligence; intelligence activities during each phase of an amphibious operation; organization of the Fleet Marine Force; intelligence sources and documents; order of battle; beach and helicopter landing zone intelligence; security; naval communications procedures; reconnaissance agencies; and basic correspondence and filing techniques. Course includes a command post exercise during which students participate as members of the intelligence section of a Marine Air-Ground Task Force being employed in an amphibious assault. *Version 2:* Lectures, examinations, laboratory, and field activities provide instruction in map reading; collection, production, and dissemination of intelligence; intelligence activities during each phase of an amphibious operation; organization of the Fleet Marine Force; intelligence sources and documents; order of battle; beach and helicopter landing zone intelligence; security; naval communications procedures; reconnaissance agencies; and basic correspondence and filing techniques. Course includes a command post exercise during which students participate as members of the intelligence section of a Marine Air/Ground Task Force being employed in an amphibious assault.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to technical communications and 3 in introduction to area studies (9/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to Soviet studies and 3 in introduction to technical communications (12/87).

NV-1511-0020

MARINE AIR-GROUND TASK FORCE INTELLIGENCE SPECIALIST INTERMEDIATE

Course Number: J-243-4208.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 10 weeks (388 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: After 8/93 see NV-1511-0036. Upon completion of the course, the student will be able to use current data base of combat intelligence information; participate in the management of the intelligence collection effort, intelligence training, administration of the intelligence section, and intelligence personnel and career development programs; understand the operation of intelligence gathering and interpretation; prepare national estimates; and apply basic geopolitical concepts.

Instruction: Lectures, examinations, laboratory, and field activities provide instruction in Fleet Marine Force and Marine Air-Ground Task Force organization; Naval Intelligence Processing System; Marine Air Ground Intelligence System; intelligence publications, documents, and records; intelligence collection agencies; intelligence planning; target intelligence; counterintelligence; electronic warfare; intelligence collection planning at the national level; intelligence collection management principles; and security education and training. Course includes a command post exercise during which students participate as members of the intelligence section of a landing force.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in Soviet studies and 3 in management problems (12/87).

NV-1511-0021

SHIPBOARD INTELLIGENCE ANALYST

Course Number: *Version 1:* J-243-0969. *Version 2:* J-243-0969.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 5-6 weeks (224 hours). *Version 2:* 3 weeks (109 hours).

Exhibit Dates: *Version 1:* 2/97–Present. *Version 2:* 1/90–1/97.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to identify foreign ships (naval and merchant marine), conduct briefings about sightings and the threat they may pose, maintain a library, and relate immediate circumstances to larger threat considerations.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures and practical exercises cover conducting briefings; effectively using library resources; Soviet, Eastern European, Cuban, and Iranian naval and merchant ships and their relationship to the general threat posed; and specific identification of foreign ships.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the upper-division baccalaureate category, 1 semester hour in Soviet studies (12/87).

NV-1511-0022

NAVAL INTELLIGENCE OFFICER

Course Number: *Version 1:* J-3A-0010. *Version 2:* J-3A-0010.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 21 weeks (827 hours). *Version 2:* 21 weeks (827 hours).

Exhibit Dates: *Version 1:* 1/94–Present. *Version 2:* 1/90–12/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the individual will be prepared for an initial intelligence assignment. *Version 2:* Upon completion of the course, the student will be able to solve intelligence problems, prepare and present intelligence briefings, and function effectively as a member of an intelligence team.

Instruction: *Version 1:* Through lecture, laboratory, and practical exercises, the junior Navy officer is introduced to naval intelligence; briefings; maps, charts, and intelligence reports; electronic warfare; naval warfare; ground and amphibious warfare; geopolitics; air warfare; imagery interpretation; strike warfare; and operational intelligence. *Version 2:* Through lecture, laboratory, and practical exercises, the junior Navy officer reviews security and intelligence operations; applies basic map reading and image interpretation skills; studies US and enemy weapons; understands mission planning; and applies special intelligence techniques.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in geopolitics (9/94). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in geopolitics and 3 in Soviet studies (12/87).

NV-1511-0024

1. JOINT INTELLIGENCE
2. ADVANCED OPERATIONAL INTELLIGENCE ANALYSIS

(Operational Intelligence Analysis)

Course Number: *Version 1:* J-243-0972. *Version 2:* J-243-0972.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 4 weeks (120-160 hours). *Version 2:* 5 weeks (193 hours).

Exhibit Dates: *Version 1:* 1/94–Present. *Version 2:* 1/90–12/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate in a joint intelligence environment, describe the overall intelligence structure as well as those of other service branches, and use the various types of intelligence (HUMINT, IMINT, SIGINT, MASINT) and apply these in practical exercises. *Version 2:* Upon completion of the course, the student will be able to identify foreign ships and their operational characteristics and other friendly naval merchant ships, conduct briefings about sightings and the threat that they pose, maintain a technical data base, and relate immediate circumstances to the larger threat considerations.

Instruction: *Version 1:* Instruction consists of lectures on the joint warfare environment, the various forms of intelligence, overall intelligence structures, and the use of satellite communications. The course concludes with a four-day practical exercise. *Version 2:* Instruction consists of lectures, visual aids, student briefings, and extensive practical exercises encompassing operational intelligence sensor systems; US and foreign weapons systems—performance and capabilities; US, Soviet, and Third World maritime warfare missions, operations, tactics, and command and control; operational intelligence briefings; preparation of operational intelligence summaries and advisory reports; security procedures; and principles of operational intelligence, analysis, reporting, and message drafting.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in social science (9/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in a physical science elective and 1 in technical communication (12/87).

NV-1511-0025

STRATEGY AND POLICY NONRESIDENT SEMINAR

Course Number: None.

Location: White Oak, MD; Washington, D.C; Seattle, WA; San Francisco, CA; San Diego, CA; Pensacola, FL; Patuxent, MD; Norfolk, VA; Newport, RI; Dahlgren, VA; Corpus Christi, TX; Annapolis, MD.

Length: 36 weeks (72 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the student will have the analytical skills to deal systematically with broad strategic questions. Closely related to this objective, the course will make the students aware of the complexity as well as ambiguity of the broad range of directions which such strategic thinking entails. In addition, the course will provide for the students a broad historical perspective on strategic questions and thinking against which to view and analyze contemporary issues.

Instruction: Instruction in the course involves one lecture per case study, a simulated seminar discussion, and extensive reading in the basic professional literature in the areas of military history, international relations, and strategy, all based upon about nine case studies. Five papers (five to ten pages each), three critiques, and two two-hour examinations are assigned.

Credit Recommendation: In the graduate degree category, 2 semester hours in history, 2 in international relations, and 2 in military studies (3/88).

NV-1511-0026

National Security Decision Making Nonresident Seminar

Course Number: None.

Location: White Oak, MD; Washington, D.C; Seattle, WA; San Francisco, CA; San Diego, CA; Pensacola, FL; Patuxent, MD; Norfolk, VA; Newport, RI; Dahlgren, VA; Corpus Christi, TX; Annapolis, MD.

Length: 36 weeks (90 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the student will be able to use multidisciplinary tools of analysis in decision making and implementation situations. They will be trained to deal with complex issues within the national security arena. Skills in areas such as resource allocation, force planning and management control will be developed.

Instruction: The course is divided into three units; the force planning component focuses on themes valuable in selecting military forces for the future. The defense analysis segment emphasizes the decision process for dealing with complex problems of resource allocation within the Department of Defense. The policy making and implementation units emphasizes political, organizational, and behavioral phenomena relevant to national security decision making. Lectures, seminars, extensive reading, and case preparation are the primary learning methods. Mid-term and final examinations are required.

Credit Recommendation: In the graduate degree category, 3 semester hours in national security planning and defense analysis and 2 in policy making and implementation (3/88).

NV-1511-0027

Basic Navy Operational Intelligence

Course Number: J-3A-0030.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/95.

Learning Outcomes: Upon completion of the course, the student will be able to apply the fundamentals of operational intelligence and the ocean surveillance information system.

Instruction: Instruction includes lectures, readings, field trips, and a substantial practical exercise. Topics include fleet intelligence operation; messages and reports; electronic warfare; defense analysis; and Soviet naval command, control, and communications.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in Soviet studies (7/88).

NV-1511-0028

Marine Air-Ground Task Force Counterintelligence

Course Number: *Version 1:* J-244-0944. *Version 2:* J-244-0944.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 17 weeks (836 hours). *Version 2:* 14-15 weeks (608 hours).

Exhibit Dates: *Version 1:* 7/94–Present. *Version 2:* 1/90–6/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to function as a member of a counterintelligence team at the headquarters level. *Version 2:* Upon completion of the course, the student will be able to function as a member of a counterintelligence team at the headquarters level.

Instruction: *Version 1:* Course includes classroom instruction, self-paced texts, and practical exercises in the field. Major topics include national, Department of Defense, and Marine Corps intelligence assets; applications of counterintelligence, terrorism, tactical functions, and security services; communication; human intelligence operations; and interrogation techniques. The training course includes weekends. *Version 2:* Course includes classroom instruction, self-paced texts, and practical exercises in the field. Major topics include national, Department of Defense, and Marine Corps intelligence assets; applications of counterintelligence, terrorism, tactical functions, and security services; communication; human intelligence operations; and interrogation techniques. The 14-15 weeks of training include weekends.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in criminal justice and 3 in principles of investigation, police procedures, or security techniques (9/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in principles of investigation, 3 in security techniques, 3 in technical communication, 3 in interviewing and interrogation, and 3 in legal principles (7/88); in the upper-division baccalaureate category, 3 semester hour in political science (major foreign powers) and 3-6 in physical security practicum on the basis of institutional evaluation (7/88).

NV-1511-0029

Marine Air-Ground Task Force Intelligence Officer Reserve, Phases 1 and 2

Course Number: J-3A-4214; J-3A-4224.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze and interpret intelligence reports, use military intelligence libraries and sources of information, employ and understand the vocabulary of intelligence, handle classified materials properly, and apply basic concepts of military strategy.

Instruction: Instruction includes lectures, practical exercises, presentation of an oral briefing, participation in a team project, and course examinations. Topics include a description of the intelligence community; intelligence definitions; preparing and interpreting intelligence estimates; using maps, terrorism, and geographical factors in intelligence operations; targeting; and considerations for personal security.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in political science (national security) and 1 in an advanced physical geography elective (7/88).

NV-1511-0030

Marine Air-Ground Task Force Intelligence Specialist Reserve (Phases 1 and 2)

Course Number: J-243-4223, Phase 2; J-243-4213, Phase 1.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze and interpret intelligence reports, use military intelligence libraries and sources of information, and handle classified materials properly.

Instruction: Lectures, practical exercises, presentation of an oral briefing, team projects, and examinations cover the intelligence community, the use of maps, the study of terrorism, and the analysis of geographical factors in intelligence operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in political science (introduction to national security) and 1 in a physical geography elective (7/88).

NV-1511-0031

Intelligence Officer Refresher

Course Number: J-3A-0952.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–7/95.

Learning Outcomes: Upon completion of the course, the student will be able to deal with general national security considerations and the basics of geopolitics and naval strategy and understand major characteristics of sensors and electronic intelligence.

Instruction: Lectures, readings, and exams cover maritime strategy, geographic areas of naval operations, and methods and types of electronic intelligence (ELINT).

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in political science (national security) and 1 in an advanced physical geography elective (7/88).

NV-1511-0032

Intelligence Specialist, Class A, Operational Intelligence Reserve, Phases 1 and 2

Course Number: *Version 1:* J-242-2014. *Version 2:* J-242-2014; J-242-2013.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 2-3 weeks (96 hours).

Exhibit Dates: *Version 1:* 4/91–10/95. *Version 2:* 1/90–3/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe regional intelligence issues and various techniques of remotely gathered intelligence information. *Version 2:* Upon completion of the course, the student will be able to deal with general national security considerations and the basics of electromagnetic radiation, types of intelligence gathering techniques, and analysis of sensor characteristics.

Instruction: *Version 1:* Through lectures, examinations, and practical exercises, the student learns to collect intelligence information using a variety of electronic sensors and to provide briefings on sensitive world areas. *Version 2:* Lectures, discussion, examinations, and practical exercises cover sensor characteristics, principles of electronic intelligence, automated intelligence data processing and data bases, US and foreign naval strategic forces, intelligence reporting, and communication.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in area studies (9/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in political science (introduction to national security) and 1 in technical communication (7/88).

NV-1511-0033

Naval Intelligence Mid-Career

Course Number: *Version 1:* J-3A-0998. *Version 2:* J-3A-0998.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 2-3 weeks (88-99 hours).

Exhibit Dates: *Version 1:* 9/94–Present. *Version 2:* 1/90–8/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to analyze high-level intelligence and national security questions in light of world instability; analyze US maritime strategy, commitments, and operations; and understand multidimensional aspects of command, control, communications, and intelligence and the complex nature of joint and coalition warfare. *Version 2:* Upon completion of the course, the student will be able to judge high-level intelligence and national security questions, including evaluation of the Soviet Union in particular, and analyze US maritime strategy and multidimensional aspects of command, control, communication, and intelligence.

Instruction: *Version 1:* Lectures by major figures in the US intelligence community, supplemental readings, and extensive class discussions cover how US naval strategy supports US policy, naval intelligence in joint and coalition warfare, capabilities and strategy of major maritime powers, terrorism, resource management, and significant political developments throughout the world. *Version 2:* Lectures by major figures in the US intelligence community and experienced practitioners of US Naval Intelligence, as well as required readings and extensive class discussion cover how US naval strategy supports US policy, capabilities and strategy of the Soviet Navy, changing political developments in the Soviet Union, questions of security and counterintelligence, terrorism, managing resources, and practical shipboard applications of broad general intelligence guidelines.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours political science, issues in national security, or intelligence planning (9/94). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in political science (national security) (7/88).

NV-1511-0034

Naval Staff College

Course Number: None.

Location: Naval War College, Newport, RI.

Length: 23 weeks (460 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the fundamentals of foreign policy and military (naval) strategy, principles of managing a defense organization, and methods for optimizing employment of naval forces in peacetime and in general conventional war deployments and how to make sound, defense-related decisions.

Instruction: Lectures, discussion sections, case studies, gaming, a research paper, and written examinations cover policy and strategy, employment of naval forces, international law and ocean affairs, and national security decision making.

Credit Recommendation: In the graduate degree category, 3 semester hours in military studies, 3 in history, and 2 in management decision making/defense analysis or 6 semester hours in military studies and 2 in management decision making/defense analysis (8/88).

NV-1511-0036

Marine Air-Ground Task Force Intelligence
(Intermediate) Chief

Course Number: OJB; J-243-4208.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 9 weeks (343-344 hours).

Exhibit Dates: 9/93–Present.

Learning Outcomes: Before 9/93 see NV-1511-0020. Upon completion of the course, the student will be able to describe the basics of naval expeditionary force structure and amphibious task force and carrier battle group and their mission and capabilities; amphibious joint intelligence center operation; intelligence preparation of the battlefield; collection resources and management; and joint intelligence architecture, targeting, and contingency planning.

Instruction: Lectures, examinations, field trips, and demonstrations cover intelligence foundations, dissemination, analysis, systems, and collection management. Signals, aviation, and logistics intelligence are also covered as well as organic collection assets.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in management problems (9/94).

NV-1601-0017

SSM Automatic Degaussing Equipment
Maintenance for the DD-963
(SSM Degaussing System for DD-963 Class
Destroyer, Class C1)

Course Number: A-690-0022.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–1/93.

Objectives: After 9/96 see NV-1714-0085. To train personnel to operate and maintain the degaussing system.

Instruction: Instruction includes the theory of degaussing; the operation of the degaussing control systems; and adjustment, maintenance, and troubleshooting associated electrical equipment related to the degaussing system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/83).

NV-1601-0018

Oxygen Generator 6L16 Operator
(Treadwell Oxygen Generator Operation/
Maintenance 6L16)
(Oxygen Generator Operator 6L16)

Course Number: *Version 1:* A-652-0050. *Version 2:* A-652-0050.

Location: *Version 1:* Submarine Training Facility, Norfolk, VA; Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Center, San Diego, CA; Submarine Training Center, New London, Groton, CT; Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA. *Version 2:* Submarine Training Center, New London, Groton, CT; Submarine Training Center, San Diego, CA; Submarine Training Center, Pearl Harbor, HI; Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: *Version 1:* 3 weeks (160 hours). *Version 2:* 3 weeks (115-120 hours).

Exhibit Dates: *Version 1:* 9/94–Present. *Version 2:* 1/90–8/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be provided with the knowledge necessary to operate, repair, and maintain the 6L16 oxygen generator. *Version 2:* Upon completion of the course, the student will be provided with the knowledge necessary to operate, repair, and maintain the 6L16 oxygen generator.

Instruction: *Version 1:* Lectures and practical exercises cover the theory and operation, maintenance, and troubleshooting of the oxygen generator and its various systems. *Version 2:* Lectures and practical exercises cover the theory and operation, maintenance, and troubleshooting of the oxygen generator and its various systems.

Credit Recommendation: *Version 1:* Credit is not recommended because of the limited, specialized nature of the course (2/96). *Version 2:* Credit is not recommended because of the limited, specialized nature of the course (10/89).

NV-1601-0019

Oxygen Generator Operator/Mechanical
Technician

Course Number: A-652-0051.

Location: Submarine Base, New London, Groton, CT; Submarine Training Center, Pearl Harbor, HI; Fleet Ballistic Missile Submarine Training Center, Charleston, SC.

Length: 3 weeks (109 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To train enlisted personnel to operate, maintain, and repair the 7L16 oxygen generator.

Instruction: Lectures and practical exercises cover the operation, repair, and troubleshooting of the 7L16 generator, including the theory of liquid and gas systems; functions of all pneumatic control system components; and the use of dial indicators, torque wrenches, and gas calibration equipment.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (6/81).

NV-1601-0020

Engineering Principles and Practices

Course Number: A-651-0066.

Location: Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (57 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train personnel to perform maintenance on basic mechanical components.

Instruction: Lectures and practical exercises cover maintenance of basic mechanical components, including sensing instruments, mechanical fasteners and locking devices, static and dynamic fluid seals, lubrication, bearings, and flexible couplings.

Credit Recommendation: In the vocational certificate category, 2 semester hours in mechanical systems maintenance (5/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in mechanical systems laboratory (5/82).

NV-1601-0022

Boiler Water/Feed Water Test and Treatment Instructor Certification

Course Number: A-651-0103.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To prepare officer and enlisted naval personnel in boiler water testing and treatment.

Instruction: Classroom instruction and practical exercises cover boiler water conditioning. Course also covers basic mathematics, algebra exponents, scientific notation, logarithms, and proportions and water chemistry, including atomic structure, the periodic table, equations, stoichiometry, acid-base reactions, pH concept, electrolysis, chemical testing, and corrosion control in Idle 8 operational high-pressure steam generators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic mathematics and 2 in basic chemistry (11/82).

NV-1601-0023

FFG-7 PCO/PXO Gas Turbine Engineering

Course Number: A-4H-0061.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 2 weeks (68 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To provide prospective commanding and executive officers with an overall knowledge of the FFG-7 ship's engineering system including administrative and managerial duties.

Instruction: The course is technical in content and deals specifically with marine gas turbine plant engineering. Major topics include the unique power train and its control system, the generation distribution and control system of the ship's electrical plant, and auxiliary systems and their respective controls and monitoring requirements. In addition, related managerial and administrative responsibilities are reviewed.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance management (11/82).

NV-1601-0024

DD-963 PCO/PXO Gas Turbine Engineering

Course Number: A-4H-0043.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 2-3 weeks (72-80 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To provide prospective commanding and executive officers with a general knowledge of the engineering system installed in a DD-963 destroyer including administrative and managerial responsibilities.

Instruction: The course gives the officer a general overview of the marine gas turbine plant, including the power train and its control system, the generation distribution and control system of the ship's electrical plant, and the auxiliary system. In addition, administrative and managerial responsibilities are covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance management (11/82).

NV-1601-0025

DD-963 Ship Service Gas Turbine Generator Set Operator and Waste Heat Boiler Operator

Course Number: A-652-0225.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train personnel in the operation of the Model 104 gas turbine generator set and wastewater heater.

Instruction: Lectures and practical exercises cover the operation of the gas turbine, including turbine assembly, coaling systems, intake, exhaust, reduction gears, ignition systems, starting systems, fuel systems, fire fighting detectors, and waste heat boiler system and operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in gas turbine theory and operation and 1 in gas turbine operation laboratory (10/83).

NV-1601-0026

FFG-7 Class Degaussing System Maintenance

Course Number: A-690-0078.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–10/93.

Objectives: After 9/96 see NV-1714-0084. To train personnel to operate and maintain a degaussing system.

Instruction: Lectures and laboratory exercises cover the theory of degaussing; operation of the degaussing control systems; and adjustment, maintenance, and troubleshooting of the electrical equipment related to the degaussing system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/83).

NV-1601-0027

Main Engine and Lube Oil Purifier

Course Number: A-651-0078.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 1-3 weeks (72-76 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to disassemble, inspect, and measure steam turbines and lube oil purifiers.

Instruction: Classroom and practical instruction cover steam turbines and lube oil purifiers. Course includes selection of parts and procedures for procurement of replacement parts.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in manufacturing processes (6/94).

NV-1601-0028

Vapor Compression Distiller Maintenance and Operation

Course Number: J-651-0488.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–11/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, service, and repair vapor compression distillers.

Instruction: Classroom and practical instruction cover vapor compression distillers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in distillation mechanical systems (6/94).

NV-1601-0029

Air Compressor and Compressed Air System Component Maintenance

Course Number: *Version 1:* A-651-0070. *Version 2:* A-651-0070.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 4-5 weeks (116 hours). *Version 2:* 2-3 weeks (100 hours).

Exhibit Dates: *Version 1:* 6/95–Present. *Version 2:* 1/90–5/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate and maintain air compressor systems. *Version 2:* Upon completion of the course, the student will be able to operate and maintain air compressor systems.

Instruction: *Version 1:* Classroom and practical instruction cover the operation and maintenance of air compressors and compressed air systems, including low- and high-pressure compressors, air dryers/dehydrators, and maintenance principles. *Version 2:* Classroom and practical instruction cover the operation and maintenance of air compressors and compressed air systems including low- and high-pressure compressors, air dryers/dehydrators, and maintenance principles.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in mechanical compressor systems (11/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in mechanical compressor systems (3/89).

NV-1601-0030

I/R High Pressure Air Compressor Combined Maintenance

Course Number: A-652-0100.

Location: Submarine Training Center, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 1-2 weeks (52 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory, operation, and maintenance of high-pressure air compressors and perform maintenance and repairs.

Instruction: Lectures and laboratory instruction cover high-pressure air compressors.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in mechanical systems (air compressors) (10/89).

NV-1601-0031

Engineering Aid, Class A
(Technical Engineering)

Course Number: *Version 1:* 491-ITRO-51T10; 1614D1; 491-51T10; J3ABR3E531 001; A-412-0010; A1614D1. *Version 2:* A-412-0010.

Location: *Version 1:* Construction Training Center Detachment, Ft. Leonard Wood, MO. *Version 2:* Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: *Version 1:* 15-18 weeks (613-773 hours). *Version 2:* 10 weeks (370 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform soils analysis, fresh and hardened concrete tests, basic surveying, and computer-aided drafting (CAD). Army and Marine learners will also use automated instruments to perform traverse and radial surveys, create topographical maps, produce drawings, and lay out projects. *Version 2:* Upon completion of the course, the student will be able to perform basic drafting and surveying and conduct materials testing.

Instruction: *Version 1:* Course includes basic drafting and surveying and materials testing. *Version 2:* Lectures and practical exercises cover drafting, construction surveying, horizontal and vertical control, mapping, soil analysis, and quality control.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in soils testing, 1 in concrete testing, 3 in computer aided drafting, and 3 in surveying. Army and Marine students earn an additional 3 semester hours in advanced surveying (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in civil drafting, 3 in surveying, and 2 in materials testing (6/91).

NV-1601-0032

Equipment Operator Water Well Drilling and Development

Course Number: A-730-0014.

Location: Construction Training Center, Port Hueneme, CA.

Length: 4 weeks (155 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply skills in water well drilling and development operations.

Instruction: Lectures and practical exercises cover developing a water supply, safely operating and maintaining a rotary drilling machine, rigging pumps and piping, testing wells for purity, digging slush pits, and setting pits and fluid return sites.

Credit Recommendation: In the vocational certificate category, 3 semester hours in water well drilling (6/91).

NV-1601-0033

Oxygen Equipment Cleaning and Calibration

Course Number: A-670-0046.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7 weeks (56 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to clean, repair, and calibrate pressure equipment which will be installed in an oil-free oxygen clean environment.

Instruction: Lectures, demonstrations, and hands-on laboratories cover safety equipment and regulations; sample testing; preparation and evaluation of data for determining hydrocarbon impurities; operation of infrared spectrophotometer; and cleaning, calibrating, and packaging prepared oxygen system equipment.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (1/98).

Related Occupations: ins .

NV-1601-0034

1. Shipboard Gauge Calibration Program Standards Maintenance
2. Shipboard Gage Calibration Program Standards Maintenance

Course Number: *Version 1:* A-670-0058. *Version 2:* A-670-0058.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 6-7 weeks (256 hours). *Version 2:* 7 weeks (213-233 hours).

Exhibit Dates: *Version 1:* 5/94–Present. *Version 2:* 12/90–4/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, troubleshoot, repair, and calibrate shipboard gauge calibration equipment. *Version 2:* Upon completion of this course, the student will have the knowledge and skills necessary to operate, troubleshoot, repair, and calibrate shipboard gauge calibration equipment.

Instruction: *Version 1:* Lectures, demonstrations, and hands-on laboratories cover pressure, temperature, and mathematical concepts and principals; the operation and use of Instrolab 420 2B-13-15 Digital Temperature indicator, Rosemount 162CE PRT, King Nutronics 3689A precision pressure standard, Fluke 8810A digital multimeter, and Tektronic 2336 oscilloscope to repair and calibrate to selected standards; operation, repair, and calibration of the King Nutronics 3666 automatic pressure calibration system, Hutron tracker equipment, Datametrics 1127-2 portable gage calibration system, and King Nutronics 3604/3605 thermo units. This course also includes group-paced lectures and laboratories covering AC circuits, inductance and capacitance, basic transistors, solid state devices, power supplies, and basic digital principles. *Version 2:* Lectures, demonstrations, and hands-on laboratories cover pressure, temperature, and mathematical concepts and principals; the operation and use of Instrolab 420 2B-13-15 Digital Temperature indicator, Rosemount 162CE PRT, King Nutronics 3689A precision pressure standard, Fluke 8810A digital multimeter, and Tektronic 2336 oscilloscope to repair and calibrate to selected standards; operation, repair, and calibration of the King Nutronics 3666 automatic pressure calibration system, King Nutronics 3657 portable calibration system, Datametrics 1127-2 portable gage calibration system, and King Nutronics 3604/3605 thermo units. After 5/95, Hutron tracker equipment was added and the King Nutronics 3657 portable calibration system was eliminated.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in precision measurement laboratory (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in precision measurement laboratory (1/93).

NV-1601-0035

Elevated Causeway

Course Number: K-062-0102.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 2-3 weeks (72 hours).

Exhibit Dates: 1/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, operate, maintain, and retrieve a modular elevated causeway.

Instruction: Curriculum is presented through classroom instruction and practical hands-on demonstrations. The skills acquired include equipment staging, causeway erecting, marine cargo handling, pile driving, causeway connectors, and installation of roadway sections.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in marine bridge construction (10/97).

NV-1601-0036

Offshore Petroleum Discharge System Officer-in-Charge

Course Number: K-2G-0439.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to supervise all systems associated with offshore petroleum discharge system.

Instruction: One week of classroom instruction is followed by two weeks of laboratory, including lectures, demonstrations, and practical applications. Course content includes planning, organizing, operating, and recover the system. Students will be instructed in conduit deployment methods, site surveys, operation order preparation, and petroleum pumping through conduit.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in marine cargo handling (liquid) (10/97).

NV-1601-0037

Elevated Causeway Navy Lighterage

Course Number: K-062-0103.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 2-3 weeks (88 hours).

Exhibit Dates: 7/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, operate, maintain, and retrieve an elevated causeway.

Instruction: Through the use of classroom instruction and practical hands-on demonstrations, the student acquires the skills of equipment staging, causeway erecting, marine cargo handling, pile driving, causeway connection, and installation of roadway sections.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in marine bridge construction (10/97).

NV-1601-0038

Offshore Petroleum Discharge System Beach Termination Unit (BTU) Operations Technician

Course Number: K-062-0104.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 2-3 weeks.

Exhibit Dates: 4/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the beach termination unit system in conjunction with other systems and rebuild valves and regulators.

Instruction: Some classroom instruction is offered along with extensive laboratory activities and practical applications. Content includes system hookup, pumping, and recovery during hands-on phase.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/97).

NV-1601-0039

Naval Gunfire Liaison Officer
(Shore Fire Control Party Training Path System)

Course Number: K-2G-0040.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan naval gunfire action for a landing force in an amphibious operation.

Instruction: Lectures, demonstrations, practical applications, and field exercises cover map reading, land navigation, naval gunfire planning and spotting, and communications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in map reading and land navigation (10/97).

NV-1606-0008

Diver First Class

Course Number: A-433-018; A-433-0025.

Location: Diving and Salvage School, Washington, DC; Diving and Salvage Training Center, Panama City, FL.

Length: 14-26 weeks (465-858 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train enlisted personnel in advanced diving, salvage, and rescue operations.

Instruction: Lectures and practical experience cover advanced deep air and mixed gas surface-supplied diving; use of hyperbaric chambers; submarine rescue; underwater cutting and welding salvage techniques; administration, supervision, and certification of diving systems; and a review of diving physics and medicine.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in advanced diving technology (4/83); in the upper-division baccalaureate category, 1 semester hour in diving supervision and administration (4/83).

NV-1606-0009

Deep Sea Helium-Oxygen Diving Officer

Course Number: A-4N-0014.

Location: Diving and Salvage School, Washington, DC; Diving and Salvage Training Center, Panama City, FL.

Length: 9 weeks (368 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train diving officers in helium-oxygen deep diving techniques.

Instruction: Lectures and practical experience cover principles and problems of deep diving and use of helium-oxygen mixtures. Course includes the use of the submarine rescue chamber and an orientation to experimental diving.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in advanced diving technology (4/83); in the upper-division baccalaureate category, 1 semester hour in diving supervision and administration (4/83).

NV-1606-0010

Navy Diver Second Class
(Explosive Ordnance Disposal Diver Candidates)

Course Number: A-433-0022.

Location: Fleet Training Center, Pacific, Pearl Harbor, HI; Harbor Clearance Unit Two, Little Creek, VA; Amphibious School, Coronado, CA; Diving and Salvage Training Center, Panama City, FL.

Length: 12 weeks (488 hours).

Exhibit Dates: 1/90–4/91.

Objectives: After 4/91 see NV-1606-0079. To train enlisted personnel in the basic aspects of scuba diving and underwater practices.

Instruction: Lectures and practical exercises cover the physics and medical aspects of diving, open circuit scuba, surface supplied air, underwater power tools, welding, and related practices.

Credit Recommendation: In the vocational certificate category, 6 semester hours in marine diving technology (4/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in marine diving technology (4/83); in the upper-division baccalaureate category, 1 semester hour in marine diving physiology (4/83).

NV-1606-0011

Scuba Diver

Course Number: A-433-0023.

Location: Naval School, New London, Groton, CT; Mobile Diving and Salvage Unit Two, Little Creek, VA; Naval School, Key West, FL; Naval School, San Diego, CA; Diving and Salvage Training Center, Panama City, FL; Mobile Diving Salvage Unit Two, Little Creek, VA; School Explosive Ordnance Disposal, Indian Head, MD; Amphibious School, Coronado, CA; Naval School, Pearl Harbor, HI.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–11/90.

Objectives: After 11/90 see NV-1606-0080. To train enlisted personnel in the basic aspects of scuba diving and underwater operations.

Instruction: Lectures and practical experiences cover the physics and medical aspects of diving, decompression theory, open-circuit theory, maintenance and repair, underwater hull inspection, underwater mechanical work techniques, escape training techniques, and diving administration.

Credit Recommendation: In the vocational certificate category, 3 semester hours in marine technology (4/83); in the lower-division baccalaureate/associate degree category, 2 semester hours in scuba diving (4/83).

NV-1606-0014

Medical Deep Sea Diving Technician
(Medical Deep Sea Diving Technician)
(Deep Sea Divers)

Course Number: A-433-0020.

Location: Deep Sea Divers School, Washington, DC; Diving and Salvage Training Center, Panama City, FL.

Length: 21-26 weeks (735-960 hours).

Exhibit Dates: 1/90–4/91.

Objectives: To train hospital personnel in the physiological effects of diving and in diving techniques.

Instruction: Lectures and practical exercises cover diving physics and physiology as applied to the treatment of compressed-gas illness, including deep air, mixed gas, and salvage surface-supported diving.

Credit Recommendation: In the vocational certificate category, 6 semester hours in marine diving technology (4/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in marine diving technology and 4 in advanced diving technology (4/83); in the upper-division baccalaureate category, 1 semester hour in marine diving physiology and 2 in medical diving physiology. Please Note: This course comprises two courses: Navy Diver, Second Class (NV-1606-0010) and Medical Technician. The recommendation for Navy Diver, Second Class has been included in this exhibit (4/83).

NV-1606-0016

Master Diver Evaluation
(Master Diver Qualification)

Course Number: A-433-019; A-433-0019.

Location: Deep Sea Divers School, Washington, DC; Diving and Salvage Training Center, Panama City, FL.

Length: 5 weeks (160 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To prepare experienced divers to meet the eligibility requirements for the title, Master Diver.

Instruction: Lectures and practical experience cover refresher training in diving equipment, techniques, and safety, with emphasis on supervisory training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in diving technology (4/83); in the upper-division baccalaureate category, 2 semester hours in diving administration and supervision (4/83).

NV-1606-0017

Medical Department Diving Officers

Course Number: A-6A-0010; A-6N-0010.

Location: Diving and Salvage School, Washington, DC; Diving and Salvage Training Center, Panama City, FL.

Length: 8-9 weeks (256-360 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To provide medical officers with instruction in diving techniques with emphasis on the physiological aspects of diving.

Instruction: Course covers familiarization with deep sea, lightweight, and helium diving; operational use of scuba; limited training in underwater mechanics; and diving techniques with emphasis on the physiological aspects of diving.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in scuba diving (4/83); in the upper-division baccalaureate category, 4 semester hours in hyperbaric physiology (4/83).

NV-1606-0060

Operations Specialist, Class A1

Course Number: J-221-0011; A-221-0011.

Location: Service School Command, Great Lakes, IL; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 12-17 weeks (480-680 hours).

Exhibit Dates: 1/90–5/90.

Objectives: After 5/90 see NV-1606-0077. To train personnel to perform duties required in a combat information center.

Instruction: Lectures and practical exercises cover procedures used in message communications, radar navigation, radar course plotting, and vector plotting in the operation of radar systems and data interpretation.

Credit Recommendation: In the vocational certificate category, 2 semester hours in navigation practices and 1 in navigation laboratory (9/84).

NV-1606-0064

Basic Diving Officer

Course Number: A-4N-0024.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 13 weeks (488 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train officers to manage and perform operational diving duties requiring scuba or surface-supplied diving equipment.

Instruction: Lectures and practical exercises cover operational diving knowledge, including diving physics and medicine, advanced hyperbaric medicine, inspection and maintenance of open-circuit scuba equipment, dive planning, use of underwater power tools, Mk 12 diving equipment, underwater work techniques, underwater cutting and welding, salvage/diving administration, and salvage demolition procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in marine diving technology (4/83); in the upper-division baccalaureate category, 1 semester hour in diving supervision and administration and 1 in marine diving physiology (4/83).

NV-1606-0065

Ship Salvage Diving Officer

Course Number: A-4N-0026.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To provide officers with the training necessary to perform salvage diving and the associated administrative procedures.

Instruction: Lectures and practical exercises cover such engineering calculations as stability studies, buoyancy computations, and underwater engineering as applied to salvage diving operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in marine salvage technology (4/83); in the upper-division baccalaureate category, 1 semester hour in diving supervision and administration (4/83).

NV-1606-0066

VQ/VAQ/VMAQ Pilot and EA-3B Navigator
Electronic Warfare (EW) Officer

Course Number: C-2D-3815.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/93–10/97.

Objectives: To provide the student with the basic skills and background knowledge required to begin operational training for mission commander or navigator.

Learning Outcomes: Upon completion of the course, the student will be able to create an area order of battle from appropriate publications and message traffic, determine threat envelopes from reported signal activity by associating signal to system to threat to weapon range and altitude data, relay an assessment of the environment in accordance with the communication plan, and adjust mission plan for the actual environment to accomplish the basic ESM and ECM objectives.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/87).

NV-1606-0067

Strike Warfare Operational Intelligence
(OPINTEL) Analyst

Course Number: J-150-0962; D-150-0015.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–12/93.

Objectives: After 12/93 see NV-1606-0087. To provide the student with a comprehensive understanding of the capabilities and use of naval intelligence processing aboard ship.

Instruction: This course qualifies students to operate a variety of computer-assisted intelligence equipment, to evaluate and disseminate information, and to use and maintain intelligence resources.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (1/86).

NV-1606-0070

Landing Helo Auxiliary (LHA)/CVN Afloat
Intelligence Specialist
(Landing Helo Auxiliary (LHA) Afloat Intelligence Specialist)

Course Number: J-243-0968; D-243-0120.

Location: Intelligence Processing System Training Facility, Key West, FL; Air Station, Norfolk, VA; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 5-7 weeks (184-280 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To provide the student with a comprehensive understanding of the capabilities of the naval intelligence processing system aboard small ships.

Instruction: Topics include basic instruction necessary to operate a variety of electronic and computer-assisted intelligence resources.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical communication (1/86).

NV-1606-0071

Air Navigation by Correspondence

Course Number: AFM-51-40; NAV AIR 00-80V-49.

Location: Development Center, Pensacola, FL.

Length: Maximum, 40 weeks.

Exhibit Dates: 1/90–12/96.

Objectives: To provide personnel with the skills needed to navigate in the air worldwide and within the airspace of the United States.

Instruction: Course provides instruction in maps and charts; dead reckoning; lines of position; fixes; navaids; radar; time, altitude, and true azimuth computation; star identification; plotting; sextants and errors of observation; grid navigation; over water aids; low level and advanced celestial navigation and systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in air navigation (11/86).

NV-1606-0072

Basic Shipboard Intelligence

Course Number: J-243-0981; K-3A-5034.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–1/94.

Learning Outcomes: Upon completion of the course, the student will be able to participate in basic planning, collecting, processing, and disseminating intelligence data under limited supervision.

Instruction: This is a fundamental lecture survey course on basic intelligence, designed for officers and enlisted personnel.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/87).

NV-1606-0073

Intelligence Specialist, Class A, Operational Intelligence

Course Number: J-242-0994.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 5 weeks (191 hours).

Exhibit Dates: 1/90–3/92.

Learning Outcomes: Upon completion of the course, the student will be able to assist naval intelligence officers in operational assignments ashore and afloat.

Instruction: Fundamental intelligence training through lecture and practical exercises cover organizing, processing, and safeguarding information; image interpretation; remote sensing; report writing; naval warfare; administration; correspondence preparation; briefing fundamentals; and research.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical communication (12/87).

NV-1606-0074

Imagery Interpretation (IIC)

Course Number: J-3A-0954; K-3A-0954.

Location: Fleet Intelligence Training Center, Pacific, San Diego, CA; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–8/94.

Learning Outcomes: After 8/94 see NV-1606-0085. Upon completion of the course, the student will be able to apply the fundamentals of basic imagery intelligence, reconnaissance systems, mission planning, and interpretation of resulting imagery.

Instruction: Lectures and extensive student practical exercises cover aerial imagery, mensuration, imagery interpretation and plotting, map reading, report writing, and physical security of imagery interpretation.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (7/88).

NV-1606-0075

Intelligence Specialist, Class A, Reserve (ISA-RES)

Course Number: J-242-0030.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply the fundamentals of basic imagery intelligence, reconnaissance systems, mission planning, and interpretation of the resulting imagery.

Instruction: Instruction is offered through lectures and extensive student practical exercises. Topics include aerial imagery, mensuration, imagery interpretation and plotting, map reading, report writing, and physical security of imagery interpretation.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/88).

NV-1606-0076

Quartermaster, Class A

Course Number: A-061-0012.

Location: Training Center, Orlando, FL.

Length: 7-8 weeks (214 hours).

Exhibit Dates: 1/90–2/96.

Learning Outcomes: Upon completion of the course, the student will be able to operate electronic navigation equipment; conduct weather observations; determine compass and gyro error; compute tide and tidal current data; keep logs and records; determine ship's position by visual and electronic means; compute times of sunrise, sunset, and twilight; and follow the rules of the road to prevent collision.

Instruction: Lectures and practical exercises cover watchstanding, piloting, charts and publications, magnetic and gyro compasses, dead reckoning, aids to navigation, weather elements and observation, and rules of the road.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in marine navigation and 2 in marine navigation laboratory (10/91).

NV-1606-0077

Operations Specialist

Course Number: J-221-0011.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 14 weeks (560 hours).

Exhibit Dates: 6/90–Present.

Learning Outcomes: Before 6/90 see NV-1606-0060. Upon completion of the course, the student will be able to plot a ship's position, heading, and speed; operate common marine and electronic navigation instruments including surface radar systems; and provide target plotting data to the combat information center based on information received from target-tracking devices.

Instruction: Lectures and practical exercises cover ship navigation, charts, radar operation, navigation plotting, signals, rules of the road, dead reckoning, and coastal navigation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in marine navigation and 2 in marine navigation laboratory (10/91).

NV-1606-0078

SEAL Scuba Diving Supervisor

Course Number: K-431-0048.

Location: Special Warfare Center, San Diego, CA.

Length: 1-2 weeks (61-73 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan, coordinate, brief and supervise scuba dives; describe the procedures and safety precautions of scuba dives; conduct pre- and postdive procedures; describe the dangers of the marine environment and have a working knowledge of the treatment for dangerous marine animal and marine environment injuries; correctly report diving accidents and injuries; and examine, diagnose, and treat diving accidents.

Instruction: Lectures, group discussions, group assignments, and written examinations are methods of instruction. This course is equivalent to a divemaster course.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in divemaster (3/92).

NV-1606-0079

Diver Second Class

Course Number: *Version 1:* A-433-0022. *Version 2:* A-433-0022.

Location: *Version 1:* Diving and Salvage Training Center, Panama City, FL. *Version 2:* Diving and Salvage Center, Panama City, FL; Mobile Diving and Salvage Unit Two, Little Creek, VA; Submarine Training Center, Pearl Harbor, HI; Amphibious School, San Diego, CA.

Length: *Version 1:* 20 weeks (800 hours). *Version 2:* 13 weeks (520 hours).

Exhibit Dates: *Version 1:* 11/94–Present. *Version 2:* 5/91–10/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform first aid and CPR; apply knowledge of diving physics and use decompression tables; operate a hyperbaric chamber; function as a diver/dive team member for open-circuit scuba operations including maintenance of equipment; dive with shallow water surface-supplied (Mk 20/Aqua Mask) air equipment; dive with deep water surface-supplied (Mk 21/Superlight 17) air equipment; use hydraulic and hand tools safely; perform hull and ship appendage inspections including cleaning; perform underwater cutting, using appropriate techniques and observing safety precautions. *Version 2:* Before 5/91 see NV-1606-0010. Upon completion of the course, the student will be able to perform first aid and CPR; apply knowledge of diving physics and use decompression tables; operate a hyperbaric chamber; function as a diver/dive team member for open-circuit scuba operations including maintenance of equipment; dive with lightweight surface-supplied air equipment; perform underwater cutting, observing appropriate techniques and safety precautions; use hydraulic and hand tools safely; perform as a diver/dive team member using surface-supplied Mk 12 equipment; inspect hulls and search bottoms using scuba.

Instruction: *Version 1:* Lectures, laboratories, written test, tank and open water projects, and performance tests are methods of instruction. *Version 2:* Lectures, laboratories, tank and open water projects, and performance tests are methods of instruction.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in basic scuba, 2 in advanced scuba, 2 in lightweight surface-supplied diving, 2 in helmet/deep surface-supplied diving, 3 in underwater ships husbandry including hull and appendage inspection and cleaning, and 3 in underwater cutting (8/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in lightweight diving (surface supplied), 3 in helmet diving (surface supplied), 3 in advanced scuba, and 3 in underwater cutting (3/92).

NV-1606-0080

1. SUBMARINE SCUBA DIVER
2. SCUBA DIVER

Course Number: *Version 1:* A-433-0056. *Version 2:* A-433-0023.

Location: *Version 1:* Submarine Training Center, Pacific, Pearl Harbor, HI; Diving and Salvage Training Center, Panama City, FL. *Version 2:* Mobile Diving Salvage Unit Two, Little Creek, VA; Diving and Salvage Training Center, Panama City, FL; Submarine Training Center, Pearl Harbor, HI; Amphibious School, San Diego, CA.

Length: *Version 1:* 4 weeks (168 hours). *Version 2:* 5 weeks (208 hours).

Exhibit Dates: *Version 1:* 1/96–Present. *Version 2:* 12/90–12/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to apply knowledge of basic physics, diving medicine, and use decompression tables; function as a basic open circuit scuba diver; and perform underwater hull inspections and security swims. *Version 2:* Before 12/90 see NV-1606-0011. Upon completion of the course, the student will be able to perform CPR; apply diving physiology and physics, including gas laws as they relate to diving; have a working knowledge of decompression diving and use of appropriate dive tables; apply principles of diving medicine, including the recognition of diving injuries and treatment; maintain and repair scuba equipment; and meet the requirements of open-water scuba certification.

Instruction: *Version 1:* Lectures, laboratories, tank, open-water projects, and written performance tests are methods of instruction. . *Version 2:* Lectures and laboratories include open-water and training tower. The US Navy Diving Manual is used throughout along with excellent student guides.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in basic scuba (8/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in open-water scuba (3/92).

NV-1606-0081

PRECISION OPTICAL MEASUREMENT

Course Number: A-670-0044.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 5 weeks (109-152 hours).

Exhibit Dates: 1/90–8/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a precision optical measuring technician.

Instruction: Lectures, demonstrations, and hands-on laboratories cover applied mathematics; principles of light/optics; operation of devices such as alignment periscope, telescopic transit square, theodolite, and alignment telescope; and operate and calibrate devices such as bidirectional auto collimator, small angle generator, plane parallel adjustable mirror, optical wedge, surface plate, penta prism, 90 degree prism, and an alignment penta mirror assembly.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in precision optics laboratory (1/93).

NV-1606-0082

1. PRECISION PHYSICAL AND DIMENSIONAL MEASUREMENT
2. PHYSICAL DIMENSIONAL MEASUREMENT AND CALIBRATION

Course Number: *Version 1:* A-670-0043. *Version 2:* A-670-0043.

Location: *Version 1:* Technical Training Unit, Keesler AFB, MS. *Version 2:* Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 8-9 weeks (328 hours). *Version 2:* 7 weeks (280 hours).

Exhibit Dates: *Version 1:* 10/94–Present. *Version 2:* 1/90–9/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform advanced calibration and maintenance techniques on physical measurement equipment at both shore and shipboard facilities, including equipment used for environmental monitoring, under supervision. *Version 2:* Upon completion of the course, the student will be able to use precision measuring equipment in a measurement calibration laboratory under supervision.

Instruction: *Version 1:* Lectures, demonstrations, and laboratory exercises use precision measuring equipment to calibrate linear, angular, temperature, force, mass and weight, density, viscosity and flow, pressure, torque, rotary motion, humidity, and gas analysis. Topics include environmental monitoring procedures, meteorological calibration, problem solving, KNC 3605 thermal unit calibration and alignment, and gauge block calibration. *Version 2:* Lectures, demonstration, and laboratory exercises use precision measuring equipment to calibrate linear, angular, temperature, force, mass and weight, density, viscosity and flow, pressure, torque, rotary motion, humidity, and gas analysis.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in physical meteorology instruments (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in physical metrology (1/93).

NV-1606-0083

VQ/VAQ/VMAQ PILOT
(EA-3B Navigator Electronic Warfare)

Course Number: C-2D-3815.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 5 weeks (163 hours).

Exhibit Dates: 1/93–10/97.

Learning Outcomes: Upon completion of the course, the student will be able to visually identify Soviet weapon systems; research publications and present accurate information on specific countries and their warfare capabilities; and prepare briefs for oral presentation based on the student's research. The student will determine threat envelopes from reported signal activity and create an area order of battle based on the collected data.

Instruction: Group-paced lecture/laboratory instruction uses audiovisual equipment and trainers to reinforce material covered in the classroom. Topics covered are electronic warfare concepts, propagation characteristics of the electromagnetic wave, basic radar characteristics, antennas, missile control systems, Soviet history, fleet communications, and electronic warfare jamming theory.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1606-0084

F/A-18 SAFETY EQUIPMENT SJU-S/A EJECTION SEAT ORGANIZATIONAL MAINTENANCE

Course Number: C-602-3867.

Location: Air Maintenance Training Group, Lemoore, CA.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–12/90.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under close supervision, organizational maintenance on an ejection seat, canopy, and emergency escape sequencing of the F/A-18 aircraft.

Instruction: Lectures and practical exercises cover maintenance of the canopy, seat, and emergency escape systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1606-0085

IMAGERY INTERPRETATION

Course Number: K-3A-0954.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/94–Present.

Learning Outcomes: Before 9/94 see NV-1606-0074. Upon completion of the course, the student will be able to interpret, plot, and measure features appearing on remotely served imagery, with on emphasis on aerial photographs.

Instruction: Instruction in this course uses lectures, visual aids, extensive practical exercises, and examination and covers image security, interpretation techniques and keys, reconnaissance platforms and sensors, map and chart utilization, and photogrammetry.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in aerial photographic interpretation (9/94).

NV-1606-0086

INTELLIGENCE OFFICER REFRESHER

Course Number: J-3A-0952.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (70-80 hours).

Exhibit Dates: 3/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to discuss recent and current topics in military intelligence.

Instruction: Presented through seminars, the topics include introduction to joint doctrine, marine air-ground task force structure, ground tactics and principles of war, amphibious operation, intelligence preparation, Cruise missile systems, merchant traffic analysis, counterdrug intelligence, regional threats, intelligence information management, and Army and Air Force structure.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in geopolitics of conflict (9/94).

NV-1606-0087

Navy Tactical Command System—Afloat
Operational Intelligence Systems
Afloat

Course Number: J-150-0962.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Before 1/94 see NV-1606-0067. Upon completion of the course, the student will able to operate the various computerized subsystems needed to support intelligence processing aboard ship. The student will be able to operate sophisticated computing equipment to analyze outcomes and maintain an intelligence data base.

Instruction: Lectures, demonstrations, and practical exercises prepare the student for operating an over-the-horizon targeting system, technical receiving equipment, standard displays, and advanced tracking prototypes.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/94).

NV-1606-0088

Marine Air-Ground Task Force Advanced
Counterintelligence

Course Number: J-244-2960.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (151 hours).

Exhibit Dates: 10/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able describe counterintelligence activities, including coordinating with other service units, planning operations, reviewing progress, and preparing reports for upper-level supervisors.

Instruction: Lectures, case studies, exams, guest lectures, and demonstrations provide the student a broad range of counterintelligence activities.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (9/94).

NV-1606-0089

Expeditionary Warfare Intelligence

Course Number: J-150-2966.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 2-3 weeks (105 hours).

Exhibit Dates: 2/94–Present.

Learning Outcomes: Upon completion of the course, the student will apply the basics of naval expeditionary force structures, amphibious and carrier battle group mission and capabilities, amphibious joint intelligence center operations, intelligence preparation for the battlefield, collection of resources, management of intelligence architecture, targeting, and contingency planning.

Instruction: Topics presented through lectures and practical exercises cover organization and capabilities of a naval amphibious task force and a Marine air-ground task force, including command and control, planning, intelligence, special operations, mine and coastal warfare, weather, terrain, coastal configuration targeting, counterinsurgency, collection of resources, aerial reconnaissance, and noncombatant evacuation.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (9/94).

NV-1701-0002

Lithium Bromide Air Conditioning Plant
Operator
(Lithium Bromide Air Conditioning)

Course Number: A-720-0028.

Location: Submarine Training Center, New London, Groton, CT; Fleet Ballistic Submarine Training Center, Charleston, SC; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 1-2 weeks (24-60 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To train enlisted personnel to perform basic maintenance on a lithium bromide air conditioning unit.

Instruction: Lectures and practical exercises cover the operation and maintenance of lithium bromide absorption systems. Course includes a study of the construction and operation of components, leak testing, purge system operation, and preventive maintenance.

Credit Recommendation: In the vocational certificate category, 2 semester hours in air conditioning theory and operation (lithium bromide) (11/85).

NV-1701-0004

R-11 Centrifugal 110 Ton Air Conditioning
Combined Maintenance
(110 Ton R11 Centrifugal Air Conditioning
Unit (York))

Course Number: A-652-0111.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Fleet Ballistic Missile Submarine Training Center, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train enlisted personnel to operate and perform mechanical maintenance on a centrifugal refrigeration system.

Instruction: Lectures and practical exercises cover the maintenance of a centrifugal refrigeration system. Topics include centrifugal compressor and capacity-control mechanism construction and operation and the maintenance procedures involved in the use of the air-purging system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in mechanical maintenance of a centrifugal refrigeration unit (6/81).

NV-1701-0005

Air Conditioning and Refrigeration Operation
and Maintenance
(Air Conditioning and Refrigeration, Class
C)
(Air Conditioning and Refrigeration, Class
C1)

Course Number: A-720-011; A-720-010; A-720-0010.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 7-8 weeks (280-300 hours).

Exhibit Dates: 1/90–6/92.

Objectives: After 6/92 see NV-1701-0019. To train enlisted personnel to operate, test, maintain, and repair air conditioning and refrigeration equipment and systems.

Instruction: Lectures and practical exercises cover the operation, testing, maintenance, and repair of air conditioning and refrigeration equipment and systems, including refrigeration unit components, accessories, and controls; refrigeration fundamentals; electrical systems in refrigeration; compressors and condensers; air-cooled equipment; water coolers; ice makers; refrigeration and air conditioning plant operations; and ventilation and air purification. Includes basic thermodynamic nomenclature.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic refrigeration and air conditioning and 2 in refrigeration and air conditioning laboratory (3/89).

NV-1701-0008

Aviation Support Equipment Mobile Air
Conditioning Intermediate
Maintenance

Course Number: C-602-3241.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to maintain and operate a mobile air conditioning unit.

Instruction: Lectures and practical exercises cover the maintenance, troubleshooting, and operation of a mobile air conditioning unit, including electrical system analysis, refrigerant analysis, troubleshooting, operational checks, and removal and replacement procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in air conditioning (3/82).

NV-1701-0009

R-114 Air Conditioning System York 150 Ton

Course Number: A-652-0229.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT.

Length: 2 weeks (46 hours).

Exhibit Dates: 1/90–11/95.

Objectives: Upon successful completion of this course, the student will be able to operate and perform required repairs and preventive maintenance on the York 150-ton centrifugal air conditioning plant.

Instruction: This course provides lectures and laboratory instruction in basic refrigeration theory, as well as in the operation of an air conditioning system and its repair to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in air conditioning (11/85).

NV-1701-0010

1. Submarine Ship Stores Refrigeration R-12
Combined Maintenance
2. Submarine Ships Stores Refrigeration R-12 Combined Maintenance

Course Number: *Version 1:* A-652-0204. *Version 2:* A-652-0204.

Location: *Version 1:* Submarine School, New London, Groton, CT; Trident Training Facility, Bangor, Bremerton, WA; Trident

Training Facility, Kings Bay, GA. *Version 2:* Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: *Version 1:* 2 weeks (59 hours). *Version 2:* 1 week (45 hours).

Exhibit Dates: *Version 1:* 3/95–Present. *Version 2:* 1/90–2/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate an R-12 refrigeration system and troubleshoot and repair refrigeration system faults under supervision. *Version 2:* Upon completion of the course, the student will be able to operate an R-12 refrigeration system and troubleshoot and repair refrigeration system faults under supervision.

Instruction: *Version 1:* Lectures and laboratory exercises cover the construction, theory of operation, and maintenance of an R-12 refrigeration system. *Version 2:* Lectures and laboratory exercises cover the construction, theory of operation, and maintenance of an R-12 refrigeration system.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in refrigeration technology. The credits listed here do not duplicate those listed for NV-1701-0011 (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in refrigeration technology. The credits listed here do not duplicate those listed for NV-1701-0011 (2/89).

NV-1701-0011

Trident Refrigeration Systems Supervisor

Course Number: A-652-0265.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 1 week (44 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and maintain hermetically-sealed refrigeration units and troubleshoot and maintain R-12 refrigeration systems.

Instruction: Lectures and laboratory exercises cover the (advanced) theory of R-12 refrigeration systems and construction, operation, and maintenance of hermetically-sealed refrigeration units.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in refrigeration technology. The credit listed does not duplicate that listed for exhibit NV-1701-0010 (2/89).

NV-1701-0012

R-114 York 200 Ton Air Conditioning Technician

Course Number: A-652-0205.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate R-114 A/C systems, perform preventive maintenance on R-114 A/C systems, and troubleshoot and repair R-114 A/C system faults.

Instruction: Lecture and laboratory exercises cover function, operation, and maintenance of R-114 A/C systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in air conditioning technology laboratory (2/89).

NV-1701-0013

Centrifugal Air Conditioning System Operation and Maintenance

Course Number: A-720-0025.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, lubricate, disassemble, and maintain a centrifugal air conditioning system.

Instruction: Lectures and practical exercises cover the subject matter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in air conditioning and refrigeration (6/94).

NV-1701-0014

E2/C2 Environmental Systems Organizational Maintenance

Course Number: C-602-3472.

Location: Air Station, Miramar, San Diego, CA.

Length: 2 weeks (64 hours).

Exhibit Dates: 9/90–Present.

Learning Outcomes: Upon completion of the course, the student will apply knowledge of an aircraft environmental system.

Instruction: Student uses publications to complete a series of written exercises and progress tests.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/91).

NV-1701-0015

P-3C Air Conditioning, Pressurization, and Utility Systems Organizational Maintenance

Course Number: C-603-3532.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, maintain, and repair utility systems on a specific aircraft.

Instruction: Lectures and practical exercises cover air conditioning controls and instrumentation, basic electricity and temperature control system, pressurization and utilities system, wing anti-ice system, heating system, oxygen system, and windshield washer system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in pressurization systems (7/92).

NV-1701-0016

E-2/C-2 Environmental Systems Integrated Organizational Maintenance

Course Number: C-602-9472.

Location: Air Maintenance Training Group Detachment, Norfolk, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 2-3 weeks (112 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform routine maintenance, under limited supervision, on air cycle, vapor cycle, and pressurization systems.

Instruction: Lectures and practical exercises cover removal and replacement of vapor and air-cycle air conditioning system, engine and airframe bleed air valve, and pressurization and temperature control. Course also includes classroom instruction on oxygen and fire extinguishing systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft environmental systems (12/92).

NV-1701-0017

F-14D Environmental/Escape Systems Integrated Organizational Maintenance Specialist

Course Number: C-602-9901.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 5-6 weeks (224 hours).

Exhibit Dates: 12/91–6/96.

Learning Outcomes: Upon completion of the course, the student will be able to perform testing and troubleshooting techniques and, under minimum supervision, perform preventive maintenance on aircraft air conditioning systems, aircraft refrigeration systems, and aircraft oxygen systems.

Instruction: Course includes lectures and laboratories on troubleshooting, testing, and servicing of aircraft air cycle air conditioning systems; operational testing and interpreting resultant data of aircraft refrigeration systems; and testing, troubleshooting, and maintaining aircraft oxygen systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft air conditioning servicing and 1 in oxygen systems maintenance (12/92).

NV-1701-0018

E-2C Vapor Cycle System Integrated Organizational Maintenance

Course Number: C-602-9482.

Location: Air Maintenance Training Group Detachment, Norfolk, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be familiar with the function, operation, and components of the vapor cycle air conditioning system and, under close supervision, will be able to maintain its components.

Instruction: Topics covered in classroom and laboratory include the vapor cycle system, including its components, system operation, servicing, and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in vapor cycle air conditioning systems (12/92).

NV-1701-0019

REFRIGERATION AND AIR CONDITIONING SYSTEMS TECHNICIANS

Course Number: A-720-0010.

Location: Fleet Training Center, Norfolk, VA.

Length: 11 weeks (433 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Before 7/92 see NV-1701-0005. Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair refrigeration and air conditioning equipment and systems.

Instruction: This course provides lecture and laboratory instruction in basic theory, operation, and repair of refrigeration and air conditioning systems, and comprehensive examinations ensure student knowledge and skill in air conditioning and refrigeration systems. Topics covered include basic refrigeration systems and operation and maintenance of hermetic and centrifugal equipment and troubleshooting of walk-in refrigerators, packaged unitary systems, dehydrators, air purification equipment, electrical controls, and reciprocating and centrifugal chillers.

Credit Recommendation: In the vocational certificate category, 1 semester hour in soldering techniques (11/95); in the lower-division baccalaureate/associate degree category, 7 semester hours in air conditioning and refrigeration equipment and 3 in air conditioning and refrigeration laboratory (11/95).

NV-1702-0002

WASHER EXTRACTOR MAINTENANCE, CLASS F1

Course Number: A-690-0017.

Location: Service School Command, San Diego, CA.

Length: 2 weeks (66 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, and maintain the Milnor 60 pound washer extractor, the Dyna washer extractor, and the Cissell steam laundry dryer.

Instruction: Course content includes lectures and practical exercises on electrical and mechanical safety, components, drive systems, motors, braking systems, water systems, and timers and switches used in washer extractors and laundry dryers.

Credit Recommendation: In the vocational certificate category, 1 semester hour in appliance repair (10/92).

NV-1702-0003

AIRCREW SURVIVAL EQUIPMENTMAN INTERMEDIATE MAINTENANCE, CLASS F1
(Advanced Sewing Machine Repair, Class F1)

Course Number: C-602-2029.

Location: Air Station, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 3 weeks (115 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, inspect, test, repair, and maintain industrial sewing machines following prescribed regulations in Cal's Handbook of Industrial Sewing Equipment.

Instruction: Course content covers introduction, disassembly and assembly, troubleshooting, timing, adjustment, and preventive maintenance of several models of industrial sewing machines. Methodology includes lectures, laboratory experiences, and knowledge and performance testing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic mechanisms (5/97).

NV-1703-0005

INTRODUCTION TO DIESEL ENGINES AND ASSOCIATED SYSTEMS
(Mine Warfare Engineman Basic)
(Engineman Basic)

Course Number: A-652-0038; J-652-0474.

Location: Mine Warfare School, Charleston, SC.

Length: 2-3 weeks (60-90 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train petty officers in diesel engine theory as it relates to the operation and maintenance of diesel engines and associated systems.

Instruction: Lectures and demonstrations cover diesel operation and construction, precision measurements, fuel properties, fuel systems, intake and exhaust systems, and piping and valves. Course includes concepts in the physical sciences and mathematics as they relate to various systems and components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in automotive, heavy equipment, diesel, or mechanical technology (11/81).

NV-1703-0009

MODEL 104 GAS TURBINE GENERATOR SET MAINTENANCE
(Ship's Service Gas Turbine Generator Module (Allison 501) Maintenance, Class C1)

Course Number: A-652-0076.

Location: Service School Command, Great Lakes, IL.

Length: 3-5 weeks (120-200 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To provide specific instruction in gas turbine engine operation, inspection, and maintenance related to the DD-963 class destroyer.

Instruction: Areas of instruction include gas turbine engine operation, construction, cooling, lubrication, trouble identification, inspection, and maintenance; gear reduction; generator operation and control; and use of specific inspection equipment and procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in gas turbine engine inspection, operation, and maintenance (1/82).

NV-1703-0010

AVIATION SUPPORT EQUIPMENT AUTOMATIC TRANSMISSION INTERMEDIATE MAINTENANCE

Course Number: C-602-3236.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train enlisted personnel to operate and repair automatic transmissions in aviation support equipment.

Instruction: Lectures and laboratory exercises cover the operation, troubleshooting, and component repair of automatic transmissions using tools, test equipment, and technical manuals related to particular transmission systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, credit in automotive maintenance on the basis of institutional evaluation (3/82).

NV-1703-0011

GROUND SUPPORT EQUIPMENT GTC-85 INTERMEDIATE MAINTENANCE

Course Number: C-602-3211.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel in repair and maintenance procedures for a ground support GTC-85 turbine engine.

Instruction: Lectures and practical exercises cover the maintenance and overhaul of a turbine engine, including break-down accessories, oil systems, electrical systems, fuel systems, and air systems. Course includes removal and repair of systems and replacement of equipment using manufacturers' maintenance manuals and special tools, while following appropriate safety procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in ground operations equipment maintenance (3/82).

NV-1703-0012

FFG-7 CENTRAL CONTROL STATION OPERATION, CLASS C1

Course Number: A-652-0156.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To provide personnel with the knowledge required to operate, under limited supervision, FFG-7 class ship's central control station equipment.

Instruction: Lectures and practical experience cover the operation of the central control station equipment of a gas turbine unit, including operation of the propulsion control console, the propulsion local operating panel, the electric control console, and the auxiliary control console.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (1/82).

NV-1703-0013

LM2500 ENGINE CHANGEOUT

Course Number: A-652-0072.

Location: Service School Command, Great Lakes, IL.

Length: 2-3 weeks (80 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To provide personnel with the skills necessary to change out major components of the LM2500 gas turbine engine.

Instruction: Lectures and laboratory exercises cover the change out procedures for components, accessories, and major assemblies of the LM2500 gas turbine.

Credit Recommendation: In the vocational certificate category, 1 semester hour in gas turbine maintenance laboratory (10/83).

NV-1703-0014

AVIATION MACHINIST'S MATE, CLASS A (S-3A), POWER PLANT SYSTEMS

Course Number: C-601-3860.

Location: Air Station, North Island, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To provide enlisted personnel with a basic knowledge of turbine engine theory, operation, maintenance, and safety.

Learning Outcomes: Upon completion of the course, the student will be able to solve basic math, fluid power, and hydraulic problems; understand basic theory and operation of a turbine engine; select and use proper hand tools associated with inspection and disassembly of turbine engines; and perform documentation and supply logistics duties.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic mathematics, 1 in basic physics, and 1 in basic turbine engine theory (4/85).

NV-1703-0015

AVIATION SUPPORT EQUIPMENT A/S32A-33 AIRCRAFT TOWING TRACTOR INTERMEDIATE MAINTENANCE

Course Number: C-602-3229.

Location: Air Station, Jacksonville, FL; Air Station, North Island, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train enlisted personnel in the operation and maintenance of an aircraft towing tractor.

Learning Outcomes: Upon completion of the course, the student will be able to identify, troubleshoot, and maintain an engine and its associated systems, main and auxiliary hydraulic systems, and the electrical lifting linkage of the A/S-32A-33 aircraft towing tractor.

Credit Recommendation: In the vocational certificate category, 1 semester hour in automotive repair (7/92).

NV-1703-0016

AVIATION SUPPORT EQUIPMENT A/S 32P-16 FIRE FIGHTING TRUCK INTERMEDIATE MAINTENANCE

Course Number: C-602-3242.

Location: Air Station, Jacksonville, FL; Air Station, North Island, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–12/95.

Objectives: To train enlisted personnel in the maintenance, troubleshooting, and repair of a fire fighting truck.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair the electrical system including the master switch and fire fighting system, the hydraulic system including the fire pump drive and assembly, and the fire fighting system including the check and reset valve and L-W pump rating.

Credit Recommendation: In the vocational certificate category, 2 semester hours in automotive repair and maintenance (4/85).

NV-1703-0017

AVIATION SUPPORT EQUIPMENT LHA-1 PALLET TRANSPORTER INTERMEDIATE MAINTENANCE

Course Number: C-602-3239.

Location: Air Station, North Island, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–1/97.

Objectives: To train enlisted personnel to operate, troubleshoot, and repair a pallet transporter.

Learning Outcomes: Upon completion of the course, the student will be able to repair, maintain, and troubleshoot the engine, the hydraulic system, the electrical system, steering and axle system, the brakes, and the auxiliary equipment of the LHA-1 pallet transporter.

Credit Recommendation: In the vocational certificate category, 1 semester hour in automobile repair (4/85).

NV-1703-0018

1. A/S32K-1C/D WEAPONS LOADER INTERMEDIATE MAINTENANCE
2. A/S 32K-1C WEAPONS LOADER INTERMEDIATE MAINTENANCE

Course Number: *Version 1:* C-602-3235. *Version 2:* C-602-3235.

Location: *Version 1:* Air Maintenance Training Group, North Island, CA; Air Maintenance Training Group, Jacksonville, FL. *Version 2:* Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 1-2 weeks (64 hours).

Exhibit Dates: *Version 1:* 3/94–Present. *Version 2:* 1/90–2/94.

Learning Outcomes: *Version 1:* Upon completion of the course the student will be able to troubleshoot, repair and maintain the weapons loader. This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to troubleshoot, repair, and maintain the weapons loader.

Instruction: *Version 1:* Lectures, practical exercises, and examinations cover the use of test equipment, mechanical engine systems, hydraulics, pump systems, control cylinders, brakes, and steering. This version is pending evaluation. *Version 2:* Lectures, practical exercises, and examinations cover the use of test equipment, mechanical engine systems, hydraulics, pump systems, control cylinders, brakes, and steering.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 1 semester hour in automotive repair (7/92).

NV-1703-0019

INTERNAL COMBUSTION ENGINE AND RELATED SYSTEMS INTERMEDIATE MAINTENANCE

Course Number: C-602-3271.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair internal combustion engines and related systems.

Instruction: Lectures, performance exercises, and examinations cover mechanical systems, electrical systems, major components and assemblies, power trains, and chassis of internal combustion engines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in automotive engine maintenance, 3 in automotive power train maintenance, and 3 in automotive electrical systems (7/92).

NV-1703-0020

AERO 47A/A1 WEAPONS LOADER INTERMEDIATE MAINTENANCE

Course Number: C-602-3288.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a shore-based weapons loader using proper documentation procedures.

Instruction: Lectures, performance exercises, and examinations cover the fuel system, electrical system, and hydraulic system of the weapons loader.

Credit Recommendation: In the vocational certificate category, 1 semester hour in automotive repair (7/92).

NV-1704-0004

1. AIR TRAFFIC CONTROLLER
   (Air Traffic Control)
2. AIR TRAFFIC CONTROLLER, CLASS A1
   (Air Traffic Control, Class A)
   (Air Traffic Controller, Class A)
   (Air Controlman, Class A)

Course Number: *Version 1:* C-222-2010. *Version 2:* C-222-2010.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN. *Version 2:* Air Technical Training Center, Memphis, Millington, TN.

Length: *Version 1:* 14 weeks (560 hours). *Version 2:* 10-16 weeks (400-640 hours).

Exhibit Dates: *Version 1:* 7/94–Present. *Version 2:* 1/90–6/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to fulfill apprentice-level technical requirement for an air traffic controller eventually leading to FAA certification in control tower operations. *Version 2:* To qualify enlisted personnel for FAA certification in control tower operations.

Instruction: *Version 1:* Lectures and practical exercises in basic air navigation and navigational aids; aviation meteorology; airport traffic control; and air traffic rules and regulations, communication procedures, and radar use. *Version 2:* Lectures and practical exercises cover basic air navigation and navigational aids; aviation meteorology; airport traffic control; and air traffic rules and regulations, communication procedures, and radar use.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in national airspace system, 2 in aviation meteorology, 2 in federal aviation regulations, and 2 in navigation principles (1/96); in the upper-division baccalaureate category, 6 semester hours in air traffic control (1/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 9 semester hours in air traffic control or 5 semester hours in private pilot ground school (6/92).

NV-1704-0006

SH-3 Automatic Stabilization Equipment
Organizational Maintenance

Course Number: C-602-3399.

Location: Air Station, Jacksonville, FL; Air Station, North Island, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide personnel with sufficient knowledge of the theory of operation of a SH-3 helicopter's automatic stabilization equipment to perform, under close supervision, organizational maintenance.

Instruction: Lectures and practical exercises cover the operation of the SH-3 helicopter's stabilization equipment, including the operation, testing, and troubleshooting of the power distribution system and the operation, testing, and troubleshooting of the yaw, pitch, and roll systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in helicopter maintenance (3/82).

NV-1704-0013

A-7E Hydraulic, Pneumatic and Airframe
Systems Organizational Maintenance
(A-7E Hydraulic and Pneumatic Systems
Organizational Maintenance)

Course Number: C-602-3793.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel in the operation, maintenance, and servicing procedures for A-7E aircraft control systems.

Instruction: Course includes practical experience in troubleshooting, maintenance, and servicing of structures and hydraulic, pneumatic, primary flight control, and auxiliary systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulic and pneumatic systems laboratory (3/82).

NV-1704-0016

TF30-P-8/408 Engine Intermediate
Maintenance/Complete Engine Repair
(TF30-P-8 Intermediate Maintenance/Complete Engine Repair)

Course Number: C-601-3132.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide maintenance personnel with instruction in TF30-P-8/408 aircraft engine maintenance.

Instruction: Lectures and practical exercises cover TF30-P-8/408 aircraft engine maintenance, including engine component inspection and repair; engine systems operation; and engine assembly, disassembly, and testing procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in turbine engine laboratory (3/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in turbine engine laboratory (3/82).

NV-1704-0019

P-3 T56-A-10/14 Engine and Related Systems
Organizational Maintenance
(P-3 T-56-A-14 Engine and Related Systems
Maintenance)

Course Number: C-601-3533.

Location: Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 4-5 weeks (158-200 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train maintenance personnel to repair P-3 aircraft power plants and related systems.

Instruction: Lectures and practical exercises cover P-3 aircraft power plant and related system maintenance, including T56-A-14 power plant system maintenance and service, engine diagnosis and troubleshooting, jet engine theory, test equipment operation, and propeller and related systems operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in general turboshaft engines and related systems maintenance (7/81).

NV-1704-0028

Ground Support Equipment Tow Tractor
Charging, Starting and Ignition
Systems Intermediate Maintenance

Course Number: C-602-3238.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 3 weeks (104 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide training in maintenance, troubleshooting, and repair of internal combustion engine starting, charging, and ignition systems.

Instruction: Lectures and practical exercises cover the maintenance and repair of internal combustion engine charging, starting, and ignition systems, including battery analysis and basic theory, analysis, troubleshooting, and repair of generators, regulators, alternators, starters, and ignition systems using special test equipment such as a dwell meter, growler, and oscilloscope.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in automotive or aircraft electrical systems and 1 in automotive or aircraft electrical laboratory for non—electrical engineering students (3/82).

NV-1704-0031

SH-3 Electrical Components Intermediate
Maintenance

Course Number: C-602-3398.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide aviation electricians with the theory of operation and the maintenance procedures for the SH-3 helicopter electrical system and the automatic stabilization equipment at the intermediate repair level.

Instruction: Lectures and practical exercises cover the operation and maintenance of a helicopter electrical system and automatic stabilization system, including the voltage regulator supervisory panel, temperature controller, loading gear controls, altitude demodulator, ASE circuitry, and cyclic coupler analysis and adjustment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in helicopter system maintenance for non—electrical engineering students (3/82).

NV-1704-0046

Douglas Model D-704 and Sargent-Fletcher
Model 31-300 Air Refueling Stores
Organizational Maintenance

Course Number: C-602-3013.

Location: Air Maintenance Training Detachment, Beaufort, SC; Air Maintenance Training Detachment, El Toro, CA; Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA; Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to maintain and repair Douglas and Sargent-Fletcher air refueling stores.

Instruction: Lectures and practical exercises cover inspection, disassembly, cleaning, repair, and reassembly of the Douglas Model D-704 and Sargent-Fletcher Model 31-300 air refueling stores systems, components, and associated equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, credit in air refueling stores maintenance on the basis of institutional evaluation (3/82).

NV-1704-0047

SH-3 Airframes and Hydraulic Systems
Organizational Maintenance

Course Number: C-602-3396.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 3 weeks (109-144 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to maintain and repair SH-3 helicopter airframe and hydraulic systems.

Instruction: Lectures and practical exercises cover removal, replacement, adjustment, and testing of components and troubleshooting and repair of airframe and hydraulic systems. Course includes trimming and alignment of track blades.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in hydraulics, assembly, and rigging (3/82).

NV-1704-0048

P-3 Flight Engineers System

(P-3 Flight Engineer System, No. 6)

Course Number: C-050-3531.

Location: Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Patuxent River, MD; Air Maintenance Training Detachment, Moffett Field, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–10/90.

Objectives: After 10/90 see NV-1704-0379. To train flight crews in P-3 system and subsystem operations and inflight maintenance.

Instruction: Lectures and practical exercises cover aircraft and electrical systems; power plant and related systems; hydraulic, structure, and pressurization systems; radio and navigation aids; autopilot; and emergency systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in engineering (7/81).

NV-1704-0072

P-3 Electrical Components Intermediate Maintenance
(P-3 Electrical Systems Intermediate Maintenance)

Course Number: C-102-3560.

Location: Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–4/90.

Objectives: To train enlisted personnel to maintain, operate, and service P-3 aircraft electrical systems at the intermediate level.

Instruction: Lectures and practical exercises cover the maintenance of P-3 aircraft electrical systems, including lighting, the propeller synchrophasing system, generators, voltage regulators, signal light controls, AOA and TAS indicators, and troubleshooting with an oscilloscope.

Credit Recommendation: In the vocational certificate category, 3 semester hours in avionics (7/81); in the lower-division baccalaureate/associate degree category, 1 semester hour in avionics technology or electronics technology (7/81).

NV-1704-0079

A-7A/B Electrical and Instrument Systems Organizational Maintenance
(A-7 Electrical and Instrument Systems Organizational Maintenance)

Course Number: C-602-3781.

Location: Air Maintenance Training Detachment, Cecil Field, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–2/92.

Objectives: To train maintenance personnel to maintain and operate the electrical and instrument systems of the A-7 aircraft.

Instruction: Lectures and practical exercises cover the maintenance and operation of the electrical and instrument systems of the A-7 aircraft, including power supply and distribution, engine and related circuitry, aircraft fuel circuits, electrically controlled hydraulic systems, lighting circuits, approach-attitude indication and compensation, air data computer, and instrumentation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aviation electricity and 1 in electrical laboratory for non—electrical engineering students (3/82).

NV-1704-0080

A-7E Electrical and Instrument Systems Organizational Maintenance

Course Number: C-602-3791.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to operate and maintain the electrical and instrument systems of the A-7E aircraft.

Instruction: Lectures cover aircraft power distribution and electrical power supplies, aircraft instrument and lighting systems, electrohydraulic and utility systems, and power plant related systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/82).

NV-1704-0085

A-6E, EA-6A, and KA-6D Environmental, Escape, and Survival Systems Organizational Maintenance
(A-6A Environmental, Escape, and Survival Systems Organizational Maintenance)

Course Number: C-602-3763.

Location: Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3-4 weeks (120-136 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train maintenance personnel to operate and maintain the environmental, escape, and survival systems of the A-6A aircraft.

Instruction: Lectures and practical exercises cover general aircraft familiarization; inspections, trouble shooting procedures, and maintenance of escape and survival systems; environmental control systems and oxygen systems; and use of special tools and ground support equipment.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (10/92).

NV-1704-0109

Aviation Support Equipment GTCP-100 and Enclosures Intermediate Maintenance
(Aviation Support Equipment GTCP-100 Engine Intermediate Maintenance)

Course Number: C-602-3212.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 2-3 weeks (80-120 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train aviation support technicians to maintain GTCP-100 engines.

Instruction: Lectures and practical exercises cover GTCP-100 engine maintenance, including engine description, cold-section theory, hot-section theory, lubrication system, electrical system, fuel system, air control system, and test equipment operation. Course includes disassembly, inspection, and repair of the GTCP-100 engine.

Credit Recommendation: In the vocational certificate category, 1 semester hour in ground operational equipment (3/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in electricity/electrical laboratory (3/82).

NV-1704-0114

SH-3 Electrical Systems Organizational Maintenance
(SH-3A/D Electrical Systems Organizational Maintenance)

Course Number: C-602-3397.

Location: Air Maintenance Training Detachment, Imperial Beach, CA; Air Maintenance Training Detachment, Quonset Point, RI; Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 4-5 weeks (144-160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to maintain the electrical systems of SH-3 helicopters.

Instruction: Lectures and practical exercises cover the maintenance and repair of the electrical systems of SH-3 helicopters, including power supply system, power plant/main gearbox and related systems, miscellaneous and utility systems, rotor-actuating systems, fuselage fuel system, vertical-gyro operation, hydraulic systems, and automatic bladefold system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electricity and electrical laboratory (3/82).

NV-1704-0123

T-41-A-2 Engine Intermediate Maintenance/Complete Engine Repair
(TF41-A-2 Engine Intermediate Maintenance/Complete Engine Repair)

Course Number: C-601-3136.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train fleet maintenance personnel to maintain and repair a specific engine.

Instruction: Lectures and practical exercises in TF41-A-2 engine intermediate maintenance, including engine familiarization and systems and horizontal maintenance; vertical engine disassembly; inspection, disassembly, and assembly of subassemblies; and vertical engine assembly, final test, and preparation for service and storage.

Credit Recommendation: In the vocational certificate category, 6 semester hours in intermediate engine maintenance (3/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in intermediate engine maintenance (3/82).

NV-1704-0128

Aviation Structural Mechanic (Hydraulic), Class A1
(Aviation Structural Mechanic H (Hydraulics), Class A)

Course Number: C-602-2017.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 7-10 weeks (280-400 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To train maintenance technicians to repair aircraft hydraulic structural systems.

Instruction: Lectures and practical exercises cover aircraft hydraulic structural systems repair, including hydraulic principles, tubes and fittings, flexible hoses and fittings, power system components, brakes, struts, shim mypers, valves, actuators, and publications and forms.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in hydraulics structural repair (3/90).

NV-1704-0132

Aviation Structural Mechanic (Structures), Class A1

(Aviation Structural Mechanic S (Structures), Class A)

Course Number: C-603-2010.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 8-11 weeks (320-368 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To train enlisted Navy and Marine Corps personnel with previous technical experience to perform as aviation structural mechanics (structures), third class.

Instruction: Lectures and practical exercises cover the duties of aviation structural mechanic (structures), third class, including fundamentals, aircraft structural repair, welding, nonmetallic materials, airframes and operational maintenance, and aircraft sheet metal.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in aircraft structures shop (4/92).

NV-1704-0135

A-7B/TA-7C Power Plant and Related Systems Organizational Maintenance

(A-7A/B TF30-P-6/408 Power Plants and Related Systems Organizational Maintenance)

(A-7A/B Power Plant and Related Systems Organizational Maintenance)

Course Number: C-601-3781.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 2 weeks (72-80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train experienced maintenance personnel in the maintenance, operation, and servicing of A-7A/B power plants and related systems.

Instruction: Lectures and practical exercises cover A-7A/B power plants and related systems organizational maintenance, including aircraft fuel systems, engine construction and systems, and propulsion system maintenance.

Credit Recommendation: In the vocational certificate category, 2 semester hours in power plant systems maintenance (3/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in power plant systems maintenance (3/82).

NV-1704-0139

SH-3 Power Plants and Related Systems Organizational Maintenance

(SH-3D/H Power Plants and Related Systems Organizational Maintenance)

Course Number: C-601-3399.

Location: Air Maintenance Training Detachment, Imperial Beach, CA; Air Maintenance Training Detachment, Quonset Point, RI; Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, North Island, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train maintenance personnel to maintain SH-3D and SH-3H aircraft power plants and related systems, including scheduled and unscheduled inspections; system servicing, repair, troubleshooting, and schematic analysis; and specific support equipment.

Instruction: Lectures and practical exercises cover maintenance of SH-3D and SH-3H aircraft power plants and related systems. Topics include general information and theory of helicopter flight, power plant systems, rotors and related systems, inspections, and functional testing.

Credit Recommendation: In the vocational certificate category, 2 semester hours in power plant organizational maintenance (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in power plant organizational maintenance (4/85).

NV-1704-0140

A-7E Power Plant and Related Systems Organizational Maintenance

Course Number: C-601-3782.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 3 weeks (103 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train enlisted personnel to maintain and repair the A-7E power plant and related systems.

Instruction: Lectures and practical exercises cover the maintenance, operation, and servicing of the A-7E power plant and related systems and use of tools and special maintenance and test equipment related to organizational maintenance, including aircraft fuel system, engine description and systems, propulsion system maintenance, operating maintenance, and practical training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in power plant organizational maintenance (3/82).

NV-1704-0173

A-7E Armament System Organizational Maintenance

Course Number: C-646-3787.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to operate and maintain the A-7E armament system at the organizational level.

Instruction: Lectures and practical exercises cover the maintenance and operation of the A-7E armament system. Course includes weapons release stations, release and control systems, systems checks and circuit analysis, use of specific test equipment, and troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electrical or electronic systems (3/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical or electronic systems (3/82).

NV-1704-0190

A-7A/B Structures, Hydraulics, and Pneumatic Systems Maintenance

(A-7A/B Hydraulic and Pneumatic Systems Organizational Maintenance)

Course Number: C-602-3785.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to maintain and service A-7A/B structures and hydraulic, pneumatic, primary, and auxiliary flight control systems.

Instruction: Lectures and practical exercises cover the maintenance and servicing of A-7A/B structures and hydraulic, pneumatic, primary, and auxiliary flight control systems. Course includes hydraulic and pneumatic principles, fuel cells, and hydraulic power control.

Credit Recommendation: In the vocational certificate category, 4 semester hours in hydraulic and pneumatic laboratory (3/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulic and pneumatic laboratory (3/82).

NV-1704-0229

AN/AVM-11 (V) Head Up Display Test Set Intermediate Maintenance (A-7E)

Course Number: C-150-3785; C-104-3784.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 12-13 weeks (480-520 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide instruction in the calibration, troubleshooting, repair and maintenance of a specific electronic test set.

Instruction: Lectures and practical exercises cover troubleshooting, circuit analysis and repair, maintenance, and calibration of the AN/AVM-11(V) HUD test set. Instruction covers power supply, magnetic tape unit, command bus and data transmission, display control, and specific circuit troubleshooting analysis.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic maintenance and 3 in electronic maintenance laboratory (3/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in electronic laboratory troubleshooting and 1 in electronic troubleshooting theory for non—electrical engineering majors (3/82).

NV-1704-0242

EA-6B Electrical Systems Organizational Maintenance

Course Number: C-602-3771.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (128 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To provide trained personnel with instruction in the theory, operation, and maintenance of aviation electrical systems.

Instruction: Lectures and laboratory assignments cover electrical, navigation, and environmental systems, including automatic flight control, fuel, and auxiliary systems.

Credit Recommendation: In the vocational certificate category, 6 semester hours in aircraft maintenance (7/80); in the lower-division baccalaureate/associate degree category, 6 semester hours in aviation technology (7/80).

NV-1704-0244

Terminal Radar Approach Control, Class C1
(Radar Air Traffic Control Facility Operations, Class C1)

Course Number: C-222-2011.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 6 weeks (240-276 hours).

Exhibit Dates: 1/90–9/95.

Objectives: To train air traffic control personnel and radar personnel in the use of radar equipment for instrument and visual approaches and departures.

Instruction: Lectures, laboratories, and operational exercises cover radar air traffic control, including simulated surveillance control, instrument approach and departure systems, and operation of complex computer data terminals and displays presenting information in graphic form.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in air traffic control (9/89).

NV-1704-0245

Carrier Air Traffic Control Center Operations, Class C1

Course Number: C-222-2012.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 5-6 weeks (205-236 hours).

Exhibit Dates: 1/90–3/94.

Objectives: To train personnel in air traffic control procedures aboard aircraft carriers.

Instruction: Lectures and practical exercises cover specialized air traffic control systems used aboard aircraft carriers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in military science (9/89).

NV-1704-0247

Submarine 3000 PSI Hydraulics Combined Maintenance

Course Number: A-652-0103.

Location: Submarine Base, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI; Fleet Ballistic Missile Submarine Training Center, Charleston, SC.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train enlisted personnel to operate, service, and maintain hydraulic systems.

Instruction: Lectures and practical demonstrations cover the malfunction analysis and maintenance of hydraulic systems, including description and interfacing of components, theory of operation, and maintenance and servicing of hydraulic systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in mechanical or aviation technology (6/81).

NV-1704-0248

54H60-77 Propeller Intermediate Maintenance

Course Number: C-602-3536.

Location: Air Station, Jacksonville, FL; Air Station, Moffett Field, CA; Air Station, Patuxent River, MD.

Length: 2-3 weeks (60-104 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide maintenance personnel with the knowledge and skills necessary to perform maintenance on the Hamilton Standard model 54H60-77 propeller and propeller controls.

Instruction: Lectures and practical exercises cover inspection, troubleshooting, and test procedures for the Hamilton Standard model 54H60-77 propeller, including disassembly, inspection, cleaning, and reassembly of the propeller and propeller controls.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in maintenance and repair of hydromatic propellers (7/92).

NV-1704-0249

Aviation Machinist's Mate, Class A, (A7) Power Plant System

Course Number: C-601-3153.

Location: Air Station, Lemoore, CA; Air Station, Cecil Field, FL.

Length: 3 weeks (116 hours).

Exhibit Dates: 1/90–3/92.

Objectives: Enlisted personnel are introduced to basic aviation maintenance and safety.

Instruction: This introductory course familiarizes newly indoctrinated personnel to basic math and physics; aircraft nomenclature and theory of flight; theory of jet propulsion and factors affecting thrust; aircraft hardware; basic hand tools; fuels, lube, and hydraulic fluid; aircraft corrosion, preservation, and depreservation; gas turbine power plant fundamentals; and the Naval Aviation Maintenance Program.

Credit Recommendation: In the vocational certificate category, 1 semester hour in introduction to aviation maintenance (3/82).

NV-1704-0250

A-7E Communication, Navigation, Identification, and Countermeasures Organizational Maintenance

Course Number: C-102-3783.

Location: Air Station, Lemoore, CA; Air Station, Cecil Field, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide experienced aviation electronics technicians with training in the maintenance of the communication, navigation, identification, and countermeasures systems utilized in an A-7E aircraft.

Instruction: Lectures cover the operation, maintenance, and repair of an A-7E aircraft navigation, communication, and identification system, including, a specific UHF communication set (AN/ARC-159), a navigation set (AN/ARN-52), a radar altimeter set (AN/APN-194), a radar beacon and transponder set, and electronic countermeasures equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aviation electronics maintenance (3/82).

NV-1704-0251

A-7A/B AN/APQ-116 Radar Set Organizational Maintenance

Course Number: C-104-3781.

Location: Air Station, Cecil Field, FL.

Length: 4 weeks (152 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide maintenance personnel with instruction in the theory of operation and maintenance procedures of the radar set AN/APQ-116.

Instruction: Lectures include theory of operation and maintenance procedures for the AN/APQ-116 radar set. Practical exercises in the alignment and testing of the AN/APQ-116 set include the antenna drive system, the power supply/programmer, the receiver/transmitter, and the command computer.

Credit Recommendation: In the vocational certificate category, 1 semester hour in aviation electronics laboratory (3/82).

NV-1704-0252

A-7E Integrated Weapons Systems Technician Organizational Level Maintenance

Course Number: C-102-3795.

Location: Air Station, Lemoore, CA; Air Station, Cecil Field, FL.

Length: 6 weeks (220 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel in the operation, maintenance, troubleshooting, and testing of an A-7E aircraft integrated weapons system.

Instruction: Lectures and practical experience cover the operation and maintenance of the A-7E aircraft integrated weapon system, including block diagram analysis, equipment testing, and troubleshooting and adjusting a tactical computer system, an inertial navigation system, and several onboard radar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aviation electronics for non—electrical engineering students (3/82).

NV-1704-0253

AN/AVQ-7A/B Head Up Display Set Intermediate Maintenance

Course Number: C-104-3783.

Location: Air Station, Cecil Field, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide maintenance personnel with training in the maintenance and repair of a head up display set.

Instruction: Lectures cover the theory, operation, and maintenance of a head up display set including the utilization of computer-controlled diagnostic procedures.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aviation electronics maintenance laboratory (3/82).

NV-1704-0254

A-7E Weapons System Specialist
Organizational Maintenance

Course Number: C-102-3799.
Location: Air Station, Lemoore, CA; Air Station, Cecil Field, FL.
Length: 6 weeks (240 hours).
Exhibit Dates: 1/90–3/92.
Objectives: To train electronic technicians in the operation and maintenance of a specific integrated weapon system for the A-7E aircraft.
Instruction: Lectures and laboratory exercises cover the operation and maintenance of the A-7E aircraft integrated weapon system, including block diagram analysis, equipment testing, and troubleshooting and adjusting sensory input systems, output/display systems, inertial navigation systems, and special weapons systems.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic circuits theory for non—electrical engineering majors (3/82).

NV-1704-0255

Aviation Support Equipment Cryogenic
Intermediate Maintenance

Course Number: C-602-3240.
Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.
Length: 2 weeks (80 hours).
Exhibit Dates: 1/90–Present.
Objectives: To train maintenance personnel to service liquid and gaseous oxygen portable servicing trailers in accordance with applicable publications.
Instruction: Lectures and practical exercises cover the troubleshooting, servicing, and operation of an oxygen pressure regulator. Also included is servicing oxygen and nitrogen units (trailer), handling of liquid oxygen, and using the proper tools, test equipment, and publications to service the equipment.
Credit Recommendation: In the vocational certificate category, 1 semester hour in aircraft servicing (7/92).

NV-1704-0257

Denison Electrical and Electronics Control
Maintenance and Controls for Logic
Elevators

Course Number: A-690-0029.
Location: Technical Training Center, Treasure Island, San Francisco, CA.
Length: 5 weeks (200 hours).
Exhibit Dates: 1/90–Present.
Learning Outcomes: Upon completion of the course, the student will be able to analyze simple series/parallel circuits using Ohm's and Kirchhoff's laws; troubleshoot the Cutler Hammer Logic Control Elevator System down to the circuit board level; and test, troubleshoot and make repairs on Denison hydraulic systems in accordance with standard Navy procedures.
Instruction: Lectures and practical exercises cover basic electricity, solid state devices, electronic circuitry, hydraulic theory and maintenance, and troubleshooting of a specific piece of equipment.
Credit Recommendation: In the vocational certificate category, 6 semester hours in industrial technology laboratory (8/89).

NV-1704-0259

ASROC Weapons Handling System
Maintenance

Course Number: A-121-0490.
Location: Service School Command, Great Lakes, IL.
Length: 8 weeks (320 hours).
Exhibit Dates: 1/90–6/93.
Objectives: To train personnel in the maintenance of the ASROC weapons handling system.
Instruction: Lectures and practical exercises cover the operation and maintenance of power distribution systems, control and firing circuits, power drives, amplifiers, mechanical linkages, and hydraulic systems.
Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical maintenance (1/82).

NV-1704-0260

FFG-7 Engineering System Maintenance
Management, Mechanical, Class C1

Course Number: A-652-0153.
Location: Service School Command, Great Lakes, IL.
Length: 6 weeks (240 hours).
Exhibit Dates: 1/90–6/91.
Objectives: To train senior enlisted personnel to manage the mechanical systems of the engineering plant on a FFG-7 class ship.
Instruction: Lectures and practical exercises cover to the level of maintenance and responsibility of modular change out, piece part repair, preventive and corrective maintenance, and progressive overhaul of gas turbine power plants.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in power plant management (1/82).

NV-1704-0261

FFG-7 Fuel Systems, Mechanical, Class C1

Course Number: A-652-0165.
Location: Service School Command, Great Lakes, IL.
Length: 3 weeks (120 hours).
Exhibit Dates: 1/90–6/91.
Objectives: To provide knowledge and skills necessary to operate and maintain the FFG-7 class fuel system and the JP-5 subsystem.
Learning Outcomes: Students will be able to perform required onboard testing of fuels and main propulsion lubricants; identify and comply with off-ship testing requirements and procedures for submission of fuel and oil samples; perform administrative duties relating to safe handling, storage, and testing of fuels; and identify and comply with environmental directives and regulations concerning the overboard discharge of oil waste contaminants.
Credit Recommendation: In the vocational certificate category, 3 semester hours in fuel and lubricant handling systems (1/82).

NV-1704-0262

Engineering Systems Maintenance
Management
(FFG-7 Introduction to Engineering Maintenance Management, Class C1)

Course Number: A-652-0152.
Location: Service School Command, Great Lakes, IL.
Length: 3 weeks (105-120 hours).
Exhibit Dates: 1/90–10/91.
Objectives: After 10/91 see NV-1732-0022. To provide skills necessary to understand and monitor power plant operations.
Instruction: Lectures and practical exercises cover monitoring the operation of a power plant. Included are the use of technical manuals, maintenance concepts of gas turbine systems, support systems, diesel generator systems, power distribution and conversion equipment, air conditioning and refrigeration systems, seawater-freshwater systems, fuel systems, compressed air systems, mechanical handling systems, and pollution control systems.
Credit Recommendation: In the vocational certificate category, 3 semester hours in basic power plant operation (1/86).

NV-1704-0263

Propulsion Engineering Basics, Class AP

Course Number: A-651-0010.
Location: Service School Command, Great Lakes, IL.
Length: 4 weeks (176 hours).
Exhibit Dates: 1/90–6/90.
Objectives: To train personnel in basic propulsion auxiliary equipment.
Instruction: Lectures and practical exercises cover basic propulsion engineering including maintenance and introduction to auxiliary equipment such as pumps, heat exchangers, bearings, centrifuges, air compressors, valves, power transfer equipment, and measuring devices. Lectures and practical exercises also cover lubrication systems, fire fighting equipment, and proper watchstanding procedures.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in power plant auxiliary equipment, 1 in equipment maintenance, and 1 in power plant operation laboratory (10/83).

NV-1704-0264

Basic Hydraulic Systems and Components

Course Number: K-652-2146.
Location: Fleet Training Center, San Diego, CA.
Length: 3 weeks (90 hours).
Exhibit Dates: 1/90–5/92.
Objectives: After 3/95 see NV-1704-0419. To train personnel in the basic theory of hydraulic systems and components.
Instruction: Lectures and practical exercises cover the basic theory of static hydraulic systems and components, including basic static fluid physics; reservoirs; filters; strainers; control valves; accumulators; packing seals; positive, nonpositive, and variable displacement pumps; and hydraulic system troubleshooting.
Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery hydraulics (5/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulics (fluid statics) (5/82).

NV-1704-0265

DD-963 Auxiliary Systems Technician

Course Number: K-652-2167.

Location: Fleet Training Center, San Diego, CA.

Length: 6 weeks (190 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train personnel in the operation and maintenance of shipboard auxiliary systems.

Instruction: Classroom instruction and practical exercises cover the operation and maintenance of shipboard auxiliary systems, including submerged tube and flash type distilling plants for making fresh water, water testing and treatment, salinity alarms, thermodynamic nomenclature, hydraulic systems, modified vacuum incinerator sewage disposal system, and vibration and noise analysis for preventive maintenance.

Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery hydraulics and 2 in machinery maintenance (5/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulics (fluid statics), 1 in mechanical systems laboratory or, in lieu of the above, 3 semester hours in marine auxiliary systems (5/82).

NV-1704-0267

DD-963 Engineering Department Division Officer
(DD-963 Main Propulsion Assistant)

Course Number: A-4H-0055.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 10 weeks (380 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To provide the engineering division officer with a knowledge of the engineering systems installed in the DD-963 class destroyer.

Instruction: The course emphasizes the gas turbine main propulsion, electrical, and auxiliary systems as well as the administrative and management programs in effect on the DD-963. Main topic areas include the marine gas turbine and its power train, the gas turbine generator and electric systems, auxiliary systems, and the control systems. Extensive casualty control training is done in the propulsion plant trainer.

Credit Recommendation: In the vocational certificate category, 4 semester hours in gas turbine systems (11/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in gas turbine systems, 2 in maintenance management, and 2 in marine engineering systems laboratory (11/82).

NV-1704-0268

FFG-7 Engineer Division Officer
(FFG-7 Main Propulsion Assistant)

Course Number: A-4H-0058.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 5 weeks (198 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To provide the engineering division officer with a knowledge of the engineering systems installed in the FFG-7 class frigate.

Instruction: The course emphasizes the operation and maintenance of gas turbine main propulsion and electrical and auxiliary systems found on the FFG-7 ship. Main topic areas include the marine gas turbine and its power train, the diesel generator and electrical systems, the auxiliary systems, and the control systems. Extensive casualty control training is provided in the propulsion plant trainer.

Credit Recommendation: In the vocational certificate category, 4 semester hours in gas turbine systems (11/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in gas turbine systems, 2 in maintenance management, and 2 in marine engineering systems laboratory (11/82).

NV-1704-0269

Basic Hydraulics

Course Number: A-652-0164.

Location: Service School Command, Great Lakes, IL.

Length: 2-4 weeks (80-145 hours).

Exhibit Dates: 1/90–12/91.

Objectives: After 12/91 see NV-1704-0390. To train personnel in the operation and maintenance of hydraulic systems on the FFG-7 class ships.

Instruction: Lectures and practical exercises cover the basic theory of static hydraulic systems and components, including basic static fluid physics; reservoirs; filters; strainers; control valves; accumulators; packing seals; positive, nonpositive, and variable displacement pumps; and hydraulic system troubleshooting.

Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery hydraulics (1/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in hydraulics (fluid statics) (1/86).

NV-1704-0270

FFG-7 Auxiliary Mechanical Subsystem Technician

Course Number: A-652-0233.

Location: Service School Command, Great Lakes, IL.

Length: 14 weeks (560 hours).

Exhibit Dates: 1/90–10/91.

Objectives: To train personnel to operate and perform corrective and preventive maintenance on mechanical auxiliary subsystem components installed on a FFG-7 ship.

Instruction: This is a pipeline course consisting of several courses, including NV-1715-1073, NV-1704-0269, and NV-1704-0262.

Credit Recommendation: Please refer to the individual exhibits as noted above for credit recommendation (10/87).

NV-1704-0271

FFG-7 Auxiliary Mechanical System Technician

Course Number: A-652-0159.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–10/93.

Objectives: To train enginemen to operate and maintain certain auxiliary mechanical systems.

Instruction: Lectures and practical exercises provide the knowledge and skills necessary to operate and maintain the mechanical components of the oil waste separator, the pallet elevator, and auxiliary propulsion devices.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/83).

NV-1704-0272

Fundamental Hydraulic Component Maintenance

Course Number: J-651-0450.

Location: Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train personnel in the basic theory of hydraulic systems and components.

Instruction: Lectures and practical exercises cover the basic theory of static hydraulic systems and components, including basic static fluid physics; reservoirs; filters; strainers; control valves; accumulators; packing seals; positive, nonpositive, and variable displacement pumps; and hydraulic system troubleshooting.

Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery hydraulics (3/89); in the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulics (fluid statics) (3/89).

NV-1704-0273

UH-1N Electrical/Instrument Systems Organizational Maintenance

Course Number: D-602-2050.

Location: Helicopter Combat Support Squadron, Pensacola, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–3/94.

Objectives: To train enlisted personnel in the maintenance and repair of the UH-1N helicopter electrical and instrument systems.

Instruction: Instruction covers DC power distribution, AC power systems, batteries, wiring diagrams, and warning circuits.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aircraft electrical maintenance (3/84); in the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft electrical maintenance (3/84).

NV-1704-0274

UH-1N Communication/Navigation Systems Organizational Maintenance

Course Number: D-102-2020.

Location: Helicopter Combat Support Squadron, Pensacola, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/94.

Objectives: To train fleet maintenance personnel to perform maintenance on communications and navigation systems.

Learning Outcomes: Upon completion of the course, the student will be able to install, operate, troubleshoot, and adjust an avionics system aboard the UH-1N, including ICS, VHF-FM, HF, UHF, TACAN, ADF, IFF, and a radar altimeter.

Credit Recommendation: In the vocational certificate category, 2 semester hours in avionics equipment repair (3/84); in the lower-division baccalaureate/associate degree category, 1 semester hour in avionics (3/84).

NV-1704-0275

Trident Countermeasures O/M

Course Number: A-123-0179.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 3 weeks (104 hours).
Exhibit Dates: 1/90–8/94.

Objectives: To prepare students to operate and maintain specialized electromechanical and hydraulic systems.

Instruction: Lectures and practical exercises cover the operation and maintenance of a countermeasures system, including applications of electromechanical, pneumatic, and fluid equipment to a marine vessel simulator.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electromechanical and hydraulic system applications (8/84); in the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical and fluid equipment laboratory (8/84).

NV-1704-0276

Trident Defensive Weapons Ordnance Subsystem O/M

Course Number: A-123-0178.
Location: Trident Training Facility, Bangor, Bremerton, WA.
Length: 5 weeks (184 hours).
Exhibit Dates: 1/90–7/94.

Objectives: After 7/95 see NV-1704-0427. To prepare students to operate and maintain torpedo and torpedo handling equipment.

Instruction: Lectures and practical exercises cover torpedo system operation, including applications of mechanical, pneumatic, and fluid equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electromechanical systems applications (8/84); in the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical and fluid system applications laboratory (8/84).

NV-1704-0278

EC-130 Airframe and Hydraulic Systems Maintenance

Course Number: D-602-0481.
Location: Air Station, Patuxent River, MD.
Length: 5 weeks (200 hours).
Exhibit Dates: 1/90–11/94.

Objectives: To provide personnel with the knowledge and skills necessary to maintain airframes and aircraft hydraulic systems.

Instruction: Lectures and laboratory applications cover hydraulic systems, booster and auxiliary hydraulic systems, primary flight controls, wing flap and trim tab systems, main and nose wheel landing gear systems, and brake and antiskid systems.

Credit Recommendation: In the vocational certificate category, 4 semester hours in basic hydraulic components and aircraft familiarization (11/84); in the lower-division baccalaureate/associate degree category, 3 semester hours in basic hydraulics and systems (11/84).

NV-1704-0279

EC-130 Environmental Systems Maintenance

Course Number: D-602-0461.
Location: Air Station, Patuxent River, MD.
Length: 3 weeks (120 hours).
Exhibit Dates: 1/90–11/94.

Objectives: To provide personnel with the knowledge and skills to maintain an aircraft environmental system.

Instruction: Lectures and practical exercises cover the operation and testing of pneumatic, anti-icing, fire extinguishing, and oxygen systems and their descriptions. Inspection and prevention for corrosion and corrosion control as well as safety precautions are also covered.

Credit Recommendation: In the vocational certificate category, 2 semester hours in the familiarization of environmental system corrosion control (11/84); in the lower-division baccalaureate/associate degree category, 1 semester hour in environmental systems (11/84).

NV-1704-0280

EC-130 Power Plant and Related Systems Maintenance

Course Number: D-601-0411.
Location: Air Station, Patuxent River, MD.
Length: 7 weeks (280 hours).
Exhibit Dates: 1/90–11/94.

Objectives: To provide personnel with the knowledge and skills necessary to maintain aircraft gas turbine power plants, related systems, and auxiliary power plant systems.

Instruction: Lectures and laboratory applications cover aircraft fuel systems; safety procedures; turboprop engines and related systems, including oil, fuel, starting, temperature indicators, and engine controls; propeller and associated systems, including anti-icing and de-icing, fire detection, and extinguishing systems; and gas turbine auxiliary power and related systems.

Credit Recommendation: In the vocational certificate category, 6 semester hours in familiarization of turboprop engines and auxiliary power units (11/84); in the lower-division baccalaureate/associate degree category, 3 semester hours in power plant systems and turboprop and related systems (11/84).

NV-1704-0281

OE-159 Reel Operator/Maintenance

Course Number: D-104-0452.
Location: Air Station, Patuxent River, MD.
Length: 7 weeks (280 hours).
Exhibit Dates: 1/90–11/94.

Objectives: To train personnel to operate and maintain the OE-159 antenna system.

Instruction: Lectures and laboratory applications cover electrical systems familiarization, reel panel familiarization (antenna), hydraulic principles as related to antenna components, safety principles, electrical system, reading and understanding electrical circuits for antenna reel systems, and troubleshooting. Also covered are computer fundamentals, related test equipment and maintenance, records, and inspection procedures.

Credit Recommendation: Credit is not recommended due to the military-specific nature of the course (11/84).

NV-1704-0287

S-3A Power Plant and Related Systems Organizational Maintenance

Course Number: C-601-3676.
Location: Air Station, North Island, San Diego, CA; Air Station, Cecil Field, FL.
Length: 2 weeks (80 hours).
Exhibit Dates: 1/90–4/95.

Objectives: To train enlisted personnel in the theory and knowledge of the propulsion, fuel, and auxiliary power systems of the S-3A aircraft.

Learning Outcomes: Upon completion of the course, the student will be able to identify and operate the S-3A fuel system, power plant, auxiliary power unit, and ground support equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in jet engine familiarization (4/85).

NV-1704-0288

S-3A Structure, Hydraulic, and Flight Control Systems Organizational Maintenance

Course Number: C-603-3676.
Location: Air Station, Cecil Field, FL; Air Station, North Island, San Diego, CA.
Length: 4 weeks (160 hours).
Exhibit Dates: 1/90–4/95.

Objectives: To train enlisted personnel in theory and troubleshooting techniques of the S-3A flight control systems.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot S-3A aircraft systems, including the hydraulic, landing gear, brakes, nose wheel steering, arresting hook, auxiliary power unit, wing fold, trim control, and flight control systems of the aircraft.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft system maintenance (4/85).

NV-1704-0289

SH-2 Aviation Machinist's Mate Power Plant System

Course Number: C-601-3378.
Location: Air Station, North Island, San Diego, CA.
Length: 4 weeks (160 hours).
Exhibit Dates: 1/90–4/95.

Objectives: To provide newly enlisted personnel with the skills to understand and maintain the aircraft power plant and related systems.

Learning Outcomes: Upon completion of the course, the student will be able to maintain the power plant and related systems of the SH-2 aircraft including the electrical and gas turbine systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in turbine engine maintenance (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in the theory of turbine (jet) engines (4/85).

NV-1704-0290

SH-2F Airframes, Hydraulics, and Flight Control Organizational Maintenance

Course Number: C-602-3394.
Location: Air Station, Norfolk, VA; Air Station, North Island, San Diego, CA.
Length: 2-3 weeks (75-80 hours).
Exhibit Dates: 1/90–Present.

Objectives: To train enlisted personnel in the basic maintenance of the hydraulic and flight control systems of the SH-2F helicopter.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain the hydraulic system, landing gear system, wheel brake system, rotor brake system, rescue hoist, and utility system and check, rig, and maintain automatic stabili-

BEST COPY AVAILABLE

zation systems and flight control systems of the helicopter.

Credit Recommendation: In the vocational certificate category, 2 semester hours in helicopter hydraulics and flight control systems repair and maintenance (3/91); in the lower-division baccalaureate/associate degree category, 2 semester hours in helicopter hydraulics and flight control systems theory (3/91).

NV-1704-0291

SH-2F AUTOMATIC STABILIZATION

Course Number: C-602-3386.

Location: Air Station, North Island, San Diego, CA; Air Station, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train technicians in the functional maintenance of automatic stabilization equipment for a helicopter.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, at the functional block level, helicopter automatic stabilization equipment, including gyro systems, accelerometers, trim controls, and various electromechanical servo systems that control roll, yaw, pitch, air speed, and altitude.

Credit Recommendation: In the vocational certificate category, 2 semester hours in helicopter stabilization system maintenance (3/91).

NV-1704-0292

SH-60B AIRFRAMES AND RELATED SYSTEMS ORGANIZATIONAL MAINTENANCE

Course Number: C-603-4406.

Location: Air Station, North Island, San Diego, CA.

Length: 3 weeks (126 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To provide enlisted personnel with the skills necessary to maintain, troubleshoot, and repair airframes and related systems.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair systems of the SH-60B helicopter, including the composite structure, doors, cockpit enclosures, hydraulics, flight control systems, landing gear, environmental controls, main and tail rotor, and utility and weapons systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aircraft structural repair (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft structural maintenance (4/85).

NV-1704-0293

SH-60B POWER PLANT AND RELATED SYSTEMS ORGANIZATIONAL MAINTENANCE

Course Number: C-601-4406.

Location: Air Station, North Island, San Diego, CA.

Length: 3 weeks (135 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train enlisted personnel in the basic inspection and maintenance of a gas turbine engine and related helicopter drive systems.

Learning Outcomes: Upon completion of the course, the student will be able to remove, install, and maintain engine and auxiliary power unit components of the T700 GE-401 gas turbine engine and troubleshoot and maintain fire extinguishing systems, fuel systems, and rotor drive systems of the helicopter.

Credit Recommendation: In the vocational certificate category, 2 semester hours in helicopter turbine engine overhaul (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in turbine engine theory (4/85).

NV-1704-0294

T-700-GE 401 INTERMEDIATE MAINTENANCE FIRST DEGREE

Course Number: C-601-4408.

Location: Air Station, North Island, San Diego, CA; Air Station, Mayport, FL.

Length: 3-4 weeks (120-160 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train enlisted personnel in inspecting, troubleshooting, disassembling, and building up an aircraft engine.

Learning Outcomes: Upon completion of the course, the student will be able to understand and troubleshoot the T-700-GE aircraft engine system, including engine teardown, inspection and buildup and be familiar with engine borescope inspection.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aircraft turbine engine maintenance (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft turbine engine theory (4/85).

NV-1704-0295

TF-34 FIRST DEGREE INTERMEDIATE MAINTENANCE

Course Number: C-601-3677.

Location: Air Station, North Island, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train personnel in the inspection, disassembly, repair, and reassembly of a turbine engine.

Learning Outcomes: Upon completion of the course, the student will be able to disassemble, inspect, and reassemble the TF-34 turbofan engine, including the fuel, electrical, and lubrication systems as well as the borescope inspection.

Credit Recommendation: In the vocational certificate category, 2 semester hours in turbine engine repair and maintenance (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in turbine engine maintenance (4/85).

NV-1704-0296

WR-27 AUXILIARY POWER UNIT INTERMEDIATE MAINTENANCE

Course Number: C-601-3679.

Location: Air Station, North Island, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train personnel in the inspection, disassembly, and buildup of an auxiliary power unit.

Learning Outcomes: Upon completion of the course, the student will be able to assemble/disassemble, inspect, and troubleshoot the WR-27 auxiliary power unit using appropriate test equipment and special tools.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/85).

NV-1704-0297

SH-3 AVIATION MACHINIST'S MATE, CLASS A POWER PLANT SYSTEMS

Course Number: C-601-4396.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To provide personnel with the skills to maintain a turbine engine power plant and its related systems.

Learning Outcomes: Upon completion of the course, the student will be able to maintain a turbine engine power plant and its related systems at a very basic level and will be familiar with the hydraulics, electricity, jet propulsion theory, and gas turbine power plant operation of the SH-3 aircraft.

Credit Recommendation: In the vocational certificate category, 1 semester hour in jet engine laboratory (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in turbine (jet) engine theory (4/85).

NV-1704-0300

AIRCRAFT LAUNCH AND RECOVERY EQUIPMENT OFFICER, CLASS C2

(Aircraft Launch and Recovery Equipment Officer)

Course Number: C-2G-2010.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: 2-3 weeks (95-103 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to direct aircraft launch and recovery operations.

Instruction: Course includes lectures and performance exercises to direct operations of aircraft launch and recovery.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (1/96).

NV-1704-0301

AVIATION BOATSWAIN'S MATE HANDLING, CLASS C1, (SEA TRACK)

Course Number: C-822-2014.

Location: Air Technical Training Center, Lakehurst, NJ; Air Technical Training Center, Memphis, Millington, TN.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to supervise personnel in shipboard aircraft handling and crash salvage procedures.

Instruction: Course includes lectures and performance exercises in aircraft ground handling, crash and fire damage control, first aid, and fire fighting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in administration (correspondence and filing), 1 in industrial safety, and 2 in supervision of aircraft emergency operations (crash/fire/rescue) (6/87).

NV-1704-0302

Aviation Boatswain's Mate Equipment, Class A1, C13 Track

Course Number: C-604-2019.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will apply entry-level skills to the operation of aircraft launch and restraint equipment under supervision.

Instruction: Course includes lectures with limited performance exercises in C-13 catapult equipment and accessories for aircraft launch and restraint.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in fluid power system theory in an industrial maintenance technology program (6/87).

NV-1704-0303

Aircrew Survival Equipmentman, Class C1

Course Number: C-602-2011.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: 12 weeks (452 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to establish and supervise a maintenance organization which inspects, services, and repairs aircrew survival equipment.

Instruction: Lectures and hands-on experience cover theory and practical application relating to maintenance and material management of items of equipment used for aircrew survival. Course includes detailed study of industrial-grade sewing machines, gaseous and liquid oxygen support systems and equipment, and related aviation survival equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in industrial sewing machine repair and service (6/87); in the lower-division baccalaureate/associate degree category, 3 semester hours in general science laboratory, 1 in aircraft environmental control systems, and 1 in maintenance systems planning (6/87).

NV-1704-0304

Aircrew Survival Equipmentman, Class A1

Course Number: C-602-2010.

Location: Air Technical Training Center, Memphis, Millington, TN; Air Technical Training Center, Lakehurst, NJ.

Length: 10-11 weeks (368-388 hours).

Exhibit Dates: 1/90–1/96.

Learning Outcomes: Upon completion of the course, the student will be able to work with minimum supervision in the area of survival equipment inspection, repair, and operation. This equipment is essential to support flying safety and pilot survival in an emergency.

Instruction: Major topics include parachute assembly, packing, and inspection; survival clothing, oxygen masks, and exposure equipment; sewing machine use; maintenance and repair of fabrics; and interpretation and application of technical requirements and documents.

Credit Recommendation: In the vocational certificate category, 2 semester hours in sewing machine operation, service, and maintenance and 2 in parachute packing and inspection (10/91); in the lower-division baccalaureate/associate degree category, 3 semester hours in aviation safety equipment repair and maintenance (10/91).

NV-1704-0305

1. Aircraft Launch and Recovery Equipment C13 Mod O Catapult, Class C1
2. Aircraft Launch and Recovery Equipment, Class C1, C13 Mod O Track

Course Number: *Version 1:* C-604-2011. *Version 2:* C-604-2011.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: *Version 1:* 4-6 weeks (193-229 hours). *Version 2:* 8 weeks (310 hours).

Exhibit Dates: *Version 1:* 3/90–Present. *Version 2:* 1/90–2/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to inspect, operate, and maintain C-13 catapults and related equipment, including Mk-7 Mods 1, 2, and 3 arresting gear, barriers, and shore-based arresting gear. *Version 2:* Upon completion of the course, the student will be able to inspect, operate, and maintain C-13 catapults and related equipment, including Mk-7 Mods 1, 2, and 3 arresting gear, barriers, and shore-based arresting gear.

Instruction: *Version 1:* Lectures and practical laboratory experiences in aircraft launch and recovery equipment utilizing C13 Mod 0 equipment as training vehicle, and in safety procedures in hazardous conditions and environment. *Version 2:* Lectures and practical experiences cover aircraft launch and recovery equipment, C13 and C13 Mod 1.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial safety and 2 in hydraulic and pneumatic principles (1/96). *Version 2:* In the vocational certificate category, 3 semester hours in fluid power principles (6/87); in the lower-division baccalaureate/associate degree category, 3 semester hours in fluid power maintenance and troubleshooting and 1 in industrial safety (6/87).

NV-1704-0306

Aviation Boatswain's Mate Fuels, Class A1

Course Number: *Version 1:* C-821-2010. *Version 2:* C-821-2010.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN. *Version 2:* Air Technical Training Center, Lakehurst, NJ; Technical Training Center, Millington, TN.

Length: *Version 1:* 5 weeks (204 hours). *Version 2:* 4-5 weeks (167 hours).

Exhibit Dates: *Version 1:* 7/95–Present. *Version 2:* 1/90–6/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform entry-level duties in aircraft refueling and maintenance of refueling equipment. *Version 2:* Upon completion of the course, the student will be able to perform entry-level duties in aircraft refueling and maintenance of refueling equipment.

Instruction: *Version 1:* Course includes lectures and performance exercises in aircraft refueling, maintenance and repair of refueling systems, and fuel quality verification. *Version 2:* Course includes lectures and performance exercises in aircraft refueling, maintenance and repair of refueling systems, and fuel quality verification.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial maintenance practices (1/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft ground operations and servicing (6/87).

NV-1704-0307

1. Aircraft Launch and Recovery Equipment C13 Mod 1/2 Catapult
2. Aviation Boatswain's Mate Equipment, Class C1, C13 Mod 1 Track

Course Number: *Version 1:* C-604-2014. *Version 2:* C-604-2014.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: *Version 1:* 5-6 weeks (177 hours). *Version 2:* 8 weeks (300 hours).

Exhibit Dates: *Version 1:* 3/95–Present. *Version 2:* 1/90–2/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will fully understand the technical principles needed to maintain the C-13 Mod 1/2 catapult equipment. *Version 2:* Upon completion of the course, the student will be able to maintain Type C Mark 13 Mod 1 catapult and Mark 7 Mod 3 arresting gear equipment for aircraft launch and restraint.

Instruction: *Version 1:* Course includes lectures and performance exercises pertinent to catapult and restraint systems used to launch and recover aircraft. Course includes servicing, repairing, inspection, and rigging procedures. Student is prepared with the minimum technical knowledge needed to perform as a work center supervisor, and to demonstrate safety in hazardous conditions in environment. *Version 2:* Course includes lectures and performance exercises on catapult and restraint systems, including servicing, repairing, troubleshooting, inspecting, and rigging procedures as well as the minimum technical knowledge and guidance needed to perform as a work center supervisor.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial safety, 2 in hydraulics and pneumatic systems, 1 in industrial maintenance supervision, and 1 in introduction to industrial maintenance (1/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in hydraulic and pneumatic system principles in an industrial maintenance technology program, 3 in industrial equipment maintenance, and 1 in principles of industrial maintenance supervision (6/87).

NV-1704-0308

1. Aircraft Launch and Recovery Equipment Maintenance Officer, Class 2
2. Aircraft Launch and Recovery Equipment Maintenance Officers

Course Number: *Version 1:* C-2G-2011. *Version 2:* C-2G-2011.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: *Version 1:* 5-6 weeks (219 hours). *Version 2:* 8 weeks (320 hours).

Exhibit Dates: *Version 1:* 9/93–Present. *Version 2:* 1/90–8/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to supervise aircraft launch and recovery equipment maintenance, troubleshooting, and quality assurance, and to complete technical reports and forms. *Version 2:* Upon completion of the course, the student will be able to supervise aircraft launch and recovery equipment maintenance, troubleshooting, and quality assurance.

Instruction: *Version 1:* Course includes lectures and performance exercises in record keeping, file documentation, researching technical publications, troubleshooting, and returning to service launch and recovery equipment. *Version 2:* Course includes lectures and performance exercises in record keeping, file documentation, researching technical publications, troubleshooting, and returning to service launch and recovery equipment.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in fluid system maintenance, 3 in industrial equipment maintenance, and 3 in technical report writing (1/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in fluid system maintenance, 3 in industrial equipment maintenance, and 2 in technical report writing (6/87).

NV-1704-0309

1. Aviation Boatswain's Mate Fuels, Class C1
   (Aviation Fuel Systems, Class C1)
2. Aviation Fuel Systems, Class C1

Course Number: *Version 1:* C-821-2011. *Version 2:* C-821-2011.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN. *Version 2:* Air Technical Training Center, Lakehurst, NJ.

Length: *Version 1:* 5 weeks (180-195 hours). *Version 2:* 5 weeks (193 hours).

Exhibit Dates: *Version 1:* 3/95–Present. *Version 2:* 1/90–2/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform organizational level maintenance on automotive gasoline systems, aviation fuels systems afloat and ashore, and catapult lube oil distribution and stowage systems. The student will also be able to supervise aviation fueling operations. *Version 2:* Upon completion of the course, the student will be able to supervise aviation fueling operations and the troubleshooting and repairing of the refueling system components.

Instruction: *Version 1:* Course includes lectures and performance exercises on electric pumps, electric valves, top-level indicating and control system, centrifugal purifiers, valves, pumps, filters, and meters. Instruction on proper procedures to ventilate and clean storage and service tanks is included. *Version 2:* Course includes lectures and performance exercises on equipment for aircraft refueling operations, including operation of contamination detection equipment, pump maintenance and repair, indicator system, refueling system maintenance and troubleshooting, and aircraft refueling procedures.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft ground operation, 2 in industrial safety, and 1 in pumps and compressors (1/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft ground operations and servicing and 1 in chemistry laboratory (6/87).

NV-1704-0310

1. Aviation Boatswain's Mate (Launch and Recovery Equipment), Class A1
2. Aviation Boatswain's Mate Equipment, Class A1 Common Core
   (Aviation Boatswain's Mate E Launching and Recovery Equipment, Class A1 Common Core)

Course Number: *Version 1:* C-604-2012. *Version 2:* C-604-2012.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN. *Version 2:* Air Technical Training Center, Lakehurst, NJ; Air Technical Training Center, Memphis, Millington, TN.

Length: *Version 1:* 4-5 weeks (170 hours). *Version 2:* 4 weeks (160 hours).

Exhibit Dates: *Version 1:* 9/95–Present. *Version 2:* 1/90–8/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to use hand tools, power tools, and measuring tools; apply basic principles of hydraulics; apply maintenance and material management techniques; and operate arresting gear and catapult components. This course is designed to teach entry-level personnel the components and operations of shipboard arresting gear and catapults. *Version 2:* Upon completion of the course, the student will be able to assist in operating and maintaining shipboard arresting gear.

Instruction: *Version 1:* Instruction is primarily formal classroom presentation but does contain some laboratory work. *Version 2:* Course includes lectures and performance exercises on arresting gear, including corrosion control and basic hydraulics and gear maintenance, servicing, and operation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial equipment maintenance in an industrial maintenance technology curriculum (1/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial equipment maintenance (in industrial maintenance technology curriculum) (6/87).

NV-1704-0311

Aviation Boatswain's Mate Equipment, Class A1, C7/C11 Track

Course Number: C-604-2018.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: 4 weeks (133 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to operate aircraft launch and restraint equipment under supervision.

Instruction: Course includes lectures with limited performance exercises in Mark 7 and Mark 11 steam catapult equipment and accessories for aircraft launch and restraint.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in fluid power system theory in industrial maintenance technology (6/87).

NV-1704-0315

Guided Missile Launching System Mk 26 Operation and Maintenance
(Guided Missile Launcher System Mk 26)

Course Number: A-121-0011.

Location: Service School Command, Great Lakes, IL.

Length: 22 weeks (880 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the gunner's mate will apply fundamental electro-mechanical-hydraulic skills and knowledge to operate and maintain a computer-controlled guided missile launching system. The student will be able to trace, analyze, isolate, and repair, down to the card level, using electrical-hydraulic interconnection and internal wiring diagrams.

Instruction: Classroom instruction and laboratory exercises cover launching systems control, power distribution, troubleshooting and reference diagrams, system control interface, launcher load/unload, electronic servo control unit, and hydraulic systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in hydraulic systems troubleshooting and maintenance (1/89); in the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical systems troubleshooting and maintenance (1/89).

NV-1704-0316

1. Submarine Hydraulic Combined Maintenance
2. Trident Submarine Hydraulic Combined Maintenance
3. Trident Submarine Hydraulic Combined Maintenance

Course Number: *Version 1:* A-652-0143. *Version 2:* A-652-0143. *Version 3:* A-652-0143.

Location: *Version 1:* Submarine School, New London, Groton, CT; Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA. *Version 2:* Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA. *Version 3:* Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: *Version 1:* 2 weeks (72 hours). *Version 2:* 3 weeks (117 hours). *Version 3:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 9/96–5/97. *Version 2:* 5/95–8/96. *Version 3:* 1/90–4/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the theory and operation of a submarine hydraulic system and perform corrective maintenance on the system. *Version 2:* Upon completion of the course, the student will be able to describe the theory and operation of the submarine hydraulic system and perform corrective maintenance on the system. *Version 3:* Upon completion of the course, the student will be able to operate, troubleshoot, and repair stern diving and external hydraulic systems.

Instruction: *Version 1:* Lectures and laboratory exercises cover the theory of hydraulics, construction, operation, and maintenance of submarine hydraulic systems. *Version 2:* Lectures and laboratory exercises on the ship's service hydraulic system, stern diving hydraulic systems/power plant, and preventive maintenance of the hydraulic system. *Version 3:* Lectures and laboratory exercises cover the theory of hydraulics and the construction, operation, and maintenance of submarine hydraulic systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulic systems (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in mechanical technology (hydraulics and fluids) (4/96). *Version 3:* In the lower-division baccalaureate/associate degree category, 3 semester hours in hydraulic machinery (2/89).

NV-1704-0317

Trident Pneumatic Subsystem Maintenance

Course Number: A-652-0145.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (90 hours).

Exhibit Dates: 1/90–3/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate high- and low-pressure air compressors and troubleshoot and repair pneumatic systems, including air compressors, dehydrators, and air manifolds.

Instruction: Lectures and laboratory exercises cover air compressor construction, operation, and maintenance and related pneumatic equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in facilities engineering (pneumatic systems) (2/89).

NV-1704-0318

Trident Submarine Auxiliary Equipment
Technician Level 2

Course Number: A-652-0141.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 6 weeks (350 hours).

Exhibit Dates: 1/90–10/96.

Learning Outcomes: See individual exhibits for learning outcomes. This is a pipeline course.

Instruction: See exhibits NV-1704-0316 (A-652-0143), NV-1704-0317 (A-652-0145), NV-1731-0001 (A-652-0146), NV-1712-0028 (A-652-0150), and NV-1701-0010 (A-652-0204).

Credit Recommendation: Please refer to the individual exhibits as noted above for credit recommendation (2/89).

NV-1704-0319

Machinist's Mate Steam Propulsion
Maintenance Supervisor

Course Number: *Version 1:* A-651-0063. *Version 2:* A-651-0063.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 23 weeks (693 hours). *Version 2:* 17-18 weeks (740 hours).

Exhibit Dates: *Version 1:* 6/95–Present. *Version 2:* 1/90–5/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to organize, perform, and supervise preventive and corrective maintenance and troubleshoot the mechanical systems associated with steam power generation systems, except for the systems directly associated with the steam generation facility. *Version 2:* Upon completion of the course, the student will be able to organize, perform, and supervise preventive and corrective maintenance and troubleshoot the mechanical systems associated with steam power generation systems, except for the systems directly associated with the steam generation facility.

Instruction: *Version 1:* This is a pipeline course made up of A-651-0064, Engineering Maintenance Principles, Practices, and Administration; A-651-0065, Valve Maintenance; A-651-0067, Pump Maintenance; A-652-0069, Governor and Regulator Maintenance; A-651-0068, Auxiliary Turbine Maintenance; A-651-0077, Ship Service Turbo Generator Maintenance; A-651-0078, Main Engine and Lube Oil Purifier Maintenance; and A-651-0070, Air Compressor Maintenance. A-651-0071, Distilling Plant Condenser and Heat Exchanger Maintenance, was too brief for evaluation. The courses listed above can be found under exhibits NV-1710-0108, NV-1732-0018, NV-1710-0091, NV-1710-0086, NV-1704-0321, NV-1704-0320, NV-1601-0027, and NV-1601-0029. *Version 2:* This is a pipeline course made up of A-651-0064, Engineering Maintenance Principles, Practices, and Administration; A-651-0065, Valve Maintenance; A-651-0067, Pump Maintenance; A-652-0069, Governor and Regulator Maintenance; A-651-0068, Auxiliary Turbine Maintenance; A-651-0077, Ship Service Turbo Generator Maintenance; A-651-0078, Main Engine and Lube Oil Purifier Maintenance; and A-651-0070, Air Compressor Maintenance. A-651-0071, Distilling Plant Condenser and Heat Exchanger Maintenance, was too brief for evaluation. The courses listed above can be found under exhibits NV-1710-0108, NV-1732-0018, NV-1710-0091, NV-1710-0086, NV-1704-0321, NV-1704-0320, NV-1601-0027, and NV-1601-0029.

Credit Recommendation: *Version 1:* Please refer to the individual exhibits as noted above for credit recommendation (11/95). *Version 2:* Please refer to the individual exhibits as noted above for credit recommendation (3/89).

NV-1704-0320

1. Ship's Service Turbo-Generator Maintenance
2. Ship's Service Turbo Generator Maintenance

Course Number: *Version 1:* A-651-0077. *Version 2:* A-651-0077.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 1-2 weeks (28 hours). *Version 2:* 1-2 weeks (51 hours).

Exhibit Dates: *Version 1:* 6/95–Present. *Version 2:* 1/90–5/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to use technical references to establish appropriate maintenance requirements and perform maintenance on steam turbines and the mechanical auxiliaries associated with turboelectric generators. *Version 2:* Upon completion of the course, the student will be able to use technical references to establish appropriate maintenance requirements and perform maintenance on steam turbines and the mechanical auxiliaries associated with turboelectric generators.

Instruction: *Version 1:* Lectures and laboratory experiments are used along with homework assignments and record keeping practice. Topics include steam turbines and turboelectric generators with special emphasis on the use of manuals for these devices. *Version 2:* Classroom instruction, demonstrations, and practical exercises cover the subject matter. Record keeping procedures are included.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in basic machinery maintenance (11/95). *Version 2:* In the vocational certificate category, 1 semester hour in machinery maintenance (3/89).

NV-1704-0321

Auxiliary Turbine Maintenance
(Auxiliary Machinery Turbine Maintenance)

Course Number: A-651-0068.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 1-2 weeks (53 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform engineering maintenance on auxiliary steam turbines.

Instruction: Classroom and practical instruction cover instrumentation, inspection, and maintenance of turbine machinery.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in turbine machinery maintenance laboratory (6/94).

NV-1704-0323

Cargo Weapons Elevator Maintenance

Course Number: A-690-0082.

Location: Technical Training Center, Treasure Island, San Francisco, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use the technical documentation provided for use with the Standard Electronic Module (SEM) cargo/weapons controller; describe the functional operation of the SEM controller, including signal flow, loop operation, and time sequence; and perform preventive and corrective maintenance on the SEM controller in accordance with standard Navy checklist procedures.

Instruction: Lectures and practical exercises cover electrical, mechanical, hydraulic, and safety devices (for personnel and equipment) used on ships' elevators.

Credit Recommendation: In the vocational certificate category, 6 semester hours in electromechanical technology laboratory (8/89).

NV-1704-0324

Aviation Machinist's Mate, Class A1

Course Number: C-601-2010.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 8-9 weeks (334-342 hours).

Exhibit Dates: 1/90–1/96.

Learning Outcomes: Upon completion of the course, the student will be able to perform aircraft maintenance and jet engine mechanics.

Instruction: Lectures and practical exercises cover jet engine repair, theory of general aircraft maintenance, corrosion control, tool inventory, jet propulsion principles, power plant familiarization, typical axial and centrifugal flow power plant familiarization, inspections, power plant replacement, jet aircraft line operations, and fuel systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in turbine engine theory (6/91).

NV-1704-0325

Aviation Structural Mechanic (Safety Equipment), Class A1

Course Number: C-602-2015.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 10-11 weeks (400-412 hours).

Exhibit Dates: 1/90–1/96.

Learning Outcomes: Upon completion of the course, the student will be able to repair aviation systems.

Instruction: Lectures and laboratories cover the functions of aviation structural mechanics, including schematic interpretation, application of maintenance and materiel management system, gaseous systems, typical aircraft systems, liquid oxygen systems, aircraft pressurization and air conditioning system, operation and line maintenance, egress systems, and auxiliary bleed air systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in pressure and air conditioning systems and 3 in gaseous systems (oxygen and liquid oxygen) (8/91).

NV-1704-0326

Aviation Support Equipment Technician, Class A1

Course Number: *Version 1:* C-602-2026. *Version 2:* C-602-2026.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL. *Version 2:* Air Technical Training Center, Memphis, Millington, TN.

Length: *Version 1:* 16-17 weeks (651 hours). *Version 2:* 16-17 weeks (605-653 hours).

Exhibit Dates: *Version 1:* 1/97–Present. *Version 2:* 1/90–12/96.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will perform maintenance and administrative duties.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures and laboratories cover hand tools, hardware, composite materials, publications and forms; basic electricity including Ohm's law, test equipment, magnetism, capacitors, semiconductors, troubleshooting, power generating equipment, charging, ignition systems, diesel engines, hydraulic accessories, air conditioning, gas turbine compressors, and corrosion control.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in hydraulic systems operation, 4 in DC circuits, and 2 in automotive fundamentals (2/92).

NV-1704-0327

Basic Helicopter (H-1), Class A1

Course Number: C-600-2011.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 3-4 weeks (132 hours).

Exhibit Dates: 1/90–9/94.

Learning Outcomes: Upon completion of the course, the student will serve as apprentice helicopter mechanic at the organizational level.

Instruction: Lectures and laboratories cover hand tools; aircraft hardware; safety procedures; forms and records; aircraft ground handling and taxiing; and aircraft systems, including the electrical and fuel systems, power plant and drive system, flight control system, rotor system, hydraulic system, and line operation and inspection.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in helicopter maintenance. Note: This credit duplicates the credit recommended for C-600-2010 and C-600-2012 (9/89).

NV-1704-0328

Basic Helicopter (H-53), Class A1

Course Number: C-600-2012.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 3-4 weeks (156 hours).

Exhibit Dates: 1/90–9/94.

Learning Outcomes: Upon completion of the course, the student will serve as apprentice helicopter mechanic at the organizational level.

Instruction: Lectures and laboratories in hand tools; aircraft hardware; safety procedures; forms and records; aircraft ground handling and taxiing;, and aircraft systems, including the electrical and fuel systems, power plant and drive system, flight control system, rotor system, hydraulic system, and line operation and inspection.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in helicopter maintenance. Note: This credit duplicates the credit recommended for C-600-2010 and C-600-2011 (9/89).

NV-1704-0329

1. Basic Helicopter
2. Basic Helicopter (H-46), Class A1

Course Number: *Version 1:* C-600-2010-M1. *Version 2:* C-600-2010.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: *Version 1:* 2 weeks (67 hours). *Version 2:* 3-4 weeks (132-163 hours).

Exhibit Dates: *Version 1:* 10/94–10/95. *Version 2:* 1/90–9/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will serve as apprentice helicopter mechanic at the organizational level. *Version 2:* Upon completion of the course, the student will serve as apprentice helicopter mechanic at the organizational level.

Instruction: *Version 1:* Course includes lectures and laboratories in basic knowledge and skills necessary to perform as an entry-level helicopter mechanic. *Version 2:* Lectures and laboratories in hand tools; aircraft hardware; safety procedures; forms and records;, aircraft ground handling and taxiing; and aircraft systems, including the electrical and fuel systems, power plant and drive system, flight control system, rotor system, hydraulic system, and line operation and inspection.

Credit Recommendation: *Version 1:* Credit is not recommended because the course is too general in content and short in duration (11/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in helicopter maintenance. Note: This credit duplicates the **credit recommended for C-600-2011 and C-600-2012 (4/91).**

NV-1704-0330

Marine Air Traffic Control Advanced Technician, Class C1

Course Number: C-103-2047.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, install, and repair advanced electronics systems and equipment and be able to train others in electronic maintenance management.

Instruction: Lectures and laboratories cover maintenance management, including maintenance procedures, supply, inspection, publications, safety, and resource management concepts. Technical topics include logic gates, shift registers, memory devices, microprocessors, and programming. Also included is maintenance on communications, radar, and navigation equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance management, 1 in computer systems and organization, and 2 in electronic systems troubleshooting and maintenance (9/89).

NV-1704-0332

General Mechanical Maintenance Skills

Course Number: A-652-0228.

Location: Guided Missiles School Detachment, Dam Neck, Virginia Beach, VA; Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, San Diego, CA; Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, repair, and test piping, gauges, and heat exchangers and perform pump-motor alignment and bearing inspection.

Instruction: Lectures cover the use of hand tools, gauges, measuring instruments, safety, documentation, lubrication, bearings, and precision instruments. Laboratory exercises cover the use of hand tools, precision instruments, weight handling equipment, locking devices, and bearing inspection. Course also includes disassembly, inspection, repair, assembly, and testing of mechanical components and systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in hand tools and safety procedures and 2 in maintenance of piping systems and mechanical instruments (10/89).

NV-1704-0333

Ocean Systems Technician Analyst, Class A

Course Number: J-210-0011.

Location: Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: 13-14 weeks (532 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze acoustic signature displays of signals received from sonar detectors, identify ships/boats by their acoustic signature displays, and describe general shipboard propulsion systems and machinery.

Instruction: Classroom lectures and practical exercises cover each topic. Emphasis is on analyzing acoustic signatures.

Credit Recommendation: In the vocational certificate category, 2 semester hours in survey of marine propulsion machinery (3/90); in the upper-division baccalaureate category, 3 semester hours in ocean acoustics (3/90).

NV-1704-0334

MH-53 Rotors and Related Systems Organizational Maintenance

Course Number: C-602-4446.

Location: Air Station, Norfolk, VA.

Length: 5-6 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, repair, inspect, rig, remove, and install main/tail rotors, drive trains, and flight control systems on rotary-wing aircraft.

Instruction: Classroom and practical experiences use necessary technical data and systems mock-ups.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in helicopter systems maintenance (3/91).

NV-1704-0335

MH-53E Power Plants and Related Systems Organizational Maintenance

Course Number: C-601-3446.

Location: Air Station, Norfolk, VA.

Length: 3-4 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to conduct power plant/auxiliary power plant and related power plant systems inspections, maintenance, removal, installation, and rigging on rotary-wing aircraft.

Instruction: Classroom and practical exercises use audiovisual and appropriate system mock-ups and technical publications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in turbine engine power plants (2/91).

NV-1704-0336

SH-2F Power Plants, Related Systems, and Rotor Systems Organizational Maintenance

Course Number: C-601-3387.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Norfolk, VA.

Length: 2-3 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to service and troubleshoot aircraft fuel systems; identify turbine engine sections and their primary purpose; remove and install power plants and rotor blades; troubleshoot electrical, engine, air, main, and tail rotor transmissions; and inspect these components.

Instruction: Lectures and practical exercises cover servicing, inspecting, and maintaining/troubleshooting power plants, power plant electrical systems, and main and tail rotor transmissions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in engine power plant repair (3/91).

NV-1704-0337

T-58 First Degree Maintenance

Course Number: C-601-3131.

Location: Air Station, Jacksonville, FL; Air Station, North Island, San Diego, CA; Air Station, Norfolk, VA.

Length: 3-4 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to remove, disassemble, inspect, repair, and replace the systems and components of turboshaft engines.

Instruction: Lectures and practical exercises cover the subject areas.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in turbine engine maintenance (3/91).

NV-1704-0338

E2/C2 Power Plants and Propeller Organizational Maintenance

Course Number: C-601-3472.

Location: Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group Detachment, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 2/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain turboshaft engines and propellers.

Instruction: Lectures and practical exercises cover the disassembly, inspection, and repair of turboshaft engines and engine systems including the propeller and propeller systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in turboshaft engines and 3 in propellers (3/91).

NV-1704-0339

Air Intercept Controller Supervisor Qualification, Class C1

Course Number: K-221-0015.

Location: Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to supervise aircraft intercept controllers and aircraft weapons coordinators.

Instruction: Lectures and practical exercises include instruction in air control procedures; US and Soviet aircraft types, performance, and tactics; Soviet naval and air capabilities and warfare doctrine; antisubmarine warfare detection equipment, weapons and tactics; weather considerations; air intercept controller communications and tactics; navigation aids, IFF and radar capabilities; and rules, regulations, and publications related to the above.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in air traffic control laboratory (10/91).

NV-1704-0340

Air Intercept Controller Intermediate

Course Number: J-221-2301.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 8/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate air intercept control, radiotelephone intercept control, and nearest collision intercept procedures.

Instruction: Lectures and laboratory exercises cover intercept controller communications, air interception procedures, air control procedures, and aircraft tactics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in air traffic control laboratory (10/91).

NV-1704-0341

A-6 Structural Systems Organizational Maintenance

Course Number: C-602-3764.

Location: Air Station, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (68 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will have sufficient knowledge of the A-6 structural, flight control, landing gear, and related systems to perform organizational maintenance at the squadron level.

Instruction: Lectures and limited practical applications cover A-6 structural, flight control, and landing gear systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft flight control systems and 1 in aircraft landing gear systems (3/91).

NV-1704-0342

EA-6B Environmental, Escape, and Survival Systems Organizational Maintenance

Course Number: C-602-3772.

Location: Air Station, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (128 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will have sufficient knowledge of the environmentol escape, and survival systems of the EA-6B aircraft to perform, under supervision, organizational maintenance at the squadron level.

Instruction: Lectures and practical application cover EA-6B oxygen and canopy systems, escape and survival systems, and environmental and control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in environmental systems and 1 in aircraft oxygen systems (3/91).

NV-1704-0343

A-6 and Hydraulic Organizational Maintenance

Course Number: C-602-3761.

Location: Air Station, Oceana, Virginia Beach, VA; Air Station, Whidbey Island, Oak Harbor, WA.

Length: 4 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, analyze, and troubleshoot the A-6 airframe and hydraulic systems.

Instruction: Lectures and limited practical applications on the A-6 airframe hydraulic, flight control, landing gear, and arresting gear systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft hydraulic and flight control systems and 2 in landing gear systems (8/89).

NV-1704-0344

SH-60F/HH-60H Air Frames and Hydraulic Systems Consolidated Maintenance

Course Number: E-602-0883; C-602-0883.

Location: Air Station, Jacksonville, FL; Helicopter Antisubmarine Squadron 10, North Island, CA.

Length: 10-11 weeks (371-387 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect, service, and replace components of the cabin doors and seats, main and tail rotor systems, flight control systems, and stabilizer system; troubleshoot and service the hydraulic system and replace components as required; inspect and repair main and tail rotors; replace components in the environmental control system; and jack and level the aircraft.

Instruction: Lectures and laboratories cover the hydraulic, environmental control, cabin furnishing, main and tail rotor, flight control, wheel brake, and ice and rain control systems of the helicopter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft systems and 1 in airframe component inspection as required in an FAA maintenance technician program (11/92).

NV-1704-0345

SH-60F/HH-60H Power Plants and Related Systems Organizational Maintenance

Course Number: E-601-0814.

Location: Helicopter Antisubmarine Squadron 10, North Island, CA.

Length: 10 weeks (379 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair power plants and related systems on a complex helicopter.

Instruction: Lectures and laboratories cover maintenance data systems; basic corrosion control; mobile electric power supply; applicable shaft turbine engines, including fuel, lubricating, and electrical systems; engine inspection and troubleshooting; auxiliary power unit operation and built-in test equipment systems; fire extinguishing systems; aircraft fuel system; and main rotor and tail rotor transmission and drive systems. Completion of the course provides the technician with the qualifications to inspect, service, and maintain those systems that are categorized as power plant or rotor related.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft power plant systems turbine, 2 in helicopter maintenance heavy turbine power systems, and 3 in helicopter maintenance heavy turbine power systems laboratory (3/92).

NV-1704-0346

SH-60F/HH-60H Non-designated Airman

Course Number: E-600-0812.

Location: Helicopter Antisubmarine Squadron 10, North Island, CA.

Length: 4 weeks (138 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify corrosion types and causes, operate electrical ground power units for aircraft use, describe helicopter major system components, and describe daily inspection and cleaning requirements for helicopter operation in a harsh environment.

Instruction: Lectures and laboratories cover maintenance familiarization, ground support equipment, corrosion and corrosion control, ground handling of helicopters, and helicopter servicing.

Credit Recommendation: In the vocational certificate category, 1 semester hour in the general section of an FAA aviation maintenance technician school (2/93).

NV-1704-0347

SH-60F/HH-60H Electrical/Instrument Systems Consolidated Maintenance

Course Number: E-602-0855; C-602-0855.

Location: Helicopter Antisubmarine Squadron 10, North Island, CA.

Length: 11-13 weeks (500-520 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, remove, and replace electrical components within the AC and DC generation systems, interior and exterior lighting systems, and instruments and warning systems. The student will be able to operate, troubleshoot, and replace components in the fuel transfer, quantity indicating, and pressure refueling systems; troubleshoot and repair the engine electrical control system, anti-ice system, and blade-fold system; troubleshoot and replace components in the landing gear and flotation systems including main wheel and tail wheel brakes; and troubleshoot and repair the environmental control, fire protection, auto flight control, and stability systems.

Instruction: Lectures and practical exercises cover the topics mentioned above.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in aircraft hydraulic, electrical, fire protection, and instrument systems as applicable to an FAA maintenance technician school (11/92).

NV-1704-0348

P-3C Integrated Avionics System Data Processing Systems One and Three Organizational Maintenance

Course Number: C-102-4579.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 1-2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair a P-3C data processing system.

Instruction: Lectures, practical exercises, and exams cover the functional operation of typical computer components, including registers, NOR, XOR, multiplexers, line drivers, receivers, data buffers, error code identification, and corrective action.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computers systems troubleshooting and maintenance (7/92).

NV-1704-0349

P-3C Integrated Avionics System, Display Systems Organizational Maintenance

Course Number: C-102-4580.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 1-2 weeks (48 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and maintain the display systems of the aircraft.

Instruction: Lectures, laboratories, and exams cover system operation and component function, including video display circuits, power supplies, voltage regulators, sweep circuits, summing amplifiers, D/A converters, and cathode ray tube and matrix readout assemblies. Oscilloscopes and multimeters are used to determine component functional failure.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1704-0350

P-3C Integrated Avionics System Sensor Station Three Systems Organizational Maintenance

Course Number: C-102-4581.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 3-4 weeks (144 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot the avionics systems located in the rear of the P-3C aircraft including 240 degree search radar, IFF/SIF transponder, magnetic anomaly detector, and infrared detector and apply the principles of radar, microwaves, and magnetometers.

Instruction: Lectures, performance exercises, and exams use meters and oscilloscopes to analyze and repair the avionics systems in the aircraft.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1704-0351

P-3C Integrated Avionics Systems Update Navigation/Communication Systems Organizational Maintenance

Course Number: C-102-4590.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and troubleshoot communications and navigation equipment, including ADF, VOR, TACAN, marker beacon, and HF-UHF-VHF radio and teletype.

Instruction: Lectures, laboratories, and exams cover navigation systems, radio navigation systems, Doppler systems, and the P-3C avionics system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications (7/92).

NV-1704-0352

Aircraft Sealed Instrument Repair Intermediate Maintenance

Course Number: C-602-3019.

Location: Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair aircraft instruments and apply the physics of sensing instruments to measure temperature, altitude, attitude, pressure, and speed.

Instruction: Lectures, performance exercises, and examinations cover disassembly, alignment, operational checks, and selected repair of aircraft instruments. Meters, oscilloscopes, test sets, and special tools are used extensively.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1704-0353

Aviation Support Equipment Portable Hydraulic Power Supply Intermediate Maintenance

Course Number: *Version 1:* C-602-3232A. *Version 2:* C-602-3232.

Location: *Version 1:* Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA. *Version 2:* Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: *Version 1:* 2-3 weeks (72 hours). *Version 2:* 1-2 weeks (72 hours).

Exhibit Dates: *Version 1:* 11/95–Present. *Version 2:* 1/90–10/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, troubleshoot, repair, and maintain a portable hydraulic power supply unit using proper tools, test equipment, and MRC cards. *Version 2:* Upon completion of the course, the student will be able to operate, troubleshoot, repair, and maintain a portable hydraulic power supply unit using proper tools, test equipment, and MRC cards.

Instruction: *Version 1:* Lectures, performance exercises, and examinations cover hydraulic test stand systems and operations and portable hydraulic power supply systems and operation. *Version 2:* Lectures, performance exercises, and examinations cover hydraulic test stand systems and operations and portable hydraulic power supply systems and operation.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour aircraft support equipment maintenance (10/96). *Version 2:* In the vocational certificate category, 1 semester hour in aircraft support equipment maintenance (7/92).

NV-1704-0354

MEP-105A/009A Generator Set Intermediate Maintenance

Course Number: C-602-3272.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 11/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot a 60 kW, 120 volt, 60 Hertz diesel generator used to provide ground power to ground support equipment.

Instruction: Lectures, performance exercises, and examinations use meters and hand tools to troubleshoot and repair 60 Hertz diesel generators.

Credit Recommendation: In the vocational certificate category, 1 semester hour in power generation and 1 in electronic systems troubleshooting and maintenance (7/92).

NV-1704-0355

P-3C Integrated Electrical Systems Organizational Maintenance

Course Number: C-602-3571.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–6/92.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot aircraft lighting, fuel, engine and propeller control, APU, hydraulic, inertial navigation, automatic flight control, and pitch and roll systems.

Instruction: Lectures, practical exercises, and examinations cover the inspection, operation, repair, and replacement of the assemblies and units of the electrical systems; inertial navigation system; autopilot, including electrical power, lighting, and engine controls; fuel, oil, propeller, and fire detection systems; instruments; hydraulics; landing gear; and ice control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical control systems (7/92).

NV-1704-0356

A-6 Airframes and Hydraulic Organizational Maintenance

Course Number: C-602-3761.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify, inspect, troubleshoot, and repair the hydraulic main, sub, and emergency systems; identify and inspect the primary and auxiliary flight control systems; and identify, inspect, and troubleshoot the landing gear, brake, nose wheel steering, and emergency extension systems.

Instruction: Instruction consists of classroom lectures, audiovisual presentations, and laboratory experience. Written and performance examinations are used for student evaluation. Major topics are aircraft hydraulic system, flight control system, and landing gear system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulic systems, 2 in landing gear systems, and 1 in flight control systems (10/92).

NV-1704-0357

EA-6B ICAP 2 Communication, Navigation, and Radar Organizational Maintenance

Course Number: C-102-3990.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and analyze the communications and navigation systems of a particular aircraft under close supervision. The student will also perform limited maintenance on each system.

Instruction: Classroom lectures, laboratory demonstrations, and student workbooks are the methods of instruction. Applications include systems analysis and troubleshooting using test equipment and system diagrams.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in communications and navigation systems and 1 in aircraft electrical systems (10/92).

NV-1704-0358

EA-6B Electrical and Instrument Systems Consolidated Organizational Maintenance

Course Number: C-602-9744.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 6 weeks (240 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the student will be familiar with AC and DC power, exterior and interior lighting, warning lights, engine electrical and environmental control systems, ice and rain removal, fuel quantity, autopilot, and flight instruments and will be able, under close supervision, to inspect, troubleshoot, and do minor repairs to electrical components of these systems.

Instruction: Lectures and laboratory activities prepare the student for active practice work on the aircraft. System familiarization followed by laboratory practice is used to prepare students to analyze system and component malfunction and remove and replace components in the above systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in communications-navigation, 1 in flight control systems, 1 in hydraulic systems, 1 in fuel systems, and 1 in aircraft electrical systems (10/92).

NV-1704-0359

E-2/C-2 Aircraft Familiarization (Flight Crew)

Course Number: C-2A-3471.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 1-2 weeks (78 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain aircraft systems and their functions and demonstrate knowledge of cockpit layout.

Instruction: Classroom instruction includes mechanical, hydraulic, structural, electrical, and electronic systems and emergency systems and cockpit orientation of the specific aircraft.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft familiarization (12/92).

NV-1704-0360

E-2/C-2 Power Plants/Propeller and Related Systems Integrated Organizational Maintenance

Course Number: C-601-9472.

Location: Air Maintenance Training Group Detachment, Norfolk, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the function of power section components of aircraft turboshaft engines and be able to troubleshoot, remove, and reinstall accessory components of aircraft turboshaft engines including propeller systems.

Instruction: Lectures and practical exercises cover the theory of operation of turboshaft aircraft engines, including engine control systems, engine fuel systems, power section and reduction gear lubrication systems, ignition, cooling, starting, and temperature control. Course also includes a comprehensive study of propeller and propeller control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft turbine engine systems and 1 in aircraft propeller systems (12/92).

NV-1704-0361

Aircraft Hydraulic and Pneumatic Component Test Stand (HCT-10) and Limited Aircraft Component Intermediate Maintenance

Course Number: C-602-3191.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 6/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform bench test procedures, troubleshooting, and maintenance on selected aircraft components while under close supervision.

Instruction: Topics covered by lecture and laboratory methods include operational testing, troubleshooting, and maintaining hydraulic and pneumatic system components which include variable displacement pumps and brake and system accumulators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulic system bench testing (12/92).

NV-1704-0362

E-2/C-2 Aircraft Rigging Organizational Maintenance

Course Number: C-602-3471.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 3 weeks (12 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the operation of landing gear and related systems and wing fold and jury strut systems and rig and adjust landing gear and flight control systems.

Instruction: Methods of instruction include lectures and laboratory on aircraft hydraulic flight control and landing gear systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft hydraulic and pneumatic power systems (12/92).

NV-1704-0363

TF 30-P-414 Series Engine First Degree Intermediate Maintenance

Course Number: C-601-3898.

Location: Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA.

Length: 8 weeks (320 hours).

Exhibit Dates: 9/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the theory of operation, nomenclature, and maintenance, and, under supervision, disassemble, inspect, and reassemble turbofan engines.

Instruction: Topics covered in the classroom include turbofan engine nomenclature, lubrication, fuel, ignition, cleaning and inspection of engine parts, and inspection of subassemblies. Topics covered in the laboratories include fan section, hot section, engine disassembly, cleaning, inspection, and reassembly.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in turbofan engine maintenance (12/92).

NV-1704-0364

F-14D Electrical Integrated Systems Organizational Maintenance

Course Number: C-602-9893.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 11-12 weeks (443 hours).

Exhibit Dates: 11/92–6/96.

Learning Outcomes: Upon completion of the course, the student will be able to perform systems analysis and troubleshooting of an aircraft electrical system, including power, lighting, engine monitoring, fire detection, and hydraulic interface.

Instruction: Methods include small group lectures with supervised laboratory. Emphasis is on testing and troubleshooting down to the subsystem level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft electrical troubleshooting and maintenance (12/92).

NV-1704-0365

C-2A Electrical and Instruments Integrated Organizational Maintenance

Course Number: C-602-9495.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze and troubleshoot typical aircraft electrical distribution and instrumentation systems, including AC and DC power distribution, lighting, engine instrumentation and wiring, air conditioning, and autoflight controllers.

Instruction: Methods include group-paced instruction using workbooks and demonstrations. Emphasis is on fault diagnosis and on subassembly removal and replacement.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft/instrumentation systems and 1 in electronic systems troubleshooting and maintenance (12/92).

NV-1704-0366

E-2 Electrical and Instruments Integrated Organizational Maintenance

Course Number: C-602-9479.

Location: Air Maintenance Training Group Detachment, Norfolk, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze and troubleshoot typical aircraft electrical distribution and instrumentation systems, including AC and DC power distribution, lighting, engine instrumentation and wiring, air conditioning, and autoflight controllers.

Instruction: Methods include group-paced instruction using workbooks and demonstrations. Emphasis is on fault diagnosis and subassembly removal and replacement.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft/instrumentation systems and 1 in electrical systems troubleshooting and maintenance (12/92).

NV-1704-0367

F-14A/A+ Wing Surface Control System
Rigging Organizational Maintenance

Course Number: C-602-3902.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 11/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform operational testing, troubleshooting, and fundamental rigging procedures on wing flaps, slats, and spoilers.

Instruction: Topics covered, using classroom and laboratory methods, include the operational testing, troubleshooting, and rigging of wing flaps, slats, and spoilers. Lectures also cover associated auxiliary devices.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in flight surface control rigging and maintenance (12/92).

NV-1704-0368

E-2C Navigation System Technician
Integrated Organizational
Maintenance

Course Number: C-602-9483.

Location: Air Maintenance Training Group Detachment, Norfolk, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply principles of operation and troubleshoot, remove, replace, and test aircraft onboard inertial navigation system components including attitude reference systems.

Instruction: Lectures and laboratory presentations detail component functions and input/output relationships within the aircraft inertial navigation system, including power supply, sensing, alignment, and interface of avionic components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft navigation systems (12/92).

NV-1704-0369

E-2/C-2 Airframe and Hydraulics Systems
Integrated Organizational
Maintenance

Course Number: C-602-9478.

Location: Air Maintenance Training Group Detachment, Norfolk, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 4-5 weeks (192 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, test, remove, and replace hydraulically operated landing gear and airframe components.

Instruction: Topics covered in classroom and laboratory include maintenance, operational testing, troubleshooting, removing and replacing hydraulic pumps, accumulators, flight control surface actuation devices, nose and main landing gear actuation devices, and brake and tire assemblies. Also covered is the operational testing and theoretical troubleshooting of the nose wheel steering, emergency gear, and windshield wiper systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in hydraulic power systems and 2 in landing gear systems (12/92).

NV-1704-0370

T56-A-425/426 Engine Second Degree
Intermediate Maintenance

Course Number: C-601-3134.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to disassemble, inspect, and reassemble a turboshaft aircraft engine.

Instruction: Lectures and laboratory exercises cover identification of engine components; engine preservation; and disassembly, inspection, and reassembly of major engine sections, including reduction gear, compressor, diffuser, turbine, and accessory section.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft turbine engines (12/92).

NV-1704-0371

C-2A (Reprocured) Avionics Systems
Integrated Organizational
Maintenance

Course Number: C-102-9496.

Location: Air Maintenance Training Group Detachment, Norfolk, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 5-6 weeks (232 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain aircraft communications, navigation, and radar systems, including troubleshooting, testing, removing, and replacing system components.

Instruction: Lectures and laboratories cover the basic principles of operating, testing, and troubleshooting of LF, HF, VHF, and UHF communications and navigation systems and various radar systems. Also included is a study of internal communications and public address systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft avionics systems (12/92).

NV-1704-0372

F-14D Armament Systems Integrated
Organizational Maintenance

Course Number: C-646-9905.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 2/92–6/96.

Learning Outcomes: Upon completion of the course, the student will be able to explain nomenclature, theory, and function of the armament system and test and troubleshoot under minimal supervision.

Instruction: Topics covered include theory of operation, inspection, functional testing, and troubleshooting of the armament and gun systems. Using the same classroom and laboratory methods, the student will learn to meet mission configuration requirements and perform loading and downloading of these systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/92).

NV-1704-0374

1. T56-A-14 First Degree Intermediate
   Maintenance
2. T56-A-10/14 First Degree Intermediate
   Maintenance

Course Number: *Version 1:* C-601-3574A. *Version 2:* C-601-3574.

Location: *Version 1:* Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA; Air Maintenance Training Group, Jacksonville, FL. *Version 2:* Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: *Version 1:* 7-8 weeks (200 hours). *Version 2:* 4-5 weeks (160-200 hours).

Exhibit Dates: *Version 1:* 1/96–Present. *Version 2:* 1/90–12/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the theory of operation and component relationships of turboshaft engines and disassemble, inspect, and reassemble the entire engine package. Course includes fuel and oil systems path of flow, bleed air, ignition, and temperature datum systems operation. *Version 2:* Upon completion of the course, the student will be able to describe the theory of operation and component relationships of turboshaft engines and disassemble, inspect, and reassemble the entire engine package.

Instruction: *Version 1:* Lectures and laboratory place emphasis on laboratory disassembly, inspection, and reassembly of engine gas producer, power, reduction gear, and accessory sections. *Version 2:* Lectures and laboratory place emphasis on laboratory disassembly, inspection, and reassembly of engine gas producer, power, reduction gear, and accessory sections.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft turbine engine theory, maintenance, and major overhaul (10/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft turbine engine theory, maintenance, and major overhaul (3/93).

NV-1704-0375

P-3A/B Integrated Electrical System
Organizational Maintenance

Course Number: C-602-3535.

Location: Air Maintenance Training Group, Moffett Field, CA.

Length: 5-6 weeks (235 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory and operation of aircraft electrical systems and repair and test individual components.

Instruction: Lectures cover electrical power generation and distribution, lighting, system instrumentation, propeller synchrophasing, engine starting, ice control, flight control, and autopilot system. Course includes extensive laboratories.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft electrical systems (3/93).

NV-1704-0376

P-3A/B Ordnance Systems Organizational Maintenance

Course Number: C-646-3531.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 2-3 weeks (104 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand the operation and servicing requirements of aircraft ordnance systems.

Instruction: Lectures and laboratories cover aircraft ordnance systems, including bomb bay, search, and camera system operation.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/93).

NV-1704-0377

P-3C Integrated Electrical System Integrated Organizational Maintenance

Course Number: C-602-9571.

Location: Air Maintenance Training Group, Moffett Field, CA; Air Maintenance Training Group, Jacksonville, FL.

Length: 9-10 weeks (384 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect and troubleshoot AC and DC electrical systems and navigation and automatic flight control systems on an aircraft.

Instruction: Lectures and laboratories use audiovisuals, publications, tools, test equipment, and trainers. Topics include AC/DC electrical systems, lighting system, auxiliary power unit, engine control instrumentation, engine temperature and oil system, cabin environmental system, engine emergency systems, fire detection, ice and rain control, and hydraulic and fuel systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in aircraft electrical systems (3/93).

NV-1704-0378

P-3 Engine Driven Compressor Intermediate Maintenance

Course Number: C-601-3576.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory of operation and maintain an engine-driven compressor system used for environmental control system in an aircraft, including component balancing, overhaul, and testing.

Instruction: Lectures and laboratory exercises cover the identification, operation, and overhaul of environmental compressor system, including disassembly, individual component testing, and reassembly. Course includes propeller balancing and overhaul of individual components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft environmental control systems (3/93).

NV-1704-0379

P-3C Flight Engineer System Familiarization

Course Number: C-050-3531.

Location: Reserve Antisubmarine Warfare Training Center, Willow Grove, PA; Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 11/90–Present.

Learning Outcomes: Before 11/90 see NV-1704-0048. Upon completion of the course, the student will be able to describe the theory and operation of all aircraft systems, including electrical, environmental, power plant and related systems, communications, navigation, ice and rain control, and emergency.

Instruction: Lectures and practical exercises cover aircraft systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in aircraft systems theory and operation (3/93).

NV-1704-0380

P-3 Structures Hydraulic Power and Flight Controls Integrated Organizational Maintenance

(P-3 Structures Hydraulic Power and Flight Controls Organizational Maintenance)

Course Number: C-603-9531; C-603-3531.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 3-5 weeks (120-176 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe basic aircraft structures, including wings, flight controls, fuselage, and landing gear. Student will be able to maintain fuel tanks and windshield and aircraft hydraulic systems, including servicing, removing, and replacing components such as pumps, control valves, and actuating components.

Instruction: Lectures and laboratory presentations use transparencies, mock-ups, and actual aircraft to show location, operation, servicing, and removal and replacement of specific components such as hydraulic components, flight controls, fuel tanks, windshields, landing gear, and brake components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic aircraft hydraulic systems and 1 in aircraft structures (3/93).

NV-1704-0382

Auxiliary Power Unit First Degree Intermediate Maintenance Repair

Course Number: C-601-3868.

Location: Air Maintenance Training Group, Lemoore, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, disassemble, and repair the auxiliary power unit under close supervision.

Instruction: Lectures, visual aids, technical manuals cover the complete disassembly and reassembly of the power unit.

Credit Recommendation: In the vocational certificate category, 1 semester hour in jet engine maintenance (8/93).

NV-1704-0383

F/A-18 Power Plants and Related Systems Organizational Maintenance

Course Number: C-601-3866.

Location: Air Maintenance Training Group, Lemoore, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under supervision, organizational maintenance on an aircraft fuel system, secondary power system, and engine system including applicable test and support equipment.

Instruction: Lectures and practical exercises cover maintaining the F404-GE-400 engine, F/A-18 fuel systems, and secondary power system.

Credit Recommendation: In the vocational certificate category, 2 semester hours (1 in theory and 1 in laboratory) in jet engine maintenance (8/93).

NV-1704-0384

F/A-18 Combined Electronics Systems Consolidated Organizational Maintenance

Course Number: C-102-9963.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 16 weeks (472 hours).

Exhibit Dates: 4/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform organizational maintenance of communications, navigation, electronic warfare, and weapons delivery systems under close supervision.

Instruction: Lectures and practical exercises use military-specific test equipment for installed equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours (1 theory and 1 laboratory) in aircraft systems (8/93).

NV-1704-0385

F/A-18 Hydraulic/Structures Mechanic Organizational Maintenance

Course Number: C-603-3866.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 5 weeks (184 hours).

Exhibit Dates: 1/90–6/91.

Learning Outcomes: Upon completion of the course, the student will be able to maintain the hydraulic power related systems and structures on the F/A-18 aircraft, under close supervision, in the operational and small shop environment.

Instruction: Presented through lectures, with limited practical exercises, topical content includes an introduction to test and support equipment and related maintenance practices applicable to operating, troubleshooting, and maintaining flight control and aircraft systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours (2 lecture and 1 laboratory) in aircraft hydraulic systems maintenance (8/93).

NV-1704-0386

F/A-18 Aviation Hydraulic/Structure Mechanic Consolidated Organizational Maintenance

Course Number: C-603-9974.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 9 weeks (280 hours).

Exhibit Dates: 6/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspection, service, and maintain hydraulic powered aircraft structures and systems, under close supervision, in a small shop or operational environment.

Instruction: Provided through a balance of lectures and practical exercises, topical content includes inspection, operation, service, and maintenance of aircraft hydraulic systems and components.

Credit Recommendation: In the vocational certificate category, 4 semester hours (2 lecture and 2 laboratory) in aircraft hydraulic systems maintenance (8/93).

NV-1704-0387

F404-GE-400 Engine First Degree Intermediate Maintenance

Course Number: C-601-3867.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 8/90–Present.

Learning Outcomes: Upon completion of the course, the student will have a fundamental knowledge of the F404-GE-400 jet engine and accessory inspection, disassembly, assembly, and installation.

Instruction: Through a combination of class lectures and laboratories, demonstration, and performance, the student will perform shop maintenance actions on turbofan engines. Topical areas include an introduction to jet engine operating principles and covers engine modules, systems, and accessories.

Credit Recommendation: In the vocational certificate category, 3 semester hours (1 lecture and 2 laboratory) in jet engine maintenance (8/93).

NV-1704-0388

F/A-18 Power Plants and Related Systems Integrated Organizational Maintenance

Course Number: C-601-9974.

Location: Air Maintenance Training Group, Lemoore, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 12/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use applicable test and support equipment to perform organizational maintenance on the F/A-18 aircraft fuel system, secondary power system, and engine system under supervision.

Instruction: Lectures and practical exercises cover maintaining the F404-GE-400 engine, F/A-18 fuel system, and secondary power system.

Credit Recommendation: In the vocational certificate category, 3 semester hours (1 theory and 2 laboratory) in jet engine maintenance (8/93).

NV-1704-0389

LSD-41 Propulsion Operator

Course Number: A-652-0307.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the propulsion control console of a controllable-pitch diesel-driven vessel.

Instruction: Lectures, demonstrations, and practical exercises are used to teach descriptive knowledge of a controllable-pitch propeller and hydraulic control system and its associated normal and emergency operating procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in applied hydraulics control laboratory (7/95).

NV-1704-0390

FFG-7 Fin Stabilizer Systems
(Basic Hydraulics for FFG-7 Auxiliaries)

Course Number: *Version 1:* A-652-0164. *Version 2:* A-652-0164.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 3 weeks (120 hours). *Version 2:* 3-4 weeks (120-160 hours).

Exhibit Dates: *Version 1:* 1/94–Present. *Version 2:* 1/92–12/93.

Learning Outcomes: *Version 1:* Before 1/94 see NV-1704-0269. Upon completion of the course, the student will be able to describe the basics of fluid power and hydraulic systems and basic theory of static hydraulic system components, including fluid statics, hydraulic fluid properties, reservoirs, accumulators, filters, strainers, pumps, seals, and valves and troubleshoot hydraulic systems. *Version 2:* Upon completion of the course, the student will be able to describe the basics of fluid power and hydraulic systems and basic theory of static hydraulic system components, including fluid statics, hydraulic fluid properties, reservoirs, accumulators, filters, strainers, pumps, seals, and valves and troubleshoot hydraulic systems.

Instruction: *Version 1:* Course includes topics in troubleshooting and repairing hydraulic power systems and extensive laboratory work. *Version 2:* Course includes topics in troubleshooting and repairing hydraulic power systems and extensive laboratory work.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in hydraulic machinery repair and troubleshooting (7/95); in the lower-division baccalaureate/associate degree category, 1 semester hour in fluid statics/basic hydraulics and 1 in hydraulics laboratory (7/95). *Version 2:* In the vocational certificate category, 4 semester hours in hydraulic machinery repair and troubleshooting (10/93); in the lower-division baccalaureate/associate degree category, 1 semester hour in fluid statics/basic hydraulics and 1 in hydraulics laboratory (10/93).

NV-1704-0391

FFG-7 Auxiliary Mechanical System Technician

Course Number: A-652-0233.

Location: Service School Command, Great Lakes, IL.

Length: 15-18 weeks (640-720 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and repair mechanical systems, including diesel, pallet elevators, fin stabilizers, and auxiliary equipment.

Instruction: This pipeline consists of A-652-0152, Introduction to Engineering Systems Maintenance and Management (Engineering Systems Maintenance Management); A-652-0164, FFG-7 Fin Stabilizer Systems (Basic Hydraulics for FFG-7 Auxiliaries) (Hydraulics/Fin Stabilizer System); A-652-0158, FFG-7 Auxiliary Mechanical Systems Maintenance (Auxiliary Mechanical Systems); and A-652-0167, Diesel Engine/Waste Heat FFG-7 (Waste Heat System/16V149TI Diesel Engine).

Credit Recommendation: Please refer to the individual exhibits as noted above for credit recommendation (1/96).

NV-1704-0392

H-46E (SR&M) Hydraulic Systems Organizational Maintenance

Course Number: C-603-3419.

Location: Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, New River, NC.

Length: 3-4 weeks (130 hours).

Exhibit Dates: 8/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify and operate basic hydraulic systems, troubleshoot and replace components, and maintain and service auxiliary systems.

Instruction: Course covers the main and auxiliary hydraulic systems for large twin-rotor helicopter, including systems layout; component identification and function; hydraulic pumps, motors, fittings, and control devices related to rotor; cargo handling; engine starting; flight controls and main landing gear; actuation; and braking. Methodology includes lectures, demonstrations, and laboratory work using mock-ups and live components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in fluid power systems (7/94).

NV-1704-0393

H-46 Automatic Flight Control Systems (AFCS) Organizational Maintenance

Course Number: C-602-3428.

Location: Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, New River, NC.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, maintain, and service automatic flight control systems.

Instruction: Course covers automatic flight control system theory of operation; aircraft flight controls, including manual, electro, and hydraulic actuated; sensing devices, including Pitot-static, navigation radio, and Doppler inputs; and troubleshooting of entire system. Methodology includes lectures and laboratories with demonstrations using mock-ups, test equipment, and live aircraft systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in helicopter flight controls (7/94).

NV-1704-0394

H-46E MECHANICS ORGANIZATIONAL MAINTENANCE COURSE, CLASS C1

Course Number: C-600-3422.

Location: Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, New River, NC.

Length: 6-7 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform organizational maintenance on H-46E landing gear, hydraulic systems and subsystems, power plant, engine electrical system, rotor system, and all related systems.

Instruction: Course covers maintenance of H-46 landing gear, power plant, rotor, drive, flight control, and utility systems and electrical and hydraulic systems. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in rotorcraft systems maintenance, 1 in basic hydraulics, and 1 in aircraft power plants (7/94).

NV-1704-0395

H-46 FIBERGLASS ROTOR BLADE REPAIR INTERMEDIATE MAINTENANCE

Course Number: C-600-3420.

Location: Air Maintenance Training Group, New River, NC.

Length: 2 weeks (76 hours).

Exhibit Dates: 12/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform damage evaluation and repair fiberglass rotor blades; identify and use solvents; implement safety precautions, and have sufficient knowledge of H-46 fiberglass rotor blade construction to perform repair on the intermediate maintenance level.

Instruction: Course covers H-46 fiberglass rotor blade damage evaluation and repair procedures with emphasis on safety. Methodology includes lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in fiberglass repair (7/94).

NV-1704-0396

H-46 FIBERGLASS ROTOR BLADE REPAIR INTERMEDIATE MAINTENANCE

Course Number: C-600-3419.

Location: Air Maintenance Training Group, New River, NC.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 12/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to evaluate damage and repair fiberglass rotor blades; identify adhesives and solvents; distinguish between fiberglass and metal rotor blades; and implement safety precautions on the H-46 helicopter at the organizational maintenance level.

Instruction: Course covers H-46 fiberglass rotor blade damage evaluation and repair procedures with emphasis on safety. Methodology includes lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in fiberglass repair (7/94).

NV-1704-0397

F402-RR-406A ENGINE INTERMEDIATE MAINTENANCE

Course Number: C-601-3889.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand the theory of operation of the F402-RR-406A engine and be able to removal, repair, and maintain the entire engine package.

Instruction: Course covers the theory of operation of the RR-406A turbofan engine, including engine airflow and component location and function and engine section function, including entire engine removal, disassembly, repair, and maintenance. Methodology includes lectures with demonstrations using mock-ups and laboratory work with airworthy engines and components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in aircraft turbine engine maintenance (7/94).

NV-1704-0398

AV-8B AIRCRAFT MECHANIC INTEGRATED ORGANIZATIONAL

Course Number: C-600-9889.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 10-11 weeks (408 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance on the AV-8B aircraft, fuel system, and power plant on the organizational level.

Instruction: Course covers safety, ground handling, fuel systems, theory, operation, maintenance, and aircraft inspections on AV-8B aircraft. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in aircraft fuel systems, 4 in aircraft turbine engines, 2 in aircraft engine airworthiness inspection, and 1 in aircraft ground operations (7/94).

NV-1704-0399

AV-8B AIRCRAFT COMMUNICATION/NAVIGATION/IDENTIFICATION ELECTRONIC COUNTERMEASURES/WEAPONS SYSTEM SPECIALIST INTEGRATED ORGANIZATIONAL MAINTENANCE

Course Number: C-102-9895.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 12 weeks (480 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will understand the theory of operation and the functions of the AV-8B communications/navigation/weapons systems and will troubleshoot and maintain the COM/NAV systems.

Instruction: Course covers the basic theory of operation of onboard AV-8A communication/navigation/weapons systems, aircraft sheath, onboard mission computer system, communications, navigation, countermeasures, and night operations including radar and Doppler systems. Methodology includes lectures and laboratory demonstrations using mock-ups and maintenance of airworthy aircraft, applying appropriate troubleshooting and testing equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft communications and navigation systems maintenance (7/94).

NV-1704-0400

AV-8B AIRCRAFT STRUCTURES MECHANIC INTEGRATED ORGANIZATIONAL MAINTENANCE

Course Number: C-603-9887.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 7-8 weeks (302 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the structure, flight controls, and landing gear systems on the AV-8B aircraft at the organizational maintenance level.

Instruction: Course covers technical manuals, aircraft ground handling, structures, and flight controls, principles of operation, testing and troubleshooting, and landing gear operation and maintenance. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft structural mechanic, 1 in aircraft landing gears, and 2 in aircraft assembly and rigging (7/94).

NV-1704-0401

AV-8B AIRCRAFT SAFETY EQUIPMENT MECHANIC INTEGRATED ORGANIZATIONAL MAINTENANCE

Course Number: C-602-9888.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 5-6 weeks (236 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and maintain the safety equipment and environmental control systems on the AV-8B aircraft at the organizational maintenance level.

Instruction: Course covers technical manuals, safety, aircraft ground handling procedures, environmental control systems, cabin cooling and defog, cabin pressurization, avionics, cooling, canopy seal and anti-G, and oxygen generating system. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft cabin atmosphere control systems (7/94).

NV-1704-0402

AV-8B Aircraft Hydraulic/Pneumatic Mechanic Integrated Organizational Maintenance

Course Number: C-603-9889.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 4 weeks (160 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect, troubleshoot, and repair AV-8B hydraulic and pneumatic power systems.

Instruction: Course covers AV-8B hydraulic and pneumatic power systems, hydraulic pumps, motors, actuators, fittings and tubing repair, replacement systems, hydraulic power generation, flight control systems, landing gear systems, nose wheel steering, and antiskid components. Methodology includes lectures and laboratory experiences using mock-ups and live aircraft demonstrations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft fluid power system maintenance and repair (7/94).

NV-1704-0403

AV-8B Aircraft Ordnance Technician Integrated Organizational Maintenance

Course Number: C-646-9888.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 4-5 weeks (187 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the armament system at the organizational maintenance level.

Instruction: Course covers safety, ground handling, and general knowledge of the AV-8 aircraft and operation and maintenance of the armament system. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft ground operations and handling (7/94).

NV-1704-0404

AV-8B Aircraft Electrical Systems Technician Integrated Organizational Maintenance

Course Number: C-602-9887.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 11-12 weeks (470 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the student will understand the theory of operation and troubleshooting and maintenance practices for the AV-8B electrical system.

Instruction: Course covers AV-8B basic electrical system for aircraft power generation, lighting, environmental control, landing gear, braking, flight controls, and engine operation and monitoring. Methodology includes lectures and laboratory demonstrations using mock-ups and training devices.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft electrical system (7/94).

NV-1704-0405

Fixed Wing Electrical/Instrument Systems Intermediate Maintenance

Course Number: C-602-4893.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 4 weeks (160 hours).

Exhibit Dates: 2/91–Present.

Learning Outcomes: Upon completion of the course, the student will understand theory of operation and component function and be able to troubleshoot AV-8B/ F/A 18 electrical power generation systems.

Instruction: Course covers the theory of operation, testing, troubleshooting, and maintenance of AV-8B/F-18 electrical power generating systems, including MA-3 generator test stand, flight control sensors, and sealed lead acid battery. Methodology includes lectures and laboratories using demonstrations and mock-ups.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft electrical power generation systems (7/94).

NV-1704-0406

F402-RR-408 Engine Intermediate Maintenance

Course Number: C-601-3891.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 14 weeks (400 hours).

Exhibit Dates: 7/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to remove, repair, and maintain the RR-408 turbofan engine.

Instruction: Course covers the RR-408 turbofan engine, including the operation, function, removal, repair, and maintenance practices of the individual engine sections and the entire engine package. Methodology includes lectures and laboratory demonstrations using mock-ups and airworthy engines and components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in aircraft turbine engine maintenance (7/94).

NV-1704-0407

AV-8B Aircraft Communication/Navigation/Weapons System Specialist Organizational Maintenance

Course Number: C-102-9895.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 19 weeks (532 hours).

Exhibit Dates: 9/94–Present.

Learning Outcomes: Upon completion of the course, the student will understand the theory of operation and practical function of the AV-8B communications/navigation/weapons systems and be able to troubleshoot and maintain communications/navigation systems.

Instruction: Course covers the basic theory of operation of onboard AV-8B communications/navigation/weapons systems, including aircraft safety, onboard mission computer system, communications, navigation, countermeasures, and night operations including radar and Doppler systems. Methodology includes lectures and laboratory demonstrations using mock-ups and airworthy aircraft using appropriate troubleshooting and testing equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft communications and navigation systems maintenance (7/94).

NV-1704-0408

Aviation Armament Equipment Repair Intermediate Maintenance

Course Number: C-646-3126.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 4-5 weeks (184 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect, test, and repair release and suspension equipment, missile launchers, and gun systems associated with fighter/attack aircraft at the intermediate maintenance level.

Instruction: Course covers technical publications, corrosion control, multimeters, airborne guided missile launchers, ejector racks, multiple bomb racks, loading and downloading, and safety precautions. Methodology including classroom lectures and practical exercises.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/94).

NV-1704-0409

AN/ASW-40, 41, and 42 Automatic Flight Control System Intermediate Maintenance

Course Number: C-602-3941.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3-4 weeks (149 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the purpose and theory of automatic flight control systems and components and perform bench testing and troubleshooting of electronic modules using schematics, drawings, multimeters, oscilloscopes, and automatic flight control test equipment.

Instruction: Lectures and practical exercises focus on the specific parts of the flight control system. Troubleshooting techniques are emphasized.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in theory of integrated automatic flight control systems and 1 in integrated automatic flight control systems laboratory (10/94).

NV-1704-0410

EA-6B Safety Equipment Organizational Maintenance

Course Number: C-602-9743.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 4-5 weeks (164 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the students will be able to inspect aircraft liquid and gaseous oxygen systems; practice safety precautions associated with oxygen systems and servicing of the systems; check the operation of the cabin environmental systems, including pressurization, temperature, and emergency escape systems; check the operation of the windshield rain and antifog systems; and practice safety precautions associated with operating these systems.

Instruction: Students receive 79 hours of theory covering EA-6B oxygen and canopy systems, escape and survival systems, and environmental control systems. Students receive 85 hours of practical application consisting of 25 hours laboratory and 60 hours of actual aircraft maintenance experience. Practical experience is divided into 12 hours of oxygen and canopy systems, 45 hours of escape and survival systems, and 24 hours of environmental control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours aircraft environmental, life support, and ice/rain control systems (10/94).

NV-1704-0411

EA-6B Hydraulic/Structures Systems
Integrated Organizational
Maintenance

Course Number: C-602-9741.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3-4 weeks (144 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe systems operation and the purpose and locations of components, including aircraft wheels, brakes, landing gear, nose wheel steering, and flight control surfaces and actuators. In addition, students will be able to perform rigging checks and adjustments to landing gear, nose wheel steering, and flight control surfaces on actual aircraft.

Instruction: Lectures and practical applications include removal, installation, and rigging of wheels, brakes, and flight control surfaces.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in theory of aircraft wheels, brakes, and flight control maintenance (on the aircraft) and 1 in laboratory in aircraft wheels, brakes, and flight control maintenance (on the aircraft) (10/94).

NV-1704-0412

Aircraft Nondestructive Inspection
Technician

Course Number: C-603-3191.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 14-15 weeks (590-591 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform nondestructive inspection with minimal supervision aboard ship, at shore activities, and at Marine Corps aviation activities.

Instruction: Group-paced instruction teaches aircraft maintenance personnel to perform nondestructive inspections. The curriculum includes instruction in theory and practical performances of liquid penetrant, magnetic particles, eddy current, ultrasonics, and radiographic and composite material inspections. Theory, principles, and applications of optical inspection, gaseous leak detection, electrical conductivity measurement, and ultrasonic leak detection equipment are included. Safety is emphasized in all areas.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in aircraft maintenance nondestructive inspection, 2 in radiology inspection, 3 in basic metals and material processes, and 2 in industrial safety (1/97).

NV-1704-0413

Air Traffic Control Maintenance
Preparatory

Course Number: C-103-2045.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 1-2 weeks (77 hours).

Exhibit Dates: 4/93–Present.

Learning Outcomes: Upon completion of the course, the student will be understand basic entry-level maintenance interface principles.

Instruction: Course includes lectures and laboratories in identifying electronic equipment safety precautions and air traffic control electronic equipment operations.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/95).

NV-1704-0414

Amphibious Air Traffic Control Center
Operations, Class C1

Course Number: C-222-2019.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5 weeks (200 hours).

Exhibit Dates: 6/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to practice prescribed air traffic procedures, coordination, and equipment operation in amphibious air traffic control centers.

Instruction: Course includes lectures and laboratories in air traffic control operation and air traffic control phraseology.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in air traffic control operations (11/95).

NV-1704-0415

Carrier Air Traffic Control Center
Operations

Course Number: C-222-2012.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5-6 weeks (236 hours).

Exhibit Dates: 3/94–Present.

Learning Outcomes: Upon completion of the course, the student will have a basic knowledge of carrier administration, watch station functions, and typical equipment. In addition, the student will have a knowledge of procedures, phraseology, and equipment use in a carrier air traffic control center simulated launch/recovery operation.

Instruction: Lectures, laboratories, and performance exercises cover carrier air traffic control center organization, message/reports, launching and recovering aircraft equipment, air operations, and move and control procedures on aircraft carriers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in record systems management (11/95).

NV-1704-0416

Aviation Boatswain's Mate Aircraft
Handling Advanced, Class C1

Course Number: C-780-2013.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 6-7 weeks (255-265 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide a leadership role during shipboard or shore based aircraft fire fighting and salvage operations. The student will also demonstrate supervisory skills in shipboard administration and aircraft handling.

Instruction: Lectures and performance exercises cover aircraft fire fighting and rescue fundamentals, theory of fire, extinguishing agents, and equipment. Procedures for rescue and hazardous material awareness are included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in heavy equipment operation, 2 in aircraft ground handling, and 2 in industrial safety (1/97).

NV-1704-0417

Aviation Boatswain's Mate Aircraft
Handling, Class A1

Course Number: C-822-2010.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5-6 weeks (219 hours).

Exhibit Dates: 8/93–Present.

Learning Outcomes: Before 8/93 see NV-1728-0020. Upon completion of the course, the student will be able to assist in aircraft ground maneuvering and in fire fighting with direct supervision on shore or at sea.

Instruction: Lectures and performance exercises cover aircraft ground maneuvering and fire fighting techniques.

Credit Recommendation: In the vocational certificate category, 1 semester hour in heavy equipment operation (1/97); in the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft ground handling and 2 in industrial safety (1/97).

NV-1704-0418

Aviation Boatswain's Mate Fuels, Class C2
(Aviation Fuel System, Class C2)

Course Number: C-8B-2010.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 1-2 weeks (60 hours).

Exhibit Dates: 12/94–Present.

Learning Outcomes: Upon completion of the course, the student will possess the necessary knowledge to qualify as aviation fuel officer for shipboard fuel system.

Instruction: The course emphasizes administration of the V-4 division, environmental protection, and theory and operation of both JP-5 and automotive gasoline systems afloat. Safety and quality assurance of aviation fuels are stressed.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/98).

NV-1704-0419

ENGINEERING HYDRAULIC SYSTEMS AND COMPONENTS BASIC

Course Number: K-652-2146.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2-3 weeks (104 hours).

Exhibit Dates: 4/95–Present.

Learning Outcomes: Before 4/95 see NV-1704-0264. Upon completion of the course, the student will be able to describe and repair basic hydraulic systems and components.

Instruction: Methods of instruction include lectures and hands-on exercises. Topics covered include static hydraulic systems and components; basic static fluid physics; reservoirs; filters; strainers; control valves; accumulators; packing seals; positive, nonpositive, and variable displacement pumps; and hydraulic system troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic hydraulics (11/95).

NV-1704-0420

ENGINEERING MECHANICAL CORE

Course Number: A-651-0120.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (144 hours).

Exhibit Dates: 3/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify basic propulsion equipment and components, perform basic maintenance functions on propulsion auxiliary equipment, and safely operate propulsion auxiliary equipment.

Instruction: Lectures, laboratory training, and practical exercises cover power plant operation and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in power plant operation and maintenance (12/95).

NV-1704-0421

ADVANCED RADAR AIR TRAFFIC CONTROL, CLASS C1

Course Number: *Version 1:* C-222-2022. *Version 2:* C-222-2022.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN. *Version 2:* Air Technical Training Center, Memphis, Millington, TN.

Length: *Version 1:* 6 weeks (240 hours). *Version 2:* 9 weeks (360 hours).

Exhibit Dates: *Version 1:* 4/95–Present. *Version 2:* 9/92–3/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will have acquired an advanced understanding of terminal radar approach control procedures, airspace management, and navigation equipment, and will have a basic knowledge of terminal enroute radar procedures (TERPS). Student will have technical knowledge and practical application of procedures used at various positions in air traffic control facilities. *Version 2:* Upon completion of the course, the student will have acquired an advanced understanding of terminal radar approach control procedures, airspace management, and navigation equipment, and will have a basic knowledge of terminal enroute radar procedures (TERPS). Student will have technical knowledge and functional application of procedures used at various positions in air traffic control facilities.

Instruction: *Version 1:* Through a combination of 84 lecture hours and 156 laboratory hours, the student is trained in all aspects of air traffic control with an emphasis on radar and nonradar control, and of sequencing and separation of aircraft in the national airspace system. *Version 2:* Through a combination of 91 lecture hours and 269 laboratory hours, the student is trained in all aspects of air traffic control with an emphasis on radar and nonradar control, and of sequencing and separation of aircraft in the national airspace system.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in national airspace system (1/96); in the upper-division baccalaureate category, 3 semester hours in air traffic control (1/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in national airspace system (1/96); in the upper-division baccalaureate category, 6 semester hours in air traffic control (1/96).

NV-1704-0422

MARINE AIR TRAFFIC CONTROL AND LANDING SYSTEM ADVANCED OPERATOR, CLASS M3

(Marine Air Traffic Control and Landing System Advanced Operator)

Course Number: C-2G-2018; C-2G-2018-M4.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 4 weeks (160 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will have been provided with comprehensive training on the employment and operation of the marine air traffic control and landing systems (MATCALS) and the development of terminal instrument approach procedures (TERPS). Work performed will be at the supervisor level in a highly mobile environment.

Instruction: Through a blending of 31 hours of lecture and 129 hours of laboratory, students gain in-depth understanding of construction and design of instrument approach procedures and are introduced to related aspects of air traffic control.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introductory air traffic control (8/96).

NV-1704-0423

AIRCRAFT LAUNCH AND RECOVERY EQUIPMENT ARRESTING GEAR

Course Number: C-604-2029.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: 3-4 weeks (145 hours).

Exhibit Dates: 7/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the Mark 7 arresting gear under minimum supervision.

Instruction: Includes lectures and performance exercises to provide knowledge and guidance needed to operate the Mk 7 arresting gear.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (1/96).

NV-1704-0424

AIRCRAFT LAUNCH AND RECOVERY EQUIPMENT C7/11 CATAPULT, CLASS C1

Course Number: C-604-2010.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: 4 weeks (149-190 hours).

Exhibit Dates: 1/90–1/96.

Learning Outcomes: Upon completion of the course, the student will have the minimum technical knowledge necessary to operate the C7/11 catapult in all operating conditions.

Instruction: Lectures and practical performance exercises to provide the necessary technical knowledge and skills required for operation of the C7/11 catapult.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/96).

NV-1704-0425

AIRCRAFT LAUNCH AND RECOVERY EQUIPMENT MAINTENANCE TECHNICIAN, CLASS C1

Course Number: C-604-2028.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: 11-12 weeks (457 hours).

Exhibit Dates: 2/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance on aircraft launch (catapult) and aircraft recovery equipment (arresting gear) and complete associated maintenance tasks. Under limited supervision, using approved instructions and publications, student will also demonstrate safety compliance and tool use.

Instruction: During a combination of lecture (141 hours) and laboratory (316 hours), the student will be introduced to maintenance programs, practices, maintenance administration, and safety procedures and practices. The student will be afforded the opportunity to perform maintenance on catapults and associated equipment and aircraft recovery equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in heavy equipment maintenance and 3 in maintenance shop practices (1/96).

NV-1704-0427

TRIDENT DEFENSIVE WEAPONS ORDNANCE SUBSYSTEM AND MAINTENANCE

Course Number: A-123-0178.
Location: Trident Training Facility, Bangor, Bremerton, WA.
Length: 3 weeks (112-120 hours).
Exhibit Dates: 8/95–Present.

Learning Outcomes: Before 8/95 see NV-1704-0276. Upon completion of the course, the student will be able to operate and maintain torpedo and torpedo handling equipment.

Instruction: Lectures and practical exercises cover torpedo system operation, including applications of mechanical, pneumatic, and fluid equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electromechanical systems application (4/96); in the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical and fluid system applications laboratory (4/96).

NV-1704-0428

Trident High Pressure and Low Pressure Air Compressor and Dehydrator Advanced Maintenance

Course Number: A-652-0343.
Location: Trident Training Facility, Bangor, Bremerton, WA.
Length: 2 weeks (64 hours).
Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain high-and low-pressure air compressors or high-pressure air dryer and a low-pressure air-dehydrator.

Instruction: Lecture and laboratory instruction cover the operation and maintenance of high-and low-pressure air compressors, or high-pressure air dryer and low-pressure air dehydrator.

Credit Recommendation: In the vocational certificate category, 2 semester hours in hydraulics operation and maintenance (4/96).

NV-1704-0429

Aviation Machinist Mate Common Core, Class A1

Course Number: C-601-2011.
Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.
Length: 4 weeks (160 hours).
Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the common core, the student will be able to perform as an apprentice jet power plants and related systems mechanic at fleet and shore activities.

Instruction: This common core training covers technical publications, corrosion control, composites, gas turbine engines, and aircraft and engine electrical and fuel systems.

Credit Recommendation: The credit recommendation for the common core is included in the strand training programs. See the individual courses (1/97).

NV-1704-0430

Aviation Machinist Mate Helicopter Fundamentals Strand, Class A1

Course Number: C-601-2012.
Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.
Length: 2 weeks (80 hours).
Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an apprentice helicopter power plants and related systems mechanic at fleet and shore activities.

Instruction: This course covers helicopter power plants and systems, auxiliary power units, and ground support equipment. Methodology includes classroom lectures and practical exercises. Students will have completed Aviation Machinist Mate Common Core, Class A1 (C-601-2011).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft corrosion control, 1 in aviation physics, and 3 in gas turbine engines (1/97).

NV-1704-0431

Aviation Machinist Mate Turboprop Fundamentals Strand, Class A1

Course Number: C-601-2013.
Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.
Length: 2 weeks (80 hours).
Exhibit Dates: 10/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an apprentice turboprop power plants and related systems mechanic at fleet and shore activities.

Instruction: This course covers turboprop power plants and systems, auxiliary power units, and ground support equipment. Methodology includes classroom lectures and practical exercises. Students will have completed Aviation Machinist Mate Common Core, Class A1 (C-602-2011).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft corrosion control, 1 in aviation physics, and 3 in gas turbine engines (1/97).

NV-1704-0432

Aviation Machinist Mate Turbojet Fundamentals, Class A1

Course Number: C-601-2014.
Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.
Length: 2 weeks (80 hours).
Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an apprentice turbojet power plants and related systems mechanic at fleet and shore activities.

Instruction: The course covers turbojet power plants and systems, auxiliary power units, and ground support equipment. Methodology includes classroom lectures and practical exercises. Students will have completed Aviation Machinist Mate Common Core, Class A1 (C-602-2011).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft corrosion control, 1 in aviation physics, and 3 in gas turbine engines (1/97).

NV-1704-0433

Aviation Structural Mechanic S (Structures) Common Core, Class A1

Course Number: C-603-2012.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 5-6 weeks (208 hours).
Exhibit Dates: 10/95–2/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an aviation structural mechanic both afloat and ashore.

Instruction: The course content covers aircraft metal fabrications, aircraft corrosion control, aircraft nonmetallics, aircraft publications, and general aircraft maintenance. Methodology includes classroom lectures, demonstrations, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft sheet metal repair, 1 in aircraft finishes, and 1 in aircraft composites (9/96).

NV-1704-0434

Aircrew Survival Equipmentman Common Core, Class A1

Course Number: C-602-2035.
Location: Air Station, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.
Length: 3 weeks (118 hours).
Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a maintenance technician at aviation activities afloat and ashore under all operating conditions with appropriate supervision.

Instruction: This course covers specific information on the aircrew survival equipment rating, the naval aviation maintenance program, and the survival equipment asset tracking system with particular emphasis on general safety and accident prevention. General aircraft maintenance, sewing machines, and survival equipment are the major topics. Methodology includes classroom discourses, laboratory exercises, and knowledge and performance testing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft environmental systems (5/97).

NV-1704-0435

Aircrew Survival Equipmentman Intermediate Level Strand, Class A1

Course Number: C-602-2037.
Location: Air Station, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.
Length: 4-5 weeks (168-184 hours).
Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a maintenance technician at aviation intermediate maintenance activities afloat and ashore under all operating conditions with appropriate supervision.

Instruction: This course covers parachutes, personnel flotation equipment, multiplace flotation equipment, and seat survival kits. Instruction includes descriptions, parts, characteristics, and special handling techniques, such as packing of parachutes, inspections, and safety precautions. Methodology includes classroom lectures, hand-on laboratory experiences, and knowledge and performance testing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft environmental systems. For credit for the Common Core, see NV-1704-0434 (4/97).

NV-1704-0436

Oxygen System Component Test Stand/ Oxygen Regulator Repair

Course Number: C-602-2027.

Location: Air Station, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5 weeks (183 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the oxygen components test stand, including inspection, test, and repair of personal and panel-mounted oxygen regulators.

Instruction: This course covers characteristics and function, operation, maintenance, and modifications to the oxygen system component test stand. Also included are inspection, servicing, testing, disassembly, and assembly and repair of miniature and panel-mounted oxygen regulators. Methodology includes classroom discourse, hands-on laboratory experience, and knowledge and performance testing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour aircraft environmental systems (5/97).

NV-1704-0437

L OX Converter Test Stand/LOX Converter and Stock Keeping Unit (SKU) Repair

Course Number: C-602-2028.

Location: Air Station, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 2-3 weeks (94 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the LOX converter test stand; inspect, test, and repair seat survival kits; and to perform tasks pertinent the aircrews survival equipmentman rating.

Instruction: The course covers inspection, test, preventive maintenance, troubleshooting, and repair of the LOX converter test stand and its components. Operation, purging and charging, and calendar inspection of the seat survival kit's emergency oxygen system are also included. Methodology includes classroom lectures, hands-on laboratory experiences, and knowledge and performance testing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft environmental systems (5/97).

NV-1704-0438

Aviation Structural Mechanic E (Safety Equipment) Common Core, Class A1

Course Number: C-602-2033.

Location: Air Station, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5-6 weeks (213 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a maintenance technician of aircraft environmental and safety systems both afloat and ashore.

Instruction: This course covers general aircraft maintenance, aircraft publications, aircraft inspections, corrosion control, liquid and gaseous oxygen systems, aircraft air conditioning and pressurization systems, and aircraft auxiliary bleed air systems. Methodology includes classroom lectures, demonstrations, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft corrosion control, 3 in aircraft environmental control systems, and 1 in introduction to aviation maintenance (5/97).

NV-1704-0439

Aviation Structural Mechanic E (Safety Equipment) Egress Strand, Class A1

Course Number: C-602-2034.

Location: Air Station, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 2 weeks (67 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a maintenance technician of aircraft egress systems both afloat and ashore.

Instruction: This course covers introduction to canopy and egress systems including Martin Baker ejection seats. Methodology includes classroom lectures, demonstrations, and practical exercises.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/97).

NV-1704-0440

Aviation Structural Mechanic H (Hydraulics) Common Core, Class A1

Course Number: C-602-2030.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 3 weeks (118 hours).

Exhibit Dates: 10/95–2/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an aviation structural mechanic (hydraulic) both afloat and ashore.

Instruction: This course covers general aircraft maintenance, maintenance publications and documentation, and maintenance of hydraulic and pneumatic systems. Methodology includes classroom lectures, demonstrations, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance publications, 1 in aircraft corrosion control, 1 in aircraft landing gear systems, and 2 in aircraft hydraulic and pneumatic systems (8/96).

NV-1704-0441

Aviation Structural Mechanic H (Hydraulics) Organizational Level, Class A1

Course Number: C-602-2031.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 3-4 weeks (132 hours).

Exhibit Dates: 10/95–2/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an aviation structural mechanic (hydraulic) both afloat and ashore.

Instruction: This course covers basic hydraulic systems and troubleshooting, aircraft landing gears, maintenance of flight control systems, electrical troubleshooting, aircraft tires, and introduction to composite materials. Methodology includes classroom lectures, demonstrations, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance publications, 1 in aircraft corrosion control, 2 in aircraft landing gear systems, and 3 in aircraft hydraulic and pneumatic systems. Credit includes that recommended for the Common Core listed as NV-1704-0440 (1/97).

NV-1704-0442

Aviation Structural Mechanic H (Hydraulics) Intermediate Level, Class A1

Course Number: C-602-2032.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 1-4 weeks.

Exhibit Dates: 10/95–2/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an aviation structural mechanic (hydraulic) both afloat and ashore.

Instruction: This course covers hydraulic and pneumatic component repair. Methodology includes practical exercises. Students will have completed Aviation Structural Mechanic H (Hydraulics) Common Core, Class A1 (-602-2030) and the credit recommended for this course includes that of the common core.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance publications, 1 in aircraft corrosion control, 2 in aircraft landing gear systems, and 2 in aircraft hydraulic and pneumatic systems. This recommendation includes the credit recommended for NV-1704-0440 (8/96).

NV-1704-0443

E-6 Flight Engineer Initial Qualification

Course Number: E-050-0401.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 11 weeks (450 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate transport aircraft systems as a flight engineer and function as aircrew on transport category aircraft.

Instruction: Instruction includes classroom lectures, laboratories, computer-based training, and flight laboratory activities. Topics include transport aircraft systems performance, inflight operations, instrument flying, and cockpit resource management.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in cockpit resource management, 1 in instrument flight theory, 2 in transport aircraft systems, and 3 in flight engineer-flight laboratory (4/97).

NV-1704-0444

Basic Flight Engineer

Course Number: E-050-0404.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 4-5 weeks (166 hours).
Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use aircraft performance charts to determine takeoff, climb, cruise, and descent performance.

Instruction: Instruction is provided through traditional classroom lecture, laboratory, and computer-based training. Topics include atmospheric physics, weight and balance, aircraft performance computations, and applications.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in flight engineer basic (4/97).

NV-1704-0445

E-6A Power Plant and Related Systems (Initial) Organizational Maintenance

Course Number: C-601-3500.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 4 weeks (192 hours).
Exhibit Dates: 3/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe and perform entry level maintenance on aircraft fuel systems and auxiliary power units and be able to remove and replace turbine engines on aircraft.

Instruction: Instruction methods include traditional classroom, laboratory projects and computer-based training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft maintenance (including entry level skills in aircraft fuel systems, auxiliary power systems, and turbine aircraft power plants) (4/97).

NV-1704-0446

E-6A Electrical and Instrument Systems Organizational Maintenance

Course Number: C-602-3509.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 8 weeks (320 hours).
Exhibit Dates: 12/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform operational checkout, testing, and troubleshooting of the following aircraft systems: AC power system, DC power system, miscellaneous instruments, flight director system, autopilot and attitude warning system, fire detection and extinguishing system, fuel and hydraulic systems, and environmental control systems.

Instruction: Lectures and hands-on performance tasks are used to teach the operation, checking, testing, and troubleshooting of main aircraft systems. Written and performance progress tests are used for evaluation of knowledge and skills for the various systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in pneumatics and hydraulics and 3 in air conditioning and pressurization systems (4/97); in the upper-division baccalaureate category, 3 semester hours in aircraft systems controls troubleshooting and repair (4/97).

NV-1704-0447

E-6A Environmental Control Systems Organizational Maintenance

Course Number: C-602-3510.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 4 weeks (160 hours).
Exhibit Dates: 2/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use tools and test equipment to operate, maintain, and troubleshoot the following environmental control systems and emergency systems: engine and auxiliary power unit bleed air systems, cabin pressurization and air conditioning systems; avionics forced air, draw-through, and oxygen cooling systems; gallery; potable water; crew relief; and emergency and fire extinguisher systems.

Instruction: Lectures and laboratories uses specialized tools and trainers with fault-insertion capability. Topics covered are bleed air systems for engine and auxiliary power unit cabin air conditioning and pressurization systems avionics equipment cooling systems; and gallery, potable water, and emergency systems. Written tests and laboratory exams are used to assess the knowledge and skills.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft heating, air conditioning, and ventilation systems operation and troubleshooting (4/97).

NV-1704-0448

E-6A Electric and Instrument Systems (Initial) Organizational Maintenance

Course Number: C-602-3507.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 4 weeks (160 hours).
Exhibit Dates: 9/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to remove and replace the following aircraft systems: electrical power generation and distribution, utility and lighting, fuel, power plant, environmental control, hydraulic power, flight instrument and flight control use electronic test equipment like frequency counter, impedance bridge DMM; and read wiring diagrams.

Instruction: Lectures and actual hands-on exercises cover the operation, checking, and removal and replacement of the various aircraft systems, using test equipment. Assessment is accomplished using written and performance demonstration.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to aircraft systems controls (4/97).

NV-1704-0449

E-6A Power Plant and Related Systems Organizational Maintenance

Course Number: C-601-3504.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 8 weeks (176 hours).
Exhibit Dates: 4/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and conduct minor repairs to aircraft turbine engines.

Instruction: Instruction includes classroom instruction, laboratories, and computer-based training in aircraft fuel systems, auxiliary power systems, and turbine engines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in turbine engine theory and 2 in turbine engine operations, troubleshooting, and repair (4/97).

NV-1704-0450

E-6A Airframes and Hydraulic Systems (Initial) Organizational Maintenance

Course Number: C-603-3501.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 4-5 weeks (176 hours).
Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform limited maintenance on aircraft systems and components operated through hydraulic systems.

Instruction: Instruction is provided through classroom lecture, laboratory, and computer-based training. Topics include hydraulic systems, cargo door system, aerial refueling system, landing gear and brake systems, flight control and trim systems, and fuel tank systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft hydraulic systems and components and 1 in aircraft hydraulic systems and components laboratory (4/97).

NV-1704-0451

E-6A Airframe and Hydraulics Systems Organizational Maintenance

Course Number: C-603-3503.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 8 weeks (320 hours).
Exhibit Dates: 9/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform entry level maintenance on aircraft airframe structures and aircraft hydraulic systems.

Instruction: Instruction includes traditional classroom, laboratory, and computer-based training. Topics include aircraft structures, hydraulic systems, thrust reversers, landing gear, brakes, flight controls, flags, and fuel tanks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft structures theory, 2 in aircraft airframe structures laboratory, 1 in aircraft hydraulics and flight controls, and 2 in aircraft hydraulics and flight controls laboratory (4/97).

NV-1704-0452

E-6A Reel Operator/Maintenance Technician

Course Number: C-102-3516.
Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.
Length: 8 weeks (320 hours).
Exhibit Dates: 11/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the function of all basic hydraulic components and their interrelationship in hydraulic systems; troubleshoot and operate hydraulic systems; describe basic electronic components (transistor and gates), as they relate to control systems; read electrical and hydraulic symbols and control diagrams; describe phase and DC power distribution circuits; and understand basic electronic controls used in electro/mechanical/hydraulic systems.

Instruction: Lectures, demonstrations, and hands-on laboratory exercises provide a review of bipolar transistor circuits and logic functions; hydraulic components, symbols, and systems; power distribution for DC and phases for control and operation of 60HP motor; and basic control theory for electronic control of electro/mechanical/hydraulic system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours basic hydraulics and 3 in control systems (electronic and electromechanical) (4/97).

NV-1704-0455

Model 42G 500KW Motor Generator Maintenance

Course Number: A-662-0141.

Location: Submarine School, New London, Groton, CT; Submarine Training Facility, Norfolk, VA; Submarine Training Center, Pacific, Pearl Harbor, HI; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (64 hours).

Exhibit Dates: 9/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform simple experiments with motors, generators, and motor-generator sets and perform maintenance and troubleshooting on motors, generators, and motor-generator sets.

Instruction: Lecture and laboratory applications cover advanced theory of operation, maintenance, and fault analysis of motors, generators, motor-generator sets, and their associated control devices.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electrical machinery (4/97).

NV-1704-0456

Submarine Atmosphere Support System Maintenance

Course Number: A-652-0146.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine Base, New London, Groton, CT; Trident Training Facility, Kings Bay, GA.

Length: 1-2 weeks (55-56 hours).

Exhibit Dates: 9/96–4/97.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a ventilator, low-pressure blower, CO-H2 Burner, and CO2 Scrubber, and certified oxygen clean.

Instruction: Lectures and laboratory exercises cover burners, scrubbers, blowers, and ventilators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in mechanical technology or fluid mechanics technology (4/97).

NV-1708-0001

Landing Craft Air Cushion Crew Training (Craftmaster/Engineer)

Course Number: K-062-0100.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 14-15 weeks (467-480 hours).

Exhibit Dates: 11/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to function as an air cushion landing craft operator (LCAC), under all conditions.

Instruction: Classroom methods include lectures, mission simulation, and live exercises in the LCAC full mission trainer. Training includes water, land, day, night, and reduced visibility operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in power boat operation, 1 in rules of the road, and 4 in hovercraft operation (10/97).

NV-1708-0002

Boatswain's Mate Skills Basic
(Boatswain's Mate Fundamentals)

Course Number: J-060-0036.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 2-3 weeks (80 hours).

Exhibit Dates: 7/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply basic skills in seamanship, painting and surface preparation, booms, cranes, rigging, ground tackle, anchoring and mooring, and underway and alongside replenishment.

Instruction: Lectures and practical laboratory experiences cover all basic requirements for the boatswain's mate third class. Students are given practical applications in cargo handling rigs, replenishment at sea, anchoring and mooring, and line splicing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in cargo handling and seamanship (10/97).

NV-1708-0003

Offshore Petroleum Discharge System Side Loadable Warping Tug (SLWT) Operations Technician

Course Number: K-062-0101.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 3 weeks.

Exhibit Dates: 4/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to rig and operate side loading warping tug in conjunction with single anchor leg mooring and beach termination unit system.

Instruction: Classroom instruction is followed by hands-on training laboratory with practical applications. Course includes rigging applications; effects of wind, currents, and tide; and restoration of equipment and material.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in small boat handling (10/97).

NV-1709-0010

Still Documentary Photography, Class C1

Course Number: C-400-2022.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: Self-paced, 5-6 weeks (218 hours).

Exhibit Dates: 1/90–3/94.

Objectives: To provide training or updating of skills in producing photo stories and written presentations for media release and developing audiovisual presentations.

Instruction: The course uses modular self-paced, individualized instruction as the primary instructional method. Course topics cover photographic laboratory supervision; documentary news photography including caption writing, feature picture, basic news writing, spot news, layout and page makeup, picture story, and picture essay; and media selection, including presentation objectives analysis, audience analysis, content outline development, presentation method, storyboard development, master script, visual and narrative production, assembly and programming, general interest slide show, and multimedia presentation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in photo department operations (3/84); in the upper-division baccalaureate category, 2 semester hours in documentary news photography and 2 in media selection (3/84).

NV-1709-0017

Illustrative Photography, Class C1

Course Number: C-400-2021.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: Self-paced, 4-6 weeks (182-212 hours).

Exhibit Dates: 1/90–3/94.

Objectives: To provide training or skill updating in the areas of slide production and illustrative, architectural, and portrait photography.

Instruction: The course uses modular, self-paced, individualized instruction as the primary instructional method. Course topics cover photographic laboratory supervision; illustrative photography, including the Kodak Ektamatic print processor, macrophotography, composition, and architectural photography; and studio lighting/portraiture.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in photo department operations (3/84); in the upper-division baccalaureate category, 2 semester hours in photography (studio/architectural/portraiture) (3/84).

NV-1709-0018

Photographic Laboratory Technician, Class C1

Course Number: C-400-2020.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: Self-paced, 6 weeks (213 hours).

Exhibit Dates: 1/90–3/94.

Objectives: To provide students with training and skills in color printing and processing, photofinishing equipment operation, and chemical process quality control.

Instruction: The course uses modular, self-paced, individualized instruction as the primary instructional method. Course topics cover photographic laboratory supervision; laboratory support equipment familiarization, including sensitometry, film speed, process effects and uniformity, chemical monitoring and process control, replenishment rates, statistical and sensitometric evaluation, and gamma and tone reproduction; and color processing, including the master print, basket processing, visual evaluations, off-easel and on-easel spot evaluations, and calibration and indexing of color analyzer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in photo department operations (3/84); in the upper-division baccalaureate category, 2 semester hours in photography or photographic technician training (3/84).

NV-1709-0021

AN/SXQ-8(V)2 Secure Closed Circuit Television System Maintenance

Course Number: J-150-0989; D-150-0101.

Location: Intelligence Processing System Training Facility, Key West, FL; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To provide technical knowledge and skills needed to perform preventive and corrective maintenance actions for the AN/SXQ-8(V)2 secure closed circuit television system.

Instruction: Course covers block diagram analysis of CCTV system with waveform analysis and the correlation of special test equipment to the overall signal block diagram. The course is broken into major segments covering the specific equipment in the input, sync, switching, and monitor blocks.

Credit Recommendation: In the vocational certificate category, 6 semester hours in closed circuit television maintenance (1/86); in the lower-division baccalaureate/associate degree category, 3 semester hour in a technical elective (electronics) (1/86).

NV-1709-0024

Modular Image Interpretation System and Analytical Photogrammetric Positioning System Maintenance

Course Number: J-150-0990; D-150-0105.

Location: Intelligence Processing System Training Facility, Key West, FL; Air Station, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To train selected data systems technicians in corrective and preventive maintenance of the Modular Image Interpretation System AS-27A and the Analytical Photogrammetric Positioning System AN/UYK-48.

Instruction: Topics include the purpose, capabilities, and operation of the overall system; lab portion covers troubleshooting and corrective maintenance procedures.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (1/86).

NV-1709-0028

Photographic Equipment Preventive/Operational Maintenance

Course Number: C-670-2016.

Location: School of Photography, Corry Station, Pensacola, FL.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to install, operate, maintain, and perform minor repairs to general photographic equipment.

Instruction: Course includes lectures, laboratories, demonstrations, and exercises covering the mechanical, electrical, and electromechanical devices commonly found in Navy photographic laboratories.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in photographic finishing (7/87).

NV-1709-0029

Photographic Equipment Repair, Class C1

Course Number: C-670-2012.

Location: School of Photography, Corry Station, Pensacola, FL.

Length: 13 weeks (520 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance on representative mechanical, electromechanical, and electronic photographic equipment.

Instruction: Course includes lectures, demonstrations, and laboratory work on preventive maintenance of representative mechanical, electromechanical, and electronic photographic equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in photography equipment repair (7/87).

NV-1709-0030

Advanced Photography Training

Course Number: C-400-2030.

Location: School of Photography, Corry Station, Pensacola, FL.

Length: 14 weeks (560 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate knowledge and skills in the areas of photographic lab administration, quality control, color photography, illustrative photography, portraiture, photojournalism, motion picture photography, and aerial photography.

Instruction: Course includes lectures, demonstrations, and laboratory work in the areas of photographic lab administration, quality control, color photography, illustrative photography, portraiture, photojournalism, and motion picture and aerial photography.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in photographic lab administration, 1 in quality control, 2 in color photography, 2 in illustrative photography, 1 in portraiture, 2 in photojournalism, 2 in motion picture photography, and 1 in aerial photography (7/87).

NV-1709-0036

Audiovisual Managers

Course Number: C-7F-216.

Location: School of Photography, Corry Station, Pensacola, FL.

Length: 2 weeks (68 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to successfully manage an audiovisual facility.

Instruction: Course includes lectures and demonstrations covering the organization of naval audiovisual services.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in audiovisual facility management (7/87).

NV-1709-0037

Photographer's Mate School, Class A

Course Number: C-400-2011.

Location: School of Photography, Corry Station, Pensacola, FL.

Length: 9-10 weeks (372 hours).

Exhibit Dates: 1/90–4/92.

Learning Outcomes: Upon completion of the course, the student will be able to provide, with minimal supervision, routine black-and-white still photographs, including basic electronic flash photography, basic studio photography, and basic documentary photography.

Instruction: Course includes lectures, laboratories, demonstrations, and exercises in black-and-white photography process control, basic camera and exposure meter operation, electronic flash operation, sensitometry, studio photography, and documentary photography.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in basic black-and-white photography and 3 in materials and processes of photography (7/87).

NV-1709-0038

Intelligence Photography

Course Number: J-243-0974.

Location: Fleet Intelligence Training Center, Pacific, San Diego, CA; Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 1 week (40 hours).

Exhibit Dates: 1/90–1/97.

Learning Outcomes: Upon completion of the course, the student will be able to operate a 35mm camera, understand fundamental photographic theory and techniques, develop and print photographs using standard basic techniques, and maintain a photo log.

Instruction: Lectures and group-paced practical exercises cover the operation and maintenance of a basic 35mm SLR camera. Course offers limited darkroom and laboratory techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic photography (12/87).

NV-1709-0039

Intelligence Specialist, Class A Imagery Interpretation

Course Number: J-242-0993.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 15 weeks (592 hours).

Exhibit Dates: 1/90–9/92.

Learning Outcomes: Upon completion of the course, the student will be able to perform

BEST COPY AVAILABLE

arithmetic and photogrammetric calculations with mechanical and electronic calculators; identify, measure, classify, and determine junction of various physical and cultural ground features through black-and-white, color, infrared, and radar imagery; initiate research and write reports; prepare photo mosaics; and plan work assignments.

Instruction: Through lectures, laboratory assignments, and practical exercises students receive intensive instruction on all skills related to the interpretation of all-source imagery.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics and 3 in technical writing (12/87); in the upper-division baccalaureate category, 3 semester hours in photogrammetry and 3 in aerial photo interpretation (12/87).

NV-1709-0040

1. Navy Tactical Command System Afloat Strike Planning (STRIKE) Application
   (Afloat Strike Planning Support Systems Applications)
   (Afloat Strike Planning Systems Applications)
2. Automated Tactical Reconnaissance Systems (TACRECCE) Support Afloat

Course Number: *Version 1:* J-150-0987. *Version 2:* J-150-0987.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 7 weeks (280 hours). *Version 2:* 4 weeks (150 hours).

Exhibit Dates: *Version 1:* 1/93–Present. *Version 2:* 1/90–12/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will have an overall understanding of the afloat intelligence center; able to operate equipment in support of multisensor reconnaissance missions; and be familiar with battle damage assessments. *Version 2:* Upon completion of the course, the student will be able to operate an image interpretation system and a photogrammetric positioning system and perform tactical reconnaissance procedures.

Instruction: *Version 1:* Course teaches the skills necessary for photogrammetric positioning, tactical aircraft mission planning, intelligence processing, imagery processing, and operating the secure closed circuit television system. *Version 2:* Course teaches the skills necessary to operate an image interpretation system and a photogrammetric positioning system and to perform tactical reconnaissance procedures.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in communications or television studio procedures (9/94); in the upper-division baccalaureate category, 2 in aerial photographic interpretation (9/94). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in photogrammetry (12/87).

NV-1709-0041

Medical Photography Technician, Class C

Course Number: B-400-0010.

Location: School of Health Sciences, Bethesda, MD.

Length: 30-31 weeks (1224 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to take, process, and print black-and-white and color still and motion pictures related to scientific, clinical, surgical, and pathological fields and perform public relations photography.

Instruction: Lectures and practical exercises cover medical photography, including basic principles of photography, camera operation, optics, light meters, filters, film processing, and darkroom procedures for both black-and-white and color films; photo copying; slide duplication and mounting; slide projection; medical-related photographic techniques; motion picture projection; and photo laboratory administration.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in still photography, 4 in black-and-white photography, 5 in color photography, 2 in public relations photography, and 1 in photo laboratory administration (10/90); in the upper-division baccalaureate category, 12 in medical photography and 1 in forensic photography (10/90).

NV-1710-0019

1. Marine Expeditionary Airfield Equipment, Class M1
2. Marine Expeditionary Airfield Equipment

Course Number: *Version 1:* C-604-2015. *Version 2:* C-604-2015.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN. *Version 2:* Air Technical Training Center, Lakehurst, NJ; Technical Training Center, Millington, TN.

Length: *Version 1:* 6 weeks (233 hours). *Version 2:* 6 weeks (216 hours).

Exhibit Dates: *Version 1:* 7/95–Present. *Version 2:* 1/90–6/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to install, operate, maintain, inspect, and test the M-21 arresting gear, Mk 8 Fresnel lens optical landing system, AM-2 matting and accessories, airfield lighting, anchoring systems, and shore-based emergency arresting gear. *Version 2:* Upon completion of the course, the student will be able to install, operate, maintain, inspect and test the M-21 arresting gear, Mk 8 Fresnel Lens Optical Landing System, AM-2 matting and accessories, airfield lighting, anchoring systems, and shore-based emergency arresting gear and perform cardiopulmonary resuscitation as a member of a team.

Instruction: *Version 1:* Course includes lectures and practical exercises in movement and use of required equipment for the construction, installation, maintenance, and operation of a marine expeditionary airfield, including portable matting, vertical/short takeoff and landing, fresnel lens optical landing system, M-21 arresting gear and E-28 emergency aircraft shore-based arresting gear, and the E-51 emergency arresting gear. *Version 2:* Lectures and practical exercises cover movement and use of required equipment for the construction, installation, maintenance, and operation of a marine expeditionary airfield, including portable matting, vertical/short takeoff and landing, Fresnel Lens Optical Landing System, M-21 arresting gear and E-28 emergency aircraft shore-based arresting gear, and the E-51 emergency arresting gear. Instruction also covers use and handling of explosives and completion of records and maintenance reports.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial shop safety and 2 in industrial shop maintenance (1/97). *Version 2:* In the vocational certificate category, 1 semester hour in small engine maintenance (6/87); in the lower-division baccalaureate/associate degree category, 1 semester hour in power plant operational theory and 2 in safety and first aid (6/87).

NV-1710-0020

CV/CVN (Class) Air Compressor

Course Number: A-652-0239.

Location: Fleet Training Center Cryogenics School, Portsmouth, VA.

Length: 2 weeks (79 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain high- and low-pressure centrifugal air compressors.

Instruction: Classroom and practical instruction cover air compressor operation and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 in laboratory in mechanical compression systems (3/89).

NV-1710-0022

Boiler Repair Technician

Course Number: K-651-0109.

Location: Fleet Training Center, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform operational tasks, preventive maintenance, and repair on the propulsion boiler.

Instruction: Instruction includes lecture and laboratory instruction on the propulsion boiler system, including theory of operation, inspection, maintenance, and repair.

Credit Recommendation: In the vocational certificate category, 2 semester hours in boiler operational theory and 3 in boiler maintenance and repair (7/87).

NV-1710-0044

Basic Welding, Class C
(Plate Welders, Class C)

Course Number: A-701-0025.

Location: Service School Command, San Diego, CA; Naval Shipyard, Norfolk, VA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train enlisted personnel to weld various structures and hulls.

Instruction: Lectures and practical exercises cover welding, including manual metal arc welds on steel alloy plate, metal inert gas welds on aluminum plate, both types of welds on ferrous and nonferrous metal plate, gas tungsten arc welding and use of a variety of electrodes in both overhead and vertical positions.

Credit Recommendation: In the vocational certificate category, 3 semester hours in welding (5/82); in the lower-division baccalaureate/ associate degree category, 2 semester hours in welding (5/82).

NV-1710-0050

General Maintenance Welder, Class C1

Course Number: A-701-0026.

Location: Naval Shipyard, Norfolk, VA; Service School Command, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–8/91.

Objectives: After 8/91 see NV-1710-0151. To train enlisted personnel to perform manual welding on carbon steel or copper-nickel pipe.

Instruction: Lectures and practical exercises in manual arc welding on carbon steel pipe in fixed-restricted vertical and horizontal positions and brazing of copper-nickel pipe.

Credit Recommendation: In the vocational certificate category, 3 semester hours in welding (5/82); in the lower-division baccalaureate/ associate degree category, 1 semester hour in welding (5/82).

NV-1710-0051

Non-Nuclear Component Welding

Course Number: A-701-0027.

Location: Naval Shipyard, Norfolk, VA; Service School Command, San Diego, CA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–12/92.

Objectives: After 12/92 see NV-1710-0150. To train enlisted personnel to perform manual metal arc welds on carbon-molybdenum high-pressure piping systems.

Instruction: Lectures and practical exercises cover high-pressure pipe welding. Course includes manual metal arc welding of steel pipe with carbon-molybdenum electrodes, manual metal arc welding of steel pipe with chrome-molybdenum electrodes, and gas tungsten arc welding of carbon steel pipe with root inserts.

Credit Recommendation: In the vocational certificate category, 5 semester hours in pipe welding (5/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in pipe welding (5/82).

NV-1710-0057

Propulsion Shaft Components Combined Maintenance

Course Number: A-651-0061.

Location: Fleet Ballistic Submarine Training Center, Charleston, SC; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 1 week (36 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To train enlisted personnel to maintain the propulsion shaft components found on nuclear-powered submarines.

Instruction: Lectures and practical exercises cover the maintenance of propulsion shaft components. Course includes principles of operation, theory of construction, and practical training in the repair of propulsion shaft components.

Credit Recommendation: In the vocational certificate category, 1 semester hour in marine machinist (11/85).

NV-1710-0069

Nuclear Power Plant Components Welder, Class C1

Course Number: A-701-0028.

Location: Service School Command, San Diego, CA.

Length: 14 weeks (447-560 hours).

Exhibit Dates: 1/90–12/92.

Objectives: After 12/92 see NV-1710-0149. To train personnel to weld reactor coolant and associated systems in a nuclear power plant.

Instruction: Topics include introduction to nuclear power plant component welding, welding consumable material, pipe butt and socket type joints, and upper-seal weld of a beveled canopy.

Credit Recommendation: In the vocational certificate category, 6 semester hours in advanced or specialized welding (5/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in advanced or specialized welding (5/82).

NV-1710-0072

General Regulator Automatic Boiler Control Maintenance

(Steam Plant Automatic Controls Maintenance (General Regulator))

Course Number: A-651-0040; A-651-0039.

Location: Fleet Training Center, San Diego, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–10/91.

Objectives: After 10/91 see NV-1710-0155. To train personnel to operate and calibrate the general regulator automatic boiler control system.

Instruction: Lectures and practical exercises cover the operation and calibration of the general regulator automatic boiler control system, including air and fuel regulation, multielement feed water regulators, feed pump controllers, system and component calibration, and troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in automatic control or high-pressure boiler operation (5/82); in the lower-division baccalaureate/ associate degree category, 1 semester hour in automatic control instrumentation laboratory (5/82).

NV-1710-0073

Hagan Automatic Boiler Control Maintenance

(Steam Plant Automatic Controls Maintenance (Hagan))

Course Number: A-651-0042; A-651-0041.

Location: Fleet Training Center, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–10/91.

Objectives: After 10/91 see NV-1710-0156. To train personnel to operate and calibrate the Hagan automatic boiler control system.

Instruction: Classroom instruction and practical exercises cover the operation and calibration of the Hagan boiler control system, including air and fuel regulation, multielement feed water regulators, feed pump controllers, systems and component calibration, and troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in automatic control or high-pressure boiler operation (5/82); in the lower-division baccalaureate/ associate degree category, 1 semester hour in automatic control instrumentation laboratory (5/82).

NV-1710-0074

Bailey Automatic Boiler Control Maintenance

(Steam Plant Automatic Controls Maintenance (Bailey Meter))

Course Number: A-651-0044; A-651-0043.

Location: Fleet Training Center, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train personnel to operate and calibrate the Bailey automatic combustion control system.

Instruction: Instruction and practical exercises cover the operation and calibration of the Bailey automatic combustion control systems, including air and fuel regulation, multielement feed water regulators, feed pump controls, system and component calibration, and troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in automatic combustion control or high-pressure boiler operation (5/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in automatic controls instrumentation laboratory (5/82).

NV-1710-0078

Hagan Automatic Boiler Control Console (ACC) Operator

Course Number: A-651-0049.

Location: Surface Warfare Officer School, Newport, RI; Fleet Training Group, Pearl Harbor, HI; Fleet Training Center, San Diego, CA; Fleet Training Center, Mayport, FL; Fleet Training Center, Norfolk, VA; Fleet and Mine Warfare Training Center, Charleston, SC.

Length: 2-3 weeks (84 hours).

Exhibit Dates: 1/90–11/91.

Objectives: After 11/91 see NV-1710-0160. This course trains enlisted personnel and others possessing boiler operator skills to operate a Hagan automatic boiler control console.

Instruction: This course covers automatic boiler control theory and a typical automatic combustion control system. Lectures cover the principles of feed water control, feed pump differential pressure control, feedback recirculation controls, and air locks. Lectures and practical experiences cover automatic boiler control console operation and procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in a technical elective in manufacturing technology, mechanical technology, or engineering technology (11/81).

NV-1710-0079

General Regulator Automatic Boiler Control Console Operator

Course Number: A-651-0046.

Location: Fleet Training Center, Pearl Harbor, HI; Fleet Training Center, San Diego, CA; Fleet and Mine Warfare Training Center, Charleston, SC; Fleet Training Center, Mayport, FL; Fleet Training Center, Norfolk, VA.

Length: 2-3 weeks (84 hours).

Exhibit Dates: 1/90–11/91.

Objectives: After 10/95 see NV-1710-0157. The course trains enlisted personnel and others possessing boiler operator skills to operate a General Regulator automatic boiler control console.

Instruction: This course covers automatic boiler control theory and a typical automatic combustion control system. Lectures cover the principles of feed water control, feed pump differential pressure control, feed pump recirculation controls, and air locks. Lectures and practical experiences cover automatic boiler control console operation and procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in a technical elective in manufacturing technology, mechanical technology, or engineering technology (11/81).

NV-1710-0081

BOILER TECHNICIAN/MAINTENANCE MANAGEMENT
SIX YEAR OPTION
(Boiler Technician 6 Year Option (6YO) Advanced Maintenance Phase 3, Class C1)

Course Number: A-651-0080.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–2/90.

Objectives: After 2/90 see NV-1710-0124. To train personnel to perform preventive and corrective maintenance on basic steam propulsion system components.

Instruction: Lectures and practical exercises provide boiler technicians with skills in the use of marine engineering technical documentation; preparation of Planned Maintenance System (PMS) forms and supply requisitions; and maintenance principles and practices for mechanical fasteners, static and dynamic seals, sliding and rolling contact bearings, shipboard lubrication management, and scheduled and corrective maintenance of manually-operated valves.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in maintenance management (6/88).

NV-1710-0084

BOILER TECHNICIAN (1200 PSI), CLASS A1

Course Number: A-651-0010; A-651-0052.

Location: Service School Command, Great Lakes, IL.

Length: Self-paced, 7 weeks (280 hours).

Exhibit Dates: 1/90–12/90.

Objectives: After 12/90 see NV-1710-0129. To train personnel in the operation of components/systems of steam propulsion plants.

Instruction: Individualized, computer-managed instruction covers the operation of components and systems in steam propulsion plants. Instruction includes fire fighting systems, mainstream systems, boilers, water-level indicator and chemical feed systems, auxiliary steam systems, combustion air systems, exhaust systems, and service and control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours as a technical elective in systems operations or related programs (1/82).

NV-1710-0085

BAILEY AUTOMATIC BOILER CONTROL CONSOLE
OPERATOR

Course Number: A-651-0050.

Location: Fleet Training Center, Pearl Harbor, HI; Fleet Training Center, San Diego, CA.

Length: 3 weeks (84-105 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train enlisted personnel and others possessing boiler operator skills to operate a Bailey automatic boiler console.

Instruction: Lectures and laboratory exercises cover automatic boiler control theory and a typical automatic combustion control system, including principles of feed water control, feed pump differential pressure control, feed water recirculation controls, air locks, and boiler control console operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in a technical elective in manufacturing technology, mechanical technology, or engineering technology (5/82).

NV-1710-0086

AUXILIARY MACHINERY CONTROLS, GOVERNORS
AND REGULATORS MAINTENANCE

Course Number: A-651-0069.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2-3 weeks (83 hours).

Exhibit Dates: 1/90–5/95.

Objectives: After 5/95 see NV-1710-0159. To train personnel in the maintenance of machinery controls, governors, and regulators.

Instruction: Classroom instruction and practical exercises cover troubleshooting, disassembly, inspection, measurement, repair, reassembly, and testing of machinery controls, governors, and regulators, including speed control devices, air pilot diaphragm control devices, pressure control devices, and safety shutdown devices.

Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery controls, governors, and regulators maintenance (3/89); in the lower-division baccalaureate/associate degree category, 1 semester hour in mechanical systems laboratory (3/89).

NV-1710-0090

AUTOMATED PROPULSION SYSTEM MAINTENANCE

Course Number: A-651-0045.

Location: Service School Command, San Diego, CA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train personnel in the preventive and corrective maintenance of propulsion indicating and control components and systems.

Instruction: Lectures and laboratory exercises cover calibration, troubleshooting, and preventive maintenance procedures in propulsion system remote indicating and control components for boiler burner controls, temperature and pressure indicating systems, and printer output units.

Credit Recommendation: In the vocational certificate category, 2 semester hours in maintenance of remote and other indicating devices and 1 in printer output devices (5/82).

NV-1710-0091

PUMP MAINTENANCE

Course Number: A-651-0067.

Location: Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (70-76 hours).

Exhibit Dates: 1/90–5/95.

Objectives: After 5/95 see NV-1710-0158. To train students in the proper inspection and maintenance of pumps.

Instruction: Classroom instruction and practical exercises cover pump inspection and maintenance, including centrifugal, reciprocating, and rotary pumps; external and internal inspection; troubleshooting, disassembly, repair, and reassembly; test maintenance; and record keeping.

Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery pump repair (3/89); in the lower-division baccalaureate/associate degree category, 1 semester hour in mechanical systems laboratory (3/89).

NV-1710-0092

DAMAGE CONTROL ASSISTANT

Course Number: A-4G-0020.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To provide officers with the knowledge necessary to perform as a damage control assistant and electrical officer.

Instruction: The course includes a detailed study of the area of damage control equipment, systems, and administration, including equipment and maintenance procedures, stability, buoyancy, battle damage evaluation; and containment techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in shipboard repair orientation (11/82).

NV-1710-0093

SURFACE WARFARE OFFICER SPECIALTY COURSE
STEAM MAIN PROPULSION ASSISTANT

Course Number: A-4H-0021.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To train officers to operate 1200 PSI steam propulsion plants.

Instruction: Lectures and practical exercises cover power plant operations and maintenance, including main feed and condensate, lubricating oil, fuel oil, main steam, auxiliary steam, and propulsion systems. Subjects covered include air compressors, valves, pumps, gauges, distilling plants, pollution control, and brazing and soldering.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic marine engineering, or 3 in power plant operations, or 2 in high-pressure boilers, and 2 in marine engineering laboratory (11/82).

NV-1710-0094

BOILER TECHNICIAN/MAINTENANCE MANAGEMENT
SIX YEAR OPTION
(Machinist's Mate Advanced Maintenance)

Course Number: A-651-0114.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/90.

Objectives: After 5/90 see NV-1710-0125. To train personnel to perform preventive and corrective maintenance on basic steam propulsion system components.

Instruction: Lectures and practical exercises provide Machinist Mates with skills in the use of marine engineering technical documentation; preparation of planned maintenance system forms and supply requisitions; and maintenance principles and practices for mechanical fasteners, static and dynamic seals, sliding and rolling contact bearings, shipboard lubrication management, and scheduled and corrective maintenance of manually-operated valves.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in maintenance management (6/88).

NV-1710-0095

Solar T-1020S-100B Gas Turbine Generator Set Operator and Maintenance

Course Number: A-652-0226.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course the student will be able to identify component/systems of the gas turbine generator by function, operate generator, perform operational checks, perform scheduled maintenance, and perform corrective maintenance on generator set.

Instruction: Lectures and practical exercises cover gas turbine operation, including lubrication, cooling, water and fuel systems, starting procedures, combustion air systems, safety procedures, inspection and maintenance of gas turbines and borescope, and cleaning and adjusting turbine control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in gas turbine technology (6/88).

NV-1710-0097

Gas Turbine Fundamentals

Course Number: A-652-0244.

Location: Training Center, Great Lakes, IL.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To teach students the basic construction, theory of operation, and maintenance of an LM 2500 marine gas turbine propulsion system.

Instruction: Lectures and practical exercises cover basic pneumatics, hydraulics, AC and DC theory and devices, and gas turbine theory. Specific instruction and exercises cover the operating theory; construction; and maintenance of LM 2500 gas turbine propulsion systems, including fresh water, fuel and lube oil, pumps and heat exchangers, and fire fighting systems. Instruction in occupational safety include hearing loss, electric safety, and heat stress.

Credit Recommendation: In the vocational certificate category, 3 semester hours in gas turbine power systems or 2 in basic AC/DC theory, 1 in hydraulic principles, and 1 in gas turbine construction (1/86).

NV-1710-0100

Damage Control/Fuel Control Console Operator

Course Number: A-652-0079.

Location: Training Center, Great Lakes, IL.

Length: 1 week (40 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To train students to operate the damage control/fuel control console of a marine power plant.

Instruction: Lectures and practical experience cover operating control consoles.

Credit Recommendation: Credit is not recommended because of the limited, specific nature of the course (1/86).

NV-1710-0102

Gas Turbine Electrical, Class A

Course Number: *Version 1:* A-652-0298. *Version 2:* A-652-0298. *Version 3:* A-652-0298.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 8 weeks (320 hours). *Version 2:* 24 weeks (956 hours). *Version 3:* 25-26 weeks (1050 hours).

Exhibit Dates: *Version 1:* 1/95–Present. *Version 2:* 10/90–12/94. *Version 3:* 1/90–9/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to apply basic principles of engineering sciences, thermodynamics, heat transfer, and electricity and electronics through the use of basic algebra and trigonometry. Student will be able to operate gas turbine propulsion or electrical generating plant and recognize interrelationships of components in a gas turbine power plant. *Version 2:* Upon completion of the course, the student will be able to apply basic principles of engineering sciences, thermodynamics, heat transfer, and electricity and electronics through the use of basic algebra and trigonometry. Student will be able to operate gas turbine propulsion or electrical generating plant and recognize interrelationships of components in a gas turbine power plant. *Version 3:* Upon completion of the course, the student will be able to apply basic principles of the engineering sciences, including thermodynamics, heat transfer, fluid mechanics, and electricity and electronics; identify components/systems of a gas turbine propulsion unit by function; operate a gas turbine; recognize interrelationships of components in a gas turbine power plant; and diagnose malfunctions in plant operation.

Instruction: *Version 1:* Classroom lectures, demonstrations, and laboratory exercises are used to present the fundamental theories of mathematics, trigonometry, thermodynamics, heat transfer, fluid mechanics, electricity and electronics, gas turbine construction, gas turbine operations, basic AC/DC, basic electronic devices, introduction to electrical motors and generators, and industrial safety and fire fighting. *Version 2:* Classroom lectures, demonstrations, and laboratory exercises are used to present the fundamental theories of mathematics, trigonometry, thermodynamics, heat transfer, fluid mechanics, electricity and electronics, gas turbine construction, gas turbine operations, basic AC/DC, basic electronic devices, introduction to electrical motors and generators, and industrial safety and fire fighting. *Version 3:* Course includes engineering fundamentals, basic fluid mechanics, basic thermodynamics and heat transfer, engineering materials and methods, gas turbine theory, gas turbine construction, gas turbine operations, basic AC/DC circuits, basic electric devices, and introduction to electrical machinery. Course includes 760 hours of classroom instruction and 284 hours of laboratory work including 4 weeks of gas turbine plant operation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in gas turbine technology and 1 in gas turbine technology laboratory (12/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial safety, 2 in engineering science, 4 in gas turbine technology, 1 in gas turbine technology laboratory, 6 in basic electricity and electronics, and 1 in basic electricity and electronics laboratory (11/91). *Version 3:* In the vocational certificate category, 4 semester hours in gas turbine plant operations (6/88); in the lower-division baccalaureate/associate degree category, 2 semester hours in thermo/hydraulic technology, 3 in gas turbine technology, and 4 in basic electricity and electronics (6/88).

NV-1710-0103

Gas Turbine Mechanical, Class A

Course Number: *Version 1:* A-652-0299. *Version 2:* A-652-0299.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 16 weeks (636 hours). *Version 2:* 15-16 weeks (764 hours).

Exhibit Dates: *Version 1:* 10/90–6/95. *Version 2:* 1/90–9/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the basic fundamentals of thermodynamics, heat transfer, fluid mechanics, and basic electricity and identify components/systems of a gas turbine propulsion plant and describe their operation. Student will make basic algebraic and trigonometric calculations. *Version 2:* Upon completion of the course, the student will be able to describe the basis principles of the engineering sciences, including thermodynamics, heat transfer, fluid mechanics, and electricity; identify components/systems of a gas turbine propulsion plant by function; perform basic functions in operating a gas turbine power plant; and diagnose malfunctions based on observation of operating parameters.

Instruction: *Version 1:* Classroom lectures, demonstrations, and laboratory work are used to cover engineering fundamentals; algebra; trigonometry; basic fluid mechanics; heat transfer; gas turbine theory, construction, and operation; basic theory of electricity; gas turbine propulsion auxiliary systems; industrial safety; and fire fighting. *Version 2:* Engineering fundamentals, basic fluid mechanics, basic thermodynamics and heat transfer, engineering materials and methods, gas turbine theory, gas turbine construction, gas turbine operations, basic AC/DC circuits, electrical maintenance techniques are covered in 530 hours of classroom instruction and 226 hours of laboratory work, including four weeks of gas turbine plant operation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in gas turbine technology, 2 in electric fundamentals, 2 in engineering sciences fundamentals, 1 in industrial safety, and 1 in gas turbine technology laboratory (11/91). *Version 2:* In the vocational certificate category, 4 semester hours in gas turbine plant operation (6/88); in the lower-division baccalaureate/associate degree category, 2 semester hours in thermo/hydraulic technology, 3 in gas turbine technology, and 2 in basic electricity (6/88).

NV-1710-0104

Boiler Technician Six Year Obligator (BT 6YO) Advanced Operator

Course Number: *Version 1:* A-651-0079. *Version 2:* A-651-0079.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 6 weeks (216 hours). *Version 2:* 8 weeks (269 hours).

Exhibit Dates: *Version 1:* 6/90–11/94. *Version 2:* 1/90–5/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to identify high-pressure steam propulsion plant equipment and components; describe and perform normal equipment and component operation and setup and shutdown procedures; identify subsystem interconnections; operate plant equipment; keep appropriate records; make basic quantity and quality calculations associated with plant operations; and perform watchstanding maintenance. *Version 2:* Upon completion of the course, the student will be able to identify steam power plant components by function and operate steam plant power plant systems, including steam generators, main feed and condensate, sea water cooling, air removal, lubricating oil service, auxiliary steam, and electrical distribution systems. Student will stand appropriate 1200 psi steam power plant watches with special emphasis on automatic boiler control systems and practice a high standard of steam power plant and industrial safety.

Instruction: *Version 1:* Classroom lectures, demonstrations, performance exercises, laboratory instruction, and practice support the operation of a high-pressure steam propulsion system and its individual equipment. *Version 2:* Approximately equal time emphasis is given to classroom presentation and laboratory work. Testing is both written and oral. Emphasis is on knowledge base, facts, and terminology. Topics include safety, metrology, steam power plant systems, basic thermodynamic calculations, basic power plant system function, and interconnection and operating procedures.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in steam power plant operation and 1 in steam power plant operation laboratory (6/90). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in steam power plant operation and 1 in industrial safety (6/88).

NV-1710-0105

Machinist's Mate Six-Year Obligator (6YO)

Course Number: A-651-0105.

Location: Service School Command, Great Lakes, IL.

Length: 8 weeks (275 hours).

Exhibit Dates: 1/90–12/95.

Learning Outcomes: Upon completion of the course, the student will be able to identify steam power plant components by function; operate steam power plant systems, including steam generators, main feed and condensate, sea water cooling, air removal, lubricator oil service, auxiliary steam, and electrical distribution systems; stand appropriate 1200 psi steam power plant watches with special emphasis on ship's service generator operations and flash type distilling plant operations; and practice high standards of steam power plant and industrial safety.

Instruction: Approximately equal time emphasis is placed on classroom presentations and laboratory work. Testing is both written and oral, with emphasis on knowledge base, facts, and terminology. Topics include safety, metrology, steam power plant systems, basic thermodynamic calculations, basic power plant system function, and interconnections and operating procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in steam power plant operations and 1 in industrial safety (6/88).

NV-1710-0106

KAMEWA Controllable Pitch Propeller Maintenance

Course Number: A-652-0055.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–12/93.

Learning Outcomes: Upon completion of the course, the student will be able to train enginemen to operate, maintain, and troubleshoot variable-pitch ship propellers and associated control equipment.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of variable-pitch ship propellers and associated control equipment including applications of hydraulics and pneumatics and analysis of electrical control circuits and mechanical components.

Credit Recommendation: In the vocational certificate category, 3 semester hours in pneumatic/hydraulic control systems maintenance (6/88).

NV-1710-0107

Missile Tube Support Equipment (Mechanical)

Course Number: A-121-0470.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (56 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a missile launcher pressurization system and missile tube hydraulic system and perform preventive and corrective maintenance on missile tube heating and cooling, dehumidifying, hydraulic, and missile launcher pressurization system.

Instruction: Lectures and laboratory exercises cover the mechanical subsystems (pneumatic, hydraulic, heating, cooling, and dehumidifying) related to submarine missile launching tubes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in mechanical engineering technology laboratory (2/89).

NV-1710-0108

Engineering Maintenance Principles, Practices, and Administration

Course Number: *Version 1:* A-651-0064. *Version 2:* A-651-0064.

Location: *Version 1:* Fleet Training Center, Norfolk, VA. *Version 2:* Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: *Version 1:* 3 weeks (97 hours). *Version 2:* 3 weeks (97 hours).

Exhibit Dates: *Version 1:* 6/95–Present. *Version 2:* 1/90–5/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform and supervise general mechanical maintenance. *Version 2:* Upon completion of the course, the student will be able to perform and supervise general mechanical maintenance.

Instruction: *Version 1:* Classroom and practical exercises cover instrumentation of machinery, mechanical fasteners, mechanical seals, lubrication, bearings, and couplings. Course includes administrative procedures for performing maintenance on mechanical systems and for spare part procurement. *Version 2:* Classroom and practical exercises cover instrumentation of machinery, mechanical fasteners, mechanical seals, lubrication, bearings, and couplings. Course includes administrative procedures for performing maintenance on mechanical systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in lecture and laboratory in machinery maintenance (11/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in machinery maintenance (3/89).

NV-1710-0109

Boiler Technician Steam Propulsion Maintenance Supervisor

Course Number: A-651-0083.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 17-18 weeks (675 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to organize, perform, and supervise preventive and corrective maintenance on the mechanical systems associated with steam power generation systems, not including main steam turbines and high-pressure compressors.

Instruction: This is a pipeline course made up a A-651-0064, Engineering Maintenance Principles, Practices, and Administration (NV-1710-0108); A-651-0065, Valve and Steam Trap Maintenance (Valve Maintenance) (NV-1732-0018); A-651-0067, Pump Maintenance (NV-1710-0091) or (NV-1710-0158); A-651-0069, Auxiliary Machinery Controls, Governors, and Regulators Maintenance (Governor and Regulator Maintenance) (NV-1710-0086) or (NV-1710-0159); A-651-0068, Auxiliary Machinery Turbine Maintenance (Auxiliary Turbine Maintenance) (NV-1704-0321); A-651-0074 Forced Draft Blower Maintenance (NV-1710-0110); and A-651-0075, Steam Generator Maintenance (NV-1732-0017). (A-651-0071, Distilling Plant Condenser and Heat Exchanger Maintenance was too brief for evaluation.) For descriptions, see the individual courses.

Credit Recommendation: Please refer to the individual exhibits as noted above for credit recommendation (3/89).

NV-1710-0110

Forced Draft Blower Maintenance

Course Number: A-651-0074.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform forced draft blower component maintenance, including steam turbine drives, lubricating systems, and fans.

Instruction: Classroom instruction, demonstrations and practical experience cover the above subject matter.

Credit Recommendation: In the vocational certificate category, 1 semester hour in steam power systems maintenance or repair (6/94).

NV-1710-0111

Three Winch Controller Using Standard Electronic Modules (SEM) and Controls for Logic Elevators

Course Number: A-690-0030.

Location: Technical Training Center, Treasure Island, San Francisco, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operation of multivibrators, power supplies, and operational amplifiers; troubleshoot the logic elevator simulator to the circuit board level in accordance with standard Navy procedures; describe the hydraulic operation of third generation Western Gear sealed transmissions; state the function and designation of the pressure controls; check pilot-operated, solenoid-operated, and servo-operated valves.

Instruction: Lecture and laboratory exercises cover the maintenance and repair of a three winch controller.

Credit Recommendation: In the vocational certificate category, 6 semester hours in elevator repair (8/89).

NV-1710-0112

Standard Tensional Replenishment Alongside Methods (STREAM) Operator

Course Number: A-060-0025.

Location: Technical Training Center, Treasure Island, San Francisco, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to safely perform procedures utilizing standard tensioned replenishment alongside methods.

Instruction: Lectures and practical exercises cover raw-tensioned, high-line system operation, including standard methods of replenishment at sea, preventive maintenance of station components, safety precautions, and emergency breakaway procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in nautical science (cargo operations) (8/89).

NV-1710-0113

Underway Replenishment Mechanical and Hydraulic Component Maintenance

Course Number: A-690-0028.

Location: Technical Training Center, Treasure Island, San Francisco, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to relate principles of hydraulics to construction, operation, and maintenance of mechanical/hydraulic machinery such as pumps, actuators, accumulators etc., associated with the standard tensioned replenishment alongside methods.

Instruction: Lecture and labs cover principles of hydraulics, construction, operation, and maintenance of hydraulic equipment; interpretation of hydraulic system drawings; and troubleshooting techniques for mechanical hydraulic equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in mechanical technology (hydraulic) and 2 in hydraulic laboratory (8/89).

NV-1710-0114

Nuclear Propulsion Plant Operators Welding

(Nuclear Power Plant Operator Welder)

Course Number: A-701-0015.

Location: Service School Command, San Diego, CA; Submarine Base, New London, Groton, CT.

Length: 10-12 weeks (400-480 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic welding and apply intermediate and advanced welding or welding supervisor instruction up to ASME pressure vessel standards and nuclear code standards.

Instruction: Lectures cover safety, welding and silver brazing processes, and nondestructive testing processes. Laboratory sessions are used to bring the student to a reasonable level of proficiency in welding (or brazing) pipe or plate. Repairs to welds and braze joints are also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours lecture and 3 semester hours laboratory in welding processes, brazing processes, and nondestructive testing processes. Note that this course duplicates A-701-0031 (NV-1732-0019). Credit should not be awarded for both (12/93).

NV-1710-0115

Shielded Metal Arc Welding

Course Number: A-701-0053.

Location: Submarine Base, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Learning Outcomes: Upon completion of the course, the student will be able to perform metal arc welding on ferrous materials. The student will be able to position the work, set up the equipment, select welding rod, weld, remove slag, visually inspect, and make repairs to the work.

Instruction: Lectures and practical exercises cover safety precautions, equipment setup, equipment operation, welding techniques, and visual inspection and acceptance standards.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic welding (shielded metal arc) (10/89).

NV-1710-0116

Fuel Gas Welding, Brazing, and Cutting

Course Number: A-701-0054.

Location: Submarine Base, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Learning Outcomes: Upon completion of the course, the student will be able to weld, braze, cut, and solder using fuel gases such as acetylene and propane. The student will be able to describe theory, equipment characteristics, and safety precautions involved with the welding. Student will be able to position the work, set up the equipment, perform the work, visually inspect it, and make repairs.

Instruction: Lectures and extensive practical exercises cover the above subjects.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic gas welding, brazing, soldering, and cutting (10/89).

NV-1710-0117

Construction Mechanic, Class A

Course Number: A-610-0022.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: 13 weeks (528 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the principles of electrical systems, operation of two-stroke cycle and four-stroke cycle engines, theory of suspension and steering systems, theory of hydraulics, operation of air and hydraulic brake systems, and fundamentals of fuel injection systems for diesel engines and automotive power train; service hydraulic brakes, electrical systems, engines, suspension and steering, automotive power train, and diesel fuel injection; conduct preventive maintenance on all vehicles to meet manufacturers' specifications; and perform oxyacetylene welding and cutting operations and minor auto body repair and painting.

Instruction: Lectures and practical exercises cover automotive and mobile equipment, including two-stroke cycle and four-stroke cycle engine theory, electrical systems, hydraulic brake systems, power train systems, and preventive maintenance of vehicles and equipment following all safety procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in automotive electrical systems and 3 in hydraulic brake service (3/91).

NV-1710-0118

1. Builder, Class A, Navy
2. Builder, Class A

Course Number: *Version 1:* A-710-0010. *Version 2:* A-710-0010.

Location: *Version 1:* Construction Training Center, Gulfport, MS. *Version 2:* Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: *Version 1:* 12 weeks (480 hours). *Version 2:* 13 weeks (464 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 6/91–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to read and understand basic drawings and specifications for light-frame construction, heavy timber bridge construction, and pre-engineered building construction and perform, under supervision, masonry construction, light-frame construction, interior and exterior finishing, built-up roofing applications, wood frame structure preservation, heavy timber bridge construction, and pre-engineered building construction. *Version 2:* Upon completion of the course, the student will be able to read and understand basic drawings and specifications for light-frame construction, heavy timber bridge construction, and pre-engineered building construction and perform, under supervision, masonry construction, light-frame construction, interior and exterior finishing, built-up roofing applications, wood frame structure preservation, heavy timber bridge construction, and pre-engineered building construction.

Instruction: *Version 1:* Lectures, audiovisual instruction, and hands-on applications cover the use of hand tools and portable machinery and include plan reading, concrete construction, masonry construction, light-frame construction, interior finishing, hot built-up roofing and composite shingle construction, heavy timber frame construction, and pre-engineered building erection. *Version 2:* Lectures, audiovisual instruction, and hands-on applications cover the use of hand tools and portable machinery and include plan reading, concrete construction, masonry construction, light-frame construction, interior finishing, hot built-up roofing and composite shingle construction, heavy timber frame construction, and pre-engineered building erection.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 in applied mathematics (4/97); in the lower-division baccalaureate/associate degree category, 3 in construction materials, 4 in framing and exterior finish, 3 in interior finish, and 1 in technical mathematics. Credit is to be granted in either category, but not in both (4/97). *Version 2:* In the vocational certificate category, 8 semester hours in residential building construction (3/91); in the lower-division baccalaureate/associate degree category, 1 semester hour in blueprint reading and 3 in methods of (residential) building construction (3/91).

NV-1710-0119

Construction Mechanic, Class C-1 Advanced

Course Number: A-610-0011.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: 13 weeks (486 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the use of precision tools, function of engine analyzer, gear ratios, principles of hydraulics, and geometry of steering and suspension systems; perform engine overhaul, engine tune-up, automatic transmission reconditioning, manual transmission reconditioning, differential and drive line adjustment and repair, electrical system repair, and air and hydraulic brake system overhaul to meet manufacturer's specifications; service and repair heavy equipment power trains; supervise other mechanics; and complete reports.

Instruction: Lectures and practical exercises cover repair and reconditioning of automobiles and other vehicles and their component parts, including engines, transmissions, differentials, drive lines, electrical systems, brake systems, steering suspension systems, and diesel fuel injection systems. Course also includes supervisory and training duties.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in engine performance (tune-up), 3 in engine overhaul, 3 in automotive electrical systems, 3 in suspension and steering systems, 3 in automatic transmission reconditioning, 3 in manual transmission and drive axle, and 3 in diesel fuel injection systems (3/91).

NV-1710-0120

1. Advanced Builder
2. Builder, Class C-1 Advanced

Course Number: *Version 1:* A-710-0011. *Version 2:* A-710-0011.

Location: Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: *Version 1:* 10 weeks (400 hours). *Version 2:* 13 weeks (479 hours).

Exhibit Dates: *Version 1:* 10/96–Present. *Version 2:* 1/90–9/96.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to supervise the construction of foundations and footings, masonry components, wood framing, walls, stairs, and roofs, including the installation of interior and exterior trim and preparation of painted surfaces for buildings, heavy timber structures, and waterfront structures; perform job planning, estimating, and material takeoff for the various construction components; and supervise the mixing, placing, finishing, curing, and testing of concrete. *Version 2:* Upon completion of the course, the student will be able to supervise the construction of foundations and footings, masonry components, wood framing, walls, stairs, and roofs, including the installation of interior and exterior trim and preparation of painted surfaces for buildings, heavy timber structures, and waterfront structures; perform job planning, estimating, and material takeoff for the various construction components; and supervise the mixing, placing, finishing, curing, and testing of concrete.

Instruction: *Version 1:* Lectures and practical exercises cover building supervision, including job safety, construction drawings and specifications, light-frame construction, roofing, in-shop machinery and fabrication, timber bridge construction, pile placement, concrete construction, and masonry construction. Course also includes introduction to planning, estimating, and scheduling. *Version 2:* Lectures and practical exercises cover building supervision, including job safety, construction drawings and specifications, light-frame construction, roofing, in-shop machinery and fabrication, timber bridge construction, pile placement, concrete construction, and masonry construction. Course also includes introduction to planning, estimating, and scheduling.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in building construction practices, 1 in project management, 4 in materials and methods of construction, and 1 in estimating and planning (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in personnel supervision (3/91); in the upper-division baccalaureate category, 3 semester hours in advanced materials and methods of construction, 1 in planning and scheduling, and 1 in advanced estimating (3/91).

NV-1710-0121

Gas Turbine Hot Plant, Class A

Course Number: A-652-0318.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (168 hours).

Exhibit Dates: 9/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate shipboard gas turbine main propulsion and auxiliary systems; perform as an equipment monitor on gas turbine; and operate and perform assigned scheduled maintenance on the propulsion system, electrical system, power generation/distribution system, auxiliary support system, pneumatic system, lube oil systems, fire fighting systems, and cooling water system.

Instruction: Classroom lectures, demonstrations, and practice exercises are used in conjunction with an actual and a simulated power plant to cover gas turbine operations and maintenance, gas turbine propulsion, and auxiliary systems operation and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine power plant operations technology and 1 in gas turbine power plant operations and maintenance laboratory (6/91).

NV-1710-0122

Engineman Six Year Obligor Advanced
Operator/Maintenance Core

Course Number: A-652-0304.

Location: Service School Command, Great Lakes, IL.

Length: 5 weeks (200 hours).

Exhibit Dates: 5/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform normal day-to-day operation and maintenance functions on auxiliary equipment. Systems include fuel oil testing, lube oil testing, jacket water testing, air compressor and air dehydration systems, and water distilling and purification systems. Correct procedures for the use of the maintenance, materiel, and management system are learned.

Instruction: Classroom lectures, demonstrations, and performance exercises cover the operation and maintenance of auxiliary systems, including fuel and lube oil systems, pneumatic systems, and fresh and potable water systems. Data entry and use of preventive maintenance system are demonstrated.

Credit Recommendation: In the vocational certificate category, 2 semester hours in operation and maintenance of auxiliary equipment and 1 in industrial safety (6/91).

NV-1710-0123

Engineman Six Year Obligor Advanced
Operator/Maintenance Auxiliary
Strand

Course Number: A-652-0325.

Location: Service School Command, Great Lakes, IL.

Length: 8 weeks (320 hours).

Exhibit Dates: 7/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain and troubleshoot diesel engines, auxiliary steam systems, elevators, conveyors, steam-driven washers, dryers, presses, water heaters, marine anchor and boat handling equipment, diesel electric power plant control panels, and diesel propulsion systems.

Instruction: Classroom lectures, demonstrations, and performance exercises provide descriptive fundamental theory to support the performance and normal operation, maintenance, and troubleshooting procedures on the above listed equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in mechanical operation, maintenance, and troubleshooting and 2 in electrical operation, maintenance, and troubleshooting, or 1 in in mechanical blueprint reading, 1 in electrical blueprint reading, and 1 in industrial safety (6/91).

NV-1710-0124

Boiler Technician Six-Year Obligator (BT-6YO) Advanced Maintenance

Course Number: A-651-0080.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 3/90–6/95.

Learning Outcomes: Before 3/90 see NV-1710-0081. Upon completion of the course, the student will be able to perform preventive and corrective maintenance and repair on steam plant and propulsion system components, including mechanical fasteners, gaskets, packing, mechanical seals, flexible couplings, sliding and rolling contact bearings, valves, centrifugal pumps, turbine generators, condensers, heat exchangers, boiler hand-hole plates, and gauge glasses.

Instruction: Classroom lectures, demonstrations, and performance exercises provide the knowledge and skills required to perform steam propulsion plant maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in steam power plant maintenance and 1 in steam power plant maintenance laboratory (3/92).

NV-1710-0125

Machinist's Mate Six-Year Obligator (MM 6YO) Advanced Maintenance

Course Number: A-651-0114.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 6/90–Present.

Learning Outcomes: Before 6/90 see NV-1710-0094. Upon completion of the course, the student will be able to perform preventive and corrective maintenance and repair on steam plant and propulsion system components, including mechanical fasteners, gaskets, packing, mechanical seals, flexible couplings, sliding and rolling contact bearings, valves, centrifugal pumps, turbine generators, condensers heat exchangers, boiler hand-hole plates and gauge glasses.

Instruction: Classroom lectures, demonstrations, and performance exercises provide the knowledge and skills required to perform steam and propulsion plant maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in steam power plant maintenance and 1 in steam power plant maintenance laboratory (3/92).

NV-1710-0126

Machinist's Mate Six-Year Obligator (MM 6YO) Advanced Operations

Course Number: A-651-0105.

Location: Service School Command, Great Lakes, IL.

Length: 6 weeks (216 hours).

Exhibit Dates: 3/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to identify high-pressure steam propulsion plant equipment and components; describe and perform normal equipment and system operation, start-up, and shutdown procedures; identify subsystem interconnectors; operate the plant equipment; keep appropriate records; make basic quantity calculations associated with plant operation; and perform watchstanding maintenance tests.

Instruction: Classroom lectures, demonstrations, performance exercises, laboratory instruction, and practice support the operation of a high-pressure stream propulsion system and its associated equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in steam power plant operation and 1 in steam power plant operation laboratory (6/91).

NV-1710-0128

1. Machinist's Mate, Class A (1200 PSI)
2. Machinist's Mate, Class A

Course Number: *Version 1:* A-651-0053. *Version 2:* A-651-0053.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 4 weeks (157 hours). *Version 2:* 10 weeks (392 hours).

Exhibit Dates: *Version 1:* 11/94–Present. *Version 2:* 1/91–10/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to identify basic steam propulsion plant components, describe their operation, and perform basic maintenance on them. Students will be able to perform the duties of engine room shutdown watchstanders. *Version 2:* Upon completion of the course, the student will be able to identify basic steam propulsion plant components, describe their operation, and perform basic maintenance on them. Students will be able to perform the duties of engine room shutdown watchstanders.

Instruction: *Version 1:* Classroom lectures, demonstrations, and performance exercises are used to provide description of the operation of steam plant equipment and perform basic maintenance and repair. *Version 2:* Classroom lectures, demonstrations, and performance exercises are used to provide nomenclature and basic description of the operation of steam plant equipment. Laboratories provide skills needed to perform basic maintenance and repair of valves. Safety procedures are emphasized. Topics presented include hand tool use; valve packing and repair procedures; description of pumps, heat exchangers, fire fighting equipment, pneumatic systems, steam cycle components, turbine operations, basic turbo generator, and electrical distribution systems; distilling plants; and damage control basics.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in boiler operations (12/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in steam plant fundamentals and 1 in steam plant maintenance laboratory (6/91).

NV-1710-0129

1. Boiler Technician, Class A (1200 PSI)
2. Boiler Technician, Class A

Course Number: *Version 1:* A-651-0052. *Version 2:* A-651-0052.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 4 weeks (157 hours). *Version 2:* 10 weeks (392 hours).

Exhibit Dates: *Version 1:* 11/94–Present. *Version 2:* 1/91–10/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to identify basic steam propulsion plant components, describe their operation, and perform basic maintenance on them. Students will be able to perform the duties of engine room shutdown watchstanders. *Version 2:* Before 1/91 see NV-1710-0084. Upon completion of the course, the student will be able to identify basic steam propulsion plant components, describe their operation, and perform basic maintenance on them. Students will be able to perform the duties of engine room shutdown watchstanders.

Instruction: *Version 1:* Classroom lectures, demonstrations, and performance exercises are used to provide description of the operation of steam plant equipment and perform basic maintenance and repair. *Version 2:* Classroom lectures, demonstrations, and performance exercises are used to provide nomenclature and basic descriptions of the operation of steam plant equipment. Labs provide skills needed to perform basic maintenance and repair of valves. Safety procedures are emphasized. Specific topics presented include hand tools use; valve parts and repair procedures; descriptions of pumps, heat exchangers, fire fighting equipment, pneumatic systems, steam cycle, and components; turbine operation; basic turbo electric generation and electrical distribution system; distilling plants; and damage control basics.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in boiler operations (12/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in steam plant fundamentals and 1 in steam plant maintenance laboratory (6/91).

NV-1710-0130

Equipment Operator, Class A

Course Number: *Version 1:* A-730-0010. *Version 2:* A-730-0010.

Location: *Version 1:* Construction Training Center Detachment, Ft. Leonard Wood, MO. *Version 2:* Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: *Version 1:* 13-14 weeks (540 hours). *Version 2:* 9 weeks (360 hours).

Exhibit Dates: *Version 1:* 2/96–Present. *Version 2:* 1/90–1/96.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to inspect, maintain, and operate material handling, construction, and earth-moving equipment and perform basic sitework and operations. *Version 2:* Upon completion of the course, the student will be able to check, maintain, and operate automobiles, material handling equipment, and construction and earthmoving equipment in the field.

Instruction: *Version 1:* Lectures and practical exercises cover front-end loader, forklift, grader, and crawler tractor operation, adjustment, and servicing, including internal combustion engine, fuels, and lubricants; earthwork fundamentals; equipment production; hauling, loading, and lifting equipment adjustment, operation, and servicing; soil compactor operation; tractor-drawn scraper operation; site plan reading; earthwork procedures; and site layout. *Version 2:* Lectures and practical exercises cover automobile, front-end loader, forklift, grader, and crawler tractor operation, adjustment, and servicing, including internal combustion engine, fuels, and lubricants; earthwork fundamentals; equipment production; hauling, loading, and lifting equipment adjustment, operation, and servicing; soil compactor operation; and tractor-drawn scraper operation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in construction sitework, 8 in heavy construction equipment operation, and 3 in construction equipment maintenance (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in heavy construction equipment and 2 in construction equipment maintenance (6/91).

NV-1710-0131

ADVANCED EQUIPMENT OPERATOR

Course Number: A-730-0011.

Location: Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: 12 weeks (504 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to manage and supervise projects; apply advanced production principles to earthwork and asphalt mixing and paving techniques; adjust and service asphalt distributors, pavers, cranes, and road rollers; and apply principles and techniques of foremanship necessary for a crew leader on a construction project.

Instruction: Lectures and practical exercises cover supervision and planning, including the areas of foremanship, personnel readiness, quality control, administration, earthwork computations, surveying, material and equipment estimating, project planning, asphalt mixing/design/operations, crane operations and attachments, and transportation of construction equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in supervision, planning and estimating in highway construction (6/91).

NV-1710-0132

UTILITIESMAN ADVANCED

Course Number: A-720-0013.

Location: Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: 12 weeks (483 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply management skills to a specific project; operate water treatment equipment; install and maintain a water supply and sewage treatment plant; apply plumbing skills to water distribution systems and sewage systems; and maintain boiler, refrigeration, and air conditioning systems.

Instruction: Lectures and practical exercises in utility systems maintenance and repair, including plumbing, sewage disposal, blueprint reading, boilers, refrigeration, pumps, compressors, air conditioning, water treatment, and basic electricity.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic plumbing, 2 in basic electronics, 2 in water purification, 3 in air conditioning and refrigeration, and 2 in steam and hot water heating (6/91).

NV-1710-0133

UTILITIESMAN SHORE BASED BOILER CONTROLS TECHNICIAN, CLASS C

Course Number: A-720-0022.

Location: Construction Training Center, Port Hueneme, CA.

Length: 7 weeks (221 hours).

Exhibit Dates: 1/90–2/96.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, maintain, and operate steam heating boilers and use electrical and pneumatic controllers, system components, safety switches, and testing meters.

Instruction: Lectures, demonstrations, audiovisuals, teaching aids, and practical experiences cover troubleshooting, repair, operation, and maintenance of steam heating boilers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in automatic controllers, 1 in basic electricity, 2 in boiler operation and maintenance, and 2 in electrical circuits (6/91).

NV-1710-0134

EQUIPMENT OPERATOR BLASTING AND QUARRY OPERATIONS

Course Number: A-730-0019.

Location: Construction Training Center, Port Hueneme, CA.

Length: 5 weeks (194 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to handle, transport, and store explosives; operate equipment for drilling and loading explosives; handle blasting equipment, primers, and explosives for blasting operations; and supervise the operation of quarries in peacetime and contingency operations.

Instruction: Lectures and practical exercises cover drilling, placing charges, detonation procedures, and construction blasting; quarry layout; and development and operation of a quarry and rock crushing operation.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic geology and 3 in quarry management (6/91).

NV-1710-0135

LANDING CRAFT, AIR CUSHION CRAFT CONTROL SYSTEMS MAINTENANCE

Course Number: K-652-0315.

Location: Amphibious School, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the landing craft control system and calibrate, troubleshoot, and repair the control system and its subsystems.

Instruction: Classroom lectures and practical applications, films, and onboard training are course methods. Student must successfully complete progress tests in craft control auxiliary systems, engine/auxiliary power unit control systems, alarm and monitor systems, and craft control maneuvering systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in mechanical systems repair (3/92).

NV-1710-0136

AVIATION SUPPORT EQUIPMENT DIESEL ENGINE DRIVEN FORK LIFT TRUCKS INTERMEDIATE MAINTENANCE

Course Number: C-602-3268.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, maintain, and repair the fuel, electrical, and hydraulic systems of a diesel engine forklift truck.

Instruction: Lectures, practical exercises, and examinations cover operational checkout procedures, maintenance documentation, proper use of tools and test equipment, and safety precautions in the maintenance of this piece of equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in heavy equipment maintenance (7/92).

NV-1710-0137

PROPULSION ALARM AND INDICATING SYSTEMS MAINTENANCE, CLASS C-1

Course Number: A-651-0047.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3-4 weeks (133-160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, students will be able to perform preventive and corrective maintenance on pressure alarms, temperature alarms, liquid-level alarms, salinity-indicating systems, fire room emergency alarms, and wrong direction alarms on a propulsion alarm and indicating system.

Instruction: Review of DC and AC circuit parameters and semiconductor devices is included. Lectures and practical exercises cover calibration; troubleshooting; and preventive and corrective maintenance for pressure, temperatures, liquid-level, salinity-indicating, and fire room emergency alarm systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in maintenance of remote indicating devices (11/95).

NV-1710-0138

GTCP95-2 and GTCP95-3 Gas Turbine Engine Intermediate Maintenance

Course Number: C-601-3575.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 2-3 weeks (115 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory of operation and maintenance of gas turbine engines, troubleshoot engines, and repair to airworthy standards.

Instruction: Lectures and laboratories use gas turbine engines and test equipment, including engine analyzer, test kit for bleed air flow, thermostat calibration, vibration pickup, pneumatic regulator pressure test.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic turbine engine theory and maintenance (3/93).

NV-1710-0140

Advanced Composite Materials Maintenance

Course Number: C-603-3868.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 5 weeks (160 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect and repair composite materials.

Instruction: With a combination of lecture and practical application, the student will gain hands-on working experience with the inspection and repair procedures related to adhesive mixing, damage evaluation, composite laminate structures, installation of bolted repair patches, graphite-epoxy skin, aluminum honeycomb cone structure, strain gauge installation, Kevlar-Epoxy skin, and Nomex honeycomb cone structure.

Credit Recommendation: In the vocational certificate category, 3 semester hours (1 lecture, 2 laboratory) in composite structure repair (8/93).

NV-1710-0141

Console Operator Training
(Gas Turbine System Operator (DDG-51))

Course Number: A-652-0337.

Location: Service School Command, Great Lakes, IL.

Length: 3-4 weeks (120-160 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate ship's propulsion and electrical control consoles on gas turbine powered vessels.

Instruction: Classroom lectures, demonstrations, and performance exercises are used to provide basic knowledge of equipment control consoles, basic operation of the consoles, and casualty control training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine control system operation laboratory (12/95).

NV-1710-0142

Console Operator Training
(Gas Turbine System Technician Advanced Operator (DD-963/DDG-993/CG-47))

Course Number: A-652-0336.

Location: Service School Command, Great Lakes, IL.

Length: 3-4 weeks (120-150 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate ship's propulsion and electrical control consoles on gas turbine powered vessels.

Instruction: Classroom lectures, demonstrations, and performance exercises are used to provide basic knowledge of equipment control consoles, basic operation of the consoles, and casualty control training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine control system operation laboratory (12/95).

NV-1710-0143

Gas Turbine Systems (Mechanical), Class C
(Gas Turbine System Technician Advanced Operator (FFG-7))

Course Number: A-652-0334.

Location: Service School Command, Great Lakes, IL.

Length: 3-4 weeks (120-150 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate ship's propulsion and electrical control consoles on gas turbine powered vessels.

Instruction: Classroom lectures, demonstrations, and performance exercises are used to provide basic knowledge of equipment control consoles, basic operation of the consoles, and casualty control training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine control system operation laboratory (12/95).

NV-1710-0144

Gas Turbine System Technician (GS)
Advanced Hot Plant GL-7 Strand

Course Number: A-652-0333.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (140 hours).

Exhibit Dates: 8/92–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain shipboard gas turbine main propulsion unit, auxiliary equipment, and electrical systems. Student will be familiar with watchstanding procedures, safety, and standard operation and maintenance procedures. Systems are specific to FFG-7/GL-7 type plants.

Instruction: Lectures and practical exercises cover watchstanding, safety, terminology, theory, measurement, and functional relationships as applied to gas turbine plant operation. Plant auxiliary systems are also covered, including auxiliary boiler, distilling plant, fuel oil system, lube oil system, ship service diesel generators, air compressors, cooling systems, and electrical distribution system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine power plant operations and 1 in gas turbine operations laboratory (10/93).

NV-1710-0145

Gas Turbine System Technician, Class A, Hot Plant

Course Number: A-652-0319.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and operate a gas turbine propulsion plant and auxiliary systems and perform as an equipment monitor on gas turbine power plants.

Instruction: Classroom lectures, demonstrations, and practical exercises are used in conjunction with an actual and simulated power plant to cover gas turbine operation and maintenance, gas turbine propulsion, and auxiliary system operation and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine power plant operations and 1 in gas turbine operations laboratory (10/93).

NV-1710-0146

Gas Turbine System Technician (GS)
Advanced Hot Plant

Course Number: A-652-0312.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (140 hours).

Exhibit Dates: 8/91–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain shipboard gas turbine main propulsion unit, auxiliary equipment, and electrical systems. Student will be familiar with watchstanding procedures, safety, and standard operation and maintenance procedures. Systems are specific to CG-49/GL-47 type plants.

Instruction: Lectures and practical exercises cover watchstanding, safety, terminology, theory, measurement, and functional relationships as applied to gas turbine plant operation. Plant auxiliary systems are also covered, including auxiliary boiler, distilling plant, fuel oil system, lube oil system, ship service diesel generators, air compressors, cooling systems, and electrical distribution system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine power plant operations and 1 in gas turbine operations laboratory (10/93).

NV-1710-0147

1. Gas Turbine Systems (Mechanical), Class C
2. Advanced Training Phase II Mechanical Maintenance

Course Number: *Version 1:* A-652-0303. *Version 2:* A-652-0303.

Location: *Version 1:* Training Center, Great Lakes, IL. *Version 2:'* Service School Command, Great Lakes, IL.

Length: *Version 1:* 14 weeks (560 hours). *Version 2:* 17 weeks (680 hours).

Exhibit Dates: *Version 1:* 1/95–Present. *Version 2:* 5/91–12/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain gas turbine propulsion and auxiliary equipment. Students will apply basic engineering theory and the use of electronic test equipment to the maintenance of the LM-2500 and Allison 501-K17 gas turbine engines and their propulsion-related auxiliaries. *Version 2:* Upon completion of the course, the student will be able to maintain gas turbine propulsion and auxiliary equipment. Students will apply basic engineering theory and the use of electronic test equipment to the maintenance of the LM-2500 and Allison 501-K17 gas turbine engines and their propulsion-related auxiliaries.

Instruction: *Version 1:* Lectures, laboratory exercises using an interactive electronic classroom, practical demonstrations, and actual equipment are used to learn maintenance procedures on gas turbines and related equipment, including brakes, clutches, shafting and bearings, controllable-pitch propellers and hydraulic systems, lube oil purifiers and systems, pumps and pumping systems, reduction gears, turbine generator systems, and waste heat recovery boilers. *Version 2:* Lectures, laboratory exercises, practical demonstrations, and the use of actual equipment are used to learn maintenance procedures on gas turbines and related equipment, including brakes, clutches, shafting and bearings, controllable-pitch propellers and hydraulic systems, lube oil purifiers and system, pumps and pumping systems, reduction gears, turbine generator systems, and waste heat recovery boilers.

Credit Recommendation: *Version 1:* In the vocational certificate category, 6 semester hours in gas turbine power plant maintenance (12/95); in the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine power systems laboratory (12/95). *Version 2:* In the vocational certificate category, 6 semester hours in gas turbine power plant maintenance (10/93); in the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine power systems laboratory (10/93).

NV-1710-0148

Ultrasonic Shearwave Inspector

Course Number: A-701-0047.

Location: Service School Command, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/93–1/98.

Learning Outcomes: Upon completion of the course, the student will be be to perform ultrasonic inspection of welded metal components.

Instruction: Group-paced lectures and practical exercises cover ultrasonic inspection theory, standards, and equipment. Student performance tests and oral feedback are required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in ultrasonic testing of welded components (11/93).

NV-1710-0149

Nuclear Power Plant Components Welder

Course Number: A-701-0028.

Location: Service School Command, San Diego, CA.

Length: 14 weeks (560 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Before 1/93 see NV-1710-0069. Upon completion of the course, the student will be able to weld nuclear power plant components and qualify as a nuclear power plant welder.

Instruction: Lectures and extensive practical laboratory experiences cover the use of gas tungsten arc welding equipment to join nuclear power plant components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in gas tungsten arc welding theory and 6 in gas tungsten arc welding of nuclear components laboratory (11/93).

NV-1710-0150

Non-Nuclear Component Welder

Course Number: A-701-0027.

Location: Service School Command, San Diego, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Before 1/93 see NV-1710-0051. Upon completion of the course, the student will be able to perform as a welder using shielded metal arc and gas tungsten welding equipment.

Instruction: Lectures and extensive practical laboratory experience cover the theory and practice of welding include both plating and pipe material of chromium molybdenum and carbon molybdenum.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in welding theory and 6 in plate and pipe welding laboratory (11/93).

NV-1710-0151

General Maintenance Welding, Class C1

Course Number: A-701-0026.

Location: Service School Command, San Diego, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 9/91–Present.

Learning Outcomes: Before 9/91 see NV-1710-0050. Upon completion of the course, the student will be able to perform oxygen acetylene silver brazing; visual and liquid penetrant inspection; gas metal arc welding—aluminum; shielded metal arc welding—plate; shielded metal arc welding—pipe, and emergency boiler repair.

Instruction: By use of lecture, audiovisuals, demonstrations, and extensive hands-on learning experiences, introduction to general maintenance welding, oxygen-acetylene brazing, visual and liquid penetrant testing of welds, gas metal arc welding of aluminum, shielded metal arc welding of plate, and shielded metal arc welding of pipe are covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in metal arc welding (11/93).

NV-1710-0152

T-58GE-16 Intermediate Maintenance First Degree Repair, Class C1

Course Number: C-601-3152.

Location: Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, New River, NC.

Length: 6 weeks (176 hours).

Exhibit Dates: 2/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to remove, disassemble, repair, and replace components in the T-58 turboshaft engine.

Instruction: Course covers the theory of operation of gas turbine engines including airflow patterns and system functions; oil, fuel, electrical, and accessory sections; engine module disassembly and repair; and power turbine, compressor, combustion, and gas producer including QEC package components. Methodology includes lecture and laboratory experiences using mock-ups and live engine components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft turbine engines (7/94).

NV-1710-0154

Machinist's Mate, Class A

Course Number: A-661-0103.

Location: Nuclear Power Training Command, Orlando, FL.

Length: 13 weeks (335 hours).

Exhibit Dates: 3/94–Present.

Learning Outcomes: Upon completion of the course, the student will have a basic understanding of the theory and operation of a steam power plant; be able to perform basic arithmetic operations; operate tools, test equipment, and system components; read blueprints; practice rigging techniques; and perform maintenance procedures.

Instruction: The course is conducted through classroom and laboratory mode. The mathematics component covers arithmetic operations, scientific notation, first-order algebraic equations, metric prefixes, conversions, exponents, polynomials, introduction to trigonometric functions and vector notation, colinear and noncolinear vectors, complex numbers, polar and rectangular conversions, phasor diagrams, and solution of electrical problems using phasors. Basic concepts of geometry include calculating area, volume, and perimeter. The classroom instruction in the mechanical component includes mechanical equipment (energy and force equations, basic fluid and thermodynamics, mass and energy balance, heat exchangers, condensers, pumps, air compressors, and refrigeration); air conditioning and ventilation (steam turbines, steam cycle, and component and system maintenance). The laboratory portion covers compressed air, steam turbine, reduction gears, basic fluid theory, heat exchanger, and pumps. In the basic machinery classroom instruction component, topics include safety, hand tools, maintenance, rigging, blueprint reading, engineering labs, piping, tubing, flexible hoses, valves (gate, globe, needle, regulating, relief, check, ball, butterfly, and pressure control), packing and gaskets, precision measuring instruments, steam traps, fundamentals of lubrication, oil purification, and pump couplings. The laboratories cover hand tools, rigging, blueprint reading, packing and gaskets, piping, valves as listed above, precision measuring instruments, steam traps, fundamentals of lubrication, oil purification (Sharples, and Delaval), and pump couplings. Tools include basic hand tools and precision measuring equipment such as calipers, micrometers, vernier calipers, depth gages, torque wrenches, pressure gages, and mechanical test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics including algebra II, 3 in mechanical physics, and 3 in steam plant operations (turbines, condensers, heat exchangers, and system components) (2/95).

NV-1710-0155

General Regulator Automatic Boiler Control (ABC) Maintenance

Course Number: A-651-0040.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: Group-paced, 8 weeks (317 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Before 11/91 see NV-1710-0072. Upon completion of the course, the student will be able to operate, maintain, and calibrate the general regulator automatic boiler control systems.

Instruction: Methods of instruction consist of both lecture and laboratory exercises. Students cover topics in the operation, maintenance, and calibration of the general regulator automatic boiler control system, including air and fuel regulation, multi-element feed water and feed pump controls, systems, and component calibration and troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in automatic control or high-pressure boiler operation (11/95); in the lower-division baccalaureate/associate degree category, 1 semester hour in automatic control instrumentation laboratory (11/95).

NV-1710-0156

Hagan Automatic Boiler Control (ABC) Maintenance

Course Number: A-651-0041.

Location: Fleet Training Center, Norfolk, VA.

Length: 7 weeks (280 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Before 11/91 see NV-1710-0073. Upon completion of the course, the student will be able to operate, maintain, and calibrate the Hagan automatic boiler control system.

Instruction: Methods of instruction include lecture and laboratory exercises. Topics covered include the operation, maintenance, and calibration of the Hagan boiler control system, including air and fuel regulation, multi-element feed water and feed pump controls, system and component calibration, and troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in automatic control or high-pressure boiler operation (11/95); in the lower-division baccalaureate/associate degree category, 1 semester hour in automatic control instrumentation laboratory (11/95).

NV-1710-0157

General Regulator Automatic Boiler Control (ABC) Console Operator

Course Number: A-651-0046.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 11/95–Present.

Learning Outcomes: Before 11/95 see NV-1710-0079. Upon completion of the course, the student will be able to operate a general regulator automatic boiler control console.

Instruction: Methods of instruction include lectures and practical experience in automatic boiler control console operation and procedures. Topics covered include automatic boiler control and a typical automatic combustion control system, feed water control, feed pump differential pressure control, feed pump recirculation controls, and air locks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour as a technical elective in manufacturing technology, mechanical technology, or engineering technology (11/95).

NV-1710-0158

Pump Maintenance

Course Number: A-651-0067.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3 weeks (100 hours).

Exhibit Dates: 6/95–Present.

Learning Outcomes: Before 6/95 see NV-1710-0091. Upon completion of the course, the student will be able to inspect and maintain pumps.

Instruction: Methods of instruction include classroom instruction and practical hands-on exercises. Topics include pump inspection and maintenance, including centrifugal, reciprocating, and rotary type pumps; external and internal inspection; troubleshooting; disassembly, repair, and testing; and record keeping.

Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery pump repair (11/95); in the lower-division baccalaureate/associate degree category, 1 semester hour in mechanical systems laboratory (11/95).

NV-1710-0159

Governor and Regulator Maintenance

Course Number: A-651-0069.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 6/95–Present.

Learning Outcomes: Before 6/95 see NV-1710-0086. Upon completion of the course, the student will perform maintenance on machinery controls, governors, and regulators.

Instruction: Methods of instruction include lecture and hands-on exercises. Topics covered include troubleshooting, disassembly, inspection, measurement, repair, reassembly, and testing of machinery controls, governors and regulators, including speed control devices, air pilot diaphragm control devices, pressure control devices, and safety shutdown devices.

Credit Recommendation: In the vocational certificate category, 3 semester hours in machinery controls, governors, and regulators maintenance (11/95); in the lower-division baccalaureate/associate degree category, 1 semester hour in mechanical systems laboratory (11/95).

NV-1710-0160

Hagan Automatic Boiler Control (ABC) Console Operator

Course Number: A-651-0049.

Location: Fleet Training Center, Norfolk, VA.

Length: 3 weeks (93 hours).

Exhibit Dates: 12/91–Present.

Learning Outcomes: Before 12/91 see NV-1710-0078. Upon completion of the course, the student will be able to operate a Hagan automatic boiler control console.

Instruction: Lecture and practical experience cover automatic boiler control console operation and procedures. Topics covered include automatic boiler control theory, typical automatic combustion control system, principles of automatic combustion control, feed water control, feed pump differential pressure control, and feedback recirculation controls and air locks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in a technical elective in manufacturing, engineering, or mechanical technology (11/95).

NV-1710-0161

Marine Gas Turbine Inspector Training and Certification

Course Number: A-652-0503.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to diagnose mechanical problems, provide technical assistance, produce message text format reports, and recommend corrective action for propulsion and auxiliary gas turbines.

Instruction: Lecture, seminars and practical exercises cover the inspection and performance analysis of jet engines.

Credit Recommendation: In the vocational certificate category, 3 semester hours in gas turbine analysis and inspection (12/95).

NV-1710-0162

Gas Turbine Electrical Maintenance DDG-51/AOE-6, Class C

Course Number: A-652-0329.

Location: Service School Command, Great Lakes, IL.

Length: 7 weeks (280 hours).

Exhibit Dates: 6/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain gas turbine main propulsion and auxiliary system consoles.

Instruction: Lectures use interactive electronic classroom and practical exercises to cover digital system fundamentals, signal conditioning, and gas turbine control console troubleshooting and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital technology and 2 in control system technology (12/95).

NV-1710-0163

Light Frame Construction

Course Number: A-710-0026.

Location: Construction Training Center, Port Hueneme, CA.

Length: 2 weeks (70 hours).

Exhibit Dates: 10/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use a trailer-mounted saw to construct roof framing systems, including common rafters; hip and valley rafters; hip, valley and cripple jacks; roof trusses; and stair construction.

Instruction: Lectures and extensive practical laboratory experiences cover use of a trailer and mounted saw; layout and roof framing using common rafters; hip and valley rafters; hip, valley and cripple jacks; and roof trusses. Also included is stair construction.

Credit Recommendation: In the vocational certificate category, 2 semester hours in components for roof framing (4/97); in the lower-division baccalaureate/associate degree category, 1 semester hour in roof framing systems. Credit is to be granted in either category, but not in both (4/97).

NV-1710-0164

Roofing

Course Number: A-710-0012.

Location: Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: 2 weeks (70 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to lay out and apply built-up roofing, modified bitumen roofing, asphalt roll roofing, and composition shingles and estimate roofing materials.

Instruction: Lectures and extensive practical laboratory experiences cover layout estimating and installation of built-up roofs, modified bitumen roofs, asphalt roll roofs, and composition shingles.

Credit Recommendation: In the vocational certificate category, 2 semester hours in roof covering applications (4/97); in the lower-division baccalaureate/associate degree category, 1 semester hour in roofing systems. Credit is to be granted in either category, but not both (4/97).

NV-1710-0165

Forming and Reinforcing

Course Number: A-710-0025.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: 2 weeks (70 hours).

Exhibit Dates: 10/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to design layouts and build concrete forms, fabricate and place reinforcing steel, and understand concrete precasting operations.

Instruction: Lectures with extensive practical laboratory exercises cover design, layout, and building of concrete for,; fabrication and placement of reinforcing steel, and understanding concrete precasting operations.

Credit Recommendation: In the vocational certificate category, 2 semester hours in forming and reinforcement for concrete construction practice (4/97); in the lower-division baccalaureate/associate degree category, 1 semester hour in concrete construction. Credit is to be granted in either category, but not in both (4/97).

NV-1710-0166

Masonry Unit Construction 2

Course Number: A-710-0028.

Location: Construction Training Center, Gulfport, MS.

Length: 2 weeks (70 hours).

Exhibit Dates: 4/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify masonry terminology, tools, and materials; tuckpointing, cleaning, and waterproofing; estimate masonry materials; perform layout procedures; and lay masonry units.

Instruction: Lectures with extensive practical laboratory experiences cover masonry tools and materials; tuckpointing, cleaning, and waterproofing; estimating masonry materials; layout; and laying masonry units.

Credit Recommendation: In the vocational certificate category, 2 semester hours in masonry construction practices (4/97); in the lower-division baccalaureate/associate degree category, 1 semester hour in masonry construction. Credit is to be granted in either category, but not both (4/97).

NV-1710-0167

Builder, Class A, Air Force

Course Number: A-710-0032.

Location: Construction Training Center, Gulfport, MS.

Length: 10-11 weeks (416 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to read and understand basic drawings and specifications for light-frame construction, heavy timber bridge construction, and pre-engineering building construction and perform, under supervision, masonry construction, light-frame construction, interior and exterior finishing, shingling, wood frame structure preservation, heavy timber bridge construction, and pre-engineering building construction.

Instruction: Lectures, audiovisual instruction, and hands-on applications cover the use of hand tools and portable machinery and include plan reading, concrete construction, masonry construction, light-frame construction, interior finishing, composite shingle construction, heavy timber frame construction, and pre-engineering building erection.

Credit Recommendation: In the vocational certificate category, 2 in applied mathematics (4/97); in the lower-division baccalaureate/associate degree category, 3 in construction materials, 4 in framing and exterior finish, 3 in interior finish, and 1 in technical mathematics. Credit is to be granted in either category, but not in both (4/97).

NV-1710-0169

Salvage/Construction Demolition Diver

Course Number: A-433-0048.

Location: Diving and Salvage Training Center, Panama City, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 8/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use and handle explosives and demolition accessories, design safety precautions used with explosive operations, plan and set charges, perform administrative procedures, use hydraulic and hand tools underwater, and perform underwater cutting using appropriate techniques and observing safety precautions.

Instruction: Lectures, laboratories, field and open water demonstrations (electric and non-electric demolitions), and written and performance tests are methods of instruction.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in underwater cutting (8/97).

NV-1710-0170

Builder, Class A, Army

Course Number: A-710-0033.

Location: Construction Training Center, Gulfport, MS.

Length: 7-8 weeks (288 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to read and understand basic drawings and specifications for light-frame construction, heavy timber bridge construction, and pre-engineering building construction and perform, under supervision, masonry construction, light-frame construction, exterior finishing, shingling, wood frame structure preservation, heavy timber bridge construction, and pre-engineering building construction.

Instruction: Lectures, audiovisual instruction, and hands-on applications cover the use of hand tools and portable machinery and include plan reading, concrete construction, masonry construction, light-frame construction, composite shingle construction, heavy timber frame construction, and pre-engineering building erection.

Credit Recommendation: In the vocational certificate category, 2 in applied mathematics (9/97); in the lower-division baccalaureate/associate degree category, 3 in construction materials, 4 in framing and exterior finish, and 1 in technical mathematics. Credit is to be granted in either category, but not in both (9/97).

NV-1712-0001

Waukesha Diesel Engine

Course Number: J-651-0477; J-651-0473; A-652-0037.

Location: Fleet and Mine Warfare Training Center, Charleston, SC.

Length: 4 weeks (135 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train enginemen to operate and maintain specific diesel engines, distilling plant, and engineering plant systems.

Instruction: A limited amount of lecture material in the design, construction, and operating theory of a specific diesel engine is complimented by practical laboratory exercises in the disassembly, diagnosis, and assembly of a specific diesel engine. Troubleshooting and adjustment techniques are also taught in a laboratory situation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in a technical elective credit in automotive, diesel, or heavy equipment technology (11/81).

NV-1712-0002

Diesel Engine/Fairbanks-Morse Maintenance Technician

Course Number: A-652-0046.

Location: Fleet Ballistic Submarine Training Center, Charleston, SC; Submarine Training Facility, San Diego, CA; Submarine Training Center, Pearl Harbor, HI; Submarine Training Center, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train enlisted personnel to maintain and repair the Fairbanks-Morse diesel engine.

Instruction: Lectures and practical exercises cover Fairbanks-Morse diesel engine maintenance and repair, including diesel engine principles, component familiarization and maintenance procedures, engine fluid systems, scavenging blower, camshaft drive and bearings, tappet assemblies, fuel injection, engine timing, governor, engine control linkage, snorkel systems, and troubleshooting and corrective maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in automotive technology (6/81).

NV-1712-0012

MINE WARFARE PACKARD DIESEL ENGINEMAN, CLASS C

Course Number: J-651-0475.

Location: Naval Schools, Charleston, SC.

Length: 4 weeks (120 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train enlisted personnel who have completed an introductory course in diesel engine fundamentals to a more advanced competency in the diagnosis, troubleshooting, and repair of diesel engines.

Instruction: Lectures, demonstrations, and practical exercises cover diesel engine operation, maintenance, diagnosis, and overhaul, including turbosuperchargers, instruments, and controls; operating and construction data; cooling, lubrication, air intake, exhaust, and fuel systems; engine maintenance and overhaul procedures; and engine timing, troubleshooting, testing, and starting procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in automotive or diesel technology, heavy equipment, or a technical elective (11/81).

NV-1712-0021

AVIATION SUPPORT EQUIPMENT DETROIT SERIES 53 DIESEL INTERMEDIATE MAINTENANCE
(Aviation Support Equipment UD-282 and Detroit Series 53 Diesel Engines Intermediate Maintenance)

Course Number: C-602-3213.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To train support equipment technicians in maintenance and repair of diesel engines.

Instruction: Lectures and practical exercises cover the maintenance, repair, and troubleshooting of diesel engines, including system analysis using applicable publications, test equipment, special tools, and safety precautions.

Credit Recommendation: In the vocational certificate category, 2 semester hours in automotive shop (4/85); in the lower-division baccalaureate/associate degree category, 1 semester in diesel engine maintenance (4/85).

NV-1712-0024

1. ENGINEMAN, CLASS A SCHOOL STRAND
2. ENGINEMAN, CLASS A, CLASS A1

Course Number: *Version 1:* A-652-0018. *Version 2:* A-652-0018.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 10-11 weeks (420 hours). *Version 2:* 9 weeks (344 hours).

Exhibit Dates: *Version 1:* 10/94–Present. *Version 2:* 1/90–9/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will have a broad based mechanical knowledge and specific training in diesel repair and maintenance. *Version 2:* Upon completion of the course, the student will be able to function as an entry-level diesel engine operator and perform basic maintenance and repair on diesel engines and auxiliary systems.

Instruction: *Version 1:* Classroom instruction and hands-on training covers repair and maintenance of mechanical equipment, including water heaters, conveyors, laundry and kitchen equipment, and steering gear. Half of the course is devoted to diesel engines of all types. *Version 2:* Lectures and practical exercises cover engines, including portable pumps; internal combustion engines; diesel engines; lubrication, cooling, fuel, electrical, and transmission systems; and auxiliary boilers. The course includes air conditioning, refrigeration, fire fighting systems, and valve and pump maintenance.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in basic mechanics (12/95); in the lower-division baccalaureate/associate degree category, 2 semester hours in diesel fundamentals and 1 in industrial safety (12/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in diesel engines and power plant auxiliaries and 2 in diesel engine laboratory (6/88).

NV-1712-0025

1182 PROPULSION SYSTEM TECHNICIAN

Course Number: A-652-0054.

Location: Service School Command, Great Lakes, IL.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–12/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, overhaul, and repair medium-speed, marine diesel engines of various manufacture and operate, maintain, and troubleshoot a Kamewa controllable-pitch propeller.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of variable-pitch ship propellers and associated control equipment including applications of hydraulics and pneumatics and analysis of electrical control circuits and mechanical components.

Credit Recommendation: In the vocational certificate category, 5 semester hours in diesel engine maintenance and 3 in pneumatic/hydraulic control systems maintenance (6/88); in the lower-division baccalaureate/associate degree category, 3 semester hours in diesel engine technology (6/88).

NV-1712-0026

MASTER MARINE DIESEL MECHANIC MAINTENANCE

Course Number: A-652-0305.

Location: Service School Command, Great Lakes, IL.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–2/91.

Learning Outcomes: Upon successful completion of the course, the student will be able to operate, maintain, overhaul and repair medium-speed marine diesel engines.

Instruction: Lectures and practical exercises cover diesel engine construction, operation, maintenance, overhaul, and repair as it applies to a wide variety of medium-speed marine diesel engines. Topics include construction, turbocharging, diesel auxiliary systems, and control systems.

Credit Recommendation: In the vocational certificate category, 5 semester hours in diesel engine maintenance (6/88); in the lower-division baccalaureate/associate degree category, 3 semester hours in diesel engine technology (6/88).

NV-1712-0027

FFG-7 AUXILIARY 16V149TI DIESEL ENGINE MAINTENANCE

Course Number: A-652-0306.

Location: Service School Command, Great Lakes, IL.

Length: 5 weeks (180 hours).

Exhibit Dates: 1/90–2/91.

Learning Outcomes: Upon completion of the course, the student will be able to identify components and explain fundamental operating principles of two-stroke and four-stroke diesel engines; perform designated scheduled maintenance on components and systems of diesel engines in general; and perform designated scheduled maintenance, troubleshooting, and limited corrective maintenance on the DDA 16V149TI diesel engine.

Instruction: Classroom and practical exercises cover diesel engine maintenance, including diesel engine construction and operating principles, shaft alignment principles and practices, diesel engine systems, diesel engine troubleshooting, and timing operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in diesel engine technology and 1 in diesel engine operation and maintenance (6/88).

NV-1712-0028

TRIDENT SUBMARINE DIESEL ENGINE MAINTENANCE

Course Number: A-652-0150.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Norfolk, VA; Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT; Submarine Training Facility, San Diego, CA; Submarine Training Facility, Charleston, SC; Submarine Training Facility, Kings Bay, GA.

Length: 2 weeks (79 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform standard preventive maintenance procedures on a medium-speed diesel engine and troubleshoot and repair diesel engine faults.

Instruction: Lecture and laboratory exercises cover the construction, operation, and maintenance of auxiliary diesel engines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in diesel engine technology. Credit listed in this course does not duplicate credit for Trident Diesel Engine Supervisor, A-652-0267 (NV-1712-0029) (2/96).

NV-1712-0029

TRIDENT DIESEL ENGINE SUPERVISOR

Course Number: A-652-0267.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 1 week (53 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair diesel engine faults.

Instruction: Lecture and laboratory exercises cover the theory of operation, construction, and maintenance of auxiliary diesel engines. Emphasis is on lubrication and governor systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in diesel engine technology. Credit listed for this course is not duplicated in Trident Submarine Diesel Engine Maintenance, A-652-0150 (NV-1712-0028) (2/89).

NV-1712-0030

TRIDENT SUBMARINE AUXILIARY EQUIPMENT TECHNICIAN LEVEL 3

Course Number: A-652-0142.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (97 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: See individual exhibits for learning outcomes. This is a pipeline course.

Instruction: See exhibits NV-1712-0029 (A-652-0267) and NV-1701-0011 (A-652-0265).

Credit Recommendation: Please refer to the individual exhibits noted above for credit recommendation (2/89).

NV-1712-0031

FAIRBANKS-MORSE 38F 5 1/4 DIESEL MAINTENANCE TECHNICIAN

Course Number: A-652-0236.

Location: Submarine Base, New London, Groton, CT.

Length: 1-2 weeks (65 hours).

Exhibit Dates: 1/90–3/93.

Learning Outcomes: Upon completion of the course, the student will be able to describe diesel operation and maintenance and operate, troubleshoot, and maintain diesel engines.

Instruction: Lectures and laboratories cover diesel operation and maintenance subjects, including construction and assembly of components, fuel injection systems, governors, turbochargers, lubrication, and timing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 in laboratory in diesel engine technology. (May be applied to an automotive technology program.) (10/89).

NV-1712-0032

1. ENGINEMAN, CLASS C, CORE
2. DIESEL ENGINE, CLASS C CORE

Course Number: *Version 1:* A-652-0320. *Version 2:* A-652-0320.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 4 weeks (143 hours).

Exhibit Dates: *Version 1:* 8/94–Present. *Version 2:* 2/91–7/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to identify diesel engine and propulsion systems parts, components, and subsystems; describe their operation and interrelationships; describe the auxiliary systems operation and function; make basic calculations; and measure diesel physical parameters. The student will also be able to supervise diesel plant personnel, perform associated administrative functions, and apply plant safety codes and procedures. *Version 2:* Upon completion of the course, the student will be able to identify diesel engine and propulsion systems parts, components, and subsystems; describe their operation and interrelationships; describe the auxiliary systems operation and function; make basic calculations; and measure diesel physical parameters.

Instruction: *Version 1:* Classroom lectures and demonstrations are used to present the fundamental theories of operation and diesel construction. Topics include diesel safety, cooling systems, instrumentation, fuel systems, diesel construction, diesel cycles, lube oil systems, intake and exhaust systems, and power transmission systems. Classroom lectures are also used to demonstrate plant safety. *Version 2:* Classroom lectures and demonstrations are used to present the fundamental theories of operation and diesel construction. Topics include diesel safety, cooling systems, instrumentation, fuel systems, diesel construction, diesel cycles, lube oil systems, intake and exhaust systems, and power transmission systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in diesel engine fundamentals, 1 in industrial safety, and 1 in power plant administration (12/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in diesel engine fundamentals (6/91).

NV-1712-0033

DIESEL ENGINE, CLASS C MODULE 4

Course Number: A-652-0324.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (152 hours).

Exhibit Dates: 4/91–5/94.

Learning Outcomes: Upon completion of the course, the student will be able to safely operate and maintain diesel engines used for marine propulsion and generator service. Caterpillar D-399 and IFID-36 SSCV-AM Engines only are reviewed during the course.

Instruction: Classroom lectures and demonstrations are performed to introduce extensive laboratory time. Laboratory stresses general description, operational description, maintenance description, and complete disassembly, inspection, reassembly, and operation of each engine.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in diesel engine maintenance and repair laboratory (6/91).

NV-1712-0034

SMALL BOAT ENGINE OVERHAUL

Course Number: K-652-0230.

Location: Amphibious School, Little Creek, Norfolk, VA; Amphibious School, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 2/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and overhaul small diesel engines.

Instruction: Lectures and laboratories cover diesel engine components and systems. Included topics are construction, lubrication systems, fuel systems, hydraulic systems, water systems, electrical systems, injectors, governors, and transmissions. Instruction includes disassembly, inspection, repair, and reassembly of all of the above components and systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in diesel/automotive/marine engines (3/92).

NV-1712-0035

BARGE FERRY ENGINEER O LEVEL MAINTENANCE

Course Number: K-652-0297.

Location: Amphibious School, San Diego, CA.

Length: 2 weeks (121 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the diesel propulsion, powered causeway, electrical, and ventilation systems on a self-propelled barge ferry.

Instruction: Lectures and laboratories cover the topics listed above.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in mechanical systems repair (3/92).

NV-1712-0036

SMALL BOAT ENGINEER

Course Number: K-652-0231.

Location: Mobile training, as required; Amphibious School, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 2/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, in a limited way, a small diesel engine, marine transmission, and outdrive.

Instruction: Lectures and laboratories cover diesel engine, transmission, and outdrive components and systems. Topics include physical and functional description of construction, lubrication systems, electrical systems, and power transmission components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category

gory, 1 semester hour in diesel/automotive/marine engines (3/92).

NV-1712-0037

Diesel Engine/Waste Heat FFG-7

Course Number: A-652-0167.
Location: Service School Command, Great Lakes, IL.
Length: 3 weeks (120 hours).
Exhibit Dates: 1/94–Present.
Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, repair, and maintain a shipboard waste heat recovery system and a medium horse power marine diesel engine. Student will be able to describe equipment, basic mechanical heat processes, functional sequences, and abnormal system conditions.
Instruction: Instruction includes lecture, demonstration, mock-ups, and hands-on laboratory training. Examination includes performance, knowledge recall, and troubleshooting analysis. Systems include diesel, waste heat system, diesel auxiliary systems, test equipment, seawater distillation systems, and associated electrical systems.
Credit Recommendation: In the vocational certificate category, 3 semester hours in diesel power plant operation and maintenance (10/93).

NV-1712-0038

Engineman, Class C, Module 1
(Diesel Engine, Class C, Module 1)

Course Number: A-652-0321.
Location: Service School Command, Great Lakes, IL.
Length: 4 weeks (157 hours).
Exhibit Dates: 5/91–Present.
Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot medium-speed diesel engines; interpret technical data; and identify and correct mechanical problems in the EMD and ALCO 251-C engines and auxiliaries.
Instruction: Lectures and practical exercises use actual equipment and mock-ups to teach engine construction, operating theory, problem isolation, troubleshooting, and maintenance and repair techniques for medium-speed diesel engines. All engine systems are covered, including starting, speed control, fuel oil, cooling, and turbocharging.
Credit Recommendation: In the vocational certificate category, 3 semester hours in medium-speed diesel engine troubleshooting, maintenance, and repair (7/95).

NV-1712-0039

Diesel Engine, Class C, Module 2

Course Number: A-652-0322.
Location: Service School Command, Great Lakes, IL.
Length: 4 weeks (145 hours).
Exhibit Dates: 4/91–12/93.
Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot medium-speed diesel engines; interpret technical data; and identify and correct mechanical problems in the GM series V71 and DDA 16V 14911 engines and auxiliaries.
Instruction: Lectures and practical exercises use actual equipment and mock-ups to teach engine construction, operating theory, problem isolation, troubleshooting, and maintenance and repair techniques for medium-speed diesel engines. All engine systems are covered, including starting, speed control, fuel oil, cooling, and turbocharging.
Credit Recommendation: In the vocational certificate category, 3 semester hours in medium-speed diesel engine troubleshooting, maintenance, and repair (10/93).

NV-1712-0040

Engineman, Class C, Module 3
(Diesel Engine, Class C, Module 3)

Course Number: A-652-0323.
Location: Service School Command, Great Lakes, IL.
Length: 4 weeks (145-160 hours).
Exhibit Dates: 4/91–Present.
Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot medium-speed diesel engines; interpret technical data; and identify and correct mechanical problems in the Colt Pielstick PC2.5C and Fairbanks-Morse 38D 8 1/8 engines and auxiliaries.
Instruction: Lectures and practical exercises use actual equipment and mock-ups to teach engine construction, operating theory, problem isolation, troubleshooting, and maintenance and repair techniques for medium-speed diesel engines. All engine systems are covered, including starting, speed control, fuel oil, cooling, and turbocharging.
Credit Recommendation: In the vocational certificate category, 3 semester hours in medium-speed diesel engine troubleshooting, maintenance, and repair (7/95).

NV-1712-0041

Diesel Engine Inspector Training and Certification

Course Number: A-652-0311.
Location: Service School Command, Great Lakes, IL.
Length: 5 weeks (193 hours).
Exhibit Dates: 1/92–Present.
Learning Outcomes: Upon completion of the course, the student will be able to inspect diesel engines, compare inspection results with specifications, analyze the data, make repair recommendations, and report results.
Instruction: Instruction includes lectures, demonstrations, laboratory exercises, analysis exercises, and case studies with group discussions. Topics include diesel and auxiliary equipment components, theory of operation, maintenance, specifications and standards, safety, and inspection procedures. Course includes communication skills at the report-writing level. Engine inspection skills are emphasized. Examinations include written, practical, and oral components.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in advanced diesel engine inspection or repair diagnosis and 1 in diesel engine laboratory (10/93).

NV-1712-0042

MA2, MA3 Generator Test Stand Maintainer

Course Number: C-602-3820.
Location: Air Maintenance Training Group, Cherry Point, NC.
Length: 4 weeks (160 hours).
Exhibit Dates: 2/92–Present.
Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair the MA2 and MA3 generator test stand at the intermediate maintenance level.
Instruction: Course includes publications, safety, description, theory of operation, construction, limitations, and maintenance of MA2 and MA3 generator test stand. Methodology includes classroom lectures and practical exercises.
Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (7/94).

NV-1712-0043

MCM Class Propulsion Operator and Maintenance

Course Number: A-652-0340.
Location: Service School Command, Great Lakes, IL.
Length: 5 weeks (200 hours).
Exhibit Dates: 5/94–Present.
Learning Outcomes: Upon completion of the course, the student will have in-depth knowledge of MCM propulsion equipment including Isotta-Franchini diesel and gas turbine generation equipment.
Instruction: Computer enhanced lecture techniques are used as well as laboratory.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in diesel engines and auxiliaries and 1 in gas turbines and generators (12/95).

NV-1712-0044

ARS-50 Propulsion Technician

Course Number: A-652-0339.
Location: Service School Command, Great Lakes, IL.
Length: 3 weeks (120 hours).
Exhibit Dates: 6/94–Present.
Learning Outcomes: Upon completion of the course, the student will have complete and in-depth knowledge of ARS-50 propulsion equipment including the Caterpillar diesel.
Instruction: Classroom instruction and laboratory are used.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in diesel engines and auxiliaries (12/95).

NV-1712-0045

Small Boat Engine Overhaul Technician

Course Number: K-652-0232.
Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.
Length: 4 weeks (160 hours).
Exhibit Dates: 6/95–Present.
Learning Outcomes: Upon completion of the course, the student will have a broad based mechanical knowledge in small high-speed diesel engine repair, operation, and maintenance. And the Cummings B-series with MDS outdrive.
Instruction: Lectures and practical exercises cover high-speed diesel engine systems and theory concentrating on overhaul, maintenance, and troubleshooting of GM 6-711 Cummings diesel engines and associated auxiliary and propulsion drive system. Topics include

construction, troubleshooting, tune-up, turbocharging, diesel auxiliary systems, electrical systems, and control systems. The second platform studied is the GM 6-71 series with Allison transmission.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in high-speed diesel engine construction, maintenance, and operation (10/97).

NV-1713-0003

Advanced Engineering Aid

Course Number: *Version 1:* A-412-0015. *Version 2:* A-412-0015.

Location: Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: *Version 1:* 13 weeks (513 hours). *Version 2:* 12 weeks (408 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to solve problems in applied algebra, trigonometry, geometry, and metric systems; understand the basic concepts of statics and strength of materials; design simple members in wood, steel, and concrete; understand the basic concepts for designing HVAC, plumbing, lighting, and electrical systems; perform construction surveying; test soils and concrete; and understand construction planning and estimating. *Version 2:* Upon completion of the course, the student will be able to perform advanced surveying and drafting, plan and estimate, and design and conduct materials testing.

Instruction: *Version 1:* Lectures, demonstrations, and practical exercises cover applied mathematics; construction supervision and management; construction design (wood, steel, and concrete, HVAC, plumbing, electrical); construction surveying, planning, and estimating; and soil mechanics. *Version 2:* Lectures and advanced practical exercises cover applied mathematics, engineering supervision and management, construction design and surveying, planning and estimating, and quality control.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in technical mathematics, 3 in applied structural design (wood, steel, concrete), 1 in applied mechanical-electrical building equipment design, 2 in planning and estimating, 2 in construction surveying, and 3 in applied soil mechanics (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 8 semester hours in construction surveying and civil drafting and 2 in planning and estimating (6/91).

NV-1714-0003

Electrician's Mate Maintenance, Class C1
(Electrician's Mate Maintenance, Class P)

Course Number: A-651-0025.

Location: Development and Training Center, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 3 weeks (90 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide electrician-supervisors with practical training in maintenance and repair procedures on ship's electrical installations.

Instruction: Lectures and laboratory exercises cover electrical machine operation and safety and maintenance, including electric motor theory, motor controllers, alternators, regulators (including solid state regulators), basic magnetism, magnetic amplifiers, degaussing, cathodic equipment, lead and batteries, starter motors, battery charge systems, and their application to shipboard systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electrical machine systems and controls (5/82).

NV-1714-0004

Missile Launcher System Mk 24 Maintenance
Electrical

Course Number: A-121-0267.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 2 weeks (96 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To provide missile technicians with skills needed to maintain and repair electrical portions of the Mk 24 missile launcher system.

Instruction: Lectures and laboratory exercises cover the electrical and electromechanical components of the Mk 24 missile launcher system, including maintenance and repair philosophy and techniques, safety procedures, flow diagrams, circuit breakers, alignment tools, and calibration.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electrical and electromechanical system maintenance (3/81).

NV-1714-0005

Electrical Distribution and Control
Equipment Combined Maintenance

Course Number: A-662-0025.

Location: Submarine School, New London, Groton, CT.

Length: 2 weeks (60-72 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train students to inspect, maintain, adjust, and repair electrical distribution and control equipment installed in nuclear submarines.

Instruction: Lectures and exercises cover electrical switchboards, circuit breakers and circuit breaker control circuitry, AC controllers, coolant pump controllers, and DC starters.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electrical distribution and maintenance (6/81).

NV-1714-0016

Electric Motor Rewind, Class C

Course Number: A-662-0021.

Location: Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 5 weeks (150-160 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train enlisted personnel in the techniques and procedures used in winding AC and DC motors.

Instruction: Lectures and practical exercises cover the recording of data; construction of wiring diagrams; and the rewinding, assembling, and testing of DC motors, single-phase AC motors, and three-phase AC motors.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electric motor repair laboratory and 1 in electric motor repair (5/82).

NV-1714-0018

Variable Speed Controllers Combined
Maintenance

Course Number: A-662-0040.

Location: Submarine School, Pearl Harbor, HI; Submarine School, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 1-2 weeks (33-80 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To train students in the theory, operation, and maintenance of four types of variable speed AC motor controllers.

Instruction: Lectures and practical exercises cover four types of variable-speed AC motor controllers, including functional characteristics, modes of operation, and controls. Corrective maintenance using schematics, signal flow, and operating sequence is also covered. The student learns to interpret malfunctions; isolate faults to the component level; and repair, align, adjust, and calibrate the controllers. The course includes a basic semiconductor review and in-depth theory, operation, and the corrective and preventive maintenance of variable-voltage/variable-frequency controllers to the component level. Equipment studied includes the McCarr SIX-SCR variable-voltage controller, the GE variable-voltage/frequency controller, the GE variable-frequency controller, and the Cutler Hammer variable-voltage/frequency controller.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical machinery controllers (11/85).

NV-1714-0019

Aviation Support Equipment Technician
Electrical

Course Number: C-000-3263.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide non—electrical maintenance personnel with electrical and electronic familiarization, and electrical safety procedures and practices.

Instruction: Lectures and practical exercises cover basic electricity, including DC circuits, magnetism, transformers, generators, transistors, electrical safety, soldering, and troubleshooting principles and procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical fundamentals for non—electrical engineering students (3/82).

NV-1714-0023

FFG-7 Engineering System Maintenance
Management, Electrical, Class C1

Course Number: A-652-0154.

Location: Service School Command, Great Lakes, IL.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train mechanical technicians in the theory of operation and maintenance management of shipboard electrical control systems.

Instruction: Group lectures and individual practice cover the theory of operation, capabilities, limitations, and management of shipboard electrical control systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (1/82).

NV-1714-0024

Gas Turbine Systems Technician Electrical, Class A1

Course Number: A-652-0178.

Location: Service School Command, Great Lakes, IL.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train technicians to maintain gas turbine electrical systems.

Instruction: Lectures, demonstrations, and exercises cover DVMs, oscilloscope, lead acid storage batteries, blueprint reading, transformers, motors, three-phase AC motor controllers, AC generators, magnetic amplifiers, number systems, BCD code, logic symbols, Boolean algebra, and digital circuits.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electric generator plant maintenance (1/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital logic (1/82).

NV-1714-0027

Minesweeping Electrician's Mate

Course Number: J-647-0019.

Location: Fleet and Mine Warfare Training Center, Charleston, SC.

Length: 8 weeks (280 hours).

Exhibit Dates: 1/90–3/93.

Objectives: To train foreign and US naval personnel to operate and maintain minesweeping equipment found onboard minesweeping vessels.

Instruction: Lectures and laboratory instruction cover installing, operating, maintaining, and repairing degaussing and and minesweeping ships and equipment using the principles of magnetism and electricity. Laboratory includes the use of equipment such as meters, generators, motor-generator sets, vacuum tube voltmeters, oscilloscopes, magnetometers, signal amplifiers, and fault logic amplifiers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical theory (3/83).

NV-1714-0028

Mineman, Class A

Course Number: J-647-0016.

Location: Fleet and Mine Warfare Training Center, Charleston, SC.

Length: 12 weeks (520 hours).

Exhibit Dates: 1/90–3/93.

Objectives: To provide designated personnel with the necessary skills and related knowledge to perform final preparation, upgrade maintenance, and safety inspection of mine warfare weapons.

Instruction: Lectures and laboratory instruction cover identifying; handling; maintaining; and repairing mine equipment, using specific equipment, manuals, and directives.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/83).

NV-1714-0029

FFG-7/DD-963 60/40 Hertz Static Frequency Converter Maintenance

Course Number: A-652-0243.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–10/93.

Objectives: After 9/93 see NV-1714-0086. To train personnel in maintenance and troubleshooting procedures for a 60 to 400 Hertz converter.

Instruction: Lectures and practical exercises cover the theory of operation, component function, and maintenance and troubleshooting procedures for a converter including rectifier circuits and digital control circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical control systems troubleshooting laboratory (10/83).

NV-1714-0030

FFG-7 Class Ship Auxiliary Electrical Subsystem Technician

Course Number: A-662-0120.

Location: Service School Command, Great Lakes, IL.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–4/90.

Objectives: To train personnel to operate and perform corrective maintenance on electrical auxiliary subsystem components installed in FFG-7 class ships.

Instruction: This is a pipeline course consisting of a number of courses; see NV-1704-0262.

Credit Recommendation: This was a pipeline course; see above noted exhibit (11/83).

NV-1714-0031

FFG-7 Auxiliary Electrical Systems
(FFG-7 Auxiliary Electrical Systems Maintenance)

Course Number: A-652-0215.

Location: Service School Command, Great Lakes, IL.

Length: 2-5 weeks (80-200 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train electricians in the maintenance of shipboard auxiliary electrical systems.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of auxiliary electrical systems, including a diesel generator static exciter, electric distribution switchboards, and 400 Hertz line voltage regulators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electrical controls maintenance (10/93).

NV-1714-0032

AN/USM-403 Electrical System Equipment Test Set Intermediate Maintenance

Course Number: C-198-3678.

Location: Air Station, North Island, San Diego, CA.

Length: 11 weeks (440 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To provide electronic maintenance personnel with training in the maintenance and repair of an electrical equipment test set.

Learning Outcomes: Upon completion of this course, the student will be able to perform computer functional checkout; operator interface circuit card analysis; diagnosis of program system procedures; circuit board analysis of various circuits, including use of AC/DC power supply, function generator, sampling measurement system, and frequency standard; and test station troubleshooting at the board or component level.

Credit Recommendation: In the vocational certificate category, 6 semester hours in computer maintenance and repair laboratory (4/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in computer maintenance laboratory and 1 semester hour in computer systems applications (4/85).

NV-1714-0033

S-3A Electrical Systems Organizational Maintenance

Course Number: C-602-3676.

Location: Air Station, North Island, San Diego, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To familiarize enlisted personnel with aircraft electrical and instrument systems.

Learning Outcomes: Upon completion of the course, the student will have a basic understanding of S-3A aircraft systems, including electrical power generation and distribution systems, electronic control systems, electromechanically operated systems, and flight and navigation instrument systems and be able to troubleshoot using limited test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft electrical systems (4/85).

NV-1714-0034

S-3A Electrical System Intermediate Maintenance

Course Number: C-602-3680.

Location: Air Station, North Island, San Diego, CA.

Length: 3 weeks (112 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train personnel in the maintenance and repair of an automatic flight control system to the component level.

Learning Outcomes: Upon completion of the course, the student will maintain and repair pressure temperature system, automatic altitude encoders and test sets, pitch trim activators, angle of attack systems, liquid quantity gauging systems, antiskid wheel speed transducer, control logic assembly, and an automatic flight control system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in aviation maintenance systems (4/85).

NV-1714-0035

SH-2F Electrical Component Intermediate Maintenance

Course Number: C-602-4386.

Location: Air Station, North Island, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train aviation technicians in the principles of operation, repair, and maintenance of the aircraft's electrical system.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain to the component level search and landing lights, fuel control activators, blade-tracking activator controllers, and fuel quantity bridge amplifiers on a military helicopter.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electromechanical laboratory (4/85).

NV-1714-0036

SH-2F Electrical System Organizational Maintenance

Course Number: C-602-3395.

Location: Air Station, North Island, San Diego, CA; Air Station, Norfolk, VA.

Length: 2-3 weeks (77 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train aviation technicians to analyze, troubleshoot, repair, and maintain the electrical systems of the SH-2F helicopter.

Learning Outcomes: Upon completion of the course, the student will be able to locate and troubleshoot components of the electrical power supply system, the lighting system, the landing gear electrical system, the cockpit blade-tracking system, the environmental control system, the fuel transfer system, flight and nonflight instruments, and throttle and RPM control systems using maintenance publications, training devices, test equipment, and tools.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/91).

NV-1714-0037

SH-60B Electrical System Organizational Maintenance

Course Number: C-602-4406.

Location: Air Station, North Island, San Diego, CA; Air Station, Mayport, FL.

Length: 4 weeks (174 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train aviation electricians in the theory of operation, troubleshooting, repair, and maintenance of the electrical systems of a helicopter.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, repair, and maintain components of the SH-60B helicopter, including the AC/DC power system; caution advisory system; hydraulic power system; engine electrical system; and the fuel, fire protection, power train, blade/pylon fold, de-ice/anti-ice, interior/exterior lighting, and landing gear systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aircraft systems maintenance laboratory and 1 in electromechanical laboratory (4/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft systems maintenance (4/85).

NV-1714-0038

MMG-1A Mobile Electric Power Plant Intermediate Maintenance

Course Number: C-602-3237.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train aviation electrical technicians to repair and maintain a mobile electrical power plant.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, repair, and maintain elements of a mobile electric power plant, including the AC/DC control circuits, AC/DC voltage regulation, frequency regulation, and protection circuits to the component level.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electric power laboratory (4/85).

NV-1714-0039

FFG-7 Electrical Plant Control Console Operator Electrical Maintenance

Course Number: A-652-0249.

Location: Training Center, Great Lakes, IL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To qualify personnel for electric power plant control panel operation.

Instruction: Lectures and practical exercises cover engine room and electric power plant operations. The student learns about systems operation and intersystem influences. The student learns operating procedures and operates an electric power plant simulator. General instruction covers fuel oil quality assurance and heat stress physiology and prevention programs.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electric power plant operation laboratory and 1 in occupational safety (1/86).

NV-1714-0040

FFG-7 Electrical Plant Control Console Operator Mechanical Maintenance

Course Number: A-652-0251.

Location: Training Center, Great Lakes, IL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To qualify personnel for electric power plant control panel operation.

Instruction: Lecture and practical exercises cover engine room and electric power plant operations. The student learns about systems operation and intersystem influences and operating procedures and operates an electric power plant simulator. General instruction cover fuel oil quality assurance and heat stress physiology and prevention programs.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electric power plant operation laboratory and 1 in occupational safety (1/86).

NV-1714-0041

FFG-7 Electrical Systems Maintenance

Course Number: A-652-0253.

Location: Training Center, Great Lakes, IL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train personnel in the operation and maintenance of data acquisition equipment for the FFG-7 gas turbine power plant.

Instruction: Lectures and laboratory exercises cover operation, calibration, and maintenance of analog and digital circuits used to monitor and control gas turbine power plants.

Credit Recommendation: In the vocational certificate category, 3 semester hours in operation and maintenance of electronic monitoring and control equipment (1/86).

NV-1714-0042

CV Catapult Electrician

Course Number: *Version 1:* C-604-2013. *Version 2:* C-604-2013.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: *Version 1:* 4 weeks (156 hours). *Version 2:* 4 weeks (156 hours).

Exhibit Dates: *Version 1:* 5/92–Present. *Version 2:* 1/90–4/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain and repair the electrical portion of catapult and arresting gear systems and associated equipment. *Version 2:* Upon completion of the course, the student will be able to maintain and repair catapult electrical systems and associated equipment.

Instruction: *Version 1:* Lectures and practical exercises in control sequence; safety in hazardous conditions and environments; operation; maintenance; and repair of electrical systems and related components, including engine system, launching recovery systems, and tension systems. *Version 2:* Lectures and practical exercises cover control sequence; safety in hazardous conditions and environments; operation; maintenance; and repair of electrical systems and related components, including engine system, launching recovery systems, and tension systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial safety and 2 in basic electrical circuits (1/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical system maintenance and 2 in electrical system troubleshooting and schematic interpretation (6/87).

NV-1714-0043

FFG-7 Class Ship Auxiliary Electrical Subsystem

Course Number: A-652-0172.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot common malfunctions in unidynamic pallet elevator control systems, incinerator control systems, and air conditioning fan coil unit control systems.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of incinerator, air compressor, pallet elevator, cooling water, propulsion, air conditioning, and oil and water separator electrical control systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electrical control systems maintenance (10/93).

NV-1714-0044

ELECTRICIAN'S MATE, CLASS A

Course Number: *Version 1:* A-662-0016. *Version 2:* A-662-0016.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 21 weeks (840 hours).

Exhibit Dates: *Version 1:* 10/94–Present. *Version 2:* 1/90–9/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform routine preventive and corrective maintenance on specific shipboard electrical systems. *Version 2:* Upon completion of the course, the student will be able to apply fundamentals of basic electricity and electronics, solid state devices, digital logic, switch gear, single and multiphase motors, motor starter and controller circuits, AC/DC generators, soldering techniques, and first aid. The student will be able to interpret logic and schematic diagrams and use electronic test equipment in identifying and correcting problems related to shipboard electrical machinery and galley equipment. The student will be able to plan and conduct a preventive maintenance program.

Instruction: *Version 1:* Lectures and practical exercises cover shipboard electrical safety and maintenance on lighting systems, small craft electrical systems, galley equipment, cathodic protection systems, degaussing systems, and motor operated valves. *Version 2:* Lectures and practical laboratories cover magnetism, inductive and capacitive circuits, power factor, phase angles, motors and generators, DC circuits, voltage dividers, power calculations, Kirchhoff's law, AC and DC generators, single and multiphase motors, motor control circuits, solid state theory, digital logic theory, and maintenance and material management.

Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in electrical maintenance (12/95). *Version 2:* In the vocational certificate category, 3 semester hours in solid state electronics and 2 in technical mathematics (6/88); in the lower-division baccalaureate/associate degree category, 4 semester hours in DC circuits; 4 in AC circuits; 3 in AC/DC motors, generators, and controllers (6/88).

NV-1714-0045

SD/P ELEVATOR SYSTEM MAINTENANCE
TECHNICIAN

Course Number: A-690-0079.

Location: Service School Command, Great Lakes, IL.

Length: 1 week (40 hours).

Exhibit Dates: 1/90–6/91.

Learning Outcomes: Upon completion of the course, the student will be able to interpret control system drawings for FFG-7 pallet elevators, troubleshoot common malfunctions of control system, and perform preventive and corrective maintenance on pallet elevator controls.

Instruction: Classroom and practical exercises cover the nomenclature, physical construction, automatic electrical control system, operation, maintenance, and repair of a pallet elevator.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electrical control systems maintenance (6/88).

NV-1714-0046

500 KW 60 HERTZ MOTOR GENERATOR SET
ELECTRICAL MAINTENANCE

Course Number: A-662-0125.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 1 week (48 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform electrical, preventive maintenance procedures with supervision on ship's service motor generator set.

Instruction: Lectures and laboratory exercises cover construction, maintenance, and theory of operation of DC/AC motor generator sets. Emphasis is on controllers and electrical troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical technology laboratory (2/89).

NV-1714-0047

500 KW 60 HERTZ MOTOR GENERATOR SET
MECHANICAL MAINTENANCE

Course Number: A-662-0102.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform mechanical, preventive and corrective maintenance with supervision on ship's service motor generator set.

Instruction: Lecture and laboratory exercises cover construction, maintenance, and theory of operation of DC/AC motor generator set. Emphasis is on mechanical features and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical technology laboratory (5/97).

NV-1714-0048

LAMPS MK 3 HORIZON REFERENCE SET
MAINTENANCE

Course Number: K-652-2203.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 1-2 weeks (62-64 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform electrical maintenance, troubleshoot, and repair the horizontal reference system (a subsystem of a helicopter shipboard landing system) and its components.

Instruction: Lectures and practical exercises cover the subject matter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical control systems (6/94).

NV-1714-0049

1. 400 HERTZ MOTOR GENERATOR ELECTRICAL SYSTEM MAINTENANCE, CLASS C1
2. 400 HERTZ MAINTENANCE

Course Number: *Version 1:* A-662-0023; J-662-0023. *Version 2:* J-662-0023.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 5 weeks (200 hours). *Version 2:* 5-6 weeks (232 hours).

Exhibit Dates: *Version 1:* 6/91–Present. *Version 2:* 1/90–5/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to troubleshoot, repair, and maintain 400 Hz motor generator systems while observing proper safety precautions. *Version 2:* Upon completion of the course, the student will be able to troubleshoot and maintain 400 Hz motor generators and voltage/frequency regulators under shipboard conditions.

Instruction: *Version 1:* Instruction includes lectures and practical exercises. Content covers power supplies, transistor amplifiers, thyristors, magnetic amplifiers, logic circuits, voltage/frequency regulators, and corrective maintenance of motor-generator systems. *Version 2:* Instructional methods include lectures and supporting laboratories in analyzing, locating, and repairing faults in 400 Hz voltage and frequency regulators.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in industrial electronics and 2 in electrical motor controls (11/95). *Version 2:* In the vocational certificate category, 3 semester hours in industrial electricity (3/89).

NV-1714-0050

ELECTRICAL CONTROL DEVICES

Course Number: J-662-0044.

Location: Fleet Training Center, Norfolk, VA.

Length: 3-4 weeks (144 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain AC relay motor controllers, small craft electrical systems, and charging systems.

Instruction: Lectures and laboratory exercises demonstrate operational theory, troubleshooting techniques, and safety practices with relay-operated controllers.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical control systems troubleshooting and maintenance (3/89).

NV-1714-0051

AVIATION ELECTRICIAN'S MATE, CLASS A1

Course Number: C-602-2012.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 21-22 weeks (869-880 hours).

Exhibit Dates: 1/90–5/96.

Learning Outcomes: Upon completion of the course, the student will be able to maintain aircraft electrical, electronic, and engine instrument systems.

Instruction: Lectures and practical exercises cover DC and AC circuits, vacuum tubes, rectifiers, filters, amplifiers, basic test instruments, electrical indicating systems, fuel quality systems, compasses, automatic pilots, instrument checks, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits, 4 in aircraft electrical systems, 3 in aircraft electronic systems, and 2 in aircraft instrumentation systems (8/92).

NV-1714-0052

Aviation Electrician's Mate Intermediate, Class C7

Course Number: C-602-2014.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 26-27 weeks (1049 hours).

Exhibit Dates: 1/90–4/91.

Learning Outcomes: Upon completion of the course, the student will be able to use standard and specialized test equipment to perform detailed preventive and corrective maintenance on electrical and electronic circuitry on common avionics weapons systems.

Instruction: Lectures and practical exercises include technical mathematics, technical physics, AC circuit analysis, solid state electronics, operational amplifiers, analog and digital computers, DC theory, and avionics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in technical mathematics, 2 in physics, 4 in solid state electronics, 5 in AC circuits, 4 in introduction to computers, 1 in introduction to avionics, and 3 in operational amplifiers (9/89).

NV-1714-0053

Submarine Main Power Generating Equipment

Course Number: A-662-0137.

Location: Guided Missiles School Detachment, Dam Neck, Virginia Beach, VA; Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe magnetic amplifiers and AC and DC power generation, regulation, and control and will be able to repair, troubleshoot, and maintain magnetic amplifiers and controllers.

Instruction: Lectures, demonstrations, and laboratory exercises cover electric power generation, regulation, and control.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in electric power generation and regulation (10/89).

NV-1714-0054

Submarine Electrical Control and Distribution Equipment Combined Maintenance

Course Number: A-662-0136.

Location: Guided Missiles School Detachment, Dam Neck, Virginia Beach, VA; Submarine Training Center, San Diego, CA; Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 2 weeks (77 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe electrical control and distribution equipment and operate and maintain circuit protection and motor control systems.

Instruction: Lectures and laboratory instruction cover electrical control and distribution equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electric power systems control (10/89).

NV-1714-0055

Construction Electrician, Class A

Course Number: *Version 1:* A-721-0018. *Version 2:* A-712-0018.

Location: *Version 1:* Construction Training Center Detachment, Sheppard AFB, TX. *Version 2:* Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: *Version 1:* 14 weeks (568 hours). *Version 2:* 13 weeks (449 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to install, troubleshoot, and maintain interior wiring systems, overhead and underground systems, AC power plant generators, field telephones and lighting, and three-phase and single phase motors. *Version 2:* Upon completion of the course, the student will be able to install and maintain interior wiring systems, overhead and underground power distribution systems, AC power plant generators, field telephones, and switchboards.

Instruction: *Version 1:* Lectures and laboratory experience covers electrical theory; AC circuits; DC generators, motors, and controllers; power distribution systems; communications systems; interior wiring; and blueprint reading. *Version 2:* Lectures and laboratory experience cover electrical theory; AC circuits; DC generators, motors and controllers; power distribution systems; communications systems; interior wiring; blueprint reading; and microcomputer fundamentals.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 DC circuits, 3 in electronic power distribution systems, 3 in residential wiring, 2 in AC circuits, and 2 in electric motor control (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in DC circuits, 1 in technical mathematics, 2 in AC circuits, 3 in electrical power distribution systems, and 3 in residential wiring (3/91).

NV-1714-0058

1. Advanced Construction Electrician
2. Construction Electrician, Class C1 Advanced

Course Number: *Version 1:* A-721-0019. *Version 2:* A-721-0019.

Location: Construction Training Center, Gulfport, MS; Construction Training Center, Port Hueneme, CA.

Length: *Version 1:* 13 weeks (521 hours). *Version 2:* 13 weeks (614 hours).

Exhibit Dates: *Version 1:* 6/92–Present. *Version 2:* 1/90–5/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to install and maintain street and airfield lighting systems, electrical motors, and generators, power plants, field and office communications and alarm systems, and interior wiring systems and plan and estimate electrical installations. *Version 2:* Upon completion of the course, the student will be able to install and maintain street and airfield lighting systems, electrical motors and generators, power plants, field and office communications systems, and interior wiring systems.

Instruction: *Version 1:* Lectures and laboratory experience cover technical mathematics, AC and DC circuits, electronic circuits, communications systems, motors and controllers, power plants, power distribution, interior wiring, and computerized estimating and scheduling. *Version 2:* Lectures and laboratory experience cover technical mathematics, AC and DC circuits, electronic circuits, communications systems, motors and controllers, power plants, power distribution, interior wiring, and computerized estimating and scheduling.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in DC circuits, 2 in AC circuits, 3 in basic electronics, 3 in electrical motor controls, and 3 in electrical construction estimating (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in DC circuits, 2 in AC circuits, 3 in basic electronics laboratory, 3 in electric motors and controllers, and 3 in electrical construction estimating (3/91).

NV-1714-0059

Construction Electrician Power and Communications Cable Splicing

Course Number: *Version 1:* A-721-0023. *Version 2:* A-721-0023.

Location: Construction Training Center, Gulfport, MS.

Length: *Version 1:* 9 weeks (360 hours). *Version 2:* 9 weeks (360 hours).

Exhibit Dates: *Version 1:* 7/96–Present. *Version 2:* 1/90–6/96.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to splice power and communications cables; splice single and multiconductors for both aerial and underground cable systems; and set up and operate test equipment to locate, identify, and repair cable faults. *Version 2:* Upon completion of the course, the student will be able to splice power and telephone cables using lead, plastic, and rubber sheaths; splice single and multiconductors for both aerial and underground cable systems; and set up and operate test equipment to locate, identify, and repair cable faults.

Instruction: *Version 1:* Lectures and practical exercises cover location, identification, and repair of aerial and underground power and communications cable systems. Course includes splicing and termination of telephone, fiber optic, and power cable systems. *Version 2:* Lectures and practical exercises cover location, identification, and repair of aerial and underground power and telephone cable systems. Course includes cable splicing exercises using various types of sheathing.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree

category, 6 semester hours electrical power and communications cable maintenance (4/97). *Version 2:* In the vocational certificate category, 3 semester hours in electrical cable troubleshooting and 3 in power and telephone cable repair (3/91).

NV-1714-0060

SH-60F/HH-60H Armament and Related
Systems Consolidated Maintenance

Course Number: E-646-0841; D-646-0841; C-646-0841.

Location: Air Training Center, Jacksonville, FL; Helicopter Antisubmarine Squadron 10, North Island, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, test, troubleshoot, and repair electrical systems malfunctions of a helicopter armament system.

Instruction: Lectures and job training cover the armament system using composite trainer and flyable aircraft.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical systems troubleshooting (10/93).

NV-1714-0061

P-3C Connector and Wire Repair
Organizational Maintenance

Course Number: C-602-3573.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair connector assemblies using time domain reflectometry.

Instruction: Lectures, practical exercises, and examinations cover wire and cable identification, connectors, wire repair tools, wire and cable testing and maintenance, and soldering techniques.

Credit Recommendation: In the vocational certificate category, 2 semester hours in manufacture, troubleshooting, and repair of electrical wire harness assemblies (7/92).

NV-1714-0062

1. Interior Communications Electrician, Class A
2. Interior Communications Electrician, Class A1

Course Number: *Version 1:* A-632-0105. *Version 2:* A-623-0105.

Location: *Version 1:* Service School Command, San Diego, CA; Service School Command, Great Lakes, IL. *Version 2:* Service School Command, San Diego, CA.

Length: *Version 1:* 5-6 weeks (208 hours). *Version 2:* 18-19 weeks (600 hours).

Exhibit Dates: *Version 1:* 6/95–Present. *Version 2:* 8/91–5/95.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, students will be able to operate and maintain, at the organizational level, interior communications systems, including power distribution, telephone, intercom, alarm, safety and warning, and ship control and navigation.

Instruction: *Version 1:* This is a pipeline course; see individual exhibits for information. *Version 2:* Course covers in detail DC circuits; AC circuits; semiconductor devices; amplifiers; DC power supplies; electromechanical devices; basic motors and generators; synchro and servo fundamentals; wind indicating equipment; digital fundamentals; application of digital circuits; equipment tag-out system; electrical blueprint reading; basic soldering; and ship's interior communication equipment installation, operation, maintenance, and troubleshooting.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits, 2 in AC circuits, 3 in solid state electronics, 2 in digital principles, and 1 in motor controls (10/92).

NV-1714-0063

Job Oriented Basic Skills, Strand 6,
Electrical, Class AP

Course Number: A-100-0067.

Location: Service School Command, San Diego, CA.

Length: 8 weeks (229 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will recognize the meaning of basic series, parallel and series, and parallel resistive circuits, determine content of written passages,-develop adequate listening skills, and use basic mathematics in problem solving.

Instruction: Instruction is lecture-based with practice exercises. Content includes fundamentals of mathematics, reading comprehension, listening comprehension, and basic DC electrical circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in communication skills, 2 in basic electricity, and 2 in fundamentals of mathematics (10/92).

NV-1714-0065

A-6/EA Electrical Connector/Wire Bundle
Repair
(A-6/EA-6 Electrical/Wire Bundle Repair)

Course Number: C-602-3943.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 1-3 weeks (64-104 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify wire types and installation methods, repair wire and terminal ends, troubleshoot defective wire and terminals and make necessary repairs, and solder and crimp regular and special connections.

Instruction: Instruction consists of lecture and laboratory activities. Students use test equipment to analyze wire and connector faults. Students apply skills in soldering, crimping, special connector installation, and wire splicing.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic cable assembly and maintenance (10/94); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical system maintenance as applied to airframe and power plant instruction (10/94).

NV-1714-0067

F-14 Aircraft Electrical Connector/Wire
Repair Organizational Maintenance

Course Number: C-602-3903.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 1-2 weeks (70 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair complex wiring systems and associated connectors, terminals, and splices using standard soldering and crimping techniques and apply quality assurance standards to ensure compliance with military requirements.

Instruction: Methods include lectures and demonstrations covering wire basics, wire types, soldering, and crimp connectors. Course also includes practical application of soldering, crimping, splicing, and heat shrink treatment applied to common components found in aircraft wiring systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic soldering techniques/electronic circuit fabrication (12/92).

NV-1714-0068

F/A-18 Electrical Instruments Consolidated
Organizational Maintenance

Course Number: C-602-9976.

Location: Air Maintenance Training Group, Lemoore, CA.

Length: 9 weeks (360 hours).

Exhibit Dates: 5/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under close supervision, organizational maintenance in the squadron working environment on electrical and instrument systems of the F/A-18 aircraft.

Instruction: Lectures and practical exercises cover electronic fundamentals, aircraft power and lighting systems, airframe systems, power plant and related systems, fuel subsystems, computer and inertial navigation systems, flight control subsystems, escape system, and environmental control subsystems of the F/A-18 aircraft.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1714-0069

F/A-18 Electrical Systems WRA Repair
Intermediate Maintenance

Course Number: C-602-3869.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 2 weeks (77 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to isolate faults and remove and repair specific replaceable assemblies of the F/A-18 electrical system, under close supervision.

Instruction: Lectures, demonstrations and practical exercises cover troubleshooting, removing, and replacing aircraft electrical system components.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1714-0070

FFG-7 Auxiliary Electrical System
Technician

Course Number: A-662-0121.

Location: Service School Command, Great Lakes, IL.

Length: 14-16 weeks (560-640 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and repair electrical systems, including diesel generators, fin stabilizers, 60-400 Hertz converter, degaussing equipment, and auxiliary equipment.

Instruction: This pipeline course consists of A-652-0172, Auxiliary Electrical Subsystems; A-652-0215, Auxiliary Electrical Systems; and other courses not evaluated.

Credit Recommendation: Please refer to the individual exhibits for credit recommendation (10/93).

NV-1714-0071

AN/USM-604 Electrical Equipment Test Set
Operator/Maintainer Intermediate
Maintenance

Course Number: C-602-4295.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 7-8 weeks (280-304 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will operate specialized electrical test equipment.

Instruction: Course covers connection and operation of electrical test equipment. Methodology includes lectures and laboratory test set demonstrations.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (7/94).

NV-1714-0072

Angle Rate Bombing Set (ARBS)/Operational
Test Program Set (OTPS)
Intermediate Level Maintenance

Course Number: C-112-3716.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate specialized electrical test equipment.

Instruction: Course covers the operation and use of specialized electrical test equipment. Methodology includes lectures and laboratory test set demonstrations.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (7/94).

NV-1714-0073

Electrician's Mate, Class A

Course Number: A-661-0104.

Location: Nuclear Power Training Command, Orlando, FL.

Length: 16 weeks (457 hours).

Exhibit Dates: 3/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic arithmetic operations; solve basic equations using phasors, vector notations, and basic trigonometry; solve DC and AC circuits, including resonance, transformers, basic three-phase circuits, analog, and digital circuits; demonstrate working of DC and AC motors and generators; operate electrical equipment using controllers; test, maintain, troubleshoot, and repair electrical circuits, AC and DC motors, cables, circuit breakers, and other related electrical equipment for power distribution; demonstrate proper use of electrical test equipment such as multimeter, function generator, oscilloscope, frequency meter, power meter, synchronoscope, phase rotation meter, and remote speed controller for measurement and troubleshooting; and perform basic soldering.

Instruction: Instruction involves theory and laboratory with extensive use of test equipment in the areas of basic electricity, basic electronics, and electrical equipment. The mathematics component covers arithmetic operations, scientific notation, first-order algebraic equations, metric prefixes, conversions, exponents, polynomials, introduction to trigonometric functions and vector notation, colinear and noncolinear vectors, complex numbers, polar and rectangular conversions, phasor diagrams, and solution of electrical problems using phasors. Basic concepts of geometry to calculate area, volume, and perimeter are included. Problem solving in all of the above includes multiple concept problems. The basic electricity component covers electrical quantities; power; series, parallel, and series-parallel circuit analysis; magnetism; inductance, capacitance, and transient circuits; AC fundamentals; reactance; impedance; analysis of RL, RC, and RLC circuits; AC power; power factor; three-phase circuits; delta and Wye connections; resonance and transformers; DC and AC motors and generators; series, induction, and synchronous motors; rotating field multiphase motors; basic soldering techniques; maintenance troubleshooting and repair of electrical circuits, using multimeter, function generator, and oscilloscope; electrical safety practices; and use of basic hand tools. The basic electronics component covers diodes; bipolar function transistors; SCR, UJT, FET, and amplifier circuits; magnetic amplifiers; troubleshooting techniques; basic operational amplifiers and applications for temperature sensing, alarms, and AC voltage regulation; introduction to digital electronics; logic gates; flip-flops; counters; experiments in all of the above topics including basic troubleshooting techniques. The electrical equipment component covers the theory of AC and DC motors and generators; three-phase generators and motors; maintenance procedures; cables and shipboard lighting systems; principles of DC and AC controllers; circuit breakers; switchboard operations; 400 Hz distribution systems; transformer banks; branch box; distribution panel; performance tests; cable testing; insulation resistance tests; storage batteries; and use of multimeter, power motor, frequency meter, synchroscope, synchronizing lamps, phase rotation meter, and remote governor speed controller.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics including algebra II, 3 in electrical troubleshooting and repair, 3 in AC circuits, 3 in DC circuits, 4 in basic electronics, and 4 in electrical machinery (2/95).

NV-1714-0074

AN/TPN-22 Maintenance, Class M3
(AN/TPN-22 Maintenance)
(AN/TPN-22 Maintenance, Class M1)

Course Number: C-103-2081.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 14-15 weeks (568 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the AN/TPN-22 radar set at the organizational and intermediate level.

Instruction: Lectures and practical exercises cover radar systems using systematic troubleshooting with appropriate test equipment. Operational checks and measurement of system parameters is performed using applicable technical publications. Alignment and adjusting procedures are taught along with preventive maintenance requirements.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in radar systems and 1 in electrical safety (8/96).

NV-1714-0075

Marine Air Traffic Control Technician
Common Core, Class M3
(Marine Air Traffic Control Technician Common Core)

Course Number: C-103-2072.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 3 weeks (120 hours).

Exhibit Dates: 11/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain logic circuits and communications equipment and will have received an introduction to computers.

Instruction: The course is taught using both formal classroom presentations and associated laboratory experiments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital circuits and 1 in electrical safety (11/95).

NV-1714-0076

Electrical Motor Rewind

Course Number: J-662-0021.

Location: Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 8/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to diagnose and repair DC and AC motors, completely rewind motors, and calculate rewinding specifications of motors using wire tables and formulas.

Instruction: Methods of instruction include lectures and practical exercises. Topics covered include recording data; constructing wiring diagrams; and rewinding, assembling, and testing DC motors, single-phase AC motors, and three-phase AC motors.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electric motor operation, repair, and rewinding (11/95).

NV-1714-0077

Aviation Ordnanceman Common Core, Class A1

Course Number: C-646-2011.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 4-5 weeks (172 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will perform routine and planned maintenance of aircraft ordnance systems.

Instruction: This course covers aircraft maintenance practices, basic electricity, electrical test equipment, and aircraft armament systems, including guns, ammunition, rockets, and bombs. Instructional methods include lectures, discussions, and laboratory assignments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in DC circuits (1/97).

NV-1714-0078

Aviation Ordnanceman Airwing Strand, Class A1

Course Number: C-646-2012.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 3 weeks (116 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student perform planned and unplanned maintenance on aircraft ordnance systems at the squadron level.

Instruction: This course covers aircraft armament systems at an operational level, Including loading and downloading of guns, rockets, and bombs. This is a hands-on laboratory intensive course.

Credit Recommendation: For credit for the Common Core, see NV-1714-0077 (1/97).

NV-1714-0079

Aviation Ordnanceman Weapons Department Strand, Class A1

Course Number: C-646-2013.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 1-2 weeks (60 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance on aircraft weapons subsystems at the weapons department level.

Instruction: This course covers aircraft armament systems at an intermediate level, including weapons systems assembly and disassembly. This is a laboratory intensive course.

Credit Recommendation: For credit for the Common Core, see NV-1714-0077 (1/97).

NV-1714-0080

Advanced Base Power Plant Maintenance

Course Number: A-721-0024.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: 2 weeks (70 hours).

Exhibit Dates: 9/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, troubleshoot, maintain, and operate electrical power generator, power plants, and associated equipment.

Instruction: Lectures and laboratory experience cover installation procedures, troubleshooting techniques, maintenance guidelines, and operation of single and parallel electrical power plant installations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical power generation (4/97).

NV-1714-0081

Electrical Power Distribution 2

Course Number: A-721-0025.

Location: Construction Training Center, Port Hueneme, CA; Construction Training Center, Gulfport, MS.

Length: 2 weeks (70 hours).

Exhibit Dates: 1/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, troubleshoot, and maintain electrical power distribution systems and exterior lighting systems.

Instruction: Lectures and laboratory experiences cover instruction procedures, troubleshooting techniques, maintenance guidelines for power distribution systems, including overhead and underground installations and airfield and street lighting systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical power distribution (4/97).

NV-1714-0082

E-6A Aircraft Wiring and Connector Repair Organizational/Maintenance

Course Number: C-602-3514.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 2 weeks (64 hours).

Exhibit Dates: 11/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use high reliability soldering equipment to repair aircraft connectors and coaxial cables, use compressed air/nitrogen heat gun, strip and splice wires, and perform solderless repair using crimp tools.

Instruction: Traditional lecture and hands-on skills development exercises use high reliability soldering and compressed air/nitrogen heat gun for the assembly and disassembly of connectors, coaxial cables, and wire splices; proper use of flux; and use of crimp tools for solderless repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in high reliability soldering (4/97).

NV-1714-0083

10kW and 70kW 400 Hertz Motor Generator Combined Maintenance

Course Number: A-662-0132.

Location: Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (70 hours).

Exhibit Dates: 8/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance procedures on motor generator sets and corrective and preventive maintenance procedures on AC and DC converter.

Instruction: Theory and laboratory exercises cover general, physical, functional and interface description and preventive maintenance procedures of the 70kW and 10kW 400 Hertz motor generator sets; cleaning, inspecting and measuring insulation resistance of the motor generator sets; recognizing and interpreting malfunctions of 400 Hertz motor generator set and frequency regulator; testing overspeed trip switch of 400 Hertz generator-motor sets; and performing fault isolation on the 70kW AC to DC converter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electrical machinery lecture and 1 in electrical machinery laboratory (4/97).

NV-1714-0084

FFG-7/MCD-1 Automatic Degaussing System Maintenance

Course Number: A-690-0078.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (80 hours).

Exhibit Dates: 10/96–Present.

Learning Outcomes: Before 10/96 see NV-1601-0026. Upon completion of the course, the student will be able to operate, troubleshoot, and repair to the component level automatic degaussing equipment; use technical manual to locate components and sub-assembly in the degaussing system; and test out of circuit continuity and resistance using a digital volt meter; and trace power flow paths of the power distribution system.

Instruction: Group-paced lecture/laboratory exercises and demonstrations on the MCD-1 Automatic degaussing system and theory of degaussing.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electrical maintenance (10/97).

NV-1714-0085

SSM Automatic Degaussing System Maintenance for DD-963 Class

Course Number: A-690-0022.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (80 hours).

Exhibit Dates: 10/96–Present.

Learning Outcomes: Before 10/96 see NV-1601-0017. Upon completion of the course, the student will be able to operate, troubleshoot, and repair the component level automatic degaussing equipment; use technical manual to locate and identify solid state devices; test out of circuit continuity and resistance of solid state

BEST COPY AVAILABLE

devices; and trace power flow paths of the power distribution system.

Instruction: Group-paced performance exercises, lectures, and demonsrations on the SSM automatic degaussing system and theory of degaussing.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electrical maintenance (10/97).

NV-1714-0086

FFG-7/DDG-993 60/400 Hertz Frequency Converter (Water-Cooled) System Maintenance

Course Number: A-652-0243.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 10/96–Present.

Learning Outcomes: Before 10/93 see NV-1714-0029. Upon completion of the course, the student will be able to train personnel in maintenance and troubleshooting procedures for a 60 to 400 Hertz converter.

Instruction: Lectures and practical exercises cover the theory of operation, component function, and maintenance and troubleshooting procedures for a converter including rectifier circuits and digital control circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/97).

NV-1715-0009

AN/UCC-1 Series Telegraph Terminal Maintenance (Electronics Technician, Class C1)

Course Number: A-101-0023; A-101-0022.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 2 weeks (60-80 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide the skills and knowledge necessary to operate and maintain the AN/UCC-1, 1C, and 1D telegraph terminals and to operate and use associated test equipment to the extent required for maintenance of the telegraph terminals.

Instruction: Course includes operational characteristics and system configurations, location and identification of major units and subunits, test sets, operating procedures, AC and DC power distribution, frequency shift keyers, control attenuators, frequency shift converters, block and schematic diagram analysis, and system troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic troubleshooting (5/82).

NV-1715-0029

AN/SPA-25/-25(B) Radar Indicator and SB-1505 Switchboard Maintenance

Course Number: A-104-0130; A-104-0129.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 3 weeks (90 hours).

Exhibit Dates: 1/90–3/91.

Objectives: After 3/91 see NV-1715-1586. To provide training for the operation and maintenance of a radar distribution switchboard and radar display system.

Instruction: Course includes operation and familiarization of a signal distribution switchboard and a radar indicator, including power supply, display circuits, and troubleshooting techniques.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics (5/82).

NV-1715-0031

RD-293/UYK-5 Card Reader Punch Maintenance

Course Number: A-150-0049.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide data systems technicians with the theory of operation and maintenance of a card reader/punch unit.

Instruction: Lectures and practical exercises cover the theory of operation and the maintenance of a computer input/output card reader/punch, including the mechanical operations, power distribution, memory operation, block diagram analysis, and electronic circuit fault analysis and repair.

Credit Recommendation: In the vocational certificate category, 1 semester hour in computer I/O equipment operation and repair (11/81).

NV-1715-0050

Digital and Electronics Training

Course Number: K-130-0271.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 13-16 weeks (508-560 hours).

Exhibit Dates: 1/90–7/96.

Objectives: To provide enlisted personnel with the skills and knowledge necessary to interpret, analyze, and troubleshoot electronic equipment.

Instruction: Course covers, at a basic level, algebra; trigonometry; scientific notation; construction techniques; basic electricity and electronic theory; AC/DC circuit analysis; semiconductor theory; basic AM/FM theory; basic servo principles; Boolean algebra; binary, octal, and hexadecimal number systems; computer architecture; digital logic circuits; and computer troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics, 3 in AC/DC circuits, 3 in solid state electronics, 3 in digital fundamentals, 1 in introduction to computers, and 1 in synchros (7/86).

NV-1715-0052

AN/ALQ-99 Tracking Receivers Control Modulators, Exciters with AN/ALM-109C Tracking Receiver Test Station and TS 3517/ALM RF Oscillator Rom Linearizer Test Set Intermediate Maintenance

Course Number: C-102-3944.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train enlisted personnel to operate, test, maintain, and repair radio receivers.

Instruction: Lectures and laboratory instruction at the block diagram level cover control data registers, Boolean logic, digital modulation and driver circuits, rate and dwell circuitry, and voltage-controlled RF oscillators. Emphasis is placed on publication interpretation and troubleshooting of specialized equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in systems maintenance laboratory (7/80).

NV-1715-0053

AN/ALQ-99 Jamming Transmitters and AN/ALM-107B Countermeasures Test Station Intermediate Maintenance (AN/ALQ-99 Jamming Transmitters and AN/ALM-107 Countermeasures Test Station Intermediate Maintenance)

Course Number: C-102-3946.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 11-12 weeks (440-480 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train enlisted personnel in maintenance, repair, and functional testing procedures for special-purpose radio transmitters.

Instruction: Lectures and practical exercises cover troubleshooting, repair, power distribution and control, countermeasures, power supply modules, RF source, traveling wave, tube testing, and block and signal flow analysis.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic communications and 3 in electronic communications laboratory (7/80).

NV-1715-0054

AN/ALM-108 Surveillance Receiver Test Station AN/ALQ-99 Surveillance Receivers Intermediate Maintenance

Course Number: C-102-3945.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train enlisted personnel in the maintenance, repair, and testing of specific radio receivers.

Instruction: Lectures and practical exercises cover the operational theory, voltage levels, and signal flow in each subsystem of a surveillance receiver. The subsystems include power supplies, power distribution, local oscillators, radio and intermediate frequency amplifiers, video amplifiers, video-to-digital converters, and mixer circuits. Practical work is done in troubleshooting using oscilloscopes, frequency counters, and digital voltmeters.

Credit Recommendation: In the vocational certificate category, 6 semester hours in the theory and repair of communications systems (7/80); in the lower-division baccalaureate/associate degree category, 1 semester hour in electronic technology communications laboratory or 3 semester hours in general technical elective for non—electronic technology students (7/80).

NV-1715-0056

AN/URT-23 Radio Transmitter Set With AN/URA-38 Antenna Coupler

Maintenance (Electronics Technician, Class C1)

(AN/URT-23(V) Radio Transmitting Set and AN/URA-38 Antenna Coupler Maintenance, Class C)

Course Number: A-101-0051; A-101-0049.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 4 weeks (144 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train enlisted personnel in the operation and maintenance of specific radio transmitter sets.

Instruction: Course covers practical training in the operation and maintenance of an AN/URT series radio transmitter using single sideband CUI, amplitude modulated, independent sideband, and frequency shift keying. The student uses general purpose test equipment and troubleshoots defective radio equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radio transmitter operation, maintenance, and troubleshooting (5/82).

NV-1715-0062

Submarine Gyrocompass Mk 19 Mod 3 Combined Maintenance

Course Number: A-670-0042.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Fleet Ballistic Missile Training Center, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 3-4 weeks (90-120 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train students to operate and maintain specific submarine gyrocompasses.

Instruction: Lectures and practical exercises cover the theory of operation of the gyrocompass to the component level, including alignment, adjustment, fault isolation, and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in servo amplifier control system troubleshooting (6/81).

NV-1715-0065

Fleet Ballistic Missile Tender Navigation Maintenance Ship's Inertial Navigation System

(Fleet Ballistic Missile (FBM) Tender Navigation Maintenance)

(Electronics Technician, Class C, SSBN Ship's Inertial Navigation, Fleet Ballistic Missile (FBM) Tender Navigation Maintenance)

Course Number: A-193-0036.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 6-8 weeks (240-248 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train electronics technicians to maintain inertial navigation systems.

Instruction: Lectures and practical exercises cover the operation, maintenance, and repair of an inertial navigation subsystem and its support equipment including specialized test sets and equipment (VOMs, oscilloscopes, wave analyzers, distortion analyzers, and signal generators); optical equipment alignment and maintenance; Selectric typewriter maintenance and theory, and paper tape unit operation and repair.

Credit Recommendation: In the vocational certificate category, 1 semester hour in typewriter maintenance and 1 in optical equipment maintenance/alignment techniques (6/89); in the lower-division baccalaureate/associate degree category, 1 semester hour in electronics maintenance laboratory (6/89).

NV-1715-0069

AN/AJM-32(V) Special Support Equipment Intermediate Maintenance

(AN/AJM-32(V) Intermediate Maintenance)

Course Number: C-150-3784.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 3 weeks (112 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train personnel in maintenance techniques, including the testing, calibration, and troubleshooting of digital electronic equipment.

Instruction: Lectures and practical exercises cover operational theory, safety procedures, maintenance and troubleshooting, and repair of digital electronic equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital electronic control systems or 2 semester hours in digital electronics for electrical engineering majors (3/82).

NV-1715-0075

Plotting System Mk NC-2 Mod 1A Maintenance

Course Number: A-623-0021; A-623-0020.

Location: Technical Training Command, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To train enlisted personnel to maintain, troubleshoot, and repair the Mk NC-2 Mod 1A plotting system.

Instruction: Lectures and practical exercises cover a review of basic electronics and servo systems and complete coverage of an electromechanical system, including plotting table, data converter, dead reckoning indicator, and troubleshooting techniques.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electromechanical systems (9/83); in the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical systems (9/83).

NV-1715-0082

Plotting System Mk NC-2 Mod 0 Maintenance

Course Number: A-623-0019; A-623-0018.

Location: Service School Training Division, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To train enlisted personnel to maintain, troubleshoot, and repair Mk NC-2 Mod 0 plotting systems.

Instruction: Lectures and practical exercises cover a review of basic electronics and servo systems and complete coverage of an electromechanical system, including plotting table, data converter, dead reckoning indicator, and troubleshooting techniques.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical systems (9/83); in the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical systems (9/83).

NV-1715-0088

AN/SRC-20, AN/SRC-21 Radio Sets Maintenance (Electronics Technician, Class 1)

(Electronics Technician, AN/SRC-20, AM/SRC-21 Radio Set Maintenance)

(Electronics Technician, AN/URC-9, AN/SRC-20, AN/SRC-21 Radio Sets with AN/SRA-33 Antenna Coupler Maintenance)

Course Number: A-101-0011; A-101-0016; A-101-0015.

Location: Electronics Technician, Class C School, Treasure Island, San Francisco, CA; Electronics Technician, Class C School, Pearl Harbor, HI; Electronics Technician, Class C School, Norfolk, VA; Electronics Technician, Class C School, San Diego, CA.

Length: 3-4 weeks (90-160 hours).

Exhibit Dates: 1/90–9/92.

Objectives: To train enlisted personnel to operate, maintain, and repair the AN/SRC-20/21 radio sets and associated test equipment.

Instruction: Lectures and laboratories in AN/SRC-20/21 radio set function during broadband, normal, retransmit, and tone modes of operation; radio set power requirements, frequency range, frequency selection, and output data; receiver, modulator, transmitter, channel selection, and antenna coupler signal characteristics and signal tracing by use of block diagrams; and radio set alignment, operational checks, and maintenance testing procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aviation electronics laboratory and 1 in electronic troubleshooting (5/82).

NV-1715-0090

Teletypewriter AN/UGC-20B/25 Combined Maintenance

(AN/UGC-20A/25A Teletypewriter Set Maintenance)

(AN/UGC-20/25 Teletypewriter Set Maintenance)

Course Number: F-160-0064; A-160-0066; A-160-0065; A-160-0064.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Fleet Ballistic Missile Submarine Training Center, Charleston, SC; Submarine Base, New London, Groton, CT.

Length: 5-7 weeks (150-264 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train submarine radiomen and submarine tender personnel to maintain and repair the AN/UGC-20/25 teletype machine.

Instruction: Lectures and practical exercises cover AN/UGC-20/25 teletype machine fundamentals and operating procedures for each section of the machine, fault isolation and repair to major subassemblies of the electrical and mechanical systems, routine maintenance and cleaning, and material usage.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electromechanical repair and 1 in electromechanical laboratory (3/81).

NV-1715-0103

Solid State Theory and Digital Electronics

Course Number: K-113-2067.

Location: Fleet Training Center, Yokasuka, Japan; Fleet Training Center, Pearl Harbor, HI; Fleet Training Center, San Diego, CA.

Length: 2-3 weeks (60-95 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide electronics technicians with training in semiconductor and solid state technology.

Instruction: Lectures and laboratory exercises cover solid state devices, including diodes, bipolar and field effect transistors, operational amplifiers, thyristors; digital circuits, including logic gates, flip-flops, shift regulators, counters, combinational circuits, arithmetic elements; and ROM and RAM memories, amplifiers, and oscillators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital electronic devices and 1 in digital electronic laboratory for electrical engineering majors (5/82).

NV-1715-0111

ASA-27 Computer Detector and ASM-76 Test Console Intermediate Maintenance

(Computer Detector (CP-413/ASA-27) Intermediate Maintenance)

Course Number: C-150-3487.

Location: Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group Detachment, North Island, San Diego, CA.

Length: 8-9 weeks (320-360 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train enlisted personnel who are familiar with digital fundamentals and avionics systems to operate, test, and repair computer detectors.

Instruction: Lectures and practical exercises cover computer detector operation, function, and theory, including system power supply, block diagram, drum servo system, and timing generator operation; target detection, including radar magnetic drum, density detectors, and IFF decoder and density detector; data acquisition, including data control and counting, servos, and translators; target computation, including programmer, drum memory, height coordinate computer, and arithmetic and transfer logic; and test circuits and troubleshooting procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic/digital systems and 1 in electronics laboratory (5/85).

NV-1715-0112

AN/APN-70B Loran System Intermediate Maintenance

(P-3 AN/APN-70 Loran System Intermediate Maintenance)

Course Number: C-102-3539.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 2-3 weeks (80-120 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train maintenance personnel who have backgrounds in transistor theory to operate and maintain the AN/APN-70 Loran navigation system.

Instruction: Lectures and practical exercises on the AN/APN-70 Loran navigation system components and equipment familiarization, including circuit analysis, block-diagram analysis, radar introduction, low-voltage power supplies, oscillators, and antennas; calibration and alignment adjustment procedures; bench setup; troubleshooting Loran equipment; associated test equipment use; and equipment malfunction isolation and repair procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in avionics or marine electronics (7/81).

NV-1715-0119

Underwater Fire Control Group Mk 111 Maintenance

Course Number: A-130-0056; K-130-0056.

Location: Fleet Antisubmarine Warfare Training Center, Pacific, San Diego, CA.

Length: 18-23 weeks (540-920 hours).

Exhibit Dates: 1/90–7/96.

Objectives: To provide selected sonar technicians with the necessary skills to maintain specified fire control equipment.

Instruction: Lectures and practical exercises cover the preventive and corrective maintenance of sonar-based fire control equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic digital troubleshooting (7/86).

NV-1715-0133

Underwater Fire Control Group Mk 114 Maintenance

Course Number: K-130-0057.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To train enlisted personnel to perform maintenance on a specified fire control system.

Instruction: Lectures and practical exercises cover Mk 114 fire control system maintenance, including introduction to weapons, basic maintenance techniques, relay transmitter and position indicator operation, input data flow and stabilization computer maintenance, and attack console operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in systems troubleshooting (7/86).

NV-1715-0146

A-7E AN/ASM-375 Inertial Measurement System Test Set Intermediate Maintenance

Course Number: C-102-3798.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 6-7 weeks (240-260 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to repair inertial measurement system test sets.

Instruction: Lectures and practical exercises cover inertial measurement system theory and maintenance techniques, including digital fundamentals, logic functions, and trace signal flow. Course includes fault isolation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital electronics fundamentals or 1 semester hour in digital electronics fundamentals for electrical engineering majors (3/82).

NV-1715-0147

Mk 35 Power Drive Maintenance for 3"/50 Caliber Rapid Fire Gun Mount

Course Number: K-041-2051.

Location: Fleet Training Center, San Diego, CA.

Length: 3 weeks (90 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train enlisted personnel to perform preventive and corrective maintenance and casualty analysis on the 3"/50 Mk 35 power drive rapid fire gun mount.

Instruction: Lectures and practical exercises in Mk 35 power drive description, function, and operation; power control, gun mount control, and motor field control circuits; and inspection, testing, and preventive and corrective maintenance procedures. Course includes basic electrical theory including AC/DC circuits and circuit theory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electrical theory (5/82).

NV-1715-0155

Fire Control, Class A

(Fire Controlman)

Course Number: A-113-0021; A-113-0019; A-113-0012; A-113-0010.

Location: Service Schools Command, Mare Island, Vallejo, CA; Service School Command, Great Lakes, IL; Service School Command, Bainbridge, MD.

Length: 22-26 weeks (880-910 hours).

Exhibit Dates: 1/90–9/92.

Objectives: After 9/92 see NV-1715-1713. To train enlisted personnel with prior electrical experience in complex weapons guidance and control systems.

Instruction: Lectures and practical exercises in the use of fire control equipment and all related equipment to keep the fire control system operational, including test equipment, transmitters, receivers, motor generators, gyros, synchros, resolvers, servo system fundamentals, oscilloscope operation, amplifiers, oscillators, and waveforming circuitry without a rigorous mathematical treatment. Also included are lectures and practical exercises on microwave tubes, waveguides, video amplifiers, antennas, radar principles, logic blocks, numbering systems and arithmetic, Boolean expressions and realization, adders, counters, digital computers, I/O systems, converters (AD and DA), programming, analog computer fundamentals, encoders, decoders, core memory, and fire control radar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in solid state electronics, 3 in electromechanical systems, 3 in digital circuits, 2 in microwave fundamenfals, 1 in electronics laboratory, 1 in digital laboratory, and 1 in radar maintenance (8/93).

NV-1715-0159

AN/AVA-1 Vertical Display Indicator Group Intermediate Maintenance

Course Number: C-198-3761.

Location: Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 5 weeks (216 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train technicians to troubleshoot, maintain, and repair a radar vertical display system.

Instruction: Lectures and laboratory instruction cover basic electronic theory including flip-flops, logic devices, and Schmitt triggers. Also included are basic television, power supplies, video amplifiers, and saw tooth generators as found in the display indicator both at the block and schematic level. Approximately half the course is devoted to video circuit theory and the remainder to practical application and laboratory work.

Credit Recommendation: In the vocational certificate category, 6 semester hours in electronic technology and 3 in electronics laboratory (7/80); in the lower-division baccalaureate/associate degree category, 4 semester hours in engineering electronic technology (7/80).

NV-1715-0162

AN/ASN-99(V) Projected Map Display Set Intermediate Maintenance
(AN/ASN-99 Projected Map Display Set Intermediate Maintenance)

Course Number: C-102-3787.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train qualified electronics technicians to operate, maintain, and troubleshoot the AN/ASN-99 projected map display set.

Instruction: Lectures and practical exercises cover AN/ASN-99 projected map display set operation, maintenance, and troubleshooting, including servomechanisms, block-diagram analysis, maintenance, and fault isolation procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic circuit analysis and 1 in electronic troubleshooting laboratory for non—electrical engineering majors (3/82).

NV-1715-0166

Sonar Communications Set AN/WQC-2/2A Operation and Maintenance (Surface)
(Sonar Communications Set AN/WQC-2/2A Operation and Maintenance)

Course Number: K-130-0213; A-130-0213.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA; Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 1-2 weeks (42 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To instruct personnel in the operation and routine maintenance of a sonar communications set.

Instruction: Instruction covers routine operation and maintenance of the sonar communications set.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/89).

NV-1715-0172

P-3 AN/APA-125A Indicator Group Intermediate Maintenance
(P-3 AN/APA-125A Indicator Maintenance, No. 48)

Course Number: C-102-3535.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 3 weeks (104 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To provide maintenance personnel with a knowledge of electronics and transistor theory to operate, calibrate, align, and maintain an aircraft radar indicator display.

Instruction: Lectures and practical exercises cover theory, maintenance, and operation of the AN/APA-125A radar indicator, including low- and high-voltage power supplies, range gate generators, video amplifiers and mixers, indicator control circuits, sweep circuits, and servo systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic radar theory and operation (7/81).

NV-1715-0175

AN/SRN-15 TACAN Distance Azimuth Measuring Equipment (DAME) Maintenance
(Electronics Technician, Class C1)

Course Number: A-102-0124.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 3 weeks (90-120 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train electronics technicians to operate, align, and repair AN/SRN-15 TACAN azimuth measuring equipment.

Instruction: Lectures and laboratory exercises cover circuit analysis and block diagrams of receivers and transmitters, logic sections, RF and control sections, power supplies and antennas, and test equipment for troubleshooting and repairing the specified equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems maintenance laboratory (5/82).

NV-1715-0178

AN/ASQ-10 Magnetic Anomaly Detector Intermediate Maintenance
(AN/ASQ-10A Magnetic Anomaly Detecting Systems Intermediate Maintenance)
(P-3 AN/ASQ-10A Magnetic Anomaly Detecting Systems Maintenance, No. 42)

Course Number: C-102-3059.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Key West, FL; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Quonset Point, RI; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 3 weeks (80-104 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train enlisted personnel to maintain, calibrate, align, troubleshoot, and repair magnetic anomaly detecting systems.

Instruction: Lectures cover magnetic anomaly detector block diagrams, theory of operation, maintenance, calibration, alignment, troubleshooting, and subsystems maintenance and repair, including power supplies, detecting head, magnetometer oscillator and amplifier, band pass and pen amplifier, test circuits, and error voltage controls.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/81).

NV-1715-0179

Gun Maintenance 5"/54 Caliber Rapid Fire Mk 42

Course Number: J-041-0123.

Location: Fleet Antiair Warfare Training Center, Dam Neck, VA.

Length: 2-3 weeks (70-115 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train gunnery personnel to operate and maintain the 5"/54 (RF) gun mount.

Instruction: Lectures and practical exercises cover the operation of 5"/54 (RF) gun mount, safety precautions, gun loading systems tests and adjustments, corrective and preventive maintenance, and troubleshooting techniques.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/91).

NV-1715-0190

E-2A AN/ARC-80 Radio Set Intermediate Maintenance
(E-2A Radio Set AN/ARC-80 Intermediate Maintenance)

Course Number: C-150-3477.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Miramar, San Diego, CA.

Length: 4-6 weeks (160-240 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train fleet maintenance personnel to maintain the E-2A AN/ARC-80 SSB transmitter, receiver, and associated test equipment.

Instruction: Lectures and practical exercises cover SSB transmitter and receiver circuit analysis; operating principles; section theory; radio frequency amplifier, antenna coupler, and trailing-wire antenna operation and maintenance; amplifier control; high-voltage circuits; control indicator; set control operation and maintenance; and AN/ASM 228 test bench and test procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications systems and 1 in electronic communications laboratory (5/85).

NV-1715-0191

AN/AQH-1 Tape Recorder/Reproducer Set Intermediate Maintenance

Course Number: C-102-3534.

Location: Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train intermediate maintenance personnel to operate, maintain, and modify the AN/AQH-1 recorder/playback device.

Instruction: Lectures and practical exercises cover basic tape recorder principles, head circuits, motor and control circuits, power supply, FM and direct-channel theory of operation, and precision plate assembly maintenance.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronics laboratory (7/81).

NV-1715-0193

AN/URN-20 Radio Set Maintenance

(AN/URN-20 TACAN Maintenance (Electronics Technician, Class C1))

(Electronics Technician AN/URN-20 Radio Set, Class C Maintenance)

Course Number: A-102-0035; A-102-0034.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–12/91.

Objectives: After 12/91 see NV-1715-1589. To train enlisted personnel to operate and maintain the AN/URN-20 radio receiver-transmitter.

Instruction: Lectures and practical exercises cover AN/URN-20 radio receiver transmitter operation, including basic air navigation systems, power distribution, antenna system, receiver, keyer, coder, and transmitter maintenance, test equipment operation, and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic navigation systems and 1 in electronic troubleshooting, or for non- electrical engineering majors, 3 semester hours in electronic systems theory and 1 in electronics laboratory (5/82).

NV-1715-0200

AN/APN-190(V) Doppler Radar Navigation System Intermediate Maintenance

(A-7 AN/APN-190 Doppler Radar Navigation System Intermediate Maintenance)

Course Number: C-102-3785.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 6-7 weeks (240-264 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train enlisted personnel to maintain, operate, and repair a Doppler radar system.

Instruction: Lectures and practical exercises cover the maintenance of the AN/APN-190 Doppler radar navigation system, including block-diagram analysis and receiver, transmitter, antenna, and control indicator analysis. Course includes troubleshooting techniques and repair procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aviation electronics and 1 in aviation electronics laboratory for non—electrical engineering students or 1 semester hour in electronics laboratory for electrical engineering majors (3/82).

NV-1715-0202

Ship's Inertial Navigation System (SINS) Mk 2 Mod 6 Calibration

Course Number: A-193-0300.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Submarine Training Center, Charleston, SC.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To provide an advanced knowledge of the theory of operation and calibration of the specified navigation system.

Instruction: Lectures and laboratories cover monitor gyro mechanism, monitor gyro error analysis, and use of current procedures for performing calibration and evaluation of data. VM bias, DEACON, PAD/PAP/HAP calibrations are performed on an operational system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/81).

NV-1715-0227

AN/AYK-2 Navigation Computer Group and OA-1768A Plotter Board Group Intermediate Maintenance

Course Number: C-102-3397.

Location: Air Maintenance Training Detachment, North Island CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 4 weeks (152-160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train naval maintenance personnel with backgrounds in electronics to operate, calibrate, test, align, and maintain the SH-3 (SH-3A/D) helicopter's automatic navigation system at the intermediate level.

Instruction: Lectures and practical exercises cover automatic navigation system introduction; AN/AYK-2 computer group theory and maintenance; DA-1768A display plotting board group, theory of operation and maintenance; and operation and maintenance procedures for memory and indicator groups. Instruction includes synchro fundamentals review and computer inputs and aerial navigation.

Credit Recommendation: In the vocational certificate category, 1 semester hour in synchro and differential generators and 1 in aircraft electrical navigation equipment (3/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical control systems (3/82).

NV-1715-0232

Ship's Inertial Navigation System (SINS) Mk 2 Mod 6 Theory and Maintenance I

(Ship's Inertial Navigation System (SINS) Mk 2 Mod 6 Control Theory)

Course Number: A-193-0262; A-193-0296.

Location: Submarine School, New London, Groton, CT; Submarine Training Center, Charleston, SC.

Length: 2 weeks (60-80 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train navigation electronics technicians to operate and maintain the Mk 2 Mod 6 ships inertial navigation system.

Instruction: Lectures cover the sequencing, development, and distribution of the Mk 2 Mod 6 SINS equipment power and the functional operation and detailed circuit analysis of data transmission loops, binnacle circuitry, temperature controls, mode selection circuitry, PAD/PAP mode control circuitry, diagnostic electronics, tape reader, gyro torquing electronics, and system alarm circuitry.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical maintenance and repair laboratory (3/81).

NV-1715-0235

Surface Sonar AN/SQS-56 Operations

Course Number: K-130-0214.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–7/96.

Objectives: To train personnel in the operation of a sonar detecting and ranging set.

Instruction: Course includes a study of the controls, indicators, and functional description of the sonar system. It also includes power up and power down procedures, use of displays, system operation under emergency conditions, and operator maintenance.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/86).

NV-1715-0247

Introduction to the Airborne Loran AN/ARN-81 Maintenance

(AN/ARN-81 Loran Intermediate Maintenance)

(C-2A AN/ARN-81 Loran Intermediate Maintenance)

Course Number: C-102-3043.

Location: Air Maintenance Training Detachment, Patuxent River, MD; Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, North Island, San Diego, CA.

Length: 3-4 weeks (120-160 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train maintenance personnel to maintain and service the AN/ARN-81 long-range (Loran) navigation system.

Instruction: Lectures and laboratories cover Loran system theory, timing circuits, display circuits, and troubleshooting and aligning a military Loran receiver.

Credit Recommendation: In the vocational certificate category, 3 semester hours in avionics or marine electronics (7/81).

NV-1715-0249

AN/VRC-46 and RT-46 Transceiver System Maintenance

(AN/VCC-2, AN/VRC-46, and AN/SRA-60 Telephone-Telegraph Communication System)

Course Number: A-101-0063.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–11/90.

Objectives: After 11/90 see NV-1715-1598. To train enlisted personnel to maintain AN/VCC-2 and AN/VRC-46 telephone equipment.

Instruction: Lectures and laboratory exercises cover a radio transceiver system, including operation, maintenance, alignment, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic troubleshooting (5/82).

NV-1715-0254

AN/ACQ-2/2A DATA COMMUNICATIONS SYSTEMS AND ASSOCIATED TEST SET EQUIPMENT INTERMEDIATE MAINTENANCE

(E-2A AN/ACQ-2 and AN/ACQ-2A Data Terminal Sets Intermediate Maintenance)

Course Number: C-150-3478.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Miramar, San Diego, CA.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train maintenance personnel to operate and troubleshoot the AN/ACQ-2 data terminal set and the AN/ASM-228 and AN/USM-145 test benches.

Instruction: Lectures and practical exercises cover the maintenance of the AN/ACQ-2 data terminal set and the AN/ASM-228 and AN/USM-145 test benches, including data terminal system familiarization, logic circuits, code generation, Doppler and synchronization circuits, code recognition circuits, control circuits, oscilloscope, counter, signal generator, wave analyzer, distortion analyzer, and operation of specialized test benches.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital communications and 1 in digital communications laboratory (5/85).

NV-1715-0256

P-3C SENSOR STATION ONE AND TWO (ACOUSTIC SYSTEMS TECHNICIAN) ORGANIZATIONAL MAINTENANCE

Course Number: C-102-3590.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 4-5 weeks (160-200 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train enlisted personnel to maintain the acoustic systems of the P-3C aircraft to the module level.

Instruction: Lectures and practical exercises cover the maintenance and troubleshooting of the acoustic systems of the P-3C aircraft, including operation and components of the sonobuoy receiver system, the bathythermograph recorder, the TD-900/AS time code generator-decoder, the AN/AQH-4 sound recorder-reproducer system, and the sonar computer recorder group.

Credit Recommendation: In the vocational certificate category, 3 semester hours in marine electronics (7/81).

NV-1715-0260

AN/APQ-126 (V) RADAR SET INTERMEDIATE MAINTENANCE

(A-7E AN/APQ-126 Radar Set Intermediate Maintenance)

Course Number: C-104-3785.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 5-6 weeks (207-240 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train aviation fire control technicians to maintain, operate, troubleshoot, and align AN/APQ-126 radar sets using appropriate test sets.

Instruction: Lectures and practical exercises cover the operation, troubleshooting, and alignment of the AN/APQ-126 radar set, including power supply programmers, transmitter/modulators, antenna/receivers, air navigation computers, sweep generators, fault locators, multiple-indicator displays, and test sets.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic maintenance and 1 in electronic maintenance laboratory (3/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in electronic troubleshooting laboratory (3/82).

NV-1715-0268

MK 116 MOD 4 UNDERWATER FIRE CONTROL SYSTEM (FCS) MAINTENANCE

Course Number: K-130-0247.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 31 weeks (1220-1240 hours).

Exhibit Dates: 1/90–4/91.

Objectives: After 6/97 see NV-1715-1854. To provide personnel with the skills and knowledge necessary to perform maintenance and repair on a specific underwater fire control system.

Instruction: Lectures and practical exercises cover numbering systems, digital logic, torpedo maintenance, general computer architecture and theory, and the AN/UYK-7 computer set and peripherals. In computer architecture topics covered include functional operation of digital computers, processors, memories, input/output, microprocessors, machine and assembly language programming, and mapping. A detailed study of the AN/UYK-7 computer, including CPU, main memory, power supply, and peripheral tape units is included as well as troubleshooting procedures, circuit measurements, diagnostic software, and systems level maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital fundamentals, 3 in computer architecture, and 6 in computer system maintenance and repair (7/86).

NV-1715-0272

SURFACE SONAR SET AN/SQS-56 MAINTENANCE

Course Number: K-130-0202.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 13 weeks (440 hours).

Exhibit Dates: 1/90–12/90.

Objectives: After 12/90 see NV-1715-1855. To train technicians to perform preventive and corrective maintenance on a sonar system under limited supervision.

Instruction: Lectures and practical exercises cover computer number systems, schematics of units and subassemblies, computer logic, input/output systems, and laboratory practice in computer logic flow diagrams.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer logic and 2 in computer maintenance laboratory (7/86).

NV-1715-0290

AN/SQQ-14 MAINTENANCE ENLISTED

Course Number: A-130-0014.

Location: Fleet and Mine Warfare Training Center, Charleston, SC.

Length: 8 weeks (217 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train enlisted personnel to apply solid state electronics theory and to perform corrective and/or preventive maintenance on the AN/SQQ-14 sonar system.

Instruction: Lectures and practical exercises cover preventive and corrective maintenance on the AN/SQQ-14 sonar system, including primary power distribution, test equipment, hoist assembly and function, servo systems, master timing, transmitters and receivers, and various timing systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours of technical elective credit in electrical or electronic associate degree programs (11/81).

NV-1715-0318

OA-3732/ASM-76 COMPUTER INDICATOR INTERMEDIATE MAINTENANCE

(E-2A Computer Indicator Semi-Automatic Checkout Equipment (SACE) Operation and Maintenance)

Course Number: C-150-3479.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Miramar, San Diego, CA.

Length: 11 weeks (440 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train enlisted personnel who have backgrounds in digital and transistor fundamentals to operate and troubleshoot the computer indicator test console.

Instruction: Lectures and practical exercises cover computer indicator test console operation and maintenance, including logic circuits, interconnection of logic elements and flip-flops; programming console operation, components, and maintenance; and logic testing procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital computer systems, 1 in digital computer systems laboratory, 1 in analog systems, and 1 in analog systems laboratory (5/85).

NV-1715-0325

AN/FRT-83, 84 AND 85 RADIO TRANSMITTERS MAINTENANCE, CLASS C1

Course Number: A-101-0052.

Location: Service School Command, Great Lakes, IL.

Length: 13 weeks (390 hours).

Exhibit Dates: 1/90–1/91.

Objectives: After 1/91 see NV-1715-1528. To train personnel to maintain, operate, troubleshoot, and adjust the AN/FRT-83 and AN/FSQ-98 radio transmitter series.

Instruction: Areas of instruction include the use of the oscilloscope, harmonic analyzer, RF generators, and other equipment to troubleshoot radio transmitting equipment, servo-amplifier, and associated relay systems. Course includes the use of schematics, timing diagrams, flow charts, and digital remote controlled radio transmitting equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in radio electronics circuit maintenance (1/82); in the lower-division baccalaureate/associate degree category, 2 semester hours in radio electronics laboratory and 1 in radio electronics circuits (1/82).

NV-1715-0329

P-3C Integrated Avionics System Technician

Course Number: C-102-3575.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 16-17 weeks (632 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train experienced fleet personnel to maintain inflight P-C3 integrated avionics systems.

Instruction: Lectures and laboratory exercises at the block diagram level cover data handling systems, magnetic tape transport and data processing, display systems, a radar system, and navigation/communications systems. Approximately half of the student's time is devoted to practical laboratory exercises.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer organization and function and 3 in electronics laboratory (7/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in avionics technology, 3 in microminiature computer functions and organization, and 2 in computer laboratory (7/81).

NV-1715-0347

E-2A Digital Data Communications System (AN/ASW-14A) Intermediate Maintenance

Course Number: C-150-3473.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Miramar, San Diego, CA.

Length: 3-4 weeks (120-160 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train maintenance personnel who have had previous training in basic avionics and digital fundamentals to maintain the E-2A digital data communication system.

Instruction: Lectures and practical exercises cover the latest maintenance procedures for the AN/ASW-14A digital data communication system, including special equipment, theory of operation, circuit analysis, programming, power supply, reply input, data storage, and output; radio receiver and transmitter components; and troubleshooting procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronics laboratory (5/85).

NV-1715-0353

Fire Control System (FCS) Mk 88 Mod 1 Digital Control Computer

Course Number: A-121-0288.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Submarine Training Center, Charleston, SC.

Length: 3-4 weeks (117-120 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train enlisted personnel to operate the Mk 88 digital control computer.

Instruction: The course covers the functional description of a minicomputer. Topics covered include the instruction set; word format; control sequences; and the functional description of subsystems such as the master clock, registers, core memory, arithmetic unit, memory logic, buffers, and interrupt operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in minicomputers (3/81).

NV-1715-0360

AN/APM-341(V) Doppler Test Set Intermediate Maintenance

Course Number: C-102-3800; C-104-3786.

Location: Air Maintenance Training Detachment, Lemoore, CA; Air Maintenance Training Detachment, Cecil Field, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train selected personnel to operate, maintain, and troubleshoot the AN/APM-341(V) Doppler test set.

Instruction: Lectures and practical exercises cover maintenance procedures for the AN/APM-341(V) Doppler test set, including instruction on logic concepts, radar signal simulator, spectrum analyzer, microwave converter, digital readout monitor, standing wave ratio meter, and quick-replaceable assemblies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aviation electronics/electronic circuit analysis and 1 in electronic circuits laboratory for non—electrical engineering students (3/82).

NV-1715-0388

AN/ASN-90 Inertial Measurement Set Intermediate Maintenance

(A-7 AN/ASN-90 Inertial Measurement Set Intermediate Maintenance)

Course Number: C-102-3788.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 3 weeks (120-136 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train enlisted personnel who have had previous training in digital fundamentals and electronics to maintain, assemble, and troubleshoot inertial measurement equipment using semiautomatic and automatic testing procedures.

Instruction: Lectures and practical exercises cover functional operation of AN/ASN-90 inertial measurement sets, controllers, adapter/power assemblies, and inertial measurement units; test and calibration procedures; and fault isolation techniques.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronics system maintenance (3/82).

NV-1715-0389

Relay Transmitter Mk 60 Maintenance

(Relay Transmitter Mk 60 Mod 0 Maintenance UFCG Mk 114 Mods 9-12)

Course Number: A-130-0060; K-130-0060.

Location: Fleet Sonar School, Key West, FL; Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 2-3 weeks (80-105 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To train enlisted personnel to operate and maintain Mk 60 Mod 0 relay transmitters.

Instruction: Lectures and laboratories cover block-diagram and circuit analysis and system operation and maintenance procedures with emphasis on system test functions. This is a highly specialized equipment course.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (7/86).

NV-1715-0400

Cryptologic Technician A (Administration), Class A

(Communications Technician Administration Branch, Class A)

Course Number: A-510-0015.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 11 weeks (417 hours).

Exhibit Dates: 1/90–10/94.

Objectives: After 10/94 see NV-1715-1876. To provide the basic knowledge required for administrative and personnel fields.

Learning Outcomes: Upon completion of the course, the student will be able to type 30 wpm with no more than 4 errors; understand and complete standard naval control forms; understand procedures and formats involved in the communications process; and exhibit competency in handling classified information.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in beginning typing (7/87).

NV-1715-0403

Radar Signal Processing Equipment Operational Maintenance

(Radar Signal Processing Equipment (RSPE) Maintenance Mk 1 and Mods 1-5)

Course Number: J-113-1112; J-113-0111.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 4-5 weeks (160-175 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train fire control technicians to operate and maintain specific radar signal processing equipment.

Instruction: Lectures and practical exercises cover the principles of operation and the development of knowledge and skills necessary to perform shipboard maintenance of video, display, and radar signal processing equipment, including identification of the interrelationship and function of the system components, casualty analysis, troubleshooting, tests, and adjustments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic equipment maintenance (10/91).

NV-1715-0408

A-7 AN/APQ-116 Radar Set Intermediate Maintenance

Course Number: C-104-3782.

Location: Air Maintenance Training Detachment, Lemoore, CA; Air Maintenance Training Detachment, Cecil Field, FL.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to operate, maintain, service, and repair AN/APQ-116 radar sets.

Instruction: Lectures and laboratories cover radar set familiarization, security, radiation hazards, and special circuits; transmitter circuit analysis, power supplies, antenna systems, and transmitter modules; general component theory; receiver circuit analysis, antenna receivers, command computers, and alarm monitors; display analysis, sweep generators, and indicator systems; and system maintenance, troubleshooting procedures, and performance testing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic high frequency circuits and 1 in high frequency circuits laboratory for non—electrical engineering majors (3/82).

NV-1715-0423

Sonar Surface Technician, Class A

Course Number: K-130-0037.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 11-12 weeks (357 hours).

Exhibit Dates: 1/90–5/90.

Objectives: After 5/96 see NV-1715-1856. To give enlisted personnel an introduction to sonar principles, fire control systems, underwater sound equipment, general purpose electronic test equipment, and aural classification techniques.

Instruction: Lectures and practical exercises cover the physics of underwater sound propagation; the components of active and passive sonar systems; operation of fire control systems; operation of auxiliary underwater equipment; aural familiarization and classification of underwater sounds; and use of voltmeters, multimeters, oscillators, counters, and oscilloscopes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in the physics of underwater acoustics and 1 in basic electronic test equipment (7/86).

NV-1715-0426

SSN Mk 3 Mod 6 Ship's Inertial Navigation System (SINS) Maintenance

(Mk 3 Mod 6 Ship's Inertial Navigation System (SINS) Maintenance)

(Mk 3 Mod 6 Ship's Inertial Navigation System (SINS) Maintenance (Enlisted))

Course Number: A-193-0032.

Location: Submarine Base, New London, Groton, CT.

Length: 19-25 weeks (570-750 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train electronics technicians to operate, evaluate, and maintain the Mk 3 Mod 6 ship's inertial navigation system.

Instruction: This is a pipeline course that is composed of a number of courses. See A-102-0168 (NV-1715-1476) and A-193-0357 (NV-1715-1461) for specific information.

Credit Recommendation: Please refer to the individual exhibits noted above for credit recommendation (3/81).

NV-1715-0443

Terrier Weapons System Mk 76 Mod 9

(Terrier Weapons System Missile Fire Control System (MFCS) Mk 76)

Course Number: A-121-0473.

Location: Service Schools Command, Mare Island, Vallejo, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 10-11 weeks (300-440 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To train senior petty officers to supervise Terrier missile weapons systems technical operations.

Instruction: Lectures and practical exercises cover the operation of Terrier missile weapons systems, including basic systems operation and equipment, target detection, missile selection, and WDE tracking; FCS assignment and target tracking; fire control problem computation using computers; missile firing and guidance; data reduction; and test and alignment procedures.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/83).

NV-1715-0445

AN/BRQ-1, AN/WYQ-1 Operator

(AN/BRD-7, AN/WYQ-1, AN/BRQ-1 Basic Operator, Class C1)

Course Number: A-233-0029.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT.

Length: 3 weeks (90-118 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train an individual to operate a surveillance receiver and digital display unit.

Instruction: Course trains the individual to operate three pieces of equipment (two receivers and a display unit) and includes basic theory, physical description and function of all controls, indicators, displays, and interface connections.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/89).

NV-1715-0447

Mardan Computer Theory and Maintenance 1

Course Number: A-193-0288.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT; Fleet Ballistic Missile Submarine Training Center, Charleston, SC; Trident Training Facility, Bangor, Bremerton, WA.

Length: 2-3 weeks (60-128 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide theory of operation of specific military equipment and to train in fault isolation and repair of the equipment.

Instruction: Lectures and laboratories cover the theory of equipment operation, including power supply sequencing, relay logic, and alarm systems and in fault isolation and repair of the equipment to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer systems troubleshooting and maintenance (10/89).

NV-1715-0448

Mardan Computer Theory and Maintenance 2

Course Number: *Version 1:* A-193-0289. *Version 2:* A-193-0289.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT; Trident Training Facility, Bangor, Bremerton, WA; Fleet Ballistic Missile Submarine Training Center, Charleston, SC.

Length: *Version 1:* 2 weeks (69 hours). *Version 2:* 1-2 weeks (60-64 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will use the theory of operation of specific equipment to perform fault isolation and repairs on the equipment. *Version 2:* Upon completion of the course, the student will use the theory of operation of specific equipment to perform fault isolation and repairs on the equipment.

Instruction: *Version 1:* Lectures and laboratories cover monitoring circuits, relay logic synchro loops, and digital motor control closed loops; the use of diagnostics to determine fault isolation; and the repair of specific equipment. Some understanding of basic computer circuits required. *Version 2:* Lectures and laboratories cover monitoring circuits, relay logic synchro loops, and digital motor control closed loops; the use of diagnostics to determine fault isolation; and the repair of specific equipment.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical troubleshooting and repair (4/96). *Version 2:* In the vocational certificate category, 1 semester hour in electromechanical repair (10/89).

NV-1715-0450

A-7A/B Integrated Avionics Weapons System Technician Organizational Maintenance

Course Number: C-102-3794.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 3 weeks (104 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train fleet maintenance personnel to troubleshoot and perform operational checks on the A-7A/B aircraft weapons system.

Instruction: Lectures and practical exercises cover troubleshooting and operational checks on the A-7A/B aircraft weapons system, including ordnance familiarization, associated equipment and weaponry, integrated flight instruments system components and circuitry, gyroscopic principles, air data equipment, delivery and release systems, weapons release computer, and associated radar set components and operation.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/82).

NV-1715-0462

P-3 PB-20N Autopilot System Intermediate Maintenance

Course Number: C-602-3532.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To provide electrical maintenance personnel with training in intermediate maintenance, circuit analysis, operation, and test procedures for a specific flight control system.

Instruction: Lectures and practical exercises provide the student with sufficient knowledge/theory to operate and troubleshoot an automatic flight control system, including power supplies, amplifiers, bench testing, and troubleshooting techniques.

Credit Recommendation: In the vocational certificate category, 2 semester hours in avionics laboratory (7/81).

NV-1715-0469

Electronic Surveillance Measures (ESM)
AN/WLR-8(V)2 Combined Operator
Maintenance

Course Number: A-233-0040.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 10-12 weeks (304-420 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train technicians with a basic computer background in the theory of operation and maintenance of a complex multichannel digital receiver and digital data processor computer system.

Instruction: Course includes analog-to-digital and digital-to-analog conversion, multiplexing, demultiplexing, ALU units, RF digital tuner control circuits, and displays. The student learns to perform fault isolation, alignment, adjustment, and calibration and to make repairs at the component level. Course includes diagnostic and maintenance procedures for small computers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital computer maintenance and repair practices and laboratory and 1 in electronics maintenance and repair laboratory (3/81); in the upper-division baccalaureate category, 1 semester hour in computer organization (3/81).

NV-1715-0491

AN/BPS-15 Radar Combined Maintenance

Course Number: A-102-0199.

Location: Submarine School, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Facility, Charleston, SC.

Length: 3-4 weeks (90-120 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide instruction on the operation and maintenance of an installed submarine radar system.

Instruction: Lectures and laboratory exercises cover the operation of a radar system, including the antenna hydraulic system, radar receiver, and the signal display unit from a block diagram and signal flow approach. Preventive and corrective maintenance, alignment adjustments, and calibration procedures are covered as well as test procedures for microwave cubes and their replacement.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/89).

NV-1715-0493

AN/APN-171(V) Radar Altimeter (Low
Level) and AN/APQ-107 Radar
Altimeter Warning Set Intermediate
Maintenance
(AN/APN-171(V) Radar Altimeter (Low
Level) Intermediate Maintenance)

Course Number: C-102-3050.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 3 weeks (96-104 hours).

Exhibit Dates: 1/90–1/97.

Objectives: To train maintenance personnel to operate and maintain the AN/APN-171(V) radar altimeter system.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, maintain, and troubleshoot an aircraft radar altimeter and altimeter warning system to the circuit board level. The student uses a differential voltmeter, power meter, standing wave indicator, RF signal generator, and phase angle meter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic instrumentation and 1 in electronics troubleshooting laboratory (4/85).

NV-1715-0496

Atmosphere Analyzer Central Atmosphere
Monitoring System (CAMS) Mk 1

Course Number: A-623-0048.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Fleet Ballistic Submarine Training Center, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 3 weeks (90-99 hours).

Exhibit Dates: 1/90–12/95.

Objectives: To provide theory and skills necessary to perform normal/casualty operational tasks and preventative/corrective maintenance on an atmosphere analyzer.

Instruction: Course is largely descriptive, involving operation and maintenance of the above-mentioned equipment. Course includes readout module, diagnostic module, coanalyzer module, MS analyzer model, low-voltage power supply module, ion pump power supply module, and an AC control module.

Credit Recommendation: In the vocational certificate category, 2 semester hours in environmental laboratory techniques (11/85).

NV-1715-0501

Electronic Surveillance Measures (ESM)
AN/WLR-6 Combined Maintenance

Course Number: A-233-0041.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 16-21 weeks (480-800 hours).

Exhibit Dates: 1/90–3/91.

Objectives: Course is designed to train technicians to operate and maintain a complex manually operated multichannel signal reception and processor radio receiver that can handle any type of transmitted signal.

Instruction: Through lectures and laboratories, the student learns the functional description, block-diagram signal flow, and operating modes of the ESM system. Subjects covered are a multiple antenna system and its coupling and antenna switching circuits; a VHF panoramic manual receiver and its subsystems; basic digital concepts using resister diode logic and transistor flip-flops; knowledge and application of db and noise figure, video and audio amplifiers, video and audio tape recorders, video and audio distribution panels, power supplies, power distribution system, characteristics and operation of traveling wave tubes and klystrons, UHF preamplifiers relay switching circuits, signal spectrum display unit, and FM multiplexers and demultiplexers. Student learns to calibrate, align, adjust, and do performance tests on all this equipment. Course includes basic digital concepts, including number systems, codes, and flip-flop operation using discrete logic circuits.

Credit Recommendation: In the vocational certificate category, 10 semester hours in electronics (3/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in general technical elective for non -electronic technology students and 2 in electronic maintenance and repair laboratory (3/81).

NV-1715-0502

AN/BQH-5(V) Series Combined Maintenance
(Data Gathering Set AN/BQH-5(V)2 Basic
Maintenance)

Course Number: A-130-0176.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 2-3 weeks (60-84 hours).

Exhibit Dates: 1/90–Present.

Objectives: Course provides system-level approach to maintenance of data gathering equipment.

Instruction: Course includes familiarization with the FR 1300 tape recorder and console as well as other highly specialized pieces of equipment. Most of the course is laboratory oriented.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (10/89).

NV-1715-0511

AN/APX-7 Radar Recognition System
Intermediate Maintenance
(P-3 AN/APX-7 Radar Recognition System
Intermediate Maintenance)

Course Number: C-102-3538.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train maintenance personnel to operate and maintain the AN/APX-7 radar recognition system.

Instruction: Lectures and practical exercises cover the operation and maintenance of the AN/APX-7 radar recognition system, including functional block diagrams, circuit analysis, transmitting system, subassemblies, video systems power monitor and supplies, set control, and troubleshooting and alignment procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (7/81).

NV-1715-0512

Tartar Radar AN/SPG-51C Digital

Course Number: A-104-0119; A-104-0136.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 23-25 weeks (800-920 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train fire control technicians to operate and maintain the AN/SPG-51C radar set and associated equipment.

Instruction: Lectures and practical exercises cover the maintenance and operation of the AN/SPG-51C radar set, including use of specialized test equipment; AC and DC power supplies; digital theory; block diagrams of track radar components; various circuits; data flow; missile guidance; signal comparator; and alignment, calibration, troubleshooting, and repair techniques. The course is heavily weighted toward troubleshooting and repair techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic troubleshooting techniques (6/89).

NV-1715-0513

AN/APQ-126(V) Radar Set Special Support
Equipment Intermediate Maintenance
(AN/APQ-126 Radar Set Special Support
Equipment Intermediate Maintenance)

Course Number: C-102-3797.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train radar maintenance personnel to operate and maintain the AN/APQ-126 radar set special support equipment at the intermediate level.

Instruction: Lectures and practical exercises cover the operation and maintenance of the AN/APQ-126 radar set special support equipment, including circuit analysis, the interconnecting power supply; control indicator; relay, assembly, and adapter boxes; circuit analysis of various generators; circuit analysis of module, antenna/receiver, and antenna boresight test sets; and alignment, troubleshooting, and checkout procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic maintenance theory and 2 in electronics maintenance laboratory (3/82).

NV-1715-0529

AN/ASM-398 Projected Map Display Set
(PMDS) Intermediate Maintenance

Course Number: C-150-3783.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train electronics maintenance personnel to service AN/ASM-398 projected map display sets.

Instruction: Lectures cover AN/ASM-398 projected map display set servicing, including analog and digital circuit theory and operation, basic logic theory and microcircuitry, test programming description and procedures, self-test fault isolation, test set calibration, and associated test equipment operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital circuit analysis or 1 semester hour in digital systems for electrical engineering majors (3/82).

NV-1715-0533

P-3C Communication/Navigation
Organizational Maintenance

Course Number: C-102-3591.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 8-9 weeks (320-360 hours).

Exhibit Dates: 1/90–4/90.

Objectives: After 4/90 see NV-1715-1577. To train fleet maintenance personnel who have had previous training in basic electronics to operate, test, and troubleshoot the P-3C communications and navigation systems.

Instruction: Lectures and practical exercises cover the operation, testing, and troubleshooting of the P-3C communications and navigation radar, radar altimeters, radio navigation systems, teletype, teleprinter, digital data link, and computer general information.

Credit Recommendation: In the vocational certificate category, 6 semester hours in communications and systems maintenance (7/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in avionics technology (7/81).

NV-1715-0534

AN/ASN-50 Attitude Heading Reference
System Intermediate Maintenance

Course Number: C-602-3010.

Location: Air Maintenance Training Detachment, Key West, FL; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Norfolk, VA; Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Imperial Beach, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 2 weeks (56-80 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train electrical maintenance personnel to operate and maintain the attitude heading reference system.

Instruction: Lectures and practical exercises cover the operation and maintenance of the attitude heading reference system, including special and general test equipment, component operation, and testing and repair procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics on the basis of institutional evaluation (7/81).

NV-1715-0539

AN/AQM-18(V)1 Thru (V)5 Sonar Computer
Recorder Group Test Central and
AN/AQM-20 Computer Group Power
Systems Test Set Intermediate
Maintenance

Course Number: C-102-3111.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train aviation maintenance personnel in the operation, maintenance, and repair of a sonar computer recorder group test central and the computer group power system test set at the intermediate level.

Instruction: Lectures and practical exercises cover the operation, maintenance, and repair of a sonar computer recorder test set and its related computer group power system test set, including circuit and signal flow analysis, individual subsystem analysis, fault isolation and repair procedures utilizing standard electronic equipment, and computer-related automatic testing procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronics maintenance procedures and 2 in electronics maintenance laboratory for non—electrical engineering students (3/82).

NV-1715-0545

RADIAC Instrument Maintenance

Course Number: A-670-0020.

Location: Service School Command, Treasure Island, San Francisco, CA.

Length: 4-5 weeks (180-190 hours).

Exhibit Dates: 1/90–11/91.

Objectives: After 5/96 see NV-1715-1860. To train enlisted personnel to operate and maintain RADIAC instruments.

Instruction: Lectures and practical exercises cover operation, maintenance, and repair of radiation related equipment, including dosage hazards; radiological monitoring and decontamination; basic nuclear physics; radiac computer indicator, detector, and calibrator maintenance; radioactive sources; leak testing; Atomic Energy Commission license requirements; electronics review; and standard test equipment operation.

Credit Recommendation: In the vocational certificate category, 3 semester hours in radiation equipment maintenance (11/81); in the lower-division baccalaureate/associate degree category, 2 semester hours in radiation equipment maintenance and credit in physics laboratory on the basis of institutional evaluation (11/81).

NV-1715-0550

AN/AQS-13B Sonar Intermediate
Maintenance

Course Number: C-130-3399.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide training for avionics personnel in the maintenance and repair of a sonar detecting ranging set and a test control set.

Instruction: Lectures and practical exercises cover the operation and maintenance of a sonar system and its related test set, including familiarization with basic sonar operation, logic gates, decoders, block-diagram analysis, power supplies and distribution, timer, data, mixers, CRT beam positioning, audio, and integrated circuit analysis and troubleshooting.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electronics maintenance laboratory (3/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronic circuit analysis and 1 in electronics laboratory for non—electrical engineering students (3/82).

NV-1715-0558

RO-358/AQS-13A Multipurpose Recorder Intermediate Maintenance

Course Number: C-102-3401.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train technicians in the intermediate maintenance of a multipurpose chart recorder, including theory, maintenance, and troubleshooting.

Instruction: Lectures and practical exercises cover the operation, maintenance, and repair of a multipurpose chart recorder, including the unregulated and regulated power supply description, stylus and chart drive circuits, performance standards, and alignment procedures. Laboratory includes troubleshooting defective equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic instrumentation or 1 in electronic troubleshooting laboratory for non—electrical engineering students (3/82).

NV-1715-0559

AN/ASQ-81(V) Magnetic Anomaly Detection Set Intermediate Maintenance

Course Number: C-102-3109.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–8/91.

Objectives: After 8/91 see NV-1715-1581. To train maintenance personnel in the operation, troubleshooting and repair of a magnetic anomaly detection set at an intermediate level.

Instruction: Lectures and practical exercises cover the operation, troubleshooting, and intermediate repair of a magnetic anomaly detection set, including basic magnetic theory, troubleshooting procedures to the bad element level, and block-diagram analysis.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics maintenance laboratory (3/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical motor controls laboratory for non—electrical engineering students (3/82).

NV-1715-0565

Electricity, Electronics, and Hydraulics, Class AP

Course Number: A-041-0012.

Location: Service School Command, Great Lakes, IL.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To provide enlisted personnel with basic training in the maintenance of missile-launching and gun systems.

Instruction: Lectures and practical exercises cover the theory and practice of AC/DC motors and generators; solid state power supplies; number systems, logic gates, digital arithmetic, circuits, counters, and registers; synchros and servos; and hydraulic controls.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical controls and 2 in digital logic (1/82).

NV-1715-0567

AN/AQA-7(V)6/7 Sonar Computer Recorder Group Difference Data Intermediate Maintenance

Course Number: C-130-3571.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 5 weeks (240 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train experienced technicians in the maintenance and repair of a particular piece of antisubmarine warfare equipment at the intermediate level.

Instruction: Lectures and practical exercises cover the operation; troubleshooting; and repair of a particular piece of antisubmarine warfare equipment, including differences from other versions of the equipment, built-in test procedures, circuit analysis and fault isolation, power supply repair, signal flow analysis, and computer fault isolation and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital system maintenance and 2 in electronics laboratory for non—electrical engineering students (3/82).

NV-1715-0571

Strike Armament Intermediate Maintenance Repair

Course Number: C-646-3118.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 8 weeks (299 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train enlisted personnel to inspect, test, assemble, and repair aviation armament equipment.

Instruction: Lectures and practical exercises cover the inspection, testing, and repair of assembly aviation armament equipment (VA-VF type), including the 3M system, operation of airborne missile launchers, suspension and releasing equipment analysis, rocket and flare dispensers, specific aircraft gun components and operation, and troubleshooting procedures.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (4/85).

NV-1715-0572

Tartar Officer Advanced
(Tartar Weapons Officer)

Course Number: A-2F-0037.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 4-6 weeks (160-179 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train officers with previous gunnery experience to operate and maintain missile equipment on DDG-2 ships.

Instruction: Lectures and practical exercises cover the operation and maintenance of missile equipment on DDG-2 ships, including Tartar overview, search radar, specific radar equipment, cooling and dry air systems, system interface, target detection and identification, selection and tracking, controls and indicators for the master control panel, target evaluation, air ready mode, designation modes, FCS acquisition-to-track sequences, specific track modes, launching system, firing circuits, data flow, logistics, and administration procedures.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (6/89).

NV-1715-0576

Poseidon Missile Technician Conversion (A-2/A-3 to C-3)

Course Number: A-121-0139.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 12 weeks (400 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To train Polaris missile technicians to maintain and test Poseidon missiles.

Instruction: Lectures and laboratory exercises cover the maintenance and repair of the Poseidon including a review of hydraulic, pneumatic, electromechanical, and hydraulic launch and support systems. The Poseidon missile and its accompanying computer is studied in depth with troubleshooting down to the module level.

Credit Recommendation: In the vocational certificate category, 1 semester hour in hydraulics (11/83); in the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical maintenance and 3 in computer/control systems troubleshooting (11/83).

NV-1715-0584

AN/APN-154(V) Radar Beacon Intermediate Maintenance

Course Number: C-102-3031.

Location: Air Maintenance Training Detachment, El Toro, CA; Air Maintenance Training Detachment, Lemoore, CA; Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA; Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Cherry Point, NC; Air Maintenance Training Detachment, Miramar, San Diego, CA.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to maintain the AN/APN-154(V) radar beacon at the intermediate level and to use associated test equipment.

Instruction: Lectures and practical exercises in the maintenance of the radar beacon and the use of associated test equipment, including controls and indicators, block diagrams and signal flow, component characteristics, electrical characteristics, and alignment and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aviation electronic instrumentation laboratory for non—electrical engineering majors (3/82).

NV-1715-0617

A-7 AN/ASW-26/30 Automatic Flight Control System Intermediate Maintenance

Course Number: C-602-3782.

Location: Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train fleet maintenance personnel who have backgrounds in A-7 aircraft systems to operate, test, troubleshoot, and maintain specific automatic flight control systems equipment at the intermediate level.

Instruction: Lectures and practical exercises in the operation, testing, troubleshooting, and maintenance of the automatic flight control systems, including component theory, various module analyses, circuit analysis, modes of operation, yaw stabilization and control augmentation, trim theory, and specific component testing procedures.

Credit Recommendation: In the vocational certificate category, 2 semester hours in autopilot electronics maintenance (3/82).

NV-1715-0640

P-3C Sensor Station Three System
Organizational Maintenance
(P-3C Sensor Station Three (Radar/Display)Technician Organization Maintenance)

Course Number: C-102-3593.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train fleet maintenance personnel to operate and maintain the radar/display systems at the block-diagram level.

Instruction: Lectures and practical exercises cover the operation and maintenance of P-3C Sensor Station Three radar/display systems, including specific equipment components, block diagrams, trouble analysis and adjustment, radar and IFF systems, and a magnetic anomaly detection system.

Credit Recommendation: In the vocational certificate category, 6 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1715-0652

Gunner's Mate, Class A1, Phase I

Course Number: A-041-0010.

Location: Service School Command, Great Lakes, IL.

Length: 5 weeks (175 hours).

Exhibit Dates: 1/90–3/92.

Objectives: After 3/92 see NV-1715-1712. To train enlisted personnel to operate and maintain gun mount and missile launching systems.

Instruction: Lectures and exercises in hand tools, ordnance identification, missile systems, and small arms.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/82).

NV-1715-0655

3"/50 Rapid Fire Twin Mount Power Drive and
Gun Maintenance
(3"/50 Caliber Rapid Fire Twin Mount Gun Maintenance (Mk 35))

Course Number: J-113-1202.

Location: Fleet Combat Direction Systems Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 3-4 weeks (105-120 hours).

Exhibit Dates: 1/90–2/91.

Objectives: To train gunnery personnel to test, adjust, and maintain the 3"/50 caliber rapid fire gun mount and control system.

Instruction: Lectures and practical exercises cover the testing, adjustment, and maintenance of the 3"/50 caliber rapid fire gun mount, including gun and motor field control circuits, parallax system operation, elevation and train receiver regulators, amplifier cabinet components, gun mechanism, loader drive operation, main cam shaft operation; feeding and shifting mechanism, timing, brake system, and lubrication procedures.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (9/84).

NV-1715-0658

Terrier Weapons System Mk 76 Mod 8
(Terrier Weapons Systems with Digital Fire Control Systems (MFCS Mk 76-6/AFCS))

Course Number: A-121-0180.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 10-11 weeks (400-470 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To train enlisted personnel to operate and maintain the Terrier digital fire control weapons system and to supervise its operation, maintenance, and testing.

Instruction: Lectures and practical exercises cover Terrier weapons system introduction, ship sensors and search radars including three-dimensional ones, fire control systems including gunfire and underwater fire, power distribution and control circuits, tactical data systems, weapons direction system, guided missile fire control system data flow and interface, launching system and Terrier missile, and weapons system testing and alignment procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic troubleshooting procedures (11/83).

NV-1715-0662

Model 28 Automatic Send Receive Teletype
Maintenance

Course Number: A-160-0023.

Location: Teletype Maintenance Class C School, San Diego, CA; Teletype Maintenance Class C School, Norfolk, VA; Teletype Maintenance Class C School, Pearl Harbor, HI.

Length: 9-10 weeks (270-328 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To train personnel to install, maintain, and repair Mod 28 automatic send and receive teletypes and to implement a planned maintenance system.

Instruction: Lectures and practical exercises cover the installation, maintenance, and repair of Mod 28 automatic send and receive teletypes and in the implementation of maintenance data collection systems, including introductions to AN/UGC-6K, automatic teletype, keyboard, perforator, reperforator, and transmitter distributor; operation of electrical components; troubleshooting of the AN/UGC-6K; introduction to the AN/UGC-20 and to various pieces of teletype equipment; and introduction to low-level keying.

Credit Recommendation: In the vocational certificate category, 6 semester hours in teletypewriter maintenance (9/83); in the lower-division baccalaureate/associate degree category, 3 semester hours as an elective in electrical technology, mechanical technology, or electromechanical technology (9/83).

NV-1715-0663

Teletype Maintenance, Class C, Low Level
Keying Teletype Maintenance

Course Number: A-160-0053; A-160-0052.

Location: Service School Command, Norfolk, VA; Fleet Training Center, Pearl Harbor, HI; Service School Command, San Diego, CA.

Length: 3 weeks (105 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To train enlisted personnel to install low-level modification kits and to adjust, maintain, and repair the Mod 28 teletypewriter.

Instruction: Lectures and practical exercises cover the installation, adjustment, maintenance, and repair of Mod 28 teletypewriter equipment modified for low-level keying, including electrical orientation, semiconductor fundamentals, radio frequency and electromagnetic interference, purpose and construction of MK-1088/UG modification kit, modes of operation, circuit symbols, electrical service assemblies and options, test equipment, circuit card analysis, modification kit installation, adjustments, converter, repair, and troubleshooting.

Credit Recommendation: In the vocational certificate category, 3 semester hours in teletype maintenance (9/83); in the lower-division baccalaureate/associate degree category, 2 semester hours as an elective in mechanical, electrical, or electromechanical technology (9/83).

NV-1715-0666

TT-264/AG Teletypewriter Group
Intermediate Maintenance

Course Number: C-102-3550.

Location: Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train maintenance personnel to repair specific teletypewriters.

Instruction: The course includes instruction in the alignment, troubleshooting, and repair of the teletypewriter by using schematic circuits, block diagrams, and standard electronic maintenance equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical maintenance procedures (7/81).

NV-1715-0672

E-2A AN/APS-96 Search Radar Intermediate
Maintenance

Course Number: C-102-3471.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Miramar, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train maintenance personnel to maintain the search radar set at the intermediate and organizational levels.

Instruction: Lectures and practical exercises cover the intermediate maintenance of the AN/APS-96 search radar, including transmit operation, receive operation, miscellaneous equipment functional description, introduction to pulse compression techniques, functional theory, trigger timer and synchronizer theory, theory of operation of specific delay line, radio frequency oscillator, radar receiver, radar modulator, and trigger pulse amplifier, power supplies, and control circuits, system emergency mode, and test operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar circuits and systems and 1 in radar laboratory (5/85).

NV-1715-0695

P-3 AN/APS-80 Search Radar System Maintenance

Course Number: C-102-3536.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 3 weeks (96-136 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train experienced technicians to maintain the search radar at the module and component levels.

Instruction: Lectures and practical exercises cover maintenance and alignment procedures for the AN/APS-80 search radar system, including introduction to the P-3 search radar system, dual radar installation in the P-3; antenna azimuth and tilt systems, dual installation switching arrangement, P-3 radar system alignment, modulator power supply, electronic synchronizer, AC power distribution, and TR tube and associated circuitry. Course includes the radar magnetron and DC power distribution.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic radar systems and 1 in radar system laboratory (7/81).

NV-1715-0698

Aviation Support Equipment NC-10B/C Mobile Electric Power Plant Systems Intermediate Maintenance

(Aviation Support Equipment NC-10B Mobile Electric Power Plant Systems Intermediate Maintenance)

Course Number: C-602-3228.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train aviation support equipment technicians to perform intermediate maintenance on the systems of the NC-10B and the NC-10B/C electric power plant.

Instruction: Lectures and practical exercises cover the maintenance of the specific electric power plants, including mechanical systems, maintenance, electrical systems, component removal and replacement, and troubleshooting and adjustments.

Credit Recommendation: In the vocational certificate category, 1 semester hour in AC/DC generator operation and repair (3/82).

NV-1715-0700

Aviation Support Equipment NC-2A Mobile Electric Power Plant Intermediate Maintenance

Course Number: C-602-3226.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train aviation support equipment technicians to perform maintenance on the NC-2A mobile electric power plant.

Instruction: Lectures and practical exercises cover the maintenance of the specific mobile electric power plant, including introduction to the NC-2A; NC-2A familiarization, NC-2A electrical description and theory of operation, drive motor operation and regulation, line troubleshooting, bench testing, repairing, and adjusting.

Credit Recommendation: In the vocational certificate category, 1 semester hour in AC/DC generator operation and repair (7/92).

NV-1715-0710

AN/ARC-51, 51A, 51AX, 51B, RT-793/ASQ and RT-1010/ASQ-140 Communication Systems Intermediate Maintenance

(AN/ARC-51, 51A and 51AX Communication Systems Intermediate Maintenance)

(P-3 AN/ARC-51A Communication Systems Maintenance, No. 22)

Course Number: C-102-3014.

Location: Air Maintenance Training Detachment, Imperial Beach, CA; Air Maintenance Training Detachment, Key West, FL; Air Maintenance Training Detachment, Cherry Point, NC; Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, Cp. Pendleton, CA; Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA; Air Maintenance Training Detachment, Santa Ana, CA; Air Maintenance Training Detachment, New River, NC; Air Maintenance Training Detachment, Kingsville, TX; Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Patuxent River, MD.

Length: 2 weeks (80-96 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train enlisted personnel to maintain, operate, and troubleshoot communication systems.

Instruction: Lectures and practical exercises cover the maintenance, operation, and troubleshooting of the AN/ARC-51, 51A, and 51AX communication systems including block-diagram analysis of transceivers. Specific topics include frequency synthesis, AC/DC power supplies, RF and power amplifiers, transmitters, and related circuitry.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (7/81).

NV-1715-0726

U-1700 Maintenance

Course Number: A-150-0103.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train data systems technicians in the operation and maintenance of a UNIVAC 1701 keypunch unit.

Instruction: Lectures and practical exercises cover the theory of operation and the maintenance procedures for a UNIVAC card keypunch unit, including the mechanical systems, the keyboard, the core memory unit, the block diagrams, and the troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in computer I/O equipment operation and repair (11/81).

NV-1715-0747

SH-3A/D AN/AQS-13A Sonar Intermediate Maintenance

Course Number: C-130-3396.

Location: Air Maintenance Training Detachment, Imperial Beach, CA; Air Maintenance Training Detachment, Quonset Point, RI; Air Maintenance Training Detachment, Jacksonville, FL; Air Maintenance Training Detachment, North Island, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train fleet maintenance personnel in the maintenance of a sonar system.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain components of a specific sonar system at the board or component level and will conduct minimum performance testing and alignment. Course includes system timers, transmitter/receiver, power supply circuit, transducer circuit, and underwater voice communication circuit.

Credit Recommendation: In the vocational certificate category, 3 semester hours in marine electronics repair and maintenance and 1 in electronics laboratory (4/85).

NV-1715-0749

AN/SPS-29E Radar Set Maintenance (Electronics Technician, Class C1)

Course Number: A-104-0151.

Location: Service School Command, San Diego, CA.

Length: 9 weeks (272-360 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide the skills and knowledge necessary to maintain a radar set.

Instruction: Topics include operation and maintenance of the AN/SPS-29E radar set and the AN/SPA-62 receiver, AC and DC distribution, cooling and air pressurization function, monitoring function, trigger generating function, transmitter group, antenna function, normal realignment group, canceller, and integrator groups.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in circuit and pneumatic system troubleshooting (5/82).

NV-1715-0754

Electronics Technician, Class C7 (Electronics Technician, Class B)

Course Number: A-100-0017; A-100-0016.

Location: Electronics Technician, Class B School, Treasure Island, San Francisco, CA; Electronics Technician, Class B School, Great Lakes, IL; Service School Command, San Diego, CA.

Length: 28 weeks (1120 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide the basic theory necessary in the training of electronics technicians.

Instruction: Lectures and practical exercises cover basic mathematics, including simple right angle trigonometry, logarithms, complex numbers, and Boolean algebra. Technical topics include AC/DC circuit theory and theorems, transients, solid state devices, signal and power amplifiers, power supplies, communication circuits, transmission lines, antennas, microwave devices and radar systems, navigation systems, digital devices, computer fundamentals, soldering techniques, and training in supervision and management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical algebra, 6 in AC/DC circuit analysis, 6 in electronic devices and systems, 1 in operational amplifier theory, 3 in electronic communications, 3 in radar and microwave theory, 4 in digital and computer fundamentals, and 1 in soldering laboratory (5/82).

NV-1715-0770

ASROC Launching Group Mk 16
Maintenance, Class C1
(ASROC Launching Group Mk 16)

Course Number: A-121-0010.

Location: Service School Command, Great Lakes, IL.

Length: 13 weeks (520 hours).

Exhibit Dates: 1/90–6/93.

Objectives: To provide gunner's mates with training in the maintenance, adjustment, and operation of the Launching Group Mk 16.

Instruction: Lectures and practical exercises cover the ASROC weapon system, launching group Mk 16, administration and supply, stand Mk 107 and carriage Mk 7, relay transmitters, power train, power drive amplifier, elevation power drive, launcher and missile simulator and checkout, hydraulic and electronic systems, and hydraulic and pneumatic devices.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical maintenance (1/82).

NV-1715-0773

AN/ARC-52 Radio Set Intermediate
Maintenance

Course Number: C-102-3019.

Location: Air Maintenance Training Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To provide maintenance personnel with the technical knowledge necessary to maintain a specific military radio set.

Instruction: Lectures and practical exercises cover the operation of the AN/ARC-52 radio receiver and transmitter with instruction in diagnosis, troubleshooting, maintenance, and repair of specific subsections of the equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (3/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in aviation radio/transceiver repair or 1 in aviation radio communications repair (3/82).

NV-1715-0774

AN/AQA-7(V) 1, 2 and 3 Sonar Computer
Recorder Group and AN/ASA-76
Generator-Transmitter Group
Intermediate Maintenance

Course Number: C-102-3075.

Location: Air Maintenance Training Detachment, Moffett Field, CA; Air Maintenance Training Detachment, Jacksonville, FL.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train experienced personnel in the maintenance and repair procedures for a sonar computer-recorder and its specialized test equipment at the component level.

Instruction: Lectures and practical exercises cover the theory, operation, and maintenance of a sonar computer-recorder, including demultiplexer, frequency, multiplier storer, spectrum analyzer-quantizer, and digital memory units. Course includes fault localization, fault isolation, component replacement, disassembly, interchange, reassembly, alignment/adjustment, safety precautions, and checkout procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronics laboratory and 3 in communications electronics (7/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in digital/analog system operations (7/81).

NV-1715-0776

E-2B Electronic Systems Organizational
Maintenance

Course Number: C-102-3479.

Location: Air Maintenance Training Detachment, North Island, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–1/96.

Objectives: To provide maintenance technicians with overall knowledge of a specialized electronics system.

Instruction: Lectures and laboratory cover organizational maintenance of an integrated system incorporating communications, navigation, detection, data link, and computer and display equipment. The student will understand electronic and digital circuit operation and perform troubleshooting down to the functional unit level.

Credit Recommendation: In the vocational certificate category, 3 semester hours in integrated electronic/computer systems operation (1/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in digital circuits, 1 in communications/radar circuits, and 1 in electronic circuits (1/86).

NV-1715-0778

Basic Point Defense Surface Missile System

Course Number: A-121-0122.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 14 weeks (560 hours).

Exhibit Dates: 1/90–6/90.

Objectives: To train personnel in the operation, maintenance, troubleshooting, and repair of a missile fire control system.

Instruction: Lectures and practical exercises cover the functional understanding of a missile fire control and launcher system. Analysis of circuit diagrams with a general review of amplitude modulation and signal tracing to isolate system faults using test equipment and schematics.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electronic test and maintenance (11/81); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical test and maintenance (11/81).

NV-1715-0780

Electronic Warfare Electronic Support
Measures System Maintenance, Class
A
(Electronic Warfare Technician AN/WLR-1
Electronic Support Measures System
Maintenance)
(Electronic Warfare Technician, Class A (A-2), Electronic Support Measures System Maintenance)

Course Number: A-102-0221; A-102-0094.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7-12 weeks (280-480 hours).

Exhibit Dates: 1/90–12/97.

Objectives: To provide electronics technicians with instruction in the operation, maintenance, and repair of electronic countermeasures systems.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory and operation of the system; calibrate, align and make performance tests on the equipment; and troubleshoot and repair receivers, omnidirectional antenna, video system, mechanical components, power supplies, signal generators, interconnects, servos and resolvers, tuners, and other signal processing circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in UHF receiver systems and 3 in troubleshooting and maintenance (7/87).

NV-1715-0788

Torpedo Mk 37 Mods 2 and 3 Test Equipment
Intermediate Maintenance
(Torpedo Mk 37 Mods 0, 2, and 3 Test
Equipment Intermediate Maintenance)

Course Number: A-123-0134.

Location: Service School Command, Orlando, FL.

Length: 7 weeks (200-210 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train technicians in test procedures for torpedo test equipment.

Instruction: Lectures and practical exercises cover the use, maintenance, and troubleshooting of torpedo test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic troubleshooting (4/83).

NV-1715-0789

Torpedo Mk 37 Mods 2 and 3 Intermediate
Maintenance

BEST COPY AVAILABLE

(Torpedo Mk 37 Mods 0, 2, and 3 Intermediate Maintenance)

Course Number: A-123-0133.

Location: Service School Command, Orlando, FL.

Length: 14 weeks (424 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train personnel in the maintenance of torpedo control systems.

Instruction: Lectures and practical training cover the maintenance of electrical control systems for torpedoes including troubleshooting procedures and functions of basic control system components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in system troubleshooting or as a technical elective (4/83).

NV-1715-0790

AN/SPS-43A/37A Radar Set Maintenance
(Electronics Technician, Class C1)
(AN/SPA-37/37A Radar Sets, AN/SPA-63 Countermeasures Receiving Group, and AN/SPS-43/43A Radar Sets Differences)

Course Number: A-104-0149.

Location: Service School Command, San Diego, CA.

Length: 11 weeks (330-440 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train electronics technicians in radar and electronic countermeasures to operate, maintain, and calibrate specified radar sets and the AN/SPA-63 countermeasures receiver.

Instruction: Lectures and practical exercises on the operation, maintenance and calibration of the radar sets and the receiver. Course includes system parameters, power supplies and distribution, pulse generators and exciters, modulators and power amplifiers, power monitor and VSWR circuits, antenna and auto-tune system, receiver circuits, test equipment use, generators, frequency counters, and oscilloscopes and DVMs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems, 2 in radar systems laboratory, and 1 in electronic troubleshooting (5/82).

NV-1715-0794

SUBROC Missile Mk 28 Mod 1 Intermediate Maintenance

Course Number: A-121-0144.

Location: Service School Command, Orlando, FL.

Length: 7-12 weeks (326-420 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train personnel to test, assemble, disassemble, and perform intermediate maintenance on the SUBROC guided missile.

Instruction: Lectures and practical exercises cover identification and assembly of parts, including mechanical handling, installation of fittings, and test monitoring.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/83).

NV-1715-0795

SUBROC Missile Mk 28 Mod 1 Test Equipment Intermediate Maintenance
(SUBROC Missile Mk 28 Mod 0 Test Equipment Intermediate Maintenance)

Course Number: A-121-0145.

Location: Service School Command, Orlando, FL.

Length: 20 weeks (632 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train personnel to use the circuit schematics of the SUBROC missile and to operate test equipment for trouble analysis.

Instruction: Lectures and practical exercises cover checkout and assembly of the SUBROC missile, including circuitry and circuit tracing; operation of electronic test equipment, including differential voltmeter, oscilloscope, and counter; test equipment calibration; trouble isolation; and operational checks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic test equipment and 3 in electronic troubleshooting (4/83).

NV-1715-0797

RT-541/ASQ Receiver/Transmitter and KY-309/ASQ Pulse Decoder and RT-547/ASQ-19 Receiver/Transmitter and KY-312/ASQ-19 Pulse Decoder Intermediate Maintenance

Course Number: C-102-3094.

Location: Air Maintenance Training Group, North Island, CA; Air Maintenance Training Group, Cherry Point, NC; Air Maintenance Training Group, El Toro, CA; Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To provide maintenance personnel with knowledge of theory of operation, testing, and system troubleshooting procedures for a military communications system.

Instruction: Lectures and practical exercises include maintenance procedures, pulse decoder circuits, block diagrams, and an introduction to receiver/transmitter theory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hour in electronics laboratory (5/85).

NV-1715-0809

AN/SPS-40B Radar Set Maintenance
(Electronics Technician, Class C1)
(AN/SPS-40B/C/D Radar Set Maintenance)

Course Number: A-104-0133.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–1/92.

Objectives: After 1/92 see NV-1715-1597. To provide the skills and knowledge necessary to operate and maintain a radar set.

Instruction: Course includes operation and maintenance of the AN/SPS-40B/C/D radar set, power control and distribution, air system, cooling system, antenna system, timing and trigger generation, frequency generation, low- and high-power transmitting group, receiver system, and test functions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in circuit and system troubleshooting (5/82).

NV-1715-0811

AN/APX-72 Series IFF Transponder System Maintenance
(AN/APX-72 Maintenance, Class C-1)

Course Number: A-102-0063.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 3 weeks (90-120 hours).

Exhibit Dates: 1/90–5/92.

Learning Outcomes: Upon completion of the course, the student will be able to operate, diagnose, troubleshoot, and repair radar communications equipment; describe system operation; and conduct preventive maintenance on these transponder systems.

Instruction: Instruction includes lecture and laboratory. Topics include power supplies, filters, digital logic, power amplifiers, modulators, demodulators, and basic transistor circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/95).

NV-1715-0812

AIMS Mk 12 IFF System Maintenance
(Electronics Technician, Class C1)

Course Number: A-102-0062.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–11/91.

Objectives: After 11/91 see NV-1715-1588. To provide skills and knowledge necessary to perform preventive and corrective maintenance on the Mk 12 aircraft interrogation system.

Instruction: This course covers operation and maintenance of radar test sets, transponder systems, interrogator systems, interference blankers, and decoders. Course also includes power supplies, digital logic, signal conditioning, transmitters and receivers, displays and circuit analysis, and troubleshooting to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems, 1 in electronics systems laboratory, and 1 in electronic troubleshooting (5/82).

NV-1715-0815

Miniature Electronic Repair Program, Class F-1
(Miniature/Microminiature Electronic Repair (2M))

Course Number: A-100-0034.

Location: Fleet Mine Warfare Training Center, Charleston, SC; Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, Pearl Harbor, HI; Fleet Training Center, Mayport, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To provide personnel with the latest methods in disassembly, repair, and soldering of miniature printed circuits, components, terminals, circuit board laminates, and conductors.

Instruction: Practical training is offered in printed circuit board repair, terminal and connector pin soldering, microelectronic circuit soldering, microminiature circuit board repair, parts installation, and microelectronic connector pin soldering techniques. Course also includes replacement of components on microminiature single- and double-sided printed circuit boards and preventive maintenance procedures for the repair station and associated components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic maintenance and troubleshooting (5/82).

NV-1715-0829

Cryptologic Technician M, Class A3
(Cryptologic Technician Maintenance)

Course Number: A-102-0109.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 16 weeks (621 hours).

Exhibit Dates: 1/90–11/92.

Objectives: After 11/92 see NV-1715-1659. To teach basic electronic maintenance of equipment used in conjunction with cryptologic missions.

Instruction: This course provides a strong technical foundation and hands-on exercises on testing, troubleshooting, and repairing digitally tuned receivers, magnetic recorders, 8080 and 6800 microprocessor systems, and basic teletype equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital computer technology, 3 in analog and digital test equipment, and 3 in digital HF receiver systems (1/84).

NV-1715-0831

Aviation Squadron Electronic Warfare (EW) Officer, Class A2

Course Number: C-2D-3814.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (148-160 hours).

Exhibit Dates: 1/90–12/97.

Objectives: To provide formal training for the aviation officer assigned to an electronic warfare officer billet in a tactical air/antisubmarine warfare squadron.

Instruction: Topics include technology, organization, equipment, publications, weapons systems, training, and operations. Subjects include business writing, equipment operation, training development, and operational planning.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/87).

NV-1715-0836

Cryptologic Technician R, Class A3
(Cryptologic Technician Collection Branch)

Course Number: A-231-0044.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: Self-paced, 22 weeks (880 hours).

Exhibit Dates: 1/90–12/97.

Objectives: To provide basic instruction and practical application in the intercept of Morse communications.

Instruction: Course includes operation of radio receiving equipment and typewriters, basic safeguards of security, communications procedures and systems, and theory and operation of communications equipment. The course provides basic instruction and practical application in intercept of Morse communications and develops ability to copy Morse code at a speed of 18 gpm and to touch type at 25 wpm.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics or general technical subjects (7/87).

NV-1715-0847

Tartar Missile Fire Control Systems (MFCS) Mk 74 Mods 4/5/8

Course Number: A-121-0239.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 20 weeks (800 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide senior petty officers with the knowledge and techniques to coordinate and supervise planned and corrective maintenance needed on a specialized missile weapons system.

Instruction: Lectures and practical exercises cover the operational differences of the Tartar missile weapons system radar from other fire control radars and the operation of the fire control computer, including number system conversions, functional operations, and the maintenance requirements of the missile system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in systems maintenance (11/81); in the lower-division baccalaureate/associate degree category, 1 semester hour in basic digital and computer fundamentals (11/81).

NV-1715-0870

DD-963 Spruance Class Destroyer Radio Communications Systems Maintenance
(Radio Communications System Maintenance for DD-963 Class Ships, Class C1)

Course Number: A-101-0096.

Location: Service School Command, San Diego, CA.

Length: 8 weeks (240-320 hours).

Exhibit Dates: 1/90–2/91.

Objectives: After 2/91 see NV-1715-1599. To train electronic technicians to operate, align, and repair a radio communications system for naval vessels.

Instruction: Lectures and laboratories cover circuit analysis and block diagrams of receivers and transmitters, logic systems, synthesizers, RF and control sections, power supplies and antennas, and use of test equipment to troubleshoot and repair the specific equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in circuit and system troubleshooting and 2 in communications systems (5/82).

NV-1715-0872

AN/USQ-64(V) Common User Digital Information Exchange System (CUDIXS) Maintenance
(Common User Digital Information Exchange System (CUDIXS) Maintenance)

Course Number: A-101-0082.

Location: Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 23 weeks (920 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide the skills and knowledge to operate and maintain a data processing communications system.

Instruction: Lectures and practical exercises cover the HP2100 minicomputer system with cassette and magnetic tape loader subsystems. Course also includes subsystems for interfacing, display, and control and operation and maintenance of line printers, data recorder/reproducers, magnetic tape, and disk subsystems and terminals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in minicomputer systems, 1 in digital communications, 3 in computer peripheral maintenance, and 1 in electronic troubleshooting (5/82); in the upper-division baccalaureate category, 1 semester hour in minicomputer systems for engineering majors (5/82).

NV-1715-0875

AN/SYQ-7(V)3 Naval Modular Automated Communications Systems NAVMACS V3 Maintenance
(Naval Modular Automated Communications System (NAVMACS) A+ Maintenance)

Course Number: A-101-0089; A-101-0214.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 13-14 weeks (520-560 hours).

Exhibit Dates: 1/90–5/92.

Objectives: After 4/92 see NV-1715-1775. To provide the skills and knowledge necessary to operate and maintain a modular automated communications system.

Instruction: Course content includes an introduction to digital computers and the operation, maintenance, and troubleshooting of computer peripherals, including recorders/reproducers, line printers, data terminals, and paper tape punch readers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer architecture and machine language, 2 in computer peripherals laboratory, and 1 in electronic troubleshooting (5/82).

NV-1715-0876

AN/WSC-3 Communications Set, OE-82B/WSC-1 Antenna Group and AN/SRA-33 Antenna Coupler Group
(AN/WSC-3 Stand-Alone Maintenance)
(AN/WSC-3 Satellite Communications Set and OE-82B/WSC-1(V) Antenna Group)

Course Number: A-101-0138.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/92.

Objectives: After 5/94 see NV-1715-1776. To provide the skills and knowledge required to operate and maintain a satellite communications set and related antenna equipment.

Instruction: Theoretical and practical instruction cover equipment operation, troubleshooting, and preventive maintenance of a satellite communications set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic troubleshooting (5/82).

NV-1715-0898

Controllers and Circuit Breakers Combined Maintenance
(Circuit Breakers and Controllers)
(Controllers Circuit Breakers, Class F1)

Course Number: L-662-0013; A-662-0038.

Location: Submarine Base, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2 weeks (60-62 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To provide necessary principles of circuit breakers and controllers to enable effective maintenance and repair of equipment used on submarines.

Instruction: Lectures and laboratory instruction provide training in the operation, maintenance, and fault detection for high voltage circuit breakers, motor controllers, and switch gear. Upon successful completion of the course, the student will be able to perform normal switching operations to isolate a circuit under fault conditions, connect an across-the-line starter for starting large motors, and remove and repair circuit breakers and switch gear.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electrical technology laboratory (11/85).

NV-1715-0901

Generator Regulators, Class F1

Course Number: L-662-0023.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 1-2 weeks (35-60 hours).

Exhibit Dates: 1/90–11/95.

Objectives: This is a basic course in the operation, maintenance, and troubleshooting of static regulators.

Instruction: Lectures and laboratory exercises cover the theory of static exciters and magnetic amplifiers. The course is designed to refresh learning of experienced enlisted personnel in the maintenance and repair of voltage and speed regulators at the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical engineering technology (power option) laboratory (11/85).

NV-1715-0903

Radio Direction Finder AN/BRD-6 Combined Maintenance
(Radio Direction Finder AN/BRD-6 Operational Maintenance)
(AN/BRD-6B Combined Maintenance, Class F1)

Course Number: F-101-0023; L-102-0020; A-102-0159.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To teach the theory of operation and maintenance of special military equipment.

Instruction: Course offers theory of operation of special military equipment, including antenna loops, preamps, flood detectors, RF units, IF units, power supplies, and synchro units. Students learn to perform adjustments, fault isolation, signal tracing, and repair to the component level.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics (11/85).

NV-1715-0912

Sonar Receiving Set AN/BQR-15 Combined Maintenance

Course Number: F-130-0034; A-130-0125; A-130-0238.

Location: Fleet Ballistic Missile Submarine Training Center, Charleston, SC; Submarine School, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2 weeks (67-80 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To provide theory of operation and maintenance on the specific military equipment.

Instruction: Course includes the study of the theory of operation of specialized military equipment. Student learns to troubleshoot, calibrate, adjust, maintain, and repair the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic electronic maintenance and repair laboratory (3/81).

NV-1715-0913

Navigation Satellite Receiver AN/WRN-5 Combined Maintenance
(Loran AN/WRN-5 Combined Maintenance)
(Satellite Navigation System AN/WRN-5)
(Satellite Receiver AN/WRN-5 Combined Maintenance, Class C-1)

Course Number: A-193-0054.

Location: Submarine School, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 3 weeks (90-117 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide the necessary skills and theory to operate, repair, and maintain a satellite receiver/computer.

Instruction: Course discusses arithmetic logic, input/output devices, analog-to-digital conversion, synchro-to-digital conversion, and phase modulation detection. More than 50 percent of the course is devoted to operational description of the equipment. Course includes discussion at the functional level of a satellite navigation receiver system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/89).

NV-1715-0918

6L16 Oxygen Generator Electrical Technician
(Oxygen Generator Technician 6L16)

Course Number: A-623-0039.

Location: Fleet Ballistic Missile Submarine Training Center, Charleston, SC; Submarine Base, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Center, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, San Diego, CA; Submarine Training Facility, Norfolk, VA.

Length: 3 weeks (90-120 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide training in the electrical maintenance of an oxygen generator.

Instruction: Approximately one-third of the course provides instruction in power supplies, contact annunciators, magnetic amplifier annunciators, readout circuits, and pressure controller systems. The balance of the course is devoted to troubleshooting and calibration.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/89).

NV-1715-0934

SSN/SSBN Electronic Hovering and Depth Control Combined Maintenance
(Electronic Hovering and Depth Control Combined Maintenance)
(Electronic Hovering and Missile Compensation)

Course Number: A-623-0041.

Location: Submarine School, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI; Fleet Ballistic Missile Submarine Training Center, Charleston, SC.

Length: 2 weeks (63-80 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train technicians to operate, align, repair, and maintain equipment to stabilize a submarine during missile launch.

Instruction: Course includes operating stabilization equipment and performing preventive maintenance, alignment, and repair on the electronic aspects of the equipment. Troubleshooting of the system covers controls, indicators, transducers, and operational amplifiers.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (6/81).

NV-1715-0935

AN/ALR-45 Countermeasures Receiving Set Intermediate Maintenance

Course Number: C-102-3093.

Location: Air Maintenance Training Detachment, Cherry Point, NC; Air Maintenance Training Detachment, Cecil Field, FL; Air Maintenance Training Detachment, Lemoore, CA; Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Miramar, San Diego, CA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 4-5 weeks (152 hours).

Exhibit Dates: 1/90–7/90.

Objectives: To provide experienced personnel with instruction in the maintenance of an electronic countermeasures receiving set by using appropriate circuit analysis and troubleshooting techniques and applicable test equipment.

Instruction: Lectures and practical laboratory work cover maintenance and troubleshooting of the electronic countermeasures test set, circuit analysis techniques, video circuit analysis, digital filtering analysis, and associated test equipment. There is also a review of transistor fundamentals and basic digital logic circuits.

Credit Recommendation: In the vocational certificate category, 3 semester hours in digital fundamentals (7/80); in the lower-division baccalaureate/associate degree category, 1 semester hour in digital fundamentals laboratory (7/80).

NV-1715-0936

AN/ALM-163 Digital Module Test Console Intermediate Maintenance

Course Number: C-102-3965.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To provide fleet aviation electronic technicians training in the maintenance and repair of a digital module test console.

Instruction: Lectures and laboratory instruction cover the functions and operation of a digital module test console, including the power supply, power distribution control systems, logic board operation, and the mechanical and electrical interface for a card reader. The student uses specialized test equipment to maintain, troubleshoot, and repair console components.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (7/80).

NV-1715-0937

A-6E (M1-M120 and 158041-1595079) and KA-6D Aircraft Communication, Navigation, Identification (CNI) and Intercommunication and Related Systems Organizational Maintenance

Course Number: C-102-3969.

Location: Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train experienced maintenance personnel in the organizational maintenance of a sophisticated communications, navigation, identification, and intercommunication system and its associated equipment as used on a naval aircraft.

Instruction: Lectures and practical exercises cover the operation, maintenance, testing, troubleshooting, and repair of communications, radar altimeter, navigation systems, and specialized test equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in avionic maintenance technology (7/80).

NV-1715-0942

A-6E TRAM Weapons System Technician Organizational Maintenance

Course Number: C-102-3971.

Location: Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–7/90.

Objectives: To provide trained personnel with instruction on organizational maintenance of ballistics computer, search radar, inertial navigation, and TRAM armament system equipment.

Instruction: Lectures and laboratory instruction at the basic block-diagram level cover the operation, troubleshooting, repair, and alignment of specialized electronic equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (7/80).

NV-1715-0943

AN/ALM-117 Digital Test Station Operator

Course Number: C-102-3973.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train experienced maintenance personnel in the operation of a specialized digital test station.

Instruction: Lectures and practical exercises cover the operation of a digital test station, including magnetic tape drives, video terminal, interface adapters, and special alignment procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in computer operations and 1 in maintenance and repair laboratory (7/80).

NV-1715-0948

AN/ASM-459 Mini-SACE Flight System Test Console Intermediate Maintenance

Course Number: C-104-3769.

Location: Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 6 weeks (226 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train experienced maintenance personnel to maintain and troubleshoot a semiautomatic checkout equipment system test console.

Instruction: Lectures and practical exercises cover the operation, programming, and program interpretation of the mini-SACE flight system test console, including block-diagram analysis, parts location, and self-testing procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic maintenance technology (7/80).

NV-1715-0951

AN/USH-17(V-3)(V-7) Mission Recorder Set and AN/UPQ-5 Display Set with Ground Support Equipment Intermediate Maintenance

Course Number: C-102-3962.

Location: Air Maintenance Training Detachment, Oceana, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–1/92.

Objectives: The course provides experienced personnel with instruction in the maintenance of a video recorder applied to radar systems.

Instruction: Lectures and laboratory instruction cover functional analysis at the block-diagram level, theory of operation, and maintenance procedures including the alignment and troubleshooting of a video recorder system.

Credit Recommendation: In the vocational certificate category, 1 semester hour in audiovisual electronics (7/80).

NV-1715-0954

CU-1768A Computer Data Coupler and CP-926A Digital Data Computer Intermediate Maintenance

Course Number: C-102-3975.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train experienced personnel in the maintenance and repair of a digital data computer and computer interface adapter.

Instruction: Lectures and laboratory instruction cover basic computer fundamentals, such as input/output operation, interrupt registers and controls, central processor unit, store operations, memory addressing, timing sequences, and other basic computer operations including maintenance and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems (7/80).

NV-1715-0955

EA-6B ICAP Electronic Countermeasures Analyst Organizational Maintenance

Course Number: C-102-3968.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To provide personnel with instruction in operation and maintenance of a defensive electronic countermeasure and tactical jamming system.

Instruction: Lectures and laboratory instruction at the systems level cover surveillance receivers, encoders, various display procedures, digital recording systems, receivers, and practical troubleshooting.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic systems maintenance laboratory (7/80).

NV-1715-0956

Subassembly Test Console (SATC) Intermediate Maintenance (AN/ALM-138, AN/ALM-143, AN/ALM-155 Subassembly Test Console T, S, and C Intermediate Maintenance)

Course Number: C-102-3956.

Location: Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA.

Length: 8-10 weeks (320-400 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To provide electronic maintenance personnel with instruction in the maintenance and operation of a contained test console.

Instruction: Lectures and laboratory instruction cover the theory and operation of the test console and how to interpret its results. Instruction includes signal flow, correct voltage, and logic levels as well as the function of each component and the effect its failure has on the circuit. The function and operating techniques of oscilloscopes, spectrum analyzers, pulse and sweep generators, counters, and other test equipment are presented. The course presumes prior knowledge of circuit analysis and transistor and logic theory.

Credit Recommendation: In the vocational certificate category, 3 semester hours in radio frequency circuits (7/80); in the lower-division baccalaureate/associate degree category, 2 semester hours in radio frequency circuits laboratory and circuit troubleshooting techniques (7/80); in the upper-division baccalaureate category, credit in radio frequency circuit test laboratory on the basis of institutional evaluation (7/80).

NV-1715-0964

Marine Corps Surveillance Radar, Class C1

Course Number: C-103-2040.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–2/91.

Objectives: To provide military personnel with the knowledge and skills to inspect, test, and repair surveillance radar.

Instruction: Lectures and practical exercises cover transmitter and receiver alignment and troubleshooting on the AN/TPS-63 radar system, including the synchronizer and frequency generator, transmitter systems and antenna, cooling systems, and RF/IF receivers.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic and digital system troubleshooting and repair (2/81).

NV-1715-0979

Navigation Technician Type I SSN-637

Course Number: A-193-0022.

Location: Submarine School, New London, Groton, CT.

Length: 24 weeks (960 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To provide the skills necessary to operate and maintain the navigation system of an SSN-637 class submarine.

Instruction: This pipeline course is composed AN/WRN-5 Combined Maintenance (A-193-0054), (NV-1715-0913) and Ship's Inertial Navigation System Mk 3 Mod 4 Combined Maintenance (A-193-0356), (NV-1402-0141).

Credit Recommendation: Please refer to the individual exhibits noted above for credit recommendation (3/81).

NV-1715-0984

Receiver Combined Maintenance

Course Number: A-101-0135.

Location: Submarine School, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2-3 weeks (80-81 hours).

Exhibit Dates: 1/90–9/93.

Learning Outcomes: To provide knowledge and skills necessary to operate and maintain a low frequency submarine radio receiver.

Instruction: Lectures and laboratory exercises cover the operation and functional block-diagram analysis of a low frequency radio to the subassembly level. Also included is maintenance and corrective maintenance procedures to isolate faults down to the module level.

Credit Recommendation: In the vocational certificate category, 1 semester hour in communications receivers and maintenance laboratory (10/89).

NV-1715-0986

Subsystem Interface Fire Control System (FCS) Mk 88 Mod 1

Course Number: A-121-0286.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 2 weeks (70 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To provide training in the functional theory of the operation and maintenance of a missile control system.

Instruction: Lectures and laboratory exercises cover the functional operation of missile control subsystems, including power supplies, analog and digital converters, display systems, and built-in test equipment to the block diagram level. Maintenance procedures, fault isolation, and diagnostic techniques are also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronics maintenance and repair laboratory (3/81).

NV-1715-0987

Sonar Sounding Set AN/BQN-3 Maintenance (AN/BQN-3 Sonar Sounding Set Advanced Training)

Course Number: A-193-0254.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Submarine Training Center, Charleston, SC; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2 weeks (60-71 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train technicians to operate, maintain, and calibrate a particular sonar system.

Instruction: Classroom and laboratory instruction cover the operation and maintenance of the BQN-3 sonar sounding set. Coverage includes system timing, transmitter, transducer, receiver, and auxiliary units of this vacuum tube system and fault isolation and repair procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronics maintenance and repair laboratory (vacuum tubes) (10/89).

NV-1715-0988

Periscope Type 15 Combined Maintenance (Periscope Set Type 15 Electronics Combined Maintenance)

Course Number: A-233-0048.

Location: Submarine School, New London, Groton, CT; Submarine Training Facility, San Diego, CA; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2 weeks (50-76 hours).

Exhibit Dates: 1/90–10/91.

Objectives: To train technical personnel in the operation and maintenance of a periscope.

Instruction: Lectures and laboratory practice cover the operation and maintenance of periscope electromechanical systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/85).

NV-1715-0989

AN/WLR-8(V)2 Basic Operation (Electronic Surveillance Maintenance (ESM) AN/WLR-8(V)2 Basic Operator)

Course Number: A-233-0027A; A-233-0027.

Location: Submarine School, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI; Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (70-80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand the operation of electronic warfare support equipment.

Instruction: Classroom instruction and laboratory exercises cover the operation of specialized military equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (4/96).

NV-1715-0990

Sonar Receiving Set AN/BQR-19 Combined Maintenance

Course Number: A-130-0211.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Fleet Ballistic Missile Training Center, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train sonar technicians in the basic operation and maintenance of a sonar receiving set.

Instruction: Lectures and practical exercises cover the theory, operation, and maintenance at board/module level of the sonar receiving system and major subsystems, including receiver, beam-forming array, and control and logic functions. A review of basic digital logic functions such as adders and counters is also included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic troubleshooting and maintenance laboratory (12/89).

NV-1715-0991

Enlisted Sonar Principles

Course Number: F-130-0199; A-130-0251.

Location: Submarine School, New London, Groton, CT; Submarine Training Facility, Norfolk, VA; Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Facility, Charleston, SC; Submarine Training Facility, San Diego, CA.

Length: 2 weeks (72-80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide sonar operators with further knowledge of mathematical, acoustic, and sonar principles needed to qualify as sonar supervisors.

Instruction: Lectures and problem solving exercises are presented in mathematics (algebra, trigonometry, exponents/logarithms/decibels); underwater acoustics; and sonar system principles, including transducers, arrays, signal processors, performance predictions, and tactical maneuvering problems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in sonar system principles (10/91).

NV-1715-0992

Sonar Receiving Set AN/BQR-21(V)
Combined Maintenance

Course Number: A-130-0184.

Location: Fleet Ballistic Missile Training Center, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train personnel in the operation and maintenance of specific equipment and its associated digital data processor and display unit.

Instruction: Lectures and laboratory practice cover the operation of sonar amplifiers, data processors, and digital display consoles and indicators. Preventive and corrective maintenance, alignment, and adjustment techniques are also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic maintenance laboratory and 1 in digital system maintenance laboratory (3/81).

NV-1715-0993

Mk 117 All Mods Combined Maintenance

Course Number: A-130-0191.

Location: Submarine School, New London, Groton, CT.

Length: 14-15 weeks (600 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train personnel to operate and maintain a computer-controlled missile firing system.

Instruction: Lectures and laboratory exercises cover all operating modes of a computer-controlled missile firing system, including command logic, timing diagrams, and circuit diagnostics for major subsystems, and including the control console, interface multiplexers, and the program controller. Digital, analog, and synchro converters are studied to enable the student to perform maintenance, fault isolation, and repair to the module level.

Credit Recommendation: In the vocational certificate category, 5 semester hours in computer maintenance and repair (3/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to computer principles and operation and 1 in digital troubleshooting (3/81).

NV-1715-0994

Dual Miniature Inertial Navigation System
(DMINS) AN/WSN-1(V)2 Combined
Maintenance
(AN/WSN-1(V)2 Combined Maintenance)

Course Number: A-102-0253.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 7-10 weeks (277-400 hours).

Exhibit Dates: 1/90–Present.

Objectives: To enable technicians to operate and maintain an inertial navigation system.

Instruction: Lectures and laboratory exercises cover the operation of a navigation computer system, including principles of inertial navigation, integrated circuits, and operation and maintenance of the dual miniature inertial navigation system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer operator (10/89); in the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical systems technology with laboratory (10/89).

NV-1715-0996

Multiplexed Equipment Fire Control System
(FCS) Mk 88 Mod 1

Course Number: A-121-0294.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 2 weeks (52 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To provide the knowledge and skills necessary to maintain a multiplexer and interfacing servo system.

Instruction: Lectures and laboratory exercises cover the operation of a multiplexer, including control logic, signal flow, input and output signal format, and maintenance and repair procedures. The operation of a servo system as it relates to the multiplexer is also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical laboratory (3/81).

NV-1715-0997

Platform Positioning Subsystem Fire Control
System (FCS) Mk 88 Mod 1

Course Number: A-121-0287.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 3 weeks (105 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train personnel in the theory of operation, testing, and maintenance of a servo positioning subsystem.

Instruction: Lectures and laboratory instruction cover accelerometers, integrating gyros, control logic, printers, A/O converters, and maintenance procedures of an inertial servo positioning subsystem.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical maintenance and repair laboratory (3/81).

NV-1715-0998

Missile Test and Readiness Equipment
(MTRE) Mk 7 Mod 2 Advanced
Maintenance (Theory)

Course Number: A-121-0256.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To provide knowledge needed to repair missile test equipment.

Instruction: Lectures and laboratory exercises cover the functional operation to the block-diagram logic level of specialized missile equipment. Topics include power supplies, display and panel controls, system verification tests, paper tape input, and printer operation and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital equipment theory (3/81).

NV-1715-1000

Magnetic Tape Unit Advanced Training

Course Number: A-193-0251.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 2 weeks (76 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train technical personnel in the theory and maintenance of a digital computer magnetic tape drive.

Instruction: Classroom and laboratory instruction cover magnetic tape transports, read/write amplifiers, signal formats, computer interface control logic, EOT and EOB tape marks, parity, motion control registers, and recording modes. Corrective maintenance procedures are covered in a laboratory format.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in digital computer peripherals (3/81).

NV-1715-1002

Ship's Inertial Navigation System (SINS) Mk
2 Mod 6 Theory and Maintenance II

Course Number: A-193-0297.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train technical personnel in the maintenance of a specific navigation system.

Instruction: Classroom and laboratory instruction cover temperature monitoring and control circuits, fault indicators, A/D and D/A conversions, gyro circuitry, and data transmission circuits as they apply to navigation systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic maintenance and repair laboratory (3/81).

NV-1715-1003

AN/BQN-17 Combined Maintenance
(Sonar Sounding Set AN/BQN-17 Combined
Maintenance)

Course Number: A-130-0169.

Location: Fleet Training Center, Pacific, San Diego, CA; Submarine School, New London, Groton, CT.

Length: 2-3 weeks (47-120 hours).

Exhibit Dates: 1/90–8/94.

Objectives: To train sonar technicians in the basic operation and maintenance of a sonar sounding set.

Instruction: Lectures, demonstrations, and laboratory exercises cover the theory, operation, and maintenance at board/module level of the sonar system and major subsystems, including transmitter, receiver, signal processors, and auxiliary units. Also included is a review of basic digital logic functions such as counters, multiplexers, and PROMS.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1006

Fire Control System (FCS) Mk 113 All Models Common Equipment Combined Maintenance

Course Number: A-130-0146.

Location: Submarine Base, New London, Groton, CT.

Length: 15-18 weeks (600-720 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train personnel to maintain and repair a specific fire control system for torpedoes.

Instruction: Lectures and practical exercises cover the operation and maintenance procedures of the system. Circuitry is studied in detail with emphasis on fault isolation and repair. The system contains analog, digital, and electromechanical circuitry.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1007

Fire Control System (FCS) Mk 113 Mods 6/8 Mk 130 Digital Computer Maintenance

Course Number: A-130-0148.

Location: Submarine Base, New London, Groton, CT.

Length: 12 weeks (440 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train qualified technicians in the theory, operation, and maintenance of a small digital computer-based system.

Instruction: Classroom, laboratory instruction, and practical exercises cover computer architecture from the register down to the component level and analysis of the computer circuits with emphasis on maintenance and fault isolation.

Credit Recommendation: In the vocational certificate category, 6 semester hours in small computer maintenance (6/81); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital computer circuits (6/81).

NV-1715-1008

Fire Control System (FCS) Mk 113 Mod 9 Mk 78 Analyzer Maintenance

Course Number: A-130-0149.

Location: Submarine Base, New London, Groton, CT.

Length: 9 weeks (320 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train technical personnel in the operational maintenance and troubleshooting of the Mk 113 fire control system using standard test equipment.

Instruction: Classroom and laboratory instruction cover the troubleshooting of a specific fire control system. Topics include digital and analog interfaces, digital-to-synchro converters, synchro-to-digital converters, and functional organization of memory and associated support circuits.

Credit Recommendation: In the vocational certificate category, 3 semester hours in digital/analog equipment maintenance (6/81).

NV-1715-1009

Telephone Dial-X System Combined Maintenance

Course Number: A-623-0058.

Location: Submarine School, New London, Groton, CT; Submarine Training Center, Pearl Harbor, HI; Fleet Ballistic Missile Submarine Training Center, Charleston, SC.

Length: 2-3 weeks (56-80 hours).

Exhibit Dates: 1/90–8/91.

Objectives: To train personnel in the preventive and corrective maintenance of a dial telephone system.

Instruction: Lectures and practical exercises cover the fault isolation, preventive maintenance, troubleshooting, and corrective maintenance of a dial telephone system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in dial telephone system maintenance and repair (10/89).

NV-1715-1010

Electronics Technician Maintenance

Course Number: F-191-0010; L-191-0010.

Location: Naval Reactor Facility, Ballston Spa, NY; Naval Reactor Facility, Idaho Falls, ID; Trident Training Facility, Bangor, Bremerton, WA; Fleet Ballistic Missile Submarine Training Facility, Charleston, SC; Submarine Base, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 5-6 weeks (200-240 hours).

Exhibit Dates: 1/90–10/94.

Objectives: To train personnel in soldering, PC board repair, connector make-up, and troubleshooting techniques.

Instruction: Lectures and practical exercises cover soldering and desoldering techniques, PC card repair, make-up and installation of electrical connectors, cable lacing and assembly, crimped connectors and clamps. Also covered are the use of test equipment, dual trace scopes, time domain reflectometers, meggers and resistance bridges, capacitance, inductance bridges, and general troubleshooting techniques.

Credit Recommendation: In the vocational certificate category, 4 semester hours PC board soldering and repair and 4 in electronic equipment troubleshooting techniques (8/84); in the lower-division baccalaureate/associate degree category, 1 semester hour in electronic test equipment and 1 in electrical maintenance laboratory (8/84).

NV-1715-1011

Encapsulated Harpoon Command and Launch Subsystem Combined Maintenance

Course Number: A-130-0197.

Location: Submarine Base, New London, Groton, CT.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train personnel in the operation and maintenance of the control and launch subsystem of a short-range missile system.

Instruction: Lectures and practical exercises cover the general physical and operational modes of a weapon control system, including the functional operation of each subsystem, interface, and preventive maintenance procedures. The major emphasis of the course is on recognizing and interpreting malfunctions using prescribed procedures to isolate and repair faults in the system. A knowledge of basic digital logic gates and flip-flops is required.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic laboratory troubleshooting (6/81).

NV-1715-1012

Dewey Underwater Log Combined Maintenance

(Dewey U/W Log Combined Maintenance)

Course Number: A-623-0062.

Location: Submarine Base, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train students to operate and maintain an electromagnetic underwater speed sensor.

Instruction: Classroom and laboratory instruction cover the operation of Dewey underwater speed sensor equipment, including alignment, adjustment, calibration, fault isolation, and repair.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (6/81).

NV-1715-1013

Mk 113 Mod 10 Digital Display Subsystem

Course Number: A-130-0150.

Location: Submarine Base, New London, Groton, CT.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–3/91.

Objectives: To train personnel to properly maintain a computer-controlled missile firing system.

Instruction: Lectures and practical exercises cover the functional description and maintenance and fault isolation procedures for a missile firing system. The control console, interface connections, display units, control computer, and power supplies are examined.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital equipment maintenance and repair laboratory (3/81).

NV-1715-1014

AN/ARN-52(V), AN/ARN-105 and AN/ARN-86 TACAN Navigation Sets Intermediate Maintenance

Course Number: *Version 1:* C-102-3034. *Version 2:* C-102-3034.

Location: *Version 1:* Air Station, New River, NC; Air Station, Tustin, CA; Air Station, Cherry Point, NC; Air Station, Cecil Field, FL; Air Station, Lemoore, CA; Air Station, Miramar, San Diego, CA; Air Station, Moffett Field, CA; Air Station, Jacksonville, FL; Air Station, Chase Field, TX; Air Station, Oceana, Virginia Beach, VA. *Version 2:* Air Station, Beaufort, SC; Air Station, New River, NC; Air Station, Tustin, CA; Air Station, Cherry Point, NC; Air Station, Cecil Field, FL; Air Station, Lemoore, CA; Air Station, Miramar, San Diego, CA; Air Station, Moffett Field, CA; Air Station, Jacksonville, FL; Air Station, Chase Field, TX; Air Station, Oceana, Virginia Beach, VA.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 4 weeks (160 hours).

Exhibit Dates: *Version 1:* 8/93–Present. *Version 2:* 1/90–7/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, troubleshoot, and maintain three specific TACAN navigation sets to the subassembly level. *Version 2:* Upon completion of the course, the student will be able to operate, troubleshoot, and maintain three specific TACAN navigation sets to the subassembly level.

Instruction: *Version 1:* Lectures and laboratory exercises cover the operation, repair, and troubleshooting of TACAN sets, including a review of vacuum tubes, transistors, and theoretical troubleshooting, video decoding, channel servo, air-to-air suppression, and antenna select circuits as they relate to the care and maintenance of air navigation equipment. *Version 2:* Lectures and laboratory exercises cover the operation, repair, and troubleshooting of TACAN sets, including a review of vacuum tubes, transistors, and theoretical troubleshooting, video decoding, channel servo, air-to-air suppression, and antenna select circuits as they relate to the care and maintenance of air navigation equipment.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in radio navigation (8/93). *Version 2:* In the vocational certificate category, 2 semester hours in electronics laboratory (7/81).

NV-1715-1015

AN/ARC-101 VHF Communications System
Intermediate Maintenance

Course Number: C-102-3023.

Location: Air Station, North Island, San Diego, CA; Air Station, Moffett Field, CA; Air Station, Patuxent River, MD.

Length: 2 weeks (56 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To provide fleet maintenance personnel with instruction at the block-diagram level in the analysis, maintenance, and repair of a VHF receiver and transmitter.

Instruction: Lectures and laboratory exercises at the block-diagram level cover the analysis of RF/IF, audio, AVC, and sensitivity circuits and frequency synthesis, modulators, oscillators, and circuitry related to alignment, troubleshooting, and repair of VHF transmitters and receivers.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics or communications laboratory (7/81).

NV-1715-1016

AN/ULA-2 Pulse Analyzer Group
Intermediate Maintenance

Course Number: C-102-3532.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train experienced maintenance personnel to maintain, troubleshoot, and repair a pulse analyzer.

Instruction: Lectures and practical exercises cover the operation and repair of a pulse analyzer. Using block diagrams and circuit schematics, the student troubleshoots power supplies, video amplifiers, sweep circuits, audio circuits, and associated circuitry using some standard electronic repair equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (7/81).

NV-1715-1017

AN/AQA-7(V)4 and AN/AQA-7(V)5 Sonar
Computer Recorder Group Difference
Data Intermediate Maintenance

Course Number: C-102-3570.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 5 weeks (224 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train experienced technicians in the maintenance and repair of a sonar computer-recorder group and a sonar computer-recorder group test control.

Instruction: Lectures and practical exercises cover the operation, troubleshooting, and repair of a sonar computer-recorder and its associated test set, including digital sweep frequency generators, analog and digital displays, power supplies, regulator assemblies, spectrum analyzers, and related electronic repair equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronics maintenance (7/81).

NV-1715-1019

AN/UYQ-8 Data Processing Set Intermediate
Maintenance

Course Number: C-102-3605.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To provide fleet maintenance personnel with knowledge to operate, analyze, troubleshoot, and maintain the AN/UYQ-8 data processing set equipment.

Instruction: Lectures and laboratory exercises include functional analysis at the block-diagram level of a central indicator, a converter, and a power supply. Approximately one half of student's time is devoted to operation, repair, and maintenance of the equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics maintenance laboratory (7/81).

NV-1715-1020

CU-2070/ARC Automatic Antenna Coupler
Intermediate Maintenance

Course Number: C-102-3562.

Location: Air Station, Jacksonville, FL; Air Station, Patuxent River, MD; Air Station, Moffett Field, CA.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train maintenance personnel to maintain an automatic antenna coupler.

Instruction: Class instruction covers the maintenance of an automatic antenna coupler including RF circuit analysis and repair techniques.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (7/81).

NV-1715-1022

Integrated Circuit Components
(Microelectronics) Intermediate
Maintenance

Course Number: C-102-3110.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 4 weeks (144 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To provide fleet electronic maintenance personnel with basic theory and practical troubleshooting methods for circuit components.

Instruction: Lectures and laboratory exercises cover integrated circuits (microelectronics), component identification, basic theory of operational amplifiers, transistor-transistor logic gates, multiplexers, flip-flop counters, shift registers, and memories. Course includes component analysis, fault isolation, and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer or electronics engineering technology and 2 in computer laboratory (7/81).

NV-1715-1024

P-3A/B (DIFAR) Weapons Systems Technician
Organizational Maintenance

Course Number: C-102-3561.

Location: Air Station, Jacksonville, FL; Air Station, Patuxent River, MD; Air Station, Moffett Field, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To provide maintenance personnel with instruction in the avionics systems of the P-3A/B aircraft.

Instruction: Lectures and practical exercises cover the operation, components, maintenance, and troubleshooting of radar, IFF, ECM, MAD, and sonar systems. Course includes power system, block diagrams, and signal flow and interface characteristics, recording, and display.

Credit Recommendation: In the vocational certificate category, 5 semester hours in electronics and avionics system maintenance (7/81).

NV-1715-1025

P-3C Integrated Avionics System (Update I)
Organizational Maintenance

Course Number: C-102-3607.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 18-19 weeks (740-745 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To provide fleet personnel with training in maintenance and repair of a P-3C Update I avionics system.

Instruction: Lectures and practical exercises cover computer structure, instructions, addressing, programming memory, input/output, fault isolation techniques, and operation of the system. Also included are magnetic tape, multiplexers, display and drum memory operation, and troubleshooting and operation and interfacing of radar, communications/navigation, sonar, magnetic anomaly detectors, inertial navigation, Doppler radar, Omega navigation, and instruments and flight controls. Approximately one half of the student's time is spent in practical, equipment-oriented activities.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic maintenance and 3 in computer maintenance (7/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in computer organization and functions, 3 in avionics technology, and 2 in computer laboratory (7/81).

NV-1715-1026

Aviation Machinist's Mate, Class A, (P-3) Power Plant System, Class A1
(P-3 Aviation Machinist's Mate (AD) Entry Level)

Course Number: C-601-3572.

Location: Air Station, Jacksonville, FL; Air Station, Moffett Field, CA.

Length: 3 weeks (119 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train enlisted personnel in turbine engine maintenance.

Instruction: Lectures cover turbine engine theory, including aircraft nomenclature, theory of flight, mathematics, hydraulics, electricity, and tool selection and use.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in theory of turbine engine maintenance (7/81).

NV-1715-1030

AN/ALD-2B Direction Finder System Intermediate Maintenance

Course Number: C-102-3042.

Location: Air Station, Moffett Field, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (56 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train maintenance personnel to maintain, troubleshoot, and repair a specific direction finder system.

Instruction: Lectures cover the operation, troubleshooting, and repair of a direction finder, including electronic circuit tracing and troubleshooting to the component level and repair techniques and alignment of video circuitry, audio circuitry, pulse amplifiers, power supplies, and related circuits.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics maintenance laboratory (7/81).

NV-1715-1031

AN/APN-141(V) Radar Altimeter Intermediate Maintenance

Course Number: C-102-3033.

Location: Air Station, Cherry Point, NC; Air Station, Lemoore, CA; Air Station, Moffett Field, CA; Air Station, Jacksonville, FL; Air Station, Miramar, San Diego, CA.

Length: 2 weeks (56 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train maintenance personnel in the maintenance and operational procedures of a radar altimeter.

Instruction: Lectures and exercises cover system operation and components, use of test equipment and testing, alignment, and troubleshooting techniques.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (7/81).

NV-1715-1032

Walleye 2 Extended Range Data Link Intermediate Maintenance

Course Number: C-121-3781.

Location: Air Station, Lemoore, CA; Air Station, Cecil Field, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/92.

Objectives: To train maintenance personnel to maintain the Walleye II extended range data link system using appropriate test equipment.

Instruction: Lectures and laboratory exercises cover the use of electronic test equipment to check, troubleshoot, and adjust hardware related to the Walleye missile guidance and control system.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics laboratory (3/82).

NV-1715-1033

OA-9008 Magnetic Tape Control Unit and Magnetic Tape Transport

Course Number: A-150-0235.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train data systems technicians in the operation and maintenance of a magnetic tape transport unit.

Instruction: The course covers the theory of operation of a magnetic tape drive unit, the manner in which data is stored on the tape, and the operation of the tape controller. Also included are the mechanical systems, the electronics used in the controller, and the maintenance procedures used on the drive unit.

Credit Recommendation: In the vocational certificate category, 1 semester hour in computer I/O equipment operation and repair (11/81).

NV-1715-1034

Operations Summary Console Difference Maintenance

Course Number: A-150-0088.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train students in theory, operation, and maintenance of shipboard equipment used to display navigational information received from the ship's radars, sonar, and other sensors.

Instruction: Lectures and practical exercises familiarize the student with electronic circuitry of the systems, including digital memory, video circuitry, video display, transfer of digital data to and from a computer, and signal processing. Emphasis is placed on fault isolation using a system technical manual.

Credit Recommendation: In the vocational certificate category, 3 semester hours in digital systems theory and troubleshooting (11/81); in the lower-division baccalaureate/associate degree category, 1 semester hour in digital systems troubleshooting laboratory (11/81).

NV-1715-1035

Radar Set AN/SPG-51D Gun and Guided Missile Director Mk 73 Mod 2 and Ancillary Equipment Operation and Maintenance

Course Number: A-104-0127.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 31 weeks (1200 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train fire control technicians to maintain a gun and guided missile radar director and ancillary equipment.

Instruction: Lectures and practical exercises cover the operation, maintenance, and repair of a fire control system which includes a pulse radar system, radar test set, gun and guided missile director, A/D and D/A signal data converter, television monitor, and control console. Emphasis is on a functional understanding of signal flow of sufficient depth in both analog and digital electronics to apply troubleshooting procedures to isolate faults to the board or component level.

Credit Recommendation: In the vocational certificate category, 3 semester hours in radar operating system and maintenance and 1 in television monitor maintenance (11/81); in the lower-division baccalaureate/associate degree category, 1 semester hour in digital equipment troubleshooting laboratory and 1 in electronic systems troubleshooting laboratory (11/81).

NV-1715-1036

Guided Missile Frigate (FFG-7) Combat Systems Maintenance

Course Number: A-121-0408.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 5 weeks (190 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train personnel to maintain combat system equipment aboard an FFG-7 class ship.

Instruction: Lectures and practical exercises cover the mission, physical characteristics, operating modes, capabilities, and limitations of a search radar, data processing subsystem, and a data display antisubmarine and antiaircraft system. Data signal flow and block-diagram descriptions are given to teach fault isolation to a specific subsystem using reference documentation, test programs, and general purpose test equipment following established troubleshooting procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic systems troubleshooting (11/81).

NV-1715-1037

Mk 23 Mod 0/1 Target Acquisition System (TAS) Maintenance

Course Number: A-121-0471.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 24 weeks (1156 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide selected fire control technicians with the training required to maintain a shipboard target acquisition system.

Instruction: Lectures and practical exercises cover the operation and purpose of a target acquisition system, including a UNIVAC 1616 computer system and its memory; tape and I/O devices; system power distribution; radar system and its transmitter, antenna, receiver, signal processor, and display console; and the troubleshooting procedures to be used with each.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer systems operation and maintenance (11/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems operation and maintenance and 1 in computer system operations (11/81).

NV-1715-1038

Mk 25 Guided Missile Launching System (GMLS)

Course Number: A-121-0124.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide the student with skills and knowledge necessary to operate and maintain a guided missile launching system.

Instruction: Lectures and practical exercises familiarize the student with the operation and major subassemblies of the missile launcher, including mechanical characteristics, generators, motors, solenoids, and vacuum tube circuitry.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/81).

NV-1715-1039

Mk 29 Mod 0 Guided Missile Launching System (GMLS) Maintenance

Course Number: A-121-0041.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide the technical knowledge and skills necessary to repair, maintain, and operate a specific guided missile launching system.

Instruction: Lectures and practical exercises cover the physical characteristics, major components, controls, indicators, and operation of each part of the launch system and include basic digital electronics and computer troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic digital electronics and 1 in computer troubleshooting (11/81).

NV-1715-1041

Basic FFG-7 Class AN/UYA-4(V) Equipment Maintenance

Course Number: A-150-0244.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train personnel in the theory of operation and the maintenance procedures for a shipboard combat system consisting of all systems associated with detection, evaluation, acquisition, engagement, or deception of enemy air, surface, or subsurface targets.

Instruction: Lectures and practical exercises cover the theory of operation, use and maintenance of a combat weapon support system, including operation of the display console, classification of scope presentations, symbol identification, and display system troubleshooting and repair; radar azimuth converter repair (component level); power system repair; radar data distribution switchboard fault analysis and repair; pulse amplifier and symbol generator fault isolation and alignment; radar display console fault isolation; test set use; analysis and repair; and general testing procedures.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic system troubleshooting (11/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems (operation and maintenance) and 1 in electronic systems laboratory (11/81).

NV-1715-1042

Dewey Underwater Log Maintenance, Class C1

Course Number: A-623-0096.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To train personnel in the operation and maintenance of an electromagnetic log (speed monitor).

Instruction: Instruction and practical exercises cover the theory of operation, maintenance, and troubleshooting of a Mk 6 Dewey Electromagnetic Log.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic equipment maintenance and repair (10/83).

NV-1715-1043

Combat Systems Maintenance Management for the CGN-38

Course Number: A-121-0404.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train personnel to manage maintenance of combat systems aboard a CGN-38 surface combat ship.

Instruction: Students learn the mission, physical characteristics, operating modes, capabilities, and limitations of combat systems on a surface combat ship. Procedures to effectively manage combat system level maintenance is given through applicable documentation used to detect, isolate, and evaluate the impact of a fault on the combat capability of the system. The troubleshooting, maintenance, and repair is specialized to specific military equipment.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/81).

NV-1715-1044

CP-789(V)/UYK Computer

Course Number: A-150-0242.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide students with the theory of operation and the skills necessary to maintain a specific general purpose digital computer (UNIVAC 12/80).

Instruction: Lectures and practical exercises are designed to familiarize the student with computer hardware and software, including the power supply, memory, input and output circuitry, control circuitry, arithmetic circuitry, and computer instruction set. Writing of diagnostic programs to detect and locate faults is also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer operation and real time processing and 1 in computer diagnostics and repair (11/81).

NV-1715-1045

CV-2036 Analog Digital Converter (KCMX) Maintenance

Course Number: A-150-0100.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train personnel in the theory, operation, and maintenance of a multiplexer handling both digital and analog signals.

Instruction: Lectures and practical exercises familiarize the student with the circuitry which performs analog-to-digital conversion, digital-to-analog conversion, digital decoding and encoding, synchro-to-digital conversion, digital-to-digital formatting, and multiplexing. The course emphasizes fault isolation and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital computer interfacing and 1 in digital systems troubleshooting (11/81).

NV-1715-1046

DD-963 Combat System Maintenance Management

Course Number: A-121-0406.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train personnel to manage maintenance of combat systems aboard a DD-963 class surface ship.

Instruction: Students learn the mission, physical characteristics, operating modes, capabilities, and limitations of combat systems and how to effectively manage maintenance operations. Course includes data signal flow and block-diagram description of radar transmitters, receivers, antennas, sonar and associated subsystems and principles of digital logic and programming concepts. Systematic diagnosis using applicable documentation to detect, isolate, and repair equipment is also covered.

Credit Recommendation: In the vocational certificate category, 3 semester hours in radar system maintenance and repair and 3 in computer system maintenance and repair (11/81).

NV-1715-1047

AN/USQ-59 Data Terminal Set Maintenance

Course Number: A-150-0099.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 2 weeks (66 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide selected personnel with knowledge in the theory of operation and maintenance of a specialized digital-to-analog and analog-to-digital signal converter data terminal set.

Instruction: Lectures and practical exercises cover the theory of operation of a specialized digital-to-analog and analog-to-digital signal converter which takes a 24 bit input word and converts it to an analog signal suitable for radio transmission or accepts signals for conversion to digital information. Also covered is the theory of maintaining this equipment, including block-diagram analysis, AC/DC power distribution, A/D and D/A conversion, phase shift modulation, parallel-to-serial and serial-to-parallel data conversion, and fault isolation to the module level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital communications practices (11/81).

NV-1715-1049

BASIC AN/UYA-4 DISPLAY EQUIPMENT MAINTENANCE

Course Number: A-150-0022.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide selected personnel with the theory of operation and maintenance of a data display subsystem such that they will be able to operate, test, and perform corrective and preventive maintenance on this system.

Instruction: Lectures and practical exercises cover the operation and function of many subsystems used within a complex target identification, weapon coordination, and communications system. Course includes computer interface procedures and circuitry, symbol generators, pulse amplifiers (dual/four channel types), amplifier alignment, refresh memory units (operation, use and fault isolation), radar range detection procedures (theory and troubleshooting), digital converters for radar data analysis, sonar azimuth converters for digital analysis, radar video display circuit analysis and repair procedures, and video signal simulation.

Credit Recommendation: In the vocational certificate category, 3 semester hours in digital troubleshooting theory and techniques and 3 in electronic systems troubleshooting (11/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems (operation and maintenance), 1 in digital systems laboratory, and 1 in electronic systems laboratory (11/81).

NV-1715-1050

AN/SRC-23 HF TRANSCEIVER AN/SRA-34 COUPLER MAINTENANCE

Course Number: A-101-0043.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 6 weeks (221 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train students to repair a specific naval radio receiver, transmitter, and antenna coupler.

Instruction: Lectures and practical exercises cover single-sideband transmission theory, operation, circuit details, and troubleshooting of the radio receiver-transmitter and antenna coupler systems. Emphasis is placed on fault isolation techniques to the subassembly level using technical manuals.

Credit Recommendation: In the vocational certificate category, 2 semester hours in troubleshooting techniques (11/81).

NV-1715-1051

AN/SRC-31 A/B UHF TRANSCEIVER AND CU-1559 COUPLER MAINTENANCE

Course Number: A-101-0045.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 3 weeks (108 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train students to repair a specific naval radio receiver-transmitter and its antenna coupling system.

Instruction: Lectures and practical exercises cover the details of all electronic circuitry of the receiver-transmitter and its antenna coupler. Emphasis is placed on fault isolation and repair of the system using technical manuals.

Credit Recommendation: In the vocational certificate category, 1 semester hour in troubleshooting techniques (11/81).

NV-1715-1052

AN/SSQ-29 DATA TERMINAL SET MAINTENANCE-DIFFERENCE

Course Number: A-150-0062.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide selected personnel with knowledge in the theory of operation and maintenance of a specialized digital-to-analog and analog-to-digital signal converter data terminal set.

Instruction: Lectures and practical exercises cover the theory of operation of a specialized digital-to-analog and analog-to-digital signal converter which takes a 24 bit input word and converts it to an analog signal suitable for radio transmission and visa versa and the theory of maintaining this equipment. Course includes AC/DC power distribution, transmit and receive control, troubleshooting and fault isolation, A/D and D/A conversion procedures, test set utilization, and repair to the component level.

Credit Recommendation: In the vocational certificate category, 1 semester hour in digital communications system troubleshooting procedures (11/81).

NV-1715-1053

AN/SSW-1 DATA TERMINAL SET MAINTENANCE

Course Number: A-150-0064.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 2 weeks (74 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide selected personnel with the theory of operation and maintenance of an data terminal set.

Instruction: The course covers the theory of operation and maintenance of a specialized military data terminal set including AC/DC power distribution, digital-to-digital converter, block-diagram analysis, and troubleshooting procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital communications systems troubleshooting procedures (11/81).

NV-1715-1054

AN/URC-85 UHF TRANSCEIVER MAINTENANCE

Course Number: A-101-0072.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 2 weeks (68 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train students to repair a specific naval radio receiver and transmitter.

Instruction: Course includes familiarization with all electronic circuitry of the receiver-transmitter system, including power distribution, power amplification, modulation, IF amplifier, and filters. Emphasis is placed on fault isolation and repair of the system using technical manuals.

Credit Recommendation: In the vocational certificate category, 1 semester hour in troubleshooting techniques (11/81).

NV-1715-1055

AN/USQ-36 DATA TERMINAL SET MAINTENANCE

Course Number: A-150-0063.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 4 weeks (183 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide select personnel with knowledge in the theory of operation and maintenance of a specialized digital-to-analog and analog-to-digital signal converter data terminal set.

Instruction: Lectures and practical exercises cover the theory of operation of a specialized digital-to-analog and analog-to-digital signal converter which takes a 24 bit input word and converts it to an analog signal suitable for radio transmission or vice versa and the theory of maintaining this equipment. Course includes power distribution, self-check failure methods, timing sequences, transmit and receiver timing and control, A/D and D/A conversion, and fault isolation procedures to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital communications systems troubleshooting procedures (11/81).

NV-1715-1056

AN/SPS-48(V) RADAR MAINTENANCE

Course Number: A-104-0155.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 28 weeks (975 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide trained personnel with the knowledge needed to perform maintenance and repair on a specialized radar system.

Instruction: Course covers the operation and maintenance of a specialized radar system, including theory of operation of the radar system, using block diagrams and schematics; the computer controller and its operation; the transmitter and receiver systems; the console operation; and the signal tracing needed to troubleshoot these systems. Topics include number systems, conversions, arithmetic operation in binary including square roots, and 3-D inertial coordinate equations.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronics troubleshooting (11/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in radar system operations and maintenance and 2 in digital logic systems maintenance (11/81).

NV-1715-1057

AN/SPS-58A RADAR MAINTENANCE

Course Number: A-104-0145.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide students with the knowledge and skills necessary to operate and maintain a radar system.

Instruction: Students learn the purpose and physical location of major subassemblies of the radar system including controls and indicators and use built-in test equipment to align and maintain the system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in radar systems maintenance (11/81).

NV-1715-1058

AN/SRC-16, AN/SRC-13 Transceiver Maintenance Differences

Course Number: A-101-0044.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 3 weeks (111 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train students in the theory of operation and maintenance of a specific naval radio receiver-transmitter.

Instruction: The course provides a detailed familiarization of all electronic circuitry in the receiver-transmitter. Emphasis is placed on fault isolation and repair of the system using technical manuals.

Credit Recommendation: In the vocational certificate category, 1 semester hour in troubleshooting techniques (11/81).

NV-1715-1059

AN/SPS-48C Radar Difference

Course Number: A-104-0175.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide radar technicians with the skills and knowledge necessary to operate and maintain a search radar system used in an automatic target detection system.

Instruction: Lectures and practical exercises cover the operation and maintenance of a specialized search radar system, including a UNIVAC 1616 computer system, its memory, tape, and I/O devices and target processor and interface systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer systems operation and maintenance (11/81); in the lower-division baccalaureate/associate degree category, 1 semester hour in computer system operations (11/81).

NV-1715-1060

AM-2310-ASQ AM-2349-ASQ-19 Amplifier (Power Supply) Receiver Intermediate Maintenance

Course Number: C-102-3099.

Location: Air Station, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide training in the operation, testing, and maintenance of a communications unit comprised of power supply, receiver, and amplifier units.

Learning Outcomes: Upon completion of the course, the student will be able to test, analyze, troubleshoot, and repair communications circuits, including a power supply unit, a UHF receiver, and automatic direction finding circuitry.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic communications and 1 in electronic communications laboratory (5/85).

NV-1715-1061

Mk 3 Mod 7 Ship's Navigation and Aircraft Inertial Alignment Systems (SNAIAS) Operation and Maintenance
(Ship's Navigation and Aircraft Inertial Alignment Systems Maintenance)

Course Number: A-193-0040.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 26 weeks (1040 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train personnel in the operation, calibration, and maintenance of an inertial navigational system.

Instruction: Personnel are given in-depth instruction in the theory, operation, and maintenance of an inertial navigational system. The course includes review of algebra, trigonometry, and vector algebra; physics of linear and rotational motion, principles of gyroscope operation, and basic inertial system dynamics; number systems, BCD codes, and conversions including fractions, logic gates, and flip-flops; and program flow charts. Included are operation and functional characteristics of a navigation computer and its peripherals, including paper tape reader, paper tape punch, teletype terminal, CRT display, and power supplies. Repertoire of the computer instruction set and programming applications include bootstrap and dump routines; basic theory; electrical and mechanical characteristics of servo systems; and use of differential voltmeters and oscilloscopes to calibrate, align, and troubleshoot equipment, in some cases, to the component level.

Credit Recommendation: In the vocational certificate category, 2 semester hours in applied mathematics and 2 in applied physics (11/81); in the lower-division baccalaureate/associate degree category, 6 semester hours in electromechanical systems (11/81).

NV-1715-1063

Harpoon Ship Command Launch Control Set Maintenance

Course Number: J-113-0127.

Location: Fleet and Mine Warfare Training Center, Charleston, SC; Fleet Training Center, Dam Neck, VA; Fleet Training Center, San Diego, CA; Fleet Training Center, Pearl Harbor, HI.

Length: 6 weeks (210 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide fire control technicians with the knowledge and skills necessary to operate and maintain the Harpoon ship command launch control set AN/SWG-1(V).

Instruction: Lectures and practical exercises cover the operation and maintenance of the Harpoon ship command launch control set with emphasis on fault isolation and repair at the system and component level and/or preventive maintenance of the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours of technical elective credit in electrical or electronic associate degree programs (11/81).

NV-1715-1064

AN/SRN-12/12A Omega Receiving Set Maintenance

Course Number: A-102-0077.

Location: Fleet and Mine Warfare Training Center, Charleston, SC; Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (48 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To train enlisted personnel to operate, maintain, and repair the Omega receiving set and to operate and use associated test equipment.

Instruction: Lectures and practical experience cover the maintenance, operation, and repair of the Omega receiving set. Proper utilization of test equipment is taught. Course includes signal characteristics, initializing, chart operational checks, symbolic integrated maintenance, troubleshooting, and computer interface.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in a technical elective in electrical or electronics technology (11/81).

NV-1715-1065

Submarine Periscope Repair, Class C1

Course Number: A-670-0019.

Location: Service School Command, Great Lakes, IL.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–6/91.

Objectives: After 6/91 see NV-1715-1654. To provide optical men with additional technical skills and knowledge to more effectively perform their duties.

Instruction: Lectures and practical exercises cover the repairing and overhauling of submarine periscopes, including inspecting, replacing defective parts, refinishing surfaces, cleaning, reassembling, collimating, adjusting optical elements, sealing, drying, and charging of optical assemblies. Course includes a review of basic electricity, electronics, motors, synchros, torque motors, and heaters and operation and maintenance of the electromechanical systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical technology (1/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical technology (1/86).

NV-1715-1066

AN/SPG-53F Modified Radar Maintenance

Course Number: A-113-0093.

Location: Service School Command, Great Lakes, IL.

Length: 16 weeks (640 hours).

Exhibit Dates: 1/90–5/92.

Objectives: After 5/92 see NV-1715-1707. To train technicians in the maintenance of a radar set.

Instruction: Lectures and practical exercises cover the operation and maintenance of power supplies, synchronizer circuits, antenna scanners, video circuits, ranging circuits, D/S converter circuits, modulation circuits, jamming circuits, and display circuits.

Credit Recommendation: In the vocational certificate category, 6 semester hours in radar electronic maintenance (1/82).

NV-1715-1067

AN/WSN-2 Stabilized Gyrocompass Maintenance, Class C1

Course Number: A-670-0048.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–3/95.

Objectives: After 2/95 see NV-1715-1790. To provide the technical knowledge and skills required to operate, maintain, and repair a stabilized gyrocompass.

Instruction: Lectures and laboratory exercises cover operation, alignment, troubleshooting, and maintenance of the gyrocompass system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in gyrocompass principles and maintenance (10/83).

NV-1715-1068

Close-In Weapons System 15-1, Class C1

Course Number: A-113-0078.

Location: Service School Command, Great Lakes, IL; Training Center, San Diego, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 27 weeks (1080 hours).

Exhibit Dates: 1/90–12/90.

Objectives: After 12/90 see NV-1715-1530. To train technicians in the operation, maintenance, and repair of electronically controlled weapon systems.

Instruction: Lectures and practical exercises cover the operation, maintenance, and repair of power supplies, environmental control systems, remote and local computer-driven display and control systems, operation and loading of receivers, and servo-control systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in servo systems maintenance and 3 in radar circuits maintenance (1/82); in the lower-division baccalaureate/associate degree category, 4 semester hours in computer interface maintenance (1/82).

NV-1715-1069

Electronics Technician Advanced Electronics Field/ Marine Corps/ Foreign, Class A1

Course Number: A-100-0062.

Location: Service School Command, Great Lakes, IL.

Length: 28 weeks (1120 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To develop the skills and knowledge necessary to perform basic maintenance on a variety of electronic equipment.

Instruction: The introductory-level course presents the principles of digital circuits, including number systems; number conversion techniques; logic concepts; logic gates; Boolean expressions; logic diagrams; magnetic storage devices; display devices; flip-flops; counters; registers; encoders and decoders; basic communications principles; AM and FM waveforms and frequency spectra; decibels; operation of a spectrum analyzer and its application to a signal flow analysis of an SSB receiver; and FM transceiver and high frequency transmitter/receiver, including RLC filter circuits, mechanical filters, modulator and demodulator circuits, oscillators, RF, IF, and audio circuits. Fifty percent of the time is devoted to signal tracing, alignment, maintenance, and troubleshooting techniques in the laboratory. Introduction to radar and microwave circuits including microwave propagation, characteristics of waveguides, chokes, dummy loads, directional couplers, resonant cavities, stub tanners, CRT characteristics, klystrons, magnetrons, traveling wave tubes, microwave measurements, and synchros is also covered. Course includes operation, alignment, fault isolation, and repair of AN/SPS-10 and AN/SPA-25 radar sets.

Credit Recommendation: In the vocational certificate category, 2 semester hours in introduction to digital circuits and 4 in electronic equipment repair (1/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems and 1 in microwave systems (1/82).

NV-1715-1070

Electronics Technician Nuclear Field, Class A1

Course Number: A-100-0064.

Location: Service School Command, Great Lakes, IL.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To develop the skills and knowledge necessary to perform basic maintenance on a variety of electronic equipment.

Instruction: This introductory-level course presents the principles of digital circuits, including number systems, number conversion techniques, logic concepts, logic gates, Boolean expressions, logic diagrams, magnetic storage devices, display devices, flip-flops, counters, registers, encoders and decoders; basic communication principles, AM and FM waveforms and frequency spectra, and decibels; and operation of a spectrum analyzer and its application to a signal flow analysis of an SSB receiver and FM transceiver, including RLC filter circuits, mechanical filters, modulator and demodulator circuits, oscillators, RF, IF, and audio circuits. Fifty percent of the time is devoted to signal tracing, alignment, maintenance and troubleshooting techniques in the laboratory. Course includes use of basic test equipment, characteristics of diodes and transistors, simple transistor circuits, debiasing and load line development. Other topics include vacuum tube characteristics and operation, turled circuits, loading, Q, RF coupling techniques, Class A and Class C amplifiers, RF oscillators, multipliers, types of modulation and detection, distortion, and characteristics of antennas. Introduction to radar and microwave circuits include microwave propagation, characteristics of waveguides, chokes, dummy loads, directional couplers, resonant cavities, stub tanners, CRT characteristics, klystrons, magnetrons, traveling wave tubes, microwave measurements, and synchros. Operation, alignment, fault isolation, and repair of a radar set is emphasized.

Credit Recommendation: In the vocational certificate category, 2 semester hours in introduction to digital circuits and 3 in electronic equipment repair (1/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems and 1 in microwave systems (1/82).

NV-1715-1071

Electronics Technician Submarine/Reserve, Class A1

Course Number: A-100-0063.

Location: Service School Command, Great Lakes, IL.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To develop the skills and knowledge necessary to perform basic maintenance on a variety of electronic equipment.

Instruction: This is an introductory-level presentation covering the principles of digital circuits, including number systems, number conversion techniques, logic concepts, logic gates, Boolean expressions, logic diagrams, magnetic storage devices, display devices, flip-flops, counters, registers, encoders and decoders; basic communication principles, AM and FM waveforms and frequency spectra, decibels; and operation of a spectrum analyzer and its application to a signal flow analysis of an SSB receiver, FM transceiver, and high frequency transmitter/receiver, including RLC filter circuits, mechanical filters, modulator and demodulator circuits, oscillators, RF, IF, and audio circuits. Fifty percent of the time is devoted to signal tracing, alignment, maintenance, and troubleshooting techniques in the laboratory.

Credit Recommendation: In the vocational certificate category, 2 semester hours in introduction to digital circuits and 3 in electronic equipment repair (1/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems (1/82).

NV-1715-1072

Electronics Technician Air Force, Class A1

Course Number: A-100-0065.

Location: Service School Command, Great Lakes, IL.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To develop the skills and knowledge necessary to perform basic maintenance on a variety of electronic equipment.

Instruction: This introductory-level course presents the principles of digital circuits, including number systems, number conversion techniques, logic concepts, logic gates, Boolean expressions, logic diagrams, magnetic storage devices, display devices, flip-flops, counters, registers, encoders and decoders; basic communications principles, AM and FM waveforms and frequency spectra, decibels; and operation of a spectrum analyzer and its application to a signal flow analysis of an SSB receiver and FM transceiver, including RLC filter circuits, mechanical filters, modulator and demodulator circuits, oscillators, RF, IF, and audio circuits. Fifty percent of the time is devoted to signal tracing, alignment, maintenance, and troubleshooting techniques in the laboratory.

Credit Recommendation: In the vocational certificate category, 2 semester hours in introduction to digital circuits and 2 in electronic equipment repair (1/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems (1/82).

NV-1715-1073

FFG-7 AUXILIARY MECHANICAL SUBSYSTEM TECHNICIAN, CLASS C1

Course Number: A-652-0158.

Location: Service School Command, Great Lakes, IL.

Length: 3-5 weeks (120-175 hours).

Exhibit Dates: 1/90–3/92.

Objectives: After 3/92 see NV-1732-0023. To train enginemen to operate and maintain auxiliary mechanical subsystems.

Instruction: Lectures and practical exercises provide the knowledge and skills necessary to operate and maintain the mechanical components of high and low air pressure systems, electronic equipment, cooling water systems, and incinerator equipment on a FFG-7 class ship.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in mechanical engineering technology (10/83).

NV-1715-1074

FFG-7 CENTRAL CONTROL STATION MAINTENANCE, CLASS C1

Course Number: A-652-0155.

Location: Service School Command, Great Lakes, IL.

Length: 16 weeks (640 hours).

Exhibit Dates: 1/90–1/91.

Objectives: To train technicians in the theory, maintenance, and repair of a computer-based shipboard control system.

Instruction: Lectures, laboratory work, and practical exercises cover digital logic from basic TTL gates to memories and counters, basic computer mathematics, troubleshooting of electronic control systems and computer circuits, machine language programming, minicomputer organization, and I/O.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic troubleshooting techniques and 2 in electronic troubleshooting laboratory (1/82); in the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to minicomputers and machine language programming and 2 in digital logic (1/82).

NV-1715-1075

FFG-7 CLASS SHIP INTERIOR COMMUNICATIONS (IC) SUBSYSTEMS TECHNICIAN

Course Number: A-623-0099.

Location: Service School Command, Great Lakes, IL.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide technical knowledge and skills required to perform organizational maintenance on navigation systems.

Instruction: Lectures and laboratory exercises cover the theory of operation, circuitry, and use of technical manuals and schematics in the operation, troubleshooting, and maintenance of electromechanical navigation equipment including servo-controlled gyroscopes.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical system maintenance and 1 in electronic system maintenance (7/95).

NV-1715-1079

GUNNER'S MATE, CLASS A PHASE II

Course Number: A-041-0016.

Location: Service School Command, Great Lakes, IL.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–3/92.

Objectives: After 3/92 see NV-1715-1712. To train technicians in the theory and maintenance of power supplies, digital circuits, and hydraulic controls for gun and missile launching systems.

Instruction: Lectures and exercises cover the theory and practices of AC/DC motors and generators; solid state power supplies; number systems, logic gates, digital arithmetic and circuits, counters, and registers; synchro servos; and hydraulic controls.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital logic and 3 in electromechanical system controls (1/82).

NV-1715-1080

GUN MOUNT 5"/54 MK 45 MAINTENANCE, CLASS C1

Course Number: A-113-0054.

Location: Service School Command, Great Lakes, IL.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–6/90.

Objectives: To train personnel in the maintenance of a gun mount and associated equipment.

Instruction: Group-paced lectures and demonstrations cover operating, testing, and maintaining power distribution systems, PC cards, control and arming circuits, mechanical linkages, and hydraulic systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical maintenance (1/82).

NV-1715-1081

TARTAR GUIDED MISSILE LAUNCHING SYSTEM (GMLS) MK 11 MAINTENANCE, CLASS C1

Course Number: A-121-0043.

Location: Service School Command, Great Lakes, IL.

Length: 23-24 weeks (920-960 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train personnel in the maintenance of a guided missile launching system.

Instruction: Lectures and demonstrations cover operating, testing, and maintaining power devices, magnetic amplifiers, firing circuits, mechanical linkages, and hydraulic systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical maintenance (1/82).

NV-1715-1082

TARTAR GUIDED MISSILE SYSTEM MK 13 MAINTENANCE, CLASS C1

Course Number: A-121-0044.

Location: Service School Command, Great Lakes, IL.

Length: 24 weeks (960 hours).

Exhibit Dates: 1/90–1/92.

Objectives: To train personnel in the maintenance of a guided missile launching system.

Instruction: Lectures and demonstrations cover the operation and maintenance of train and elevation circuits, hoist equipment, hydraulic and lubrication systems, and sensor and control systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical maintenance (1/82).

NV-1715-1083

TERRIER GUIDED MISSILE LAUNCHING SYSTEM (GMLS) MK 10 MAINTENANCE, CLASS C1

Course Number: A-121-0046.

Location: Service School Command, Great Lakes, IL.

Length: 20-22 weeks (800-880 hours).

Exhibit Dates: 1/90–2/90.

Objectives: After 2/90 see NV-1715-1526. To train personnel in the maintenance of a guided missile launching system.

Instruction: Lectures and demonstrations cover operating, testing, and maintaining power distribution systems, PC cards, control and arming circuits, mechanical linkages, and hydraulic systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical maintenance (1/82).

NV-1715-1085

DATA SYSTEMS TECHNICIAN, CLASS C

Course Number: A-101-0042.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 11-15 weeks (440-600 hours).

Exhibit Dates: 1/90–11/91.

Objectives: To provide students with skills and knowledge necessary to maintain two versions of a general purpose UNIVAC computer.

Instruction: The course offers an in-depth study of both versions of the UNIVAC general purpose computer, including control, arithmetic, memory, and input/output circuitry. Study of the instruction repertoire including detailed operating sequences for each instruction is included. Troubleshooting exercises are used throughout the course.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer troubleshooting and 2 in computer organization (11/81).

NV-1715-1087

FIRE CONTROL SYSTEM (FCS) MK 92 MOD 2 MAINTENANCE

Course Number: A-113-0080.

Location: Fleet Training Center, Dam Neck, VA; Fleet Training Center, San Diego, CA.

Length: 29 weeks (1087 hours).

Exhibit Dates: 1/90–9/91.

Objectives: After 9/91 see NV-1715-1534. To train technicians in operation and maintenance of computer-controlled gun/missile firing systems.

Instruction: This course covers operation, functional analysis, maintenance, and troubleshooting of gyro-stabilized search and track antenna groups, controls, and displays; radar signal generation and processing; and 32-bit computer operation and I/O, including ASCII data terminal, tape reader/punch, magnetic tape, and interfaces. Other subjects include servo operation, antenna drive and tracking system, AD/DA and synchro/digital signal processing, and use of computer for troubleshooting and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital laboratory, 2 in electronic/digital troubleshooting, and 2 in digital servo systems (5/82); in the upper-division baccalaureate category, 2 semester hours in digital computer systems (5/82).

NV-1715-1088

Basic Solid State Devices, Class F1

Course Number: K-662-0019; A-662-0019.

Location: Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide fundamentals of solid state theory and basic testing of components.

Instruction: Course covers basic solid state devices and circuits in a classroom environment including demonstrations and laboratory exercises. Diodes, bipolar transistors, UJTs and thyristors are studied as well as conventional circuits such as CE, CB, CC.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic devices (5/82).

NV-1715-1089

Gyro Compass Technician Mk 27 Maintenance, Class C1

Course Number: K-670-2152.

Location: Fleet Training Center, San Diego, CA.

Length: 3 weeks (90 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide personnel with theory and maintenance of the Mk 27 gyrocompass.

Instruction: Course includes gyrocompass theory, operation modes, auxiliary circuits, and gyrocompass maintenance.

Credit Recommendation: In the vocational certificate category, 2 semester hours in gyrocompass theory and laboratory (5/82).

NV-1715-1090

Mechanical Gyro Maintenance and Repair, Class C1

Course Number: A-670-0038.

Location: Fleet Training Center, San Diego, CA.

Length: 4 weeks (120 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide personnel with theory of operation and practical training in maintenance and repair of the Mk 14 mechanical gyrocompass.

Instruction: Lectures, demonstrations, and laboratory work covering gyrocompass theory of operation including errors and methods of compensation and the maintenance, calibration, and troubleshooting of mechanical and electrical components.

Credit Recommendation: In the vocational certificate category, 1 semester hour in gyrocompass maintenance and repair (5/82); in the lower-division baccalaureate/associate degree category, 1 semester hour in gyrocompass theory and operation (5/82).

NV-1715-1091

Integrated Voice Communication System AN/STC-1 Maintenance

Course Number: A-623-0042.

Location: Service School Command, San Diego, CA.

Length: 19 weeks (722 hours).

Exhibit Dates: 1/90–6/91.

Objectives: After 6/91 see NV-1715-1605. To train personnel to operate and maintain the AN/STC-1 integrated voice communications system.

Instruction: Course offers group instruction in voice communication system operation, maintenance, and troubleshooting, including oscilloscope use, digital fundamentals, computer basics, teleprinter operation, tape reader operation, and interfacing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic system troubleshooting and 2 in digital electronics (5/82).

NV-1715-1092

Surface Microcomponent Repair

Course Number: A-100-0056.

Location: Fleet Mine Warfare Training Center, Charleston, SC; Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, Pearl Harbor, HI; Fleet Training Center, Mayport, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To prepare personnel to repair circuit laminates, encapsulated circuits and shaft encoders, welded lead devices, multilayer devices, and electroplated circuits.

Instruction: Course includes practical training in repairing printed circuit board laminates, conductors, flexible circuits, plastic electronic panels, encapsulated circuits, shafter encoders, static-sensitive devices, welded lead devices, high density multilayer devices, and electroplated materials. Course includes the preventive maintenance of repair station required for Navy certification.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic repair laboratory (5/82).

NV-1715-1093

AN/SPS-49(V) Radar Set Maintenance

Course Number: A-104-0176.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–12/91.

Objectives: After 1/91 see NV-1715-1594. To provide trained personnel to operate and maintain a radar set, using built-in test equipment and other associated test equipment under no supervision.

Instruction: Instruction includes lectures, practical demonstrations, and hands-on operation on maintenance, and troubleshooting of shop mock-ups of the radar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar or electronic systems troubleshooting and maintenance (5/82).

NV-1715-1094

AN/SPA-66 Radar Indicator Maintenance

Course Number: A-104-0178.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide the skills and knowledge necessary to maintain radar indicators.

Instruction: Course includes operation and maintenance of the radar indicator, including regulated power supplies, DC to DC converters, and digital devices for timing, sweep generation, and troubleshooting to the component and system level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in troubleshooting and maintenance (5/82).

NV-1715-1096

AN/SPA-50, AN/SPA-50B Radar Indicator Maintenance

Course Number: A-104-0156.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide electronic technicians with the knowledge and skill necessary to maintain specific radar indicators.

Instruction: Lectures, practical demonstrations, and laboratory work cover digital devices, including A/D conversion; operational amplifiers; circuit operation of power supply, timing, sweep, and display circuits; and operation of controls required to maintain and troubleshoot specific radar indicators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic system maintenance and troubleshooting (5/82).

NV-1715-1097

AN/SPS-65(V)1 Radar Set Maintenance

Course Number: A-104-0179.

Location: Service School Command, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide electronics technicians with technical skills and knowledge to operate and perform preventive and corrective maintenance on a radar set.

Instruction: Lectures, practical demonstrations, and laboratory work involve circuit tracing, functional analysis, and fault/failure finding on AC and DC power supplies, transmitters, receiver-processors, and controls of a radar set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic equipment maintenance and troubleshooting (5/82).

NV-1715-1098

AN/SRN-9/18 Satellite Radio Navigation Sets Combined Maintenance

Course Number: A-102-0267.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide the skills and knowledge needed to perform corrective and preventive maintenance on two satellite radio navigation sets.

Instruction: Course provides instruction on the repair and preventive maintenance on the two satellite radio navigation sets. Coverage includes basic digital components, number conversions, computer fundamentals, mnemonic instruction sets, phase modulation, voltage-controlled oscillators, Doppler effect, character generators, and application of the Symbolic Integrated Maintenance Manual in maintaining the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in equipment troubleshooting and repair (5/82).

NV-1715-1099

Fleet Satellite Communications Spectrum Monitor System Equipment

Course Number: A-101-0188.

Location: Fleet Training Center, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To train personnel in the operation and maintenance of an HP 2100 and HP 8500 series minicomputer system and console.

Instruction: Course provides instruction in the HP 2100 minicomputer with cassette and magnetic tape loader subsystems. Included are subsystems for interfacing, display, and control.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in minicomputer systems (5/82); in the upper-division baccalaureate category, 1 semester hour in minicomputer systems for engineering majors (5/82).

NV-1715-1100

Narrow Band Secure Voice Stand Alone Maintenance

(Narrowband Secure Voice Stand Alone Maintenance)

Course Number: A-101-0156.

Location: Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/92.

Objectives: To provide electronic technicians with the skills and knowledge necessary to maintain specialized communications equipment.

Instruction: Lectures, practical demonstrations, and laboratory work cover security and classification procedures, voice-to-digital encoding and decoding, modems, transmitting and receiving digital signals, and maintenance and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical technology communications systems maintenance and troubleshooting (5/82).

NV-1715-1101

ASROC Missile Intermediate Maintenance

Course Number: A-121-0146.

Location: Service School Command, Orlando, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–4/93.

Objectives: To train enlisted personnel in the operation and maintenance procedures for the ASROC missile.

Instruction: Lectures and practical exercises cover the performance of the ASROC missile, including its physical description, interfacing, functional and operational description, installation procedures, and preventive and corrective maintenance.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/83).

NV-1715-1103

Torpedo Mk 46 Mod 5 Intermediate Maintenance

Course Number: A-123-0174.

Location: Service School Command, Orlando, FL.

Length: 12 weeks (420 hours).

Exhibit Dates: 1/90–2/90.

Objectives: To train enlisted personnel in the maintenance of the Mk 46 torpedo and its accessories.

Instruction: Lectures and practical experiences cover the maintenance of the Mk 46 torpedo, including a functional description of each system, assembly, inspection, performance testing, troubleshooting, and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in systems maintenance and troubleshooting or as a technical elective (4/83).

NV-1715-1104

Torpedo Mk 46 Mod 5 Test Equipment Intermediate Maintenance

Course Number: A-123-0175.

Location: Service School Command, Orlando, FL.

Length: 13 weeks (500 hours).

Exhibit Dates: 1/90–7/91.

Objectives: To train personnel in intermediate maintenance for torpedo Mk 46 test equipment.

Instruction: Lectures and practical exercises cover the theory of operation and preventive and corrective maintenance of test sets for exploder wells, gyroscope, cable, after bodies and exercise heads. The course includes a great deal of practical electronic troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance and electronic troubleshooting (4/83).

NV-1715-1105

Torpedo Mk 48 Mods 1 and 3 Intermediate Maintenance

Course Number: A-123-0140.

Location: Service School Command, Orlando, FL.

Length: 15 weeks (650 hours).

Exhibit Dates: 1/90–3/93.

Objectives: To train fleet personnel in the theory of operation and maintenance procedures for torpedo Mk 48 Mod

Instruction: Lectures and practical exercises cover equipment maintenance, including logistics, safety, troubleshooting, fault isolation, and repair or replacement of parts.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in system maintenance and troubleshooting or as a technical elective (4/83).

NV-1715-1106

Torpedo Mk 48 Mods 1 and 3 Test Equipment Intermediate Maintenance

Course Number: A-123-0141.

Location: Service School Command, Orlando, FL.

Length: 26 weeks (1040 hours).

Exhibit Dates: 1/90–5/91.

Objectives: To provide personnel with the knowledge necessary to perform intermediate maintenance and calibration on test equipment for a torpedo.

Instruction: Instruction includes the theory of operation and laboratory applications of electronic test equipment, including oscilloscope, counter-timer, frequency synthesizer, phasemeter; digital devices, including A/D converters, decoders, multiplexers, RAM, PROM, tristate devices, 8080A microprocessor, and 8228 controller; special devices and circuits, including operational amplifiers, UJT, SCR, LED, and opto-isolators; application of ATLAS programming language; simple binary and BCD arithmetic; study of Honeywell 6/43 minicomputer system; study of 8 inch flexible disk drive; and study of synchro-digital interface equipment. Laboratory work also includes troubleshooting of electronic assemblies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to microprocessors and 2 in electronic troubleshooting (4/83).

NV-1715-1108

Mineman Test Set Repair and Maintenance Training

Course Number: J-647-0018.

Location: Fleet and Mine Warfare Training Center, Charleston, SC.

Length: 12 weeks (360 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To provide senior minemen with the necessary skills and knowledge maintain mine test equipment.

Instruction: Lectures and practical laboratory exercises cover basic electricity/electronics, including series, parallel, and series-parallel AC and DC circuits and bridge circuits and active circuits using tubes and solid state devices. Troubleshooting and calibrating specific test equipment are also included.

Credit Recommendation: In the vocational certificate category, 6 semester hours in basic electricity/electronics (3/83).

NV-1715-1109

Mineman Supervisory and Advanced Technical Training

Course Number: J-647-0017.

Location: Fleet and Mine Warfare Training Center, Charleston, SC.

Length: 19 weeks (617 hours).

Exhibit Dates: 1/90–3/93.

Objectives: To provide selected senior enlisted personnel with the necessary skills and related administrative and technical knowledge to perform mine readiness and maintenance.

Instruction: Lectures and laboratory exercises cover the intermediate maintenance of a variety of weapons. Included are exercises in basic electricity and electronics covering series, parallel, and series-parallel circuits, AC and DC circuitry, bridge circuits, rectifiers, and active circuits using tubes and solid state devices. Lectures are conducted on the administration, logistics, safety, quality assurance, work load management, operations, and readiness policies and procedures required by mine shop supervisors and middle managers.

Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electricity/electronics (3/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to management (3/83).

NV-1715-1110

Fully Automatic Switching Terminal

Course Number: A-130-0267.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 5 weeks (160 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To train experienced electronics technicians to perform circuit adjustments, hardware and software maintenance, and troubleshooting and repair an automatic switching terminal.

Learning Outcomes: Upon completion of this course, the student will be able to describe the functions and subsystems of an automatic switching terminal, perform maintenance on digital systems, isolate faults, and repair digital systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital equipment maintenance and repair (8/83).

NV-1715-1112

Synchronous Distributed Processor 2

Course Number: A-130-0250.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–8/93.

Objectives: To train experienced electronic technicians to perform preventive and corrective maintenance on synchronous distributed processor systems.

Learning Outcomes: Upon completion of the course, the student will be able to describe the function of a data processor and distribution subsystem, perform maintenance on digital systems, isolate faults, and repair digital systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital equipment maintenance, troubleshooting, and repair (8/83).

NV-1715-1113

Time Series Acoustic Recall System Maintenance

Course Number: A-130-0246.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 4 weeks (130 hours).

Exhibit Dates: 1/90–9/93.

Objectives: To provide experienced electronics technicians with the necessary background to perform preventive and corrective maintenance on selected digital signal processing units.

Learning Outcomes: Upon completion of the course, the student will be able to perform all necessary preventive and corrective maintenance on selected digital signal processing units and their associated power supplies using the necessary test equipment and technical manuals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic circuit repair and maintenance (8/83).

NV-1715-1114

Ocean Systems Technician Electronic

Course Number: A-130-0114.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–8/93.

Objectives: To provide technicians with the necessary prerequisite subject matter for entrance into specialized equipment courses.

Learning Outcomes: Upon completion of the course, the student will be able to use algebra to solve electric and electronic circuit problems, apply the concepts of Ohm's and Kirchhoff's laws in series and parallel DC and AC circuits, apply digital theory to computer circuits, and apply electronic solid state and vacuum tube theory to functional circuits.

Credit Recommendation: In the vocational certificate category, 4 semester hours in fundamentals of DC and AC circuit analysis, 3 in fundamentals of electronics, and 2 in algebra and trigonometry (8/83); in the lower-division baccalaureate/associate degree category, 4 semester hours in digital circuits and computer fundamentals and 2 in algebra and trigonometry for non—technology majors (8/83).

NV-1715-1117

Aegis Combat System Maintenance Supervisor

Course Number: A-121-0483; S-121-0483.

Location: Naval Systems Department, Moorestown, NJ; Aegis Training Center, Wallops Island, VA.

Length: 7-13 weeks (228-520 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide senior fire control technicians with the knowledge to coordinate repairs, manage system maintenance, and administer system reports.

Instruction: Lectures and practical exercises cover familiarization with the documentation and capabilities of a phased array radar and sonar system, including the computers, consoles, weapon systems, operator duties, and equipment configuration.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/88).

NV-1715-1119

AN/WSN-5 Inertial Navigation System Maintenance

Course Number: A-670-0049.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–10/93.

Objectives: After 9/93 see NV-1715-1791. To train personnel to operate, maintain, and troubleshoot an inertial navigation system.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of an inertial navigation system to the circuit card level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic troubleshooting laboratory or 1 in gyrocompass repair (10/83).

NV-1715-1120

Mk 23 Gyrocompass Systems Maintenance

Course Number: A-670-0056.

Location: Service School Command, Great Lakes, IL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–10/93.

Objectives: To train personnel in the operation, maintenance, and troubleshooting of a gyrocompass system.

Instruction: Lectures and practical exercises in the theory and operation of a gyrocompass system, including synchro signal amplifier, gyro principles, AC/DC power supplies and distribution, gravity reference systems, azimuth control, leveling control, compass control, damping control, alarm systems, and course indicators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in synchro and servo control systems and 1 in servo controls laboratory. NOTE: Credit in this course duplicates that found in A-670-0055 (NV-1715-1141). Students should receive credit for one or the other of the courses but not both (10/83).

NV-1715-1122

Terrier AN/SPG-55B Mod 9 Radar Maintenance

Course Number: A-104-0197.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA; Combat Systems Technical Schools Command, Mare Island, CA.

Length: 29-30 weeks (1160-1200 hours).

Exhibit Dates: 1/90–8/91.

Objectives: To provide naval personnel with the technical knowledge and skill necessary to operate and maintain a radar system.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of the AN/SPG-55B radar system, including ship's power distribution, Doppler techniques/systems, servos, and test equipment. Maintenance is performed to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic troubleshooting and 3 in radar fundamentals (11/83).

NV-1715-1123

Replacement Navigation Tender Technician

Course Number: A-193-0310.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 3-4 weeks (120-160 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To provide naval personnel with the skills and knowledge to perform intermediate level maintenance on navigation subsystems.

Instruction: Lectures and practical exercises cover the appropriate procedures for maintenance of a navigation test set, including printed circuit soldering techniques; use of test equipment including distortion analyzers, wave analyzers, strip chart recorders, voltmeters, computers, and specialized test sets; and repair and maintenance procedures for a sonar navigation set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic equipment maintenance laboratory (11/83).

NV-1715-1124

Radar Set AN/SPG-55B Terrier Operation and Maintenance

Course Number: A-104-0169.

Location: Combat Systems Technical Schools Command, Mare Island, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 29-30 weeks (1160-1200 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To provide naval personnel with the technical knowledge and skill necessary to operate and maintain a radar system.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of the AN/SPG-55B radar system, including ship's power distribution, Doppler techniques/systems, servos, and test equipment. Maintenance is conducted to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic troubleshooting and 3 in radar fundamentals (11/83).

NV-1715-1127

Missile Technician Poseidon
(Missile Technician Poseidon Replacement)

Course Number: A-121-0250.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 18-22 weeks (760-872 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide the skills necessary to troubleshoot and repair a Poseidon missile system.

Instruction: Lectures and practical exercises cover fleet ballistic missile weapon system familiarization, including calibration, preventive maintenance of hydraulic, pneumatic and hydrostatic systems; computer and electromechanical launch systems; and troubleshooting to the module level.

Credit Recommendation: In the vocational certificate category, 1 semester hour in hydraulics (6/89); in the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical maintenance and 3 in computer/control systems troubleshooting (6/89).

NV-1715-1128

Fire Control Technician Mk 88 Mod 2 Replacement

Course Number: A-121-0316.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To provide naval personnel with the skills and knowledge to operate, maintain, and repair a missile fire control system and its support equipment.

Instruction: Lectures and practical exercises cover the operation, fault isolation, and module level repair of a computer controlled fire control system, including the power distribution system; the operation, maintenance, and repair of magnetic disk drives; the digital computer network; magnetic tape units; and keyboard and display units; and the servicing and repair of the environmental systems for the missile and its equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in industrial/commercial wiring practices (11/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in data processing equipment maintenance, 2 in digital systems, and 3 in electronic maintenance laboratory (11/83).

NV-1715-1129

Poseidon Trident I Backfit Intermediate Level Fire Control Technician FCS 88 Mod 1/2
(Fire Control Technician Mk 88 Intermediate Level Maintenance)

Course Number: A-121-0317.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 19-20 weeks (800-804 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide electronics technicians with the necessary training to operate and maintain test sets and guidance simulators.

Instruction: Lectures and practical exercises cover the areas of digital electronics, optics, printers, tape readers, wire wrap operations, power supplies, and general control wiring.

Credit Recommendation: In the vocational certificate category, 2 semester hours in optical system maintenance and 1 in wire wrap techniques (6/89); in the lower-division baccalaureate/associate degree category, 3 semester hours in digital electronic troubleshooting and 2 in digital electronic circuitry (6/89).

NV-1715-1131

Electrostatically Supported Gyro Monitor (ESGM) Backfit Central Navigation Computer Technician Conversion

Course Number: A-193-0315.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (96 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To train electronics technicians in the repair of navigation computers associated with ESGM backfit navigation systems.

Instruction: Lectures and laboratory exercises cover the technical maintenance of a central navigation computer, including tape equipment, core memories, D/D converters, and navigation systems.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic troubleshooting (11/83).

NV-1715-1132

Electrostatically Supported Gyro Monitor (ESGM) Backfit Navigation Aids Technician Conversion

Course Number: A-193-0314.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To provide advanced training in the theory and maintenance of extraordinary faults associated with the ESGM backfit navigation system.

Instruction: Lectures and practical exercises cover the advanced theory of electrostatic gyro design principles using fundamentals of physics and mathematics. Electronic and digital troubleshooting of advanced digital systems related to the ESGM is an integral part of the course.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic and digital troubleshooting and 1 in physics (11/83); in the upper-division baccalaureate category, 2 semester hours in the theory of gyro mechanisms for non—engineering majors (11/83).

NV-1715-1133

AN/SPS-48C Radar

Course Number: A-104-0188.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 26 weeks (1040 hours).

Exhibit Dates: 1/90–11/93.

Objectives: To provide radar technicians with the skills and knowledge to operate, maintain and repair a search radar system used in an automatic target detection system.

Instruction: Lectures and practical exercises in the operation and maintenance of a specialized search radar system including op code and assembly language programming of a UNIVAC 1616 computer system with the inclusion of memory transfers, tape and I/O devices.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic troubleshooting, 3 in computer science or assembly language, 2 in microwave fundamentals (11/83).

NV-1715-1135

Trident I Backfit Missile Technician (MT) Replacement

Course Number: A-121-0329.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 17-18 weeks (696-750 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide naval personnel with the skills necessary to troubleshoot and repair the Trident backfit missile system.

Instruction: Lectures and practical exercises cover the operation, maintenance, and module level repair of the Trident missile system, including strategic weapons system familiarization; missile launch systems and subsystems; support systems; mechanical systems, including hydrostatic, hydraulic, and pneumatic systems; guidance systems; electronic control systems; and the missile control computer.

Credit Recommendation: In the vocational certificate category, 1 semester hour in hydraulics (6/89); in the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical maintenance and 3 in computer/control system troubleshooting (6/89).

NV-1715-1136

Plotting System PT-512/S Tactical Display Maintenance

Course Number: *Version 1:* A-623-0037. *Version 2:* A-623-0037.

Location: Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 5 weeks (200 hours). *Version 2:* 5 weeks (200 hours).

Exhibit Dates: *Version 1:* 10/93–Present. *Version 2:* 1/90–9/93.

Learning Outcomes: *Version 1:* To train students to maintain, troubleshoot, and repair a tactical display plotting system. *Version 2:* To train students to maintain, troubleshoot, and repair a tactical display plotting system.

Instruction: *Version 1:* Lectures and practical exercises cover a review of basic electronics and servo systems and full coverage of an electromechanical system, including plotting table, data converter, dead reckoning indicator, and troubleshooting techniques. *Version 2:* Lectures and practical exercises cover a review of basic electronics and servo systems and full coverage of an electromechanical system, including plotting table, data converter, dead reckoning indicator, and troubleshooting techniques.

Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in electromechanical systems (11/95); in the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical systems (11/95). *Version 2:* In the vocational certificate category, 4 semester hours in electromechanical systems (11/95); in the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical systems (11/95).

NV-1715-1137

AN/URN-25 Afloat TACAN Maintenance

Course Number: A-102-0239.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–12/91.

Objectives: After 12/91 see NV-1715-1587. To train personnel to maintain and repair a specific navigational set, antenna, and antenna group.

Instruction: Lectures and laboratory exercises cover operation, maintenance, and repair of the AN/URN-25 navigational set, including AC/DC power supplies, coder-keyer circuits, receiver transmitter circuits, control indicator circuits, and FSK circuits; the power and monitoring circuits of the OE-273/URN antenna group; and the power, monitoring, and modulation generator circuits of the OE-258/URN antenna.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic troubleshooting (9/83).

NV-1715-1138

Broadcast Control Authority (BCA)
Operational Control Center
Operator

Course Number: A-260-0031.

Location: Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–1/93.

Objectives: After 1/93 see NV-1715-1778. To train radiomen to operate a data processing system and maintain submarine broadcast equipment at SSIXS shore sites under all operating conditions and without supervision.

Instruction: Lectures and practical exercises cover the hardware configuration and software functions of the AN/USQ-64(V) data processing system and its peripherals, their operation in various modes and differing conditions, and failure handling procedures.

Credit Recommendation: In the vocational certificate category, 2 semester hours in communications equipment operation (9/83); in the lower-division baccalaureate/associate degree category, 1 semester hour in electronic equipment operation for broadcast communications (9/83).

NV-1715-1139

Dead Reckoning Analyzer Indicator Mk 10
Mod 0/Dead Reckoning Tracer Mk 6
Mod 4B (DRAI/DRT) Maintenance

Course Number: A-623-0069.

Location: Fleet Training Center, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–9/93.

Objectives: After 9/93 see NV-1715-1787. To provide naval personnel with the technical knowledge and skill necessary to operate and maintain a dead reckoning analyzer and tracer.

Instruction: Lectures and practical exercises cover the fundamentals of electronics, including AC/DC circuits, electronic devices, and digital logic devices; the fundamentals of control transformers, synchros, and resolvers; and the operational procedures, calibration, and circuit checks of both the Mk 10 and Mk 6 equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic devices and 2 in electronic circuit troubleshooting (9/83).

NV-1715-1141

Mk 19 Gyrocompass Systems Maintenance

Course Number: A-670-0055.

Location: Service School Command, Great Lakes, IL.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–10/93.

Objectives: To train personnel in the operation, maintenance, troubleshooting, and repair of a shipboard gyrocompass system.

Instruction: Lectures and laboratory exercises cover the theory and operation of a gyrocompass system, including principles of synchros, servos, and gyros; synchro systems, including signal amplifiers, synchro testers, course indicator, electronic subassemblies, and gyro trainers; DC power supplies (using three phase AC sources); gyro systems, including roll/pitch follow-up, fast erect systems, computer control systems, integrators, damping, accelerometers, speed/tilt systems, and system alarms; and electronic power supplies and special test equipment including the operation of a phase-sensitive voltmeter and a dual channel recorder. Extensive troubleshooting and repair of the system is also included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in synchro and servo control systems and 1 in electronic maintenance and troubleshooting laboratory. NOTE: Credit in this course duplicates A-670-0056 (NV-1715-1120). Students should receive credit for one or the other of the courses but not both (10/83).

NV-1715-1143

Advanced Electronic Warfare Applications

Course Number: A-230-0018.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–6/92.

Objectives: After 6/92 see NV-1715-1687. To provide training to senior personnel in electronic detection and coordination of equipment.

Learning Outcomes: Upon completion of the course, the student will be able to detect, classify, and track targets; coordinate integration of electronic warfare equipment with other weapons systems; originate correspondence to obtain support resources and services; and organize maintenance and training support.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/87).

NV-1715-1144

AN/SLQ-32(V) Presail/Underway Operations
(Electronic Warfare Technician AN/SLQ-32
Operator)

Course Number: A-102-0210.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/90.

Objectives: After 5/90 see NV-1715-1688. To provide personnel with the skills to operate a specific piece of military equipment.

Learning Outcomes: Upon completion of the course, the student will be able to perform electronic warfare presail and underway watch duties aboard an AN/SLQ-32 equipped ship.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/87).

NV-1715-1145

AN/SLQ-32(V)3 Electronic Countermeasures
(ECM) Maintenance

Course Number: A-102-0216.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–12/92.

Objectives: After 12/92 see NV-1715-1655. To provide knowledge and skills required to perform preventive and corrective maintenance on a specific piece of electronic warfare equipment.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operation, signal flow, and interconnects of the antenna, power supplies, signal processing, analog/digital conversion, system controls, receiver/transmitter, and computer of a receiver/transmitter system using digital control and signal processing; perform preventive maintenance, alignment, troubleshooting, and repair; and use general and special purpose test equipment including computer generated diagnostic tests.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 2 semester hours in receiver/transmitter digital system maintenance (7/87).

NV-1715-1146

Aviation Electronics Warfare Fundamentals

Course Number: A-102-0301.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–12/92.

Objectives: After 12/92 see NV-1715-1651. To provide the student with knowledge of radar, general aircraft maintenance, aircraft electronic warfare systems, and general purpose test equipment.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate a fundamental knowledge of digital circuits; demonstrate a fundamental knowledge of radar and electronic warfare concepts; and demonstrate a fundamental knowledge of corrosion control, aircraft electrical maintenance, electronic warfare test equipment, transmission lines and antenna concepts, and tangential sensitivity for electronic warfare systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in an electronics elective (7/87).

NV-1715-1147

Aviation Electronics Warfare O Level Maintenance

Course Number: A-102-0299.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–12/92.

Objectives: To provide instruction on a system representative of a countermeasures weapon system.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate a basic knowledge of VHF/LF/HF receivers, frequency measurements, pulse analyzer indicators, direction finding indicators, video and audio recorders, frequency distribution systems and antennas, and testing procedures and maintenance techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems maintenance (7/87).

NV-1715-1149

Aviation Electronic Warfare, Receivers, Analyzer, Recorder and Display Intermediate Level Maintenance

(Aviation Electronics Warfare Intermediate Level Maintenance)

Course Number: A-102-0300.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–1/95.

Objectives: To provide intermediate maintenance instruction on the various items of equipment that comprise an electronic warfare weapons system.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate fundamental knowledge of VHF/UHF/FM receivers, pulse analyzer indicators, and XYZ displays; demonstrate fundamental knowledge of video recorder and recorder/reproducers; and demonstrate appropriate testing and maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems maintenance (1/84).

NV-1715-1150

Countermeasures Set AN/ULQ-6C Maintenance

Course Number: A-102-0233.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–1/94.

Objectives: To provide skill to perform preventive and corrective maintenance on a countermeasures set.

Learning Outcomes: Upon completion of the course, the student will be able to describe operation and signal flow of antenna, power supplies, modulators, RF circuits, video circuits, amplifiers, pulse generators, controls, system interconnects of a radar system and use standard test equipment to maintain, align, troubleshoot, and repair circuits and subsystems of a receiver/transmitter system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in receiver/transmitter system troubleshooting and maintenance (1/84).

NV-1715-1157

Electrostatically Supported Gyro Monitor (ESGM) Duplex Platform Interface Buffer

Course Number: A-193-0335; A-193-0435.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide advanced training for technicians in the theory and maintenance of a multiplexer interface buffer.

Instruction: Lectures and laboratory exercises cover the functional description and operation of a computer-controlled multiplexer interface buffer. Clock circuitry, computer interfacing, register and counter operation, multiplexer operation, RAM memory unit, and signal tracing are examined. Laboratory exercises cover troubleshooting and corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in multiplexer/buffer theory and digital circuits laboratory (10/89).

NV-1715-1158

Electrostatically Supported Gyro Monitor (ESGM) Theory and Maintenance

Course Number: A-193-0330.

Location: Submarine School, New London, Groton, CT; Fleet Ballistic Missile Training Center, Charleston, SC; Trident Training Facility, Bangor, Bremerton, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide technicians with training in the theory and maintenance of an analog/digital monitor.

Instruction: Lectures and laboratory exercises cover the physical and functional areas of the equipment which monitors the operating of an electrostatically supported gyro. The student learns the operating characteristics of electromagnetic accelerometers, gyro torque directors, servos, attitude readout circuits, and computer programs for operation and gyro maintenance. Maintenance and troubleshooting procedures are emphasized.

Credit Recommendation: In the vocational certificate category, 2 semester hours in servo control systems and maintenance (10/89); in the lower-division baccalaureate/associate degree category, 1 semester hour in servo control laboratory (10/89).

NV-1715-1170

Trident Missile Technician Replacement

Course Number: A-121-0441.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 21 weeks (659 hours).

Exhibit Dates: 1/90–8/92.

Learning Outcomes: Upon completion of the course, the student will be able to perform routine checkout procedures on Trident Missile launching systems, perform routine maintenance procedures on missile launching system, and troubleshoot missile launching system faults to the board or module level.

Instruction: Lectures and laboratory exercises cover the operation, maintenance, and module level repair of a missile launch system, including its launching equipment; hydraulic systems; power supplies; radiation monitoring equipment; and heating, cooling, and ventilation equipment. The student is given a functional description of the equipment and trained to recognize and interpret faults using flow charts and computer-aided diagnostics to isolate the fault.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electromechanical systems technology (3/89).

NV-1715-1172

Trident Ship Control and Atmosphere Support Technician Level 2

(Trident Ship's Control Level 2)

Course Number: A-623-0081.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 8 weeks (397 hours).

Exhibit Dates: 1/90–6/94.

Objectives: To prepare communications electricians to qualify as maintenance electricians on specific equipment.

Instruction: This is a pipeline course. See NV-1715-1305 (A-623-0084), NV-1715-1306 (A-623-0083), NV-1715-1307 (A-623-0085), and NV-1715-1308 (A-623-0086).

Credit Recommendation: Please refer to the individual exhibits noted above for credit recommendation (2/89).

NV-1715-1173

Trident Ship Control and Atmosphere Support Technician Level 3

(Trident Ship's Control Level 3)

Course Number: A-623-0082.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 8 weeks (432 hours).

Exhibit Dates: 1/90–Present.

Objectives: To prepare experienced communications electricians to maintain and repair specific equipment.

Instruction: This is a pipeline course. See NV-1715-1310 (A-623-0093), NV-1715-1311 (A-623-0114), and NV-1715-1312 (A-623-0113).

Credit Recommendation: Please refer to the individual exhibits noted above for credit recommendation (2/89).

NV-1715-1174

Antisubmarine Warfare (ASW) Module Acoustic Systems

Course Number: J-102-0360.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 14 weeks (490 hours).

Exhibit Dates: 1/90–9/94.

Objectives: To provide training in the operation and repair of submarine detection gear and associated peripheral equipment.

Learning Outcomes: Upon completion of the course, the student will be able to use test equipment and operational procedures to isolate faults and repair equipment; repair equipment to the module level; repair some equipment to the component level; use oscilloscopes, digital voltmeters, and specialized test equipment; and use factory technical literature and diagrams for troubleshooting purposes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic equipment maintenance or instrumentation repair (9/84); in the upper-division baccalaureate category, 2 semester hours in advanced digital systems for non—engineering majors (9/84).

NV-1715-1175

Antisubmarine Warfare (ASW) Support Communications Maintenance Technician

Course Number: J-101-0817.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 13 weeks (520 hours).

Exhibit Dates: 1/90–6/90.

Objectives: After 6/90 see NV-1715-1533. To train personnel in the operation and maintenance of an ASW communications system.

Learning Outcomes: Upon completion of the course, the student will be able to use the teletypewriter, voice security systems, tape recorders, modems, remote antenna control systems, and a communications console; operate the ASW communications system; troubleshoot a multichannel tape recording system; troubleshoot HF/UHF security communications systems; troubleshoot communications data link systems; and troubleshoot ASW support communications systems. All troubleshooting is done to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in data communications, 2 in digital systems analysis, and 3 in electronic equipment maintenance/instrumentation (troubleshooting) (9/84).

NV-1715-1176

Antisubmarine Warfare Operations Center (ASWOC) Radioman
(Antisubmarine Warfare (ASW) Support Communications Operator)

Course Number: J-201-0816.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 6 weeks (210 hours).

Exhibit Dates: 1/90–2/92.

Objectives: After 2/92 see NV-1715-1814. To train radio personnel to operate and coordinate various subsystems of the ASW support communications platform.

Learning Outcomes: Upon completion of the course, the student will understand the principles of high frequency and ultrahigh frequency communications, be familiar with data link and teletype circuits and voice communication systems, and operate the various subsystems of the antisubmarine warfare support communications platform.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in a survey of electronic communications (3/87).

NV-1715-1177

Force High Level Terminal Data Systems Maintenance Technician

Course Number: J-221-0389.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–12/95.

Objectives: After 12/95 see NV-1715-1815. To provide personnel with the technical knowledge and skills necessary to maintain data entry and display equipment for a computer system.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot and repair UNIVAC 2000 data terminal, three types of CRT display terminals, disk storage unit and its controller, data network controller, magnetic tape drive and controller, digital communication interface equipment, digital plotter and printers, and data entry equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital equipment troubleshooting and repair (8/84).

NV-1715-1178

Gun 5"/54 Mk 45 Mod 0 Operational Maintenance

Course Number: J-041-0130.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (105 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide the knowledge and skills required to perform supervised maintenance on a gun mount and its associated equipment.

Learning Outcomes: Upon completion of the course, the student will be able to identify the function and location of the component parts of the Mk 45 gun mount, maintain oil levels and nitrogen pressures, perform prefire and postfire checks, observe all safety precautions, inspect and maintain all parts, and demonstrate smoothness of operation during active firing.

Credit Recommendation: Credit is not recommended due to the limited, specialized nature of the course (10/90).

NV-1715-1179

76mm/62 Caliber Mod 0/1 Gun Operation and Maintenance
(76mm/62 Caliber Mk 75 Mods 0/1 Gun Operation and Maintenance)

Course Number: J-113-0040.

Location: Fleet Training Command, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 9-10 weeks (350 hours).

Exhibit Dates: 1/90–Present.

Objectives: To provide the knowledge and skills required to operate, maintain, and repair the 76MM/62 caliber gun mount.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair the Mk 75 Mods 0/1 gun, including mounting systems, barrel cooling system, anti-icing system, weapons control console, hydraulic positioning systems, and electrical/servo systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical laboratory (9/95).

NV-1715-1180

Radar Set AN/SPG-53F (Modified) Operational Maintenance

Course Number: J-113-0108.

Location: Fleet Combat Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (140-160 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train personnel to operate, perform preventive maintenance, isolate faults, and repair a radar set.

Learning Outcomes: Upon completion of the course, the student will be able to operate the radar set without supervision, be familiar with the subsystems of the radar set, recognize a malfunction and perform troubleshooting procedures to isolate a fault, use tools and test equipment to perform adjustments or to replace parts, perform preventive maintenance of the radar set, and perform turn-on and checkout procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical circuits analysis and troubleshooting/maintenance (6/91).

NV-1715-1181

EC-130 Electrical and Instruments Maintenance

Course Number: D-602-0451.

Location: Air Station, Patuxent River, MD.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/90–11/94.

Objectives: To provide personnel with the knowledge and skills necessary to maintain and troubleshoot the aircraft's electrically operated instrument systems.

Instruction: Lectures and laboratory application cover AC and DC power sources and distribution related to fuel quantity indicating, anti-icing, air conditioning, pressurization, propeller, landing gear, brake, antiskid, and flight control warning systems. Student also learns to understand, operate, and maintain electrically related instruments, including flight director, altitude heading, automatic pilot, inertial navigation, altimeter, and pitot-static systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electrical fundamentals and 3 in instrument familiarization (11/84); in the lower-division baccalaureate/associate degree category, 5 semester hours in electrical systems (11/84).

NV-1715-1182

TACAMO Communication and Avionics System Operation

Course Number: D-050-0412.
Location: Air Station, Patuxent River, MD.
Length: 7 weeks (280 hours).
Exhibit Dates: 1/90–11/94.

Objectives: To provide skills and training necessary to operate a communications system.

Learning Outcomes: Upon completion of the course, the student will be able to operate, under normal conditions, EC-130 TACAMO communications equipment, including VLF, HF, and UHF receivers and transmitters; operate teletype equipment including a printer, tape reader, and a Baudot-Morse converter; make normal adjustments to the frequency time standard; and operate AC power distribution systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/84).

NV-1715-1183

TACAMO Communications System Maintenance

Course Number: D-102-0422.
Location: Air Station, Patuxent River, MD.
Length: 18 weeks (720 hours).
Exhibit Dates: 1/90–11/94.

Objectives: To provide knowledge and skills necessary to troubleshoot and maintain the TACAMO equipment and flight deck avionics.

Learning Outcomes: Upon completion of the course, the student will be able to perform nominal checkout procedures and troubleshoot TACAMO communications systems and EC-130G/Q avionics systems, including power distribution; ULF, HF, VHF, and UHF communications; teletype equipment; and system switching.

Credit Recommendation: In the vocational certificate category, 2 semester hours in introduction to troubleshooting of communications receiver/transmitter systems (11/84).

NV-1715-1184

TACAMO UHF/HF Communications System Intermediate Maintenance

Course Number: D-102-6144.
Location: Air Station, Patuxent River, MD.
Length: 19 weeks (760 hours).
Exhibit Dates: 1/90–11/94.

Objectives: To provide electronics technicians with training in maintenance and repair of communications equipment including troubleshooting using specialized test equipment.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and perform board level repair on the AN/ARC-132 HF receiver/transmitter, AN/ARC-138 UHF transceiver, and AM-658 RF drives and describe the functional operation and perform board level troubleshooting on the CP-970/USQ (8311-13) computer, 7404A data converter, USC-11A data converter, USC-11A data modem, and USC-14 teletype adapter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital system troubleshooting, 2 in RF signal processing and signal tracing, 2 in introduction to digital logic systems (11/84).

NV-1715-1185

TACAMO VLF Communications and Verdin System Intermediate Maintenance

Course Number: D-102-6145.
Location: Air Station, Patuxent River, MD.
Length: 19 weeks (760 hours).
Exhibit Dates: 1/90–2/95.

Objectives: To provide training in the maintenance and repair of a particular communications system.

Learning Outcomes: Upon completion of the course, the student will be able to adjust and operate two specific pieces of equipment and troubleshoot to the board level using typical analog and digital test equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in schematic reading and electronic systems (2/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in troubleshooting of power supplies and 2 in introduction to digital computers, I/O, and programming (2/85).

NV-1715-1186

15G20 Simulator Maintenance, Class C1

Course Number: C-103-2041.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 3 weeks (120 hours).
Exhibit Dates: 1/90–2/95.

Objectives: To provide the skills necessary to perform preventive and corrective maintenance on a radar approach control simulator.

Instruction: Lectures and practical exercises cover the operation of a radar approach control simulator and its various input channels including a very cursory review of microprocessor basics. A majority of the class time is devoted to testing, troubleshooting to a faulty circuit card or chassis-mounted component, and alignment of equipment.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (2/85).

NV-1715-1187

15G21 Carrier Air Traffic Control Simulator Maintenance, Class C1
(15G21 Simulator Maintenance, Class C1)

Course Number: C-103-2042.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 2-3 weeks (104-120 hours).
Exhibit Dates: 1/90–10/92.

Objectives: To provide skills necessary to perform preventive and corrective maintenance on a radar air traffic control shipboard target simulator system.

Instruction: Lectures and practical exercises cover the operation of a radar traffic control shipboard target simulator system and its various input channels including a cursory review of microprocessor basics. A majority of the class time is devoted to testing, troubleshooting, to a faulty circuit card or chassis-mounted component, and alignment of equipment.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/89).

NV-1715-1190

AN/AAM-60(V)6 Electro-Optical Test Set Intermediate

Course Number: C-102-4016.
Location: Air Station, North Island, San Diego, CA.
Length: 10 weeks (400 hours).
Exhibit Dates: 1/90–4/95.

Objectives: To train technicians in the repair and maintenance of an electro-optical systems tester.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain an electro-optical system test set at the circuit board and component level. Logic devices covered include gates, multiplexers, decoders, line-drivers, phase-locked loops, CRT display electronics, servo system electronics, and a HP 2108B 16 bit microcomputer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital systems applications, 2 in electronic systems laboratory, and 1 in servo control applications laboratory (4/85).

NV-1715-1191

AN/APS-116 Search Radar and Peculiar Ground Support Equipment Intermediate Maintenance

Course Number: C-102-3679.
Location: Air Station, North Island, San Diego, CA.
Length: 13 weeks (520 hours).
Exhibit Dates: 1/90–4/95.

Objectives: To provide training in the operation and maintenance of search radar and ground support equipment.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate an understanding of the theory of operation of search radar and its ground support equipment and perform circuit analysis, testing, and fault isolation of a radar system and its associated ground support systems, including power supplies, transmitter and receiver systems, antenna systems, discrete digital circuits, linear integrated circuits, video processing circuits, oscilloscopes, frequency meters, function generators, and signal simulators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital electronics systems, 2 in digital electronics laboratory, 2 in linear electronics systems, 2 in linear electronics laboratory, 3 in radar systems, and 2 in radar systems laboratory (4/85).

NV-1715-1192

AN/AQS-13E Sonar Organizational Maintenance

Course Number: C-130-3401.

Location: Air Station, Jacksonville, FL; Air Station, North Island, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train electronics technicians to troubleshoot, repair, and maintain a sonar set at the block-diagram level.

Learning Outcomes: Upon completion of the course, the student will be able to service a military sonar system at the block-diagram level and apply sonar fundamentals to sonar hydrophones and projectors, reeling machines, dome control, azimuth and range indicators, and system power distribution.

Credit Recommendation: In the vocational certificate category, 1 semester hour in sonar repair and maintenance and 1 in sonar repair and maintenance laboratory (4/85).

NV-1715-1193

AN/USM-403 Hybrid Automatic Test Set (HATS) Operator

Course Number: C-198-3676.

Location: Air Station, North Island, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train personnel in the operation of a hybrid automatic test set and to use it to isolate and repair faults to the board level.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a hybrid automatic test set at the block-level, including programmable power supplies, CRT display, thermal printer, Diablo disk drive, and atlas analog.

Credit Recommendation: In the vocational certificate category, 3 semester hours in introduction to computer system repair and maintenance (4/85).

NV-1715-1194

S-3A Computer System Specialist Organizational Maintenance

Course Number: C-102-3681.

Location: Air Station, North Island, San Diego, CA.

Length: 8-9 weeks (340 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train personnel in the maintenance of a general purpose digital computer system.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operation of a general purpose digital computer system in terms of the main function of the CPU, I/O, and memory subsystem; identify the main functional unit in each subsystem and describe how they interact with other hardware and system software; load and run system diagnostic software; and interpret diagnostic results to isolate system faults.

Credit Recommendation: In the vocational certificate category, 6 semester hours in digital computer maintenance (4/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital computer system theory and 2 in digital systems maintenance laboratory (4/85).

NV-1715-1195

SH-3 Communications/Navigation Systems Organizational Maintenance

Course Number: C-102-3403.

Location: Air Station, North Island, San Diego, CA; Air Station, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To familiarize avionics personnel with the principles of operation and repair of communications, navigation, and radar systems of a helicopter.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, repair, and troubleshoot to the block-diagram level systems of a rotary wing aircraft, including UHF communications, search radar, radar altimeter, Doppler, interface, and automatic navigation systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/85).

NV-1715-1196

S-3A Electronic Systems Organizational Maintenance

Course Number: C-102-3676.

Location: Air Station, North Island, San Diego, CA.

Length: 7 weeks (272 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train aviation technicians to maintain an aviation electronic system.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate a working knowledge of system operation and troubleshoot and perform block-diagram level repair to HF/UHF communications systems; sonar, radar, and infrared detection systems; instrument landing systems; electronics countermeasures systems; and inter-aircraft interrogation systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems and 3 in communications systems laboratory (4/85).

NV-1715-1197

SH-60B Automatic Flight Control System Organizational Maintenance

Course Number: C-602-4407.

Location: Air Station, North Island, San Diego, CA; Air Station, Mayport, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train aviation electricians to operate, troubleshoot, repair, and maintain the electrical systems of a helicopter.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, repair, and maintain the the automatic flight control, stability augmentation, digital automatic flight control, and stabilization systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electromechanical laboratory and 1 in digital circuit repair (4/85).

NV-1715-1198

SH-60B Light Airborne Multipurpose System (LAMPS) Mk 3 Weapons System Technician Organizational Maintenance

Course Number: C-646-4406.

Location: Air Station, North Island, San Diego, CA; Air Station, Mayport, FL.

Length: 10 weeks (384 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train aviation electronics and antiwarfare technicians to analyze, troubleshoot, and maintain a weapons system.

Learning Outcomes: Upon completion of the course, the student will be able to perform functional level maintenance and troubleshooting on the SH 60B system, including data handling/data display subsystem, communications/navigation subsystem, and a mission equipment subsystem.

Credit Recommendation: In the vocational certificate category, 2 semester hours in spectrum analyzer servicing, 1 in spectrum analyzer applications in circuit analysis, 2 in electronic navigation operation principles and maintenance, and 1 in computer-aided testing techniques (4/85).

NV-1715-1199

Dynamics Alignment Test Set (DATS) Intermediate Maintenance

Course Number: C-198-3680.

Location: Air Station, North Island, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To provide personnel with the skills necessary to maintain and repair a dynamic alignment test set.

Learning Outcomes: Upon completion of the course, the student will be able to analyze, troubleshoot, and repair 5-15 volt power supplies; 5 IPS read/write assemblies; cassette tube transport modules; and control, memory, counter, and I/O printed circuit boards.

Credit Recommendation: In the vocational certificate category, 6 semester hours in radar maintenance and repair (4/85).

NV-1715-1200

Dynamics Alignment Test Set (DATS) Operator

Course Number: C-198-3679.

Location: Air Station, North Island, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To provide electronics and ASW technicians with the necessary skills to operate and maintain a dynamic alignment test set.

Learning Outcomes: Upon completion of the course, the student will be able to perform the tasks at the block diagram level, including DATS automatic testing, software analysis, tactical display system alignment, functional testing, and integrated system troubleshooting.

Credit Recommendation: In the vocational certificate category, 3 semester hours in radar maintenance and repair (4/85).

NV-1715-1201

IP-1214/AA Infrared Viewer Intermediate Maintenance

Course Number: C-102-3683.

Location: Air Station, North Island, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train personnel to perform component level maintenance on an infrared viewer.

Learning Outcomes: Upon completion of the course, the student will be able to operate and and perform board level maintenance on the IP-1214/AA infrared viewer and associated test set AN/AAM-60(V)6.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electro-optic applications (4/85).

NV-1715-1202

LN-66HP Radar Intermediate Maintenance

Course Number: C-102-3388.

Location: Air Station, North Island, San Diego, CA; Training Center, Norfolk, VA.

Length: 2 weeks (76 hours).

Exhibit Dates: 1/90–4/95.

Objectives: To train aviation electronics and ASW technicians to repair and maintain a radar set.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and perform board level maintenance on the a radar set, including power supply, transmitter/receiver, antenna, and all related circuit boards.

Credit Recommendation: In the vocational certificate category, 2 semester hours in radar repair and maintenance (4/85).

NV-1715-1203

E-2B AN/APS-96 Radar Organizational Maintenance

Course Number: C-104-3475.

Location: Air Station, Miramar, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide training in the operation and functional system level maintenance of a radar system.

Learning Outcomes: Upon completion of the course, the student will be able to operate, align, and maintain a radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radar systems laboratory (5/85).

NV-1715-1204

AN/ASN-39/39A and AN/ASN-41 Navigational Computer Systems Intermediate Maintenance

Course Number: C-102-3040.

Location: Air Station, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide training in the alignment, troubleshooting, and repair of electromechanical navigational computer systems at the module and component level.

Learning Outcomes: Upon completion of the course, the student will be able to apply the fundamental principles of aircraft navigation to align, test, maintain, and repair electromechanical navigational computing systems using synchros, servos, electronic amplifiers, and various mechanical linkages.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical laboratory (5/85).

NV-1715-1205

Semi-Automatic Checkout Equipment (SACE) with INS/AFCS/ADC/UE Test Benches Intermediate Maintenance

Course Number: C-102-3084.

Location: Air Station, Miramar, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide training in the operation and maintenance of electronic automatic test equipment.

Learning Outcomes: Upon completion of the course, the student will be able to operate, align, and calibrate semiautomatic test equipment needed for testing various avionics systems; construct test programs to automate a sequence of tests to be performed; and troubleshoot, repair, and maintain such equipment at the module and component levels.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in logic circuits, 2 in digital circuits laboratory, and 2 in electronic circuits laboratory (5/85).

NV-1715-1206

TS-2109/ASA-48 Semi-Automatic Checkout Equipment (SACE) Programmer Intermediate Maintenance

Course Number: C-102-3088.

Location: Air Station, Miramar, San Diego, CA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide training in maintaining, troubleshooting, and repairing semiautomatic test equipment.

Learning Outcomes: Upon completion of the course, the student will be able to construct programs for automatic test equipment to generate specific test sequences; understand functional operation and circuits of computer operated equipment interfaced to analog peripherals, including scaling, decoding, comparators, ADC, and counter/timers; and use self test procedures to isolate faults to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital circuit laboratory maintenance/troubleshooting of computerized control equipment and 3 in digital circuits (5/85).

NV-1715-1207

Inertial Platform Test Station (IPTS) Intermediate Maintenance

Course Number: C-102-3096.

Location: Air Station, Miramar, San Diego, CA.

Length: 6-7 weeks (264 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train electronics technicians to perform intermediate level maintenance on the inertial platform test station.

Learning Outcomes: Upon completion of the course, using a computer-controlled inertial platform test station, the student will be able to demonstrate understanding of computer modes, register functions, control words, and instructions; write simple machine language programs; perform diagnostic tests and troubleshooting of subassemblies; and describe function and operation of logic, ADC, power, data entry, interrupts, and inertial measuring unit circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer-controlled test equipment maintenance and operation and 1 in computer-controlled testing laboratory (5/85).

NV-1715-1208

AN/USM-402(V) Swept Frequency Measurement (SWFT Cart) Test Set Intermediate Maintenance

Course Number: C-102-3108.

Location: Air Station, Miramar, San Diego, CA.

Length: 5 weeks (185 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide fleet aviation electronics, antisubmarine, and fire control technicians the basic maintenance skills needed to align, calibrate, and repair the SWFT Cart (swept frequency) Test Set.

Learning Outcomes: Upon completion of the course, the student will be able to use schematic diagrams, logic drawings, and maintenance instruction manuals to identify and correct circuit problems; perform preventive maintenance and calibration on power supplies, frequency analyzers, marker generators, oscilloscopes, and recorders; use standard test equipment to troubleshoot circuits; and troubleshoot solid state and logic circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours (3 in lecture, 1 in laboratory) in electronic systems (5/85).

NV-1715-1209

TS-2109/OA-3739/OA-ASA 48 Semi-Automatic Checkout Equipment (SACE) Operator Intermediate Maintenance

Course Number: C-104-3476.

Location: Air Station, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide instruction in the operation of automatic test equipment used for testing avionics systems.

Learning Outcomes: Upon completion of this course, the student will be able to demonstrate an understanding of theory and actual operating procedures for several test consoles used for the semiautomatic testing of avionics systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (5/85).

NV-1715-1210

ASM-144 On Board Memory Tester Digital Volt Ohmmeter Intermediate Maintenance

Course Number: C-150-3488.

Location: Air Station, Miramar, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide electronics technicians with training in testing and troubleshooting of an onboard memory tester.

Learning Outcomes: Upon completion of the course, the student will be able to describe the purpose, characteristics, operation, and maintenance of memory tester, including component parts (i.e., core memory, digitizer, stimuli generator, power supplies, DVOM and interfacing/switching circuits) and demonstrate understanding of circuit theory/operation and testing of above components through laboratory assignments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital test equipment laboratory and 3 in digital circuits laboratory (5/85).

NV-1715-1211

AN/ASM-33B AN/ASM-122 Portable Module Test (PMT) Intermediate Maintenance

Course Number: C-150-3489.

Location: Air Station, Miramar, San Diego, CA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide instruction on the operation and maintenance of electronic test equipment at the board/component level.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and perform board/component level repair of electronic test equipment circuitry, including oscilloscopes, power supplies, horizontal sweep circuits, and vertical deflection circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronics laboratory (5/85).

NV-1715-1213

AN/USM-467 RADCOM Test Station Intermediate Maintenance Course

Course Number: C-198-3030.

Location: Air Station, Miramar, San Diego, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide the student training in the start-up, self test, and operation of the RADCOM Test Station.

Learning Outcomes: Upon completion of this course, the student will be able to program, boot strap, use diagnostic and self certification programs, test airborne equipment which using the AN/USM-467, and demonstrate a detailed understanding of hardware component function and operation including waveforms and signal levels.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer repair laboratory and 3 in digital computer principles (5/85).

NV-1715-1214

AN/ASN-31/36/92 Inertial Platform Maintenance Technician Intermediate Maintenance

Course Number: C-602-3017.

Location: Air Station, Miramar, San Diego, CA.

Length: 4 weeks (184 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To train electronics technicians in the operation and preventive maintenance of a computerized inertial platform test station and in its use in the testing and repair of inertial platforms.

Learning Outcomes: Upon completion of the course, the student will be able to operate the testing platform in both self testing modes and testing at inertial platforms; understand principles of inertial navigation, inertial platforms, accelerometers, gyroscopes, resolvers, synchros, and other sensors used on inertial platforms including analog and digital circuits; use diagnostic test programs to identify faults and perform alignment/calibration on both the platform tester and inertial platform; and remove and replace failed components such as gyros and resolvers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in avionics maintenance and testing (5/85).

NV-1715-1215

E-2B Navigational Systems Organizational Maintenance

Course Number: C-602-3487.

Location: Air Station, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide training in the maintenance and operation, at the organizational level, of the E-2B navigational systems.

Learning Outcomes: Upon completion of the course, the student will be able to use publications/diagrams in maintaining and troubleshooting systems and perform operational tests.

Credit Recommendation: In the vocational certificate category, 2 semester hours in avionics laboratory (5/85).

NV-1715-1216

TS-2109/OA-3742/OA-6672 Semi-Automatic Checkout Equipment (SACE) Intermediate Operators

Course Number: C-104-3477.

Location: Air Station, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–3/95.

Objectives: To familiarize the student with the operation and maintenance of the semiautomatic test benches.

Learning Outcomes: Upon completion of the course, the student will be able to operate the programming test console, inertial navigation test console, and universal encoder test console under close supervision.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/85).

NV-1715-1217

C-2A Avionics Systems Organizational Maintenance

Course Number: C-102-3493.

Location: Air Station, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/95.

Objectives: To provide training in the operation and system maintenance of avionics systems.

Learning Outcomes: Upon completion, the student will be able to demonstrate knowledge of component characteristics; operational checks; block-diagram analysis; and troubleshooting techniques for communications systems (intercom, UHF, HF), navigational systems (UHF radio, TACAN, LF/AF direction finder, UHF/ADF, LORAN, OMEGA), and special systems (IFF, radar altimeter, aircraft approach control, flight recorder-locater, weather radar).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in avionics systems (5/85).

NV-1715-1218

RT-542/ASQ, RT-546/ASQ-19, AN/ARC-52 Receiver Transmitter Intermediate Maintenance

Course Number: C-102-3079.

Location: Air Station, El Toro, CA; Air Station, Miramar, San Diego, CA.

Length: 3 weeks.

Exhibit Dates: 1/90–5/95.

Objectives: To provide maintenance personnel with theory of operation, shop test, and system troubleshooting procedures on the transmitter/receivers.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operation of the receiver/transmitter, signal trace the overall schematic of the system, and align and perform intermediate maintenance on the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications systems (5/85).

NV-1715-1219

Mk 117 Fire Control System (FCS) Basic Operation

Course Number: A-4E-0059.

Location: Submarine Training Facility, Norfolk, VA; Submarine Training Facility, Charleston, SC; Submarine Training Facility, San Diego, CA; Submarine Training School, Pacific, San Diego, CA; Submarine Base, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2 weeks (59 hours).

Exhibit Dates: 1/90–6/91.

Objectives: To give a detailed review of the operation and employment of the a fire control system.

Instruction: Course covers operation and employment of the Mk 81 weapon control consoles and the Mk 92 attack control systems. Course includes system theory and software interface.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems interfacing (11/85).

NV-1715-1221

Periscope Type 18 Combined Maintenance

Course Number: A-102-0157.

Location: Submarine Base, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 3 weeks (117 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To provide training in functional checkout, operation, maintenance, and repair of a periscope system.

Instruction: Lectures and laboratory instruction cover the theory of operation, functional analysis and description, logic flow, and maintenance concepts of type 18 periscope system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/85).

NV-1715-1222

Mk 9 Mod 4 Dead Reckoning Analyzer Indicator (DRAI) Combined Maintenance

Course Number: A-623-0108.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 2 weeks (65 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To provide training in functional checkout, operation, maintenance and repair of the Mk 9 Mod 4 dead reckoning analyzer indicator.

Instruction: Lecture and laboratory instruction on synchros, resolvers, control transformers, and servo loops found in the dead reckoning analyzer indicator.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical technology laboratory (11/85).

NV-1715-1223

Mk 19/27 Gyro Operator

Course Number: A-670-0050.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Base, New London, Groton, CT.

Length: 2 weeks (78 hours).

Exhibit Dates: 1/90–8/94.

Objectives: To provide training in the functional checkout and operation of the gyro operator. Students will be instructed in the proper methods of troubleshooting using necessary test equipment.

Instruction: Lectures and laboratory instructions cover flow diagrams and test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical/electronics lab (11/85).

NV-1715-1225

Mk 63 Torpedo Tube Basic Maintenance

Course Number: L-123-0014.

Location: Submarine Training Facility, San Diego, CA.

Length: 2 weeks (70 hours).

Exhibit Dates: 1/90–11/95.

Learning Outcomes: Upon completion of this course, the student will be able to describe the operational characteristics and maintenance requirements for the torpedo tube.

Instruction: Lectures cover the theory of operation and routine maintenance of the torpedo tube. Included topics are air, hydraulic, and ejection systems; safety precautions; troubleshooting; firing procedures; and record keeping. No actual hands-on training is provided due to lack of a trainer.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/85).

NV-1715-1226

AN/UYK-7 Computer Diagnostic Maintenance

Course Number: L-150-0002.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI.

Length: 4-5 weeks (175 hours).

Exhibit Dates: 1/90–11/95.

Objectives: To train personnel to repair, troubleshoot, and maintain the AN/UYK-7 computer using diagnostic tests and procedure guides.

Instruction: The course provides an introduction to AN/UYK-7 computer, functional characteristics of the central processor unit, and functional characteristics of input/output peripherals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer operation theory and 1 in computer operation laboratory (11/85).

NV-1715-1229

1. Integrated Launch and Recovery Television Surveillance
2. CV Air Operations Closed Circuit Television (ILARTS) Maintenance

Course Number: *Version 1:* A-191-0011. *Version 2:* A-191-0011.

Location: *Version 1:* Service School Command, Great Lakes, IL. *Version 2:* Training Center, Great Lakes, IL.

Length: *Version 1:* 18 weeks (692 hours). *Version 2:* 21 weeks (630 hours).

Exhibit Dates: *Version 1:* 10/94–Present. *Version 2:* 1/90–9/94.

Objectives: *Version 1:* Upon completion of the course, the student will be able to describe base-band video signal generation, processing, and storage and perform preventive and corrective maintenance on robust B/W TV surveillance systems. *Version 2:* Upon completion of the course, the student will be able perform maintenance in low-light level television systems.

Instruction: *Version 1:* Lectures and practical exercises cover technical math, electronic measurement, instrumentation, integrated circuits, amplifiers, and oscillators. Electronic maintenance theory is applied to robust closed circuit TV systems. *Version 2:* Lectures and practical exercises cover the maintenance of shipboard television equipment. Upon successful completion of this course, the student will be able to identify electronic circuit symbols; measure current voltage and resistance; use function generator, DVM, and oscilloscope to isolate a circuit board malfunction down to the component level; analyze resistive/reactive and tuned circuits; and troubleshoot low-light level B/W video cameras, video monitors, video cassette recorders, and reel-to-reel recorders.

Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in TV/VCR repair (12/95); in the lower-division baccalaureate/associate degree category, 4 semester hours in video technology (12/95). *Version 2:* In the vocational certificate category, 4 semester hours in TV/VCR servicing (1/86).

NV-1715-1230

1. Shipboard Information, Training, and Entertainment Closed Circuit Television (SITE)
2. Shipboard Information, Training, and Entertainment (SITE)
3. Ship's Information, Training and Entertainment (SITE II) Closed Circuit Television Maintenance

Course Number: *Version 1:* A-191-0010. *Version 2:* A-191-0010. *Version 3:* A-191-0010.

Location: *Version 1:* Service School Command, Great Lakes, IL. *Version 2:* Service School Command, Great Lakes, IL. *Version 3:* Training Center, Great Lakes, IL.

Length: *Version 1:* 18 weeks (635 hours). *Version 2:* 18 weeks (643 hours). *Version 3:* 25 weeks (752 hours).

Exhibit Dates: *Version 1:* 10/96–Present. *Version 2:* 10/94–9/96. *Version 3:* 1/90–9/94.

Learning Outcomes: *Version 1:* Upon completion of this course, the student will be able to describe the theory associated with the interior communications system with reference to video signal generation, processing, and storage; perform preventive and corrective maintenance on monochrome and color video cameras, receivers, and recorders; and apply the appropriate theory to the operation and maintenance of RF transmission, reception, and distribution systems. *Version 2:* Upon completion of the course, the student will be able to describe base-band video signal generation, processing, and storage; perform preventive and corrective maintenance on black/white and color video cameras, receivers, and recorders; and apply appropriate theory to the operation and maintenance of RF transmission, reception, and distribution systems. *Version 3:* Upon completion of the course, the student will be able to perform maintenance on training and entertainment systems.

Instruction: *Version 1:* This course includes lectures, demonstrations, and performance exercises on basic electricity, basic electronics, and digital systems; monochrome and color video monitors, corrective maintenance of monitors, and advanced theory and maintenance of monitors; color television receivers; operation and maintenance of camcorders; and video signal generation, transmission, and storage. *Version 2:* Lectures and practical exercises cover technical math, circuit schematics, measurement and instrumentation, integrated circuits, amplifiers, and oscillators. Electronic maintenance theory and practice are applied to black/white and color base-band video signal generation, transmission, and storage. *Version 3:* Lectures and practical exercises cover the maintenance of shipboard audiovisual equipment. Upon successful completion of this course, the student will be able to identify electronic circuit systems, measure current, voltage, and resistance; use function generator, DVM, and oscilloscope to isolate a circuit board malfunction down to the component level; analyze resistive and reactive circuits; and troubleshoot color video cameras, video cassette recorders, and reel-to-reel audio recorders.

Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in TV/VCR repair (10/97); in the lower-division baccalaureate/associate degree category, 4 semester hours in communications and telecommunication systems (10/97). *Version 2:* In the vocational certificate category, 4 semester hours in TV/VCR repair (12/95); in the lower-division baccalaureate/associate degree category, 4 semester hours in video technology (12/95). *Version 3:* In the vocational certificate category, 6 semester hours in television/VCR servicing (1/86).

NV-1715-1231

FFG-7 REPLACEMENT CREW TRAINING
(FFG-7 Class Ship Replacement Crew Training)

Course Number: J-113-0162.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train enlisted personnel to understand the interface between the system and its components and to operate display and weapons control consoles of a FFG-7 class guided missile frigate.

Instruction: Lectures and laboratory exercises cover the limitations, capabilities, and operation of a naval tactical data system, including such subsystems as a weapons control console, search radars, sonar, and weapon systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/86).

NV-1715-1232

FFG-7 CLASS COMBAT SYSTEM OFFICER
(FFG-7 Weapons System Officer)

Course Number: J-2E-0155.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train officers in the characteristics, operation, and deployment of a naval tactical data system multiple weapon combat system for the FFG-7 class guided guided missile frigate.

Instruction: Classroom lectures and laboratory exercises cover the limitations, capabilities, and operation of subsystems comprising the weapon system, including radar, sonar, and magnetic inputs, radio communications, and computer control. Laboratory exercises cover operation of all system components in engagement and deployment modes.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/89).

NV-1715-1233

ANTISUBMARINE WARFARE (ASW) OPERATIONS CENTER (ASWOC) SYSTEM OPERATOR, CLASS C

Course Number: J-210-0363.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 8 weeks (280-320 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train experienced personnel to operate tactical data processing equipment used in antisubmarine warfare.

Instruction: Training covers various operating modes of data communications video console, including data entry, recall, modify, print, plot, and transfer. Power up/down procedures and operation of a XEBEC disk operating system, Nova 2000 computer, Hazeltine 2000 plotter, and magnetic tape transport are all included. Using software properly, drafting standard naval messages in correct format, and analyzing acoustical data are also covered in this course.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer operator/data processor (11/90).

NV-1715-1234

ANTISUBMARINE WARFARE (ASW) MODULE OPERATOR

Course Number: J-210-0368.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 7-8 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train experienced personnel to operate tactical data processing equipment used in antisubmarine warfare.

Instruction: Operator training covers an antisubmarine warfare system, including such subsystems as video console, tape transport teletype terminal, XEBEC disk operating system, magnetic tape transport, and control panels. Also included are message format procedures, radio telephone operation, software management using utility programs, display aids, and interface characteristics.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer operations (6/86).

NV-1715-1235

NAVAL TACTICAL DATA SYSTEM INPUT

Course Number: J-221-0094.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–12/96.

Objectives: To train selected naval enlisted personnel in skills related to tactical data collection, system execution procedures, and interpretation of information unique to the mode of operation.

Instruction: Instruction includes lecture and practical applications in a laboratory mock-up environment. Console operations, systems monitoring, tracking, and the duties of the various system operators are the major areas of concentration.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/86).

NV-1715-1236

CV NAVAL TACTICAL DATA SYSTEM INPUT BASIC

Course Number: K-221-0092.

Location: Fleet Combat Training Center, Pacific, San Diego, CA; Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–12/96.

Objectives: To provide junior and middle grade enlisted personnel with training in the operating procedures, capabilities, and limitations of the CV/CVN class ship naval tactical data system.

Instruction: Classroom lectures and laboratory exercises provide the student with a basic knowledge of duties, purposes of various controls and subsystems, and modes of operation and practical applications, using a system mock-up of target tracking equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/86).

NV-1715-1237

ELECTRONIC WARFARE WATCH SUPERVISOR SURFACE

Course Number: J-233-0211.

Location: Fleet Training Group, Western Pacific, Yokosuka, Japan; Fleet Training Group, Pearl Harbor, HI; Fleet and Mine Warfare Training Center, Charleston, SC; Fleet Training Center, Mayport, FL; Fleet Combat Training Center, Pacific, San Diego, CA; Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 3-4 weeks (140 hours).

Exhibit Dates: 1/90–1/97.

Objectives: To train senior enlisted personnel in the concepts and operational applications of electronic warfare.

Instruction: Lectures cover a broad range of electronic warfare topics, including subject overview; assisting the electronic warfare officer; working knowledge of Soviet naval command, communications, and weapons; allied naval forces weapon capabilities; US naval forces and weapon capabilities; and electronic warfare organization and planning. Laboratory exercises includes assisting the electronic warfare officer in a tactical warfare game.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/86).

NV-1715-1238

TACTICAL SUPPORT CENTER DATA PROCESSING TECHNICIAN
(Antisubmarine Warfare (ASW) Operations Center Data Processing Technician, Class C)

Course Number: J-531-0365.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 9-10 weeks (360-400 hours).

Exhibit Dates: 1/90–Present.

Objectives: To train data processing technicians in the operation of the tactical data processing system utilized by the antisubmarine warfare operations center.

Instruction: Instruction includes formal classroom work and laboratory practice using current publications and equipment. Operation of the UNIVAC 1830A(CP901) computer system (CPU, disk drive, tape drive, printer, monitor), software, data bases, mission support operations, and basic system performance checks are covered.

Credit Recommendation: In the vocational certificate category, 2 semester hours in computer systems operation (3/96).

NV-1715-1239

WEAPON DIRECTION SYSTEM (WDS) MK 14 TERRIER CONSOLE OPERATOR

Course Number: J-113-0134.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 2-3 weeks (133 hours).

Exhibit Dates: 1/90–12/96.

Objectives: To train officers, warrant officers, and selected naval enlisted personnel in the efficient operation of the Mk 14 weapon direction system.

Instruction: Lectures and practical exercises cover common console operations of a terrier weapon system and the weapon/missile engagement controller. Training is provided under simulated warfare conditions in which equipment capability is reduced.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/86).

NV-1715-1240

1. Optical Landing Systems Maintenance (Optical Landing System Maintenance, Class C1)
2. Optical Landing System Maintenance

Course Number: *Version 1:* C-670-2010. *Version 2:* C-670-2010.

Location: Air Technical Training Center, Lakehurst, NJ.

Length: *Version 1:* 8-11 weeks (356-414 hours). *Version 2:* 8 weeks (312 hours).

Exhibit Dates: *Version 1:* 10/91–Present. *Version 2:* 1/90–9/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, maintain, and repair the following equipment with minimum supervision above the introductory level: the Fresnel lens optical landing system (FLOLS) Mk 6 Mod 3; the landing signal officer/heads up display (LSO/HUD) Mk 1 Mod 0 ; and the manually operated visual landing aid system (MOVLAS) Mk 1 Mod 2. *Version 2:* Upon completion of the course, the student will be able to operate, maintain, and repair the Fresnel lens optical Landing Mk 6 Mod 1 and the manually operated visual landing systems Mk 1 Mod 1, 2, and 3 or Mk II with minimum supervision.

Instruction: *Version 1:* Lectures and practical exercises in the troubleshooting, maintenance, operation, and repair of the Fresnel lens optical landing system Mk 6 Mod 3, the landing signal officer/heads up display Mk 1 Mod 0, and the manually operated visual landing aid system Mk 1 Mod 2. Topics include electrical and solid state devices, component identification, test equipment, indicator assembly stabilization, stabilization control equipment, reference lighting circuits, and lighting assembly. *Version 2:* Lectures and practical exercises in the troubleshooting and maintenance of the landing system and the manually operated visual landing aid system, including electrical and solid state devices, component identification, test equipment, indicator assembly stabilization, stabilization control equipment, reference lighting circuits, and lighting assembly.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electrical/electronic circuit theory and 3 in electrical systems troubleshooting and maintenance (1/96). *Version 2:* In the vocational certificate category, 2 semester hours in electricity or electronics theory (6/87); in the lower-division baccalaureate/associate degree category, 2 semester hours in electricity/electronic circuit theory and 3 in troubleshooting procedures (6/87).

NV-1715-1241

Outboard Maintenance Direction Finding (DF) Technician

Course Number: A-102-0327.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 18 weeks (720 hours).

Exhibit Dates: 1/90–4/91.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and perform module level service on the OK-324/SYQ computer, video display, teleprinter, AN/SLR-23 receiver, and AN/SRD-19A receiver.

Instruction: Illustrated lectures, laboratory exercises, and troubleshooting problems are used to teach preventive maintenance, troubleshooting, and corrective maintenance of the Outboard II receiver system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in system troubleshooting and 2 in system operation (7/87).

NV-1715-1242

Communications Technical Controller

Course Number: *Version 1:* A-260-0044. *Version 2:* A-260-0044.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 12 weeks (400-480 hours). *Version 2:* 12 weeks (400-480 hours).

Exhibit Dates: *Version 1:* 6/91–4/96. *Version 2:* 1/90–5/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate cryptographic equipment; troubleshoot, isolate, and identify circuit faults; operate test equipment; perform patch panel operations; perform in-service quality control check; and conduct trend analysis. *Version 2:* Upon completion of the course, the student will be able to operate a communications technical control facility, including organization, administration, reporting, quality control administration, testing, and troubleshooting.

Instruction: *Version 1:* Illustrated lectures, skilled exercise, and laboratories cover technical logs and reports; in-service and out-of-service control tests; DCS reporting; network reporting; troubleshooting; recognition of fault, fault isolation, and system restoration; and watchstanding. *Version 2:* Lecture with audiovisual aids, skilled exercises, and supervised laboratory exercises are used to teach the student the operating procedures of a communications technical control facility.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in telecommunications network manager (2/93). *Version 2:* In the vocational certificate category, 2 semester hours in office procedures and and 2 in communications theory (7/87).

NV-1715-1243

Basic Non-Morse Operator

Course Number: *Version 1:* A-231-0045. *Version 2:* A-231-0045.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 10 weeks (399 hours). *Version 2:* 22 weeks (880 hours).

Exhibit Dates: *Version 1:* 10/91–1/94. *Version 2:* 1/90–9/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to copy Morse code communications in block format at 16 groups per minute with 90 percent accuracy; describe the purpose of operating signals and procedure signs; understand radio wave propagation; explain how atmospheric variations affect radio wave propagation; define terms associated with antennas; define terms and abbreviations associated with modulation and waveform modulation; calculate and measure AM bandwidths; define terms associated with multiplexing; and have a knowledge of satellite and noncommunications systems. *Version 2:* Upon completion of the course, the student will be able to transcribe international Morse code at a rate of 16 groups/minute using a keyboard device and pencil. Student will also be familiar with basic concepts and terminology used in electronic communication and be able to apply these to radio printers, graphical analysis, target analysis, and identification.

Instruction: *Version 1:* Group-paced lectures/laboratory experiments address Morse code, automatic data processing, radio wave propagation, antenna theory, modulation, multiplexing, satellites, and noncommunications systems. *Version 2:* Course includes laboratory instruction in Morse code and classroom instruction covering basic concepts, definitions, terminology, and simple calculations used in electronic communications. Subjects presented include bandwidth, frequency allocation, types of modulation, multiplexing, and antennas.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in Morse code (2/93); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications (2/93). *Version 2:* In the vocational certificate category, 3 semester hours in electronic communications principles and 1 in Morse code (7/87).

NV-1715-1244

Telecommunications Operations Specialist

Course Number: *Version 1:* A-260-0043. *Version 2:* A-260-0043.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 5-6 weeks (190 hours). *Version 2:* 6 weeks (233 hours).

Exhibit Dates: *Version 1:* 7/91–8/93. *Version 2:* 1/90–6/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will have the knowledge and skills in communications management necessary to perform management tasks under normal and emergency conditions. *Version 2:* Upon completion of the course, the student will be able to apply the concepts and principles of effective writing and office administration.

Instruction: *Version 1:* Group-paced lectures, practical exercises, seminars, and skill exercises cover correspondence, including preparing memoranda, messages, and point papers; budget, staffing, security, and general office management; and familiarization with naval procedures and practices. *Version 2:* Group-paced lectures, practical exercises, seminars, and skill exercises cover budget management, manning requirements, security management, emergency planning, enlisted evaluations, and training.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in technical report writing and 3 in office management (1/93). *Version 2:* In the lower-division baccalaureate/

associate degree category, 3 semester hours in technical report writing and 3 in office management (7/87).

NV-1715-1245

NARROWBAND SYSTEM OPERATOR (NBS OPS),
CLASS C

Course Number: A-231-0056.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7 weeks (200 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to operate a computer-controlled narrowband HFDF system, using a PDP 11/34; several microcomputers; and associated receiving, display, and control equipment.

Instruction: Classroom instruction and laboratory assignments include subsystem function/operation; specific computer coding, syntax, loading, error messages, etc.; and operation of the system in normal and emergency modes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in keyboarding and 2 in system operation (7/87).

NV-1715-1246

OUTBOARD MAINTENANCE ACQUISITION
TECHNICIAN

Course Number: A-102-0326.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 18 weeks (720 hours).

Exhibit Dates: 1/90–4/91.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and perform module level service on the AN/SYQ-8 signal processing system and AN/SLR-16A computerized receiver.

Instruction: Illustrated lectures, laboratory exercises, and troubleshooting problems are used to teach preventative maintenance, troubleshooting, and corrective maintenance of the Outboard II receiver system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in system troubleshooting and 2 in system operation (7/87).

NV-1715-1247

TACTICAL INTELLIGENCE (TACINTEL)
COMMUNICATIONS SUBSYSTEM
MAINTENANCE
(Tactical Intelligence (TACINTEL) System
Maintenance)

Course Number: *Version 1:* A-102-0237. *Version 2:* A-102-0237.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 10 weeks (332-333 hours). *Version 2:* 12 weeks (473 hours).

Exhibit Dates: *Version 1:* 11/91–6/96. *Version 2:* 1/90–10/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the TACINTEL subsystem (AN/USQ-64(V)5) and troubleshoot the system to the module level. *Version 2:* Upon completion of the course, the student will be able to perform preventative and corrective maintenance on computer-controlled tape recording and reproducing equipment (RD-397/U Recorder-Reproducer) and troubleshoot the system to the module level.

Instruction: *Version 1:* Group-paced lectures and laboratory exercises supported with audiovisual presentations prepare the student to perform corrective and preventive maintenance on the TACINTEL subsystem. Instruction includes topics on electromechanical and electronic theory, digital techniques, principles of operation, and preventive and corrective maintenance techniques. *Version 2:* Group-paced lectures, demonstrations, and lab exercises supported by audiovisual presentations are used to prepare the student to perform corrective and preventative maintenance on a tape recorder/reproducer and troubleshoot the system to the module level.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems maintenance (2/93). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in magnetic recording devices maintenance (7/87).

NV-1715-1248

BASIC SIGNALS ANALYST
(Intermediate Non-Morse Analyst)

Course Number: *Version 1:* A-232-0060. *Version 2:* A-232-0060.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 16-17 weeks (640 hours). *Version 2:* 12 weeks (480 hours).

Exhibit Dates: *Version 1:* 5/91–Present. *Version 2:* 1/90–4/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the trainee will apply principles, rules, and concepts necessary to solve given problems and situations. The trainee will be able to describe the theory necessary to support the performance of operational tasks without the use of detailed logic or circuit diagrams. *Version 2:* Upon completion of the course, the student will be able to use various display and measuring devices, including oscilloscopes, spectrum analyzers, other visual display instruments, frequency counters, multiplexers, receivers, and magnetic recording devices. A fundamental knowledge of AC and communications is a required part of the outcomes.

Instruction: *Version 1:* This group-paced course uses audiovisuals and laboratory exercises to support topics such as mathematics, radio wave propagation, antenna selection, antenna theory, and modulation techniques. Also covered are satellite systems, receiver theory, R-2174 radio receiver, MD-976UR turntable demodulator, WJ-8618 B VHF/UHF receiver, TEK-7603 oscilloscope, HP-3562 signal analyzer, and the HP-3964A tape recorder. *Version 2:* This group-paced course uses lectures, slides, video cassettes, and lab exercises to instruct the student in the use of oscilloscopes and other display devices used in the reception, processing, and analysis of non-Morse Code signals.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in technical mathematics (5/95); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications (5/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in theory of electronic communications (7/87).

NV-1715-1250

ELECTRONIC WARFARE TECHNICIAN WLR-1H
MAINTENANCE

Course Number: A-102-0217.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 10 weeks (355 hours).

Exhibit Dates: 1/90–7/91.

Learning Outcomes: After 7/91 see NV-1715-1648. Upon completion of the course, the student will be able to operate, calibrate, analyze failures, troubleshoot, and repair electronic warfare equipment using functional diagrams, schematics, built-in test equipment, and standard test equipment such as VOMS and oscilloscopes.

Instruction: Classroom instruction and supervised laboratory activities cover the functional description and operation of controls, displays, and indicators; functional description of system, subsystems, and interfaces, including antennae, built-in test equipment, video displays, amplifiers, and power supplies; and preventive and corrective maintenance with fault identification through situational questions and laboratory exercises.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic system operation and maintenance (7/87).

NV-1715-1251

FLEET ELECTRONIC SUPPORT MAINTENANCE, CLASS
C1

Course Number: A-102-0285.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7 weeks (232-234 hours).

Exhibit Dates: 1/90–12/94.

Learning Outcomes: Upon completion of the course, the student will be able to operate systems, subsystems, and equipment related to field electronic support; align, calibrate, adjust the equipment; and locate and replace faulty components. The level at which this can be done depends on availability of technical information and policy.

Instruction: Classroom lectures, demonstrations, and hands-on laboratories cover a variety of electronic, digital, and microprocessor-based systems, including cable and antenna testing; RF/VHF signal management and distribution; audio processing, switches, speakers, and amplifiers; LANs; and EEE 488 interfaces. Both knowledge and performance testing is done.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic system maintenance (1/93).

NV-1715-1252

ELECTRONIC TECHNOLOGY, CLASS A1

Course Number: A-102-0214.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 19 weeks (1024 hours).

Exhibit Dates: 1/90–6/92.

Learning Outcomes: After 6/92 see NV-1715-1658. Upon completion of the course, the student will be able to maintain specialized electronic equipment.

Instruction: Classroom instruction and laboratory exercises cover basic soldering and connector repair, DC and AC circuits, linear power supplies, transistor amplifiers, superheterodyne receivers, timing and display circuits, RF transmission and antenna control systems, and digital logic and computer fundamentals.

Credit Recommendation: In the vocational certificate category, 3 semester hours in solid state electronics and 3 in digital electronics (7/87); in the lower-division baccalaureate/associate degree category, 1 semester hour in soldering and connector repair, 3 in DC circuits, 3 in AC circuits, 3 in electronic communications fundamentals, and 3 introduction to microcomputers (7/87).

NV-1715-1254

Electronic Technology, Class A1

Course Number: A-102-0234.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 19 weeks (1096 hours).

Exhibit Dates: 1/90–6/92.

Learning Outcomes: After 6/92 see NV-1715-1685. Upon completion of the course, the student will be able to maintain specialized electronic equipment.

Instruction: Classroom instruction and laboratory exercises cover basic soldering and connector repair, DC and AC circuits, linear power supplies, transistor amplifiers, superheterodyne receiver, timing and display circuits, RF transmission and antenna control systems, and digital logic and computer fundamentals.

Credit Recommendation: In the vocational certificate category, 3 semester hours in solid state electronics and 3 in digital electronics (7/87); in the lower-division baccalaureate/associate degree category, 1 semester hour in soldering and connector repair, 3 in DC circuits, 3 in AC circuits, 3 in electronic communications fundamentals, and 3 in introduction to microcomputers (7/87).

NV-1715-1256

1. High Frequency Direction Finding (HFDF) Hardware Maintenance
   (High Frequency Direction Finding (HFDF) Maintenance)
2. High Frequency Direction Finding (HFDF) Maintenance

Course Number: *Version 1:* A-102-0305. *Version 2:* A-102-0305.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 19 weeks (768 hours). *Version 2:* 19-20 weeks (800 hours).

Exhibit Dates: *Version 1:* 2/97–Present. *Version 2:* 1/90–1/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the entire AN/FSQ-123 narrowband system and on portions of the AN/FSQ-117 wideband system used for crosshair communications and direction finding. *Version 2:* Upon completion of the course, the student, with access to reference material, tools, and test equipment, will be able to power up, tune up, and troubleshoot a narrowband system.

Instruction: *Version 1:* This course consists of group-paced lectures, demonstrations, and laboratory exercises on preventive maintenance on the DEC PDP-11 computer system and peripherals, PDP-11/34 hardware/operation, preventive maintenance and troubleshooting of computer systems and peripherals to the lowest replaceable unit, DEC power supplies; systems operation and diagnostics, and power/timing distribution. *Version 2:* Group-paced lectures, practical exercises, and laboratory performance use chalk board and standard audiovisual equipment to cover power and timing distribution, boot verification and reload procedures, and power up/down procedures.

Credit Recommendation: *Version 1:* In the vocational certificate category, 6 semester hours in electronic systems troubleshooting and maintenance (2/98). *Version 2:* In the vocational certificate category, 6 semester hours in electronics maintenance laboratory (1/93).

NV-1715-1257

Naval Security Group Maintenance Management System Application Analyst
(Master Cryptologic Systems Technician)

Course Number: A-230-0019.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4-5 weeks (146-160 hours).

Exhibit Dates: 1/90–10/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform effectively at the middle management level as a supervisor of technical operations.

Instruction: Group instruction and laboratory assignments cover office management, report preparation, safety, budget, supply, staffing, change proposals, and security for cryptologic facilities.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1715-1258

Advanced Signals Analyst
(Senior Non-Morse Analysis)

Course Number: *Version 1:* A-232-0058. *Version 2:* A-232-0058.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 24 weeks (640-960 hours). *Version 2:* 24 weeks (640-960 hours).

Exhibit Dates: *Version 1:* 4/91–Present. *Version 2:* 1/90–3/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the trainee will be able to apply principles, rules, and concepts necessary to solve given problems and situations. The trainee will be able to describe the theory necessary to support the performance of operational tasks without the use of detailed logic or circuit diagrams. *Version 2:* Upon completion of the course, the student will be able to use spectrum analyzers, receivers, demodulators, and narrow and wide band recording equipment in the collection of non-Morse signal search and analysis.

Instruction: *Version 1:* Group-paced lectures and practical laboratory exercises cover mathematics operations, cryptologic non-Morse search operations, signal modifiers, KH-3202 variable filter, KH-3342 digitally tuned variable filter, HW-1856 fiber-optic CRT viscorder oscillograph, 321AQP5K/BPSK demodulator, 352 PCM bit synchronizer, 2340 modem, and the HP-375 actuator computer system. *Version 2:* Group-paced lectures, practical exercises, and laboratory performance use chalk board and audiovisual equipment. Topics include the study of basic algebra, trigonometry, number systems, Boolean algebra, AC/DC theory, inductive and capacitive reactance, antenna systems, AM and FM modulation, and waveform analysis.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in technical mathematics (2/93); in the lower-division baccalaureate/associate degree category, 3 semester hours in communications theory and 4 in electronic laboratory (2/93). *Version 2:* In the vocational certificate category, 3 semester hours in technical mathematics and 4 in electronic laboratory (7/87); in the lower-division baccalaureate/associate degree category, 3 semester hours in communications theory (7/87).

NV-1715-1259

AN/UYA-4 Display Maintenance Includes Beacon Video Processor

Course Number: A-150-0139.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 23 weeks (920 hours).

Exhibit Dates: 1/90–1/97.

Learning Outcomes: Upon completion of the course, the student will be able to isolate malfunctions and perform preventive and corrective maintenance on display subsystems equipment and components, including power supplies and video processors at the lowest component replacement level and apply the theory of logic gates, amplifiers, waveform generators, and counters to troubleshooting and diagnosis of malfunctions.

Instruction: Classroom lectures and discussions cover the display system components, block diagrams, and circuits. Practical exercises use electronic diagnostic instruments for finding and replacing defective parts and for checking the proper operation of the system. The course is a combination of several discrete courses involving various display systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1260

CGN/SM-2 Medium Range Missile System Technician

Course Number: A-121-0508.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 11 weeks (440 hours).

Exhibit Dates: 1/90–1/97.

Learning Outcomes: Upon completion of the course, the student will be able to prepare a shipboard missile system for operation; operate the system; test the system for faults;, and maintain, troubleshoot, and repair the system.

Instruction: Classroom lectures and practical exercises cover the missile system. Topics covered include data entry of combat information, operation of test control station, signal flow tracing, fault isolation procedures, and software diagnostic aids.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 2 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1261

AN/UYK-7 DD-963 COMPUTER/PERIPHERAL TECHNICIAN

Course Number: A-150-0109.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 25 weeks (1000 hours).

Exhibit Dates: 1/90–10/91.

Learning Outcomes: After 10/91 see NV-1402-0215. Upon completion of the course, the student will be able to operate an AN/UYK-7 computer; write machine language programs for the computer; use software diagnostic aids; troubleshoot and repair computer; and troubleshoot and repair specific digital data converters, I/O control consoles, magnetic tape units, digital-to-analog converters, and data display equipment.

Instruction: Lectures and practical exercises cover the theory and troubleshooting of a general purpose computer and its peripherals. An in-depth understanding of computer operation, instruction repertoire, signal flow, and subsystem logic is presented. The course emphasizes fault isolation to the circuit board or component level using diagnostic programs and basic test equipment. Course also includes topics pertaining to digital data converters, I/O control consoles, magnetic tape units, digital-to-analog converters, and data display equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer organization and architecture, 3 in computer troubleshooting, and 2 in computer peripherals troubleshooting (7/87).

NV-1715-1262

AN/UYK-7 DIGITAL COMPUTER MAINTENANCE

Course Number: A-150-0095.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–1/97.

Learning Outcomes: Upon completion of the course, the student will be able to operate the AN/UYK-7 computer, write machine language programs on the computer, discuss interrupt concepts, troubleshoot and repair all parts of computer, and use software diagnostic tape to locate faults.

Instruction: Lectures and practical exercises cover the theory of operation and the maintenance of a general purpose UNIVAC computer. An in-depth understanding of the computer operation, instruction repertoire, signal flow, and subsystem logic is presented. The course emphasizes fault isolation to the circuit board or component level using diagnostic programs and basic test equipment. Topics include function of front panel controls, word format, internal timing and control signals, interrupt processing, theory of instruction execution and register status, input and output timing sequence, and interface characteristics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer troubleshooting and 1 in computer organization and architecture (7/87).

NV-1715-1263

DATA SYSTEMS TECHNICIAN, CLASS A

Course Number: *Version 1:* A-150-0025. *Version 2:* A-150-0025.

Location: *Version 1:* Service Schools Command, Mare Island, Vallejo, CA. *Version 2:* Combat Systems Technical Schools Command, Mare Island, CA.

Length: *Version 1:* 28 weeks (1120 hours). *Version 2:* 32 weeks (1280 hours).

Exhibit Dates: *Version 1:* 7/92–Present. *Version 2:* 1/90–6/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to analyse basic series/parallel circuits both AC and DC; analyse RC and RL circuits including time constants; understand resonance and oscillator circuits; identify logic gates and related circuitry; understand memory theory and computer block diagrams with an emphasis on Intel-based personal computers; perform basic programming functions; identify logic functions such as AND, OR, NAND etc.; understand I/O concepts, basic block diagrams, chaining, and I/O instruction execution; perform basic troubleshooting diagnostics; and describe transistor and diode theory and function, oscillator circuits, silicon control rectifiers, unijunction and field effect transistors, and operational amplifiers. *Version 2:* Upon completion of the course, the student will be able to analyse basic series/parallel circuits both AC and DC; analyse RC and RL circuits including time constants; understand resonance and oscillator circuits; identify logic gates and related circuitry; understand memory theory and computer block diagrams with an emphasis on discrete component CPUs and computers; perform basic programming functions; identify logic functions such as AND, OR, NAND etc.; understand I/O concepts, basic block diagrams, chaining, and I/O instruction execution; perform basic troubleshooting diagnostics; and describe transistor and diode theory and function, oscillator circuits, silicon control rectifiers, unijunction and field effect transistors, and operational amplifiers.

Instruction: *Version 1:* Lectures and laboratory exercises cover basic AC/DC theory; solid state circuitry: rectifiers, amplifiers, and oscillators; number systems; logic circuits; memory theory; and computer programming. This comprehensive course also includes extensive training in the use of laboratory test instruments, troubleshooting to the component level, and soldering techniques. *Version 2:* Lectures and laboratory exercises cover basic AC/DC theory; solid state circuitry: rectifiers, amplifiers, and oscillators; number systems; logic circuits; memory theory; and computer programming. This comprehensive course also includes extensive training in the use of laboratory test instruments, troubleshooting to the component level, and soldering techniques.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in soldering techniques (3/95); in the lower-division baccalaureate/associate degree category, 5 semester hours AC/DC theory, 3 in digital electronics, 3 in microprocessor fundamentals, 3 in solid state circuits, and 3 in electronic systems troubleshooting (3/95). *Version 2:* In the vocational certificate category, 3 semester hours in soldering techniques (7/87); in the lower-division baccalaureate/associate degree category, 4 semester hours in AC/DC theory, 4 in digital electronics, 2 in electronics laboratory techniques, 3 in solid state circuits, and 2 in electronic systems troubleshooting (7/87).

NV-1715-1264

TARTAR WEAPONS DIRECTION SYSTEM MK 13 MOD 4

Course Number: A-121-0493.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–1/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive or corrective maintenance on the Mk 13 Tartar weapons direction system; operate the system or an individual piece of equipment in the system; conduct daily system operability tests and identify the computer complex in the system; and use electronic equipment such as frequency counter, differential voltmeter, multimeter, and oscilloscope for troubleshooting.

Instruction: Lectures (50 percent) and laboratory exercises (50 percent) cover a description of the equipment, methods of operation, and troubleshooting using electronic test equipment; preventive maintenance exercises using maintenance requirement cards and technical manuals; and laboratory exercises on detecting, isolating, and correcting simulated system malfunctions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic instruments or measurements laboratory and 2 in electronic systems troubleshooting (7/87).

NV-1715-1265

SHIPBOARD NON-TACTICAL AUTOMATED DATA PROCESSING (SNAP)

Course Number: A-150-0250.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–1/93.

Learning Outcomes: After 1/93 see NV-1402-0219. Upon completion of the course, the student will be able to operate the mainframe computer and peripheral equipment comprising the SNAP system, including printers, terminals, and disk and tape drive subsystems; troubleshoot, detect, and isolate faults of items at the field (shipboard) replaceable item parts level; replace and make appropriate adjustments within specified time periods; rapidly identify critical part numbers; restore the system to operational status; and use specialized electronic test equipment such as digital volt meters and dual trace oscilloscopes as well as small hand tools.

Instruction: Classroom instruction (55 percent) and laboratory exercises (50 percent) cover identifying the elements in the SNAP system, running system electrical checks and special diagnostic tests on subsystems, and making adjustments or corrections to simulated malfunctions at the parts level. Students perform test and maintenance tasks in the laboratory within time limits and produce error-free results. Students also interpret error messages resulting from the malfunctions in order to restore the equipment to error-free operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 1 semester hour in electronic measurement and instrumentation laboratory and 3 in computer peripheral troubleshooting and maintenance (7/87).

NV-1715-1266

WDS Mk 14 Communications Tracking Set SYR-1 Maintenance Tartar

Course Number: A-150-0254.

Location: Combat Systems Technical Schools Command, Mare Island, CA.

Length: 21 weeks (840 hours).

Exhibit Dates: 1/90–1/97.

Learning Outcomes: Upon completion of the course, student will be able to write machine language programs for the system computer, use software diagnostics on computer, understand I/O techniques, discuss computer interrupts, troubleshoot and repair computers, troubleshoot and repair antenna systems, and troubleshoot and repair UHF and RF detectors.

Instruction: Lectures and practical exercises cover maintenance and repair of a missile tracking system. Theory and repair techniques of the system components, including antenna, UHF and RF detectors, and computer are also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer organization and architecture, 3 in computer system troubleshooting, and 2 in electronic systems troubleshooting (7/87).

NV-1715-1268

1. 3D Radar Maintenance AN/SPS-52C
2. AN/SPS-52C Radar Set Maintenance

Course Number: *Version 1:* A-104-0181. *Version 2:* A-104-0181.

Location: *Version 1:* Service Schools Command, Mare Island, Vallejo, CA. *Version 2:* Combat Systems Technical Schools Command, Mare Island, CA.

Length: *Version 1:* 22 weeks (880 hours). *Version 2:* 27 weeks (1080 hours).

Exhibit Dates: *Version 1:* 2/92–Present. *Version 2:* 1/90–1/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, test, repair, and maintain the SPS-52C, 3 dimensional radar system. To accomplish this, the student must understand microprocessor operation down to the bit level and be able to work with the advanced electronic concepts required for a high power radar system. *Version 2:* Upon completion of the course, the student will be able to operate the radar in all modes; perform preventive maintenance, align, and adjust using standard procedures; remove/replace assemblies, modules, or components as required to pass appropriate operational checkout procedures; repair selected modules, assemblies, and subassemblies in-place as required to pass appropriate operational checkout procedures; locate and correct malfunctions at the lowest possible replacement unit for shipboard repair; set up and operate general and specialized test equipment; and repair and troubleshoot standard Navy minicomputer.

Instruction: *Version 1:* Instruction comprises both lectures and laboratory exercises integrated into a 22-week long training course. Topics covered in this course include microprocessor computer operations and maintenance including assembly language and timing diagrams, microprocessor I/O operations with recording equipment including radar transmit/receiver equipment (board level maintenance) and electrical distribution diagrams (with 30 power), and appropriate waveguide/antenna theory. *Version 2:* Lectures and practical exercises cover the maintenance and modification of the radar set, including processor/emulator block diagrams, memory diagnostics, I/O diagnostics, AC/DC distribution, macrocomponent functions, and maintenance and repair philosophy.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 5 semester hours in microprocessors and 3 in electronic systems troubleshooting and maintenance (3/95); in the upper-division baccalaureate category, 2 semester hours in advanced computer systems troubleshooting and maintenance (3/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer organization and architecture, 3 in computer troubleshooting, and 3 in electronic systems troubleshooting (7/87).

NV-1715-1269

SSBN Sonar Combined Maintenance

Course Number: A-130-0203.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 15 weeks (597 hours).

Exhibit Dates: 1/90–4/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and perform component level repair and preventive maintenance on submarine sonar equipment.

Instruction: Lectures, demonstrations, and laboratory performance cover safety devices, test equipment, vacuum tubes, solid state analog and digital subsystems of submarine sonar equipment, AM modulation and detection, logic circuits, numbering systems, memory devices, counters, registers, and servo systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital electronics, 2 in analog electronics, and 3 in electronic systems troubleshooting (7/87).

NV-1715-1270

Sonar Auxiliary Equipment Combined Maintenance Revision A

Course Number: A-130-0172.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 21 weeks (840 hours).

Exhibit Dates: 1/90–1/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance on various sonar auxiliary equipment, including communications, receiving, recording, classification, and performance measurement devices.

Instruction: Course includes a nonmathematical review of fundamentals of vacuum tubes, solid state devices, amplifier circuits, oscillators, modulation and demodulation, basic servo systems, fundamental digital numbering systems, digital circuits, common test equipment, as well as procedures used to troubleshoot, to a limited degree, various sonar equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital electronics, 2 in analog electronics, and 3 in electronic systems troubleshooting (7/87).

NV-1715-1271

Sonar Detecting/Ranging Sets, AN/BQQ-5 Series Combined Basic Maintenance (AN/BQQ-5 Combined Basic Maintenance Revision A)

Course Number: A-130-0208.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 16 weeks (475 hours).

Exhibit Dates: 1/90–1/93.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory of operation of the sonar system, perform routine preventive maintenance, operate the sonar system, and perform documented fault isolation procedures.

Instruction: Lectures and laboratory exercises cover the operation and maintenance of sonar system, basic corrective maintenance without going into detailed logic, circuit analysis, or detailed mechanical breakdown of equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting (7/87).

NV-1715-1272

Sonar AN/SQS-35(V) Maintenance

Course Number: K-130-0069.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–10/92.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on a sonar system under limited supervision.

Instruction: Lectures, demonstrations, and performance exercises on the sonar system using troubleshooting and maintenance techniques, technical manuals, and test equipment to repair the equipment to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1273

1. Sonar AN/SQS-53B (Level 2) Maintenance, Class C
2. Sonar AN/SQS-53B Maintenance Level 2

Course Number: *Version 1:* K-130-0282. *Version 2:* K-130-0282.

Location: *Version 1:* Fleet Antisubmarine Warfare Training Center, San Diego, CA. *Version 2:* Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: *Version 1:* 38 weeks (797-1350 hours). *Version 2:* 29 weeks (1040 hours).

Exhibit Dates: *Version 1:* 9/95–Present. *Version 2:* 1/90–8/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain, troubleshoot, and repair sonar system, including transmitters, receivers, power control and distribution system controller, signal/data processor, transducer arrays and interface, and display console. *Version 2:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance on sonar system and associated power supply.

Instruction: *Version 1:* Lectures, laboratory, and fault simulation exercises cover the operation, maintenance, troubleshooting, repair, and testing techniques for each subsystem; transmitters, receivers, power control and distribution system controller, signal/data processor, transducer arrays and interface, and display console; and the evaluation of overall system performance. *Version 2:* Lectures and laboratory instruction cover theory of operation, maintenance to module level, review of circuitry, system alignment, and calibration of the sonar system.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic systems troubleshooting and maintenance (10/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1274

Sonar Technician, Class A
(Sonar Technician Submarine STS, Class A)

Course Number: A-130-0029.

Location: Fleet Antisubmarine Warfare Training Center, Pacific, San Diego, CA; Submarine Base, New London, Groton, CT.

Length: 9-10 weeks (311-394 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate Navy submarine sonar systems, recognize and classify sonar targets, perform fire control plotting procedures, and perform submarine noise reduction procedures.

Instruction: Lectures and practical exercises cover topics in underwater acoustics, submarine sonar systems, sonar watchstanding procedures, and underwater fire control.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in fundamentals of underwater acoustics (10/91).

NV-1715-1275

Sonar AN/SQS-26 AXR/CX Maintenance

Course Number: K-130-0047.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 38 weeks (1512 hours).

Exhibit Dates: 1/90–4/92.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair the sonar system.

Instruction: Lectures and practical exercises cover the operation and maintenance of the AN/SQS-26CX and the AN/SQS-53 sonar detecting-ranging set, including binary mathematics and logic, test equipment, modes of operation, sound propagation, primary power distribution, sonar monitor, block diagrams, fault-locating monitor, mode selection and generation, simulated targets and target control, surface duct programmer and transmitter, B-scan receiver and display, various circuits, variable depression components, range measuring devices, and servos.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1276

Sonar AN/SQS-53 Maintenance

Course Number: K-130-0102.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 34 weeks (1356-1440 hours).

Exhibit Dates: 1/90–11/91.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair a sonar ranging-detecting set.

Instruction: Lectures and practical exercises cover the operation and maintenance of the sonar set. Topics include binary mathematics and logic, test equipment, modes of operation, sound propagation, power distribution, sonar monitor, block diagrams, fault-locating monitor, mode selection and generation, simulated target and target control, surface duct programmer, transmitter, B-scan receiver and display, various circuits, range measuring devices, and servos.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1277

Sonar AN/SQS-26 BX Maintenance

Course Number: K-130-0046.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 27 weeks (1076 hours).

Exhibit Dates: 1/90–9/93.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair the sonar system equipment to the component level, align and calibrate the sonar system, and perform preventive maintenance on sonar systems.

Instruction: Lectures and practical exercises cover the theory of operation, preventive and corrective maintenance, repair, and system alignment of a sonar system and associated power supply. Course includes a review of solid state circuitry and digital logic.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1278

Sonar AN/SQR-17(V)/17A(V) Series Maintenance

Course Number: K-130-0275.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 18 weeks (720 hours).

Exhibit Dates: 1/90–4/96.

Learning Outcomes: Upon completion of the course, the student will be able to isolate faults in the sonar system, repair and replace defective parts, and perform preventive maintenance.

Instruction: Lectures and practical exercises cover the theory of operation and maintenance of a variety of pieces of surface sonar equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1279

Sonar AN/SQQ-23A PAIR Organizational Maintenance

Course Number: K-130-0096.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 29 weeks (1145 hours).

Exhibit Dates: 1/90–9/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance, troubleshoot to the component level, and repair faults in the sonar equipment.

Instruction: Lectures and practical exercises cover the theory of operation of the sonar equipment, a review of solid state circuitry and basic digital electronics, fault isolation, alignment, and calibration of equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (8/87).

NV-1715-1280

Sonar AN/SQQ-28(V) Maintenance

Course Number: K-130-0265.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 16 weeks (638 hours).

Exhibit Dates: 1/90–2/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform diagnostic tests and preventive and corrective maintenance on a sonar signal processing system using specialized test equipment.

Instruction: Lectures, demonstrations, and laboratory exercises cover theory of equipment operation, specialized test equipment, diagnostics, and preventive and corrective maintenance procedures. Review of microprocessor fundamentals, data recording, interfacing, logic analyzing, and computer display is also included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic data processing systems troubleshooting (7/87).

NV-1715-1281

AN/BQQ-5 Consolidated Sonar Maintenance
(Sonar Detecting/Ranging Sets, AN/BQQ-5 Series Combined Advanced Maintenance)
(Sonar Detecting-Ranging Sets AN/BQQ-5 Advanced Maintenance Revision A)

Course Number: A-130-0209.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 30 weeks (895 hours).

Exhibit Dates: 1/90–2/92.

Learning Outcomes: Upon completion of the course, the student will be able to operate and perform advanced maintenance on the sonar systems.

Instruction: Lectures, demonstrations, and laboratory exercises cover the theory of operation, preventive maintenance procedures, fault isolation, and repair procedures of the sonar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 3 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1282

Sonar AN/SQS-38 Maintenance

Course Number: K-130-0071.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 17 weeks (670 hours).

Exhibit Dates: 1/90–10/93.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a sonar system and an underwater telephone to the component level and align and perform preventive maintenance on the equipment.

Instruction: Lectures and practical exercises cover the operation and maintenance of the AN/SQS-38 sonar set, WQC2 underwater telephone, and built-in test equipment. Topics include special circuits, power supplies, distribution, transmission signal development; transmitter modules, transducers, and transducer switching; and receiving subsystem, including classification, position-indicator system timing and deflection circuitry, primary cursor generation, and servos.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1283

Sonar AN/SQR-19(V) Maintenance

Course Number: K-130-1108.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 12 weeks (460 hours).

Exhibit Dates: 1/90–2/93.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain the sonar system.

Instruction: Lectures and practical exercises cover the theory of operation of the sonar system, fault isolation, repair procedures, alignment, and calibration of the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1284

Sonar AN/SQR-18A(V)1 Maintenance

Course Number: K-130-1107.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 18 weeks (606 hours).

Exhibit Dates: 1/90–11/92.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance, troubleshooting techniques, repair, alignment, and calibration on a sonar system.

Instruction: Classroom lectures and practical exercises cover digital logic, operational amplifiers, and a thorough study of the particular sonar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital electronics and 3 in electronic systems troubleshooting (7/87).

NV-1715-1285

Independent Variable-Depth Sonar Hoist AN/SQA-13(V) Maintenance

Course Number: K-041-2019.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–10/92.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair a hydraulic hoist mechanism.

Instruction: Lectures and practical exercises cover the electronic circuitry and hydraulic mechanisms of the hoist system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in hydraulic systems maintenance (7/87).

NV-1715-1286

AN/WLR-1H(V)1 Combined Maintenance

Course Number: A-233-0061.

Location: Submarine Training Facility, San Diego, CA; Submarine Base, New London, Groton, CT.

Length: 5 weeks (201 hours).

Exhibit Dates: 1/90–12/94.

Learning Outcomes: Upon completion of the course, the student will be able to operate, checkout, maintain, troubleshoot, and repair specific Navy submarine electronic equipment.

Instruction: Instruction includes lectures and practical exercises covering the theory of operation, functional analysis, logic flow, and maintenance procedures. Course also includes radar, superheterodyne receivers, digital electronics, and microprocessors.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (7/87).

NV-1715-1287

LAMPS Mk 3 Recovery Assist Securing and Traversing (RAST) Maintenance Technician

Course Number: K-652-2204.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 4 weeks (159-160 hours).

Exhibit Dates: 1/90–3/94.

Learning Outcomes: After 3/94 see NV-1715-1786. Upon completion of the course, the student will be able to perform electrical/electronic maintenance, troubleshooting, and repair to the component level on a shipboard system used to land helicopters.

Instruction: Lectures and practical exercises cover the electrical/electronic troubleshooting and maintenance of the helicopter landing system. The electrical/electronic circuitry primarily concerns motor control and power.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electrical/electronic troubleshooting and 1 in electrical control systems laboratory (6/94).

NV-1715-1288

LAMPS Mk 3 Recovery Assist Securing and Traversing (RAST) Maintenance

Course Number: K-652-2205.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 5 weeks (153 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform operational tasks, preventive and corrective maintenance, and troubleshooting on mechanical components of a shipboard system used to land helicopters.

Instruction: Lectures, demonstrations and practical exercises cover theory, maintenance, and operation of the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in principles of mechanical systems, 1 in principles of hydraulic systems, and 1 in hydromechanical laboratory (3/89).

NV-1715-1289

Gun Fire Control System Mk 86 Radar Group Maintenance

(Gun Fire Control System Mk 86 Radar Group Equipment Maintenance)

Course Number: A-113-0098.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA; Service School Command, Great Lakes, IL; Fleet Training Center, San Diego, CA.

Length: 17 weeks (623 hours).

Exhibit Dates: 1/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to maintain a gun fire control system radar group, including the primary power controllers, the SPG-60 air action radar, the SPQ-9A surface search radar, the Mk 2 system, as well as the digital control and interface systems.

Instruction: Students will have completed Fire Control, Class A and receive instruction in theory and practice in the principles of search and tracking radars and the use of tools and proper test instruments necessary to perform operational and diagnostic testing. Student will disassemble, repair, reassemble, and calibrate the Mk 86 radar group.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems maintenance (6/91).

NV-1715-1290

Mk 38 Gun Fire Control System (FCS)

Course Number: K-113-1185.

Location: Fleet Training Center, San Diego, CA.

Length: 7-8 weeks (320 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to operate and perform planned maintenance on the Mk 38 gun fire control system.

Instruction: Instruction includes lecture and laboratory experiences on all aspects of the Mk 38 gun fire control system. This includes theory, operation, maintenance, and repair using tools and test equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in principles of radar (7/87); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical/electronic systems troubleshooting and 2 in principles of hydraulic control (7/87).

NV-1715-1291

Mk 37 Gun Fire Control System (FCS)

Course Number: A-113-0109.
Location: Fleet Training Center, San Diego, CA.
Length: 7-8 weeks (320 hours).
Exhibit Dates: 1/90–12/97.
Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the Mk 37 gun fire control system.
Instruction: Instruction includes lectures and laboratory experiences in all aspects of the Mk 37 gun fire control system. This includes theory, operation, maintenance, and repair using tools and test equipment.
Credit Recommendation: In the vocational certificate category, 2 semester hours in fundamentals of radar (7/87); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical/electronic system troubleshooting and 2 in principles of hydraulic control (7/87).

NV-1715-1292

5"/38 Caliber Gun System

Course Number: K-113-0108.
Location: Fleet Training Center, San Diego, CA.
Length: 7-8 weeks (320 hours).
Exhibit Dates: 1/90–12/97.
Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the 5"/38 Mk 28 gun system.
Instruction: Instruction includes lectures and laboratory practice on all aspects of the Mk 28 gun and hydraulic control system. This includes theory, operation, maintenance, and repair using tools and test equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in principles of hydraulic control (7/87).

NV-1715-1293

16"/50 Caliber Gun System

Course Number: A-113-0111.
Location: Fleet Training Center, San Diego, CA.
Length: 7-8 weeks (320 hours).
Exhibit Dates: 1/90–12/97.
Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain gun turrets under limited supervision.
Instruction: This group-paced course includes lectures and laboratory experiences on the gun turret system using both trainers and live equipment. This includes theory, operation, maintenance, and repair using tools and test equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in principles of electrical systems maintenance, 2 in principles of mechanical systems, and 2 in principles of hydraulic systems (7/87).

NV-1715-1294

Review of Basic Circuit Concepts for Electrician's Mate
(Basic Circuit Concepts)

Course Number: A-652-0134.
Location: Service School Command, Great Lakes, IL.
Length: 1-2 weeks (40-80 hours).
Exhibit Dates: 1/90–3/94.
Learning Outcomes: Upon completion of the course, the student will be able recognize safe electrical practice, analyze AC and DC circuits, interpret circuit diagrams pertaining to solid state devices, analyze operating conditions of simple digital logic circuits, and use the multimeter and oscilloscope for measurements.
Instruction: Classroom lectures and practical exercises cover electrical safety, basic AC and DC circuits, solid state devices, digital logic circuits, and test equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical circuit theory (10/93).

NV-1715-1295

1. Electrician's Mate Surface Ship Electrician Advanced Maintenance
2. Electrician's Mate Advanced Maintenance Training

Course Number: *Version 1:* A-662-0017. *Version 2:* A-662-0017.
Location: Service School Command, Great Lakes, IL.
Length: *Version 1:* 17 weeks (523-524 hours). *Version 2:* 20 weeks (800 hours).
Exhibit Dates: *Version 1:* 5/94–Present. *Version 2:* 1/90–4/94.
Learning Outcomes: *Version 1:* Upon completion of the course, the student will apply the principles of AC and DC networks, and electromechanical and electronic devices and systems to operate and maintain the 150kW motor-generator set, frequency and voltage regulators, solid state motor controllers, and shipboard power distribution. *Version 2:* Upon completion of the course, the student will have a fundamental understanding of how to operate and maintain a 100kW motor-generator and the generator frequency and voltage controller, basic electricity and electronics, solid state theory and application, digital logic theory and application, test equipment application, single and multiphase motors, servo systems, and degaussing system operation and maintenance.
Instruction: *Version 1:* The multimedia, group-paced learning system incorporates extensive use of laboratories in AC/DC circuits, semiconductor theory and application, digital logic and logic circuits, AC and DC motor and generator operation and maintenance, 150kW generator frequency and voltage controller operation and maintenance, degaussing system operations and testing, maintenance and material management, and servo system operation and testing. *Version 2:* This multimedia, group-paced learning system incorporates extensive use of laboratories in AC/DC circuits, semiconductor theory and application, digital logic and logic circuits, AC and DC motor and generator operation and maintenance, 100kW generator frequency and voltage controller operation and maintenance, degaussing systems operations and testing, maintenance and material management, and servo system operation and testing.
Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in motor controller maintenance (12/95); in the lower-division baccalaureate/associate degree category, 4 semester hours in AC and DC networks, 4 in analog and digital electronics technology, and 4 in electromechanical technology (12/95). *Version 2:* In the vocational certificate category, 3 semester hours in solid state electronics and 3 in technical mathematics (6/88); in the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical control, 4 in DC circuits, 4 in AC circuits, and 2 in digital logic (6/88).

NV-1715-1296

1. Interior Communications Surface Ship Electrical Advanced
2. Interior Communications Electrician Advanced Maintenance Training

Course Number: *Version 1:* A-623-0013. *Version 2:* A-623-0013.
Location: Service School Command, Great Lakes, IL.
Length: *Version 1:* 17 weeks (558-559 hours). *Version 2:* 20 weeks (800 hours).
Exhibit Dates: *Version 1:* 5/94–Present. *Version 2:* 1/90–4/94.
Learning Outcomes: *Version 1:* Upon completion of the course, the student will apply the principles of AC and DC networks, electromechanical and electronic devices and systems to maintain communications systems (voice and date), and signal processing, equipment and servomechanisms. *Version 2:* Upon completion of the course, the student will be able to perform maintenance, calibration, troubleshooting, and repair on shipboard electrical equipment, such as communications systems; wind measuring systems; temperature monitoring and salinity measuring systems; and ships logging system, using basic electricity/electronics, solid state theory and application, digital logic theory and application, test equipment application, single and multiphase motors, and servo systems.
Instruction: *Version 1:* This multimedia, group-paced learning system incorporates extensive use of laboratories in AC/DC circuits, semiconductor theory and application, digital logic and logic circuits, servomechanism components and systems, analog and digital signal processing systems, and a review of basic algebra and trigonometry. *Version 2:* This multimedia, group-paced learning system incorporates extensive use of laboratories in AC/DC circuits, semiconductor theory and application, digital logic and logic circuits, AC and DC motor and generator operation, servomechanism components and systems, and a review of basic algebra and trigonometry.
Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in internal communications systems maintenance (12/95); in the lower-division baccalaureate/associate degree category, 4 semester hours AC and DC networks, 4 in analog and digital electronics technology, and 4 in electromechanical technology (12/95). *Version 2:* In the vocational certificate category, 3 semester hours in solid state electronics and 3 in technical math (6/88); in the lower-division baccalaureate/associate degree category, 4 semester hours in DC circuits, 4 in AC circuits, 3 in servomechanisms, and 2 in digital logic (6/88).

NV-1715-1297

Gun Mount 5"/54 Mk 45 Mod 1 Operation and Maintenance

Course Number: A-113-0115.

Location: Service School Command, Great Lakes, IL; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to describe the mechanical, hydraulic, electrical, electronic, and computer systems used in a computer controlled gun system. The student will be able to operate, maintain, and troubleshoot the Mk 45 Mod 1 gun system.

Instruction: Lectures and performance exercises use test equipment to maintain and operate electronic control systems and repair and overhaul mechanical, hydraulic, and pneumatic components to the board level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in hydraulic maintenance and 2 in electromechanical maintenance (6/91).

NV-1715-1298

Terrier Guided Missile Launching System Mk 10 55C5 Solid State Difference
(Guided Missile Launching System Mk 10 Solid State Control System Difference)

Course Number: A-121-0499.

Location: Service School Command, Great Lakes, IL.

Length: 6 weeks (256 hours).

Exhibit Dates: 1/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the electronic, servo-control, and mechanical components of a computer-controlled guided missile launch system. Specifically, the student will troubleshoot electronic problems down to the module level and use flow charts and schematic diagrams to identify and correct mechanical and servo-control problems.

Instruction: Classroom instruction and practical laboratory exercises cover system operation, controls, indicators, readouts, electronic/electrical/mechanical/hydraulic circuits, computer codes, diagnostic problems, and basic safety precautions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical maintenance (6/91).

NV-1715-1299

US Marine Corps Remote Sensor Operator Reserve (Phases 1 and 2)

Course Number: J-243-2014.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and employ ground-based remote sensor equipment.

Instruction: Lectures and demonstrations cover operation, employment, and maintenance of remote sensors and preparation of plans, documents, reports, and messages associated with remote sensor operations.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic security systems and 3 in electronic security implementation, operation, and management (7/88); in the lower-division baccalaureate/associate degree category, 2 semester hours in basic map reading (7/88).

NV-1715-1300

US Marine Corps Remote Sensor Operator

Course Number: BGG; J-243-0941.

Location: Navy and Marine Corps Intelligence Training Center, Dam Neck, Virginia Beach, VA.

Length: 5-6 weeks (204-282 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate ground-based remote sensor equipment.

Instruction: Lectures, demonstrations, and practical exercises cover the operation, employment, and maintenance of remote sensors; map reading and interpretation; and preparation of plans, documents, reports, and messages associated with remote sensor operations.

Credit Recommendation: In the vocational certificate category, 3 semester hour in electronic security systems and 3 in electronic security implementation, operation, and management (9/94); in the lower-division baccalaureate/associate degree category, 2 semester hours in basic map reading (9/94).

NV-1715-1301

1. Aegis Display System Operating and Maintenance
2. Aegis Display System Operation and Maintenance

Course Number: *Version 1:* S-150-0238. *Version 2:* A-150-0238; S-150-0238.

Location: Aegis Training Center, Dahlgren, VA.

Length: *Version 1:* 25 weeks (966 hours). *Version 2:* 22 weeks (876 hours).

Exhibit Dates: *Version 1:* 7/93–Present. *Version 2:* 1/90–6/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, maintain, and repair a computer-based video signal processing system, including displays, computers, communications, power supplies, and cooling equipment; use general purpose and specialized test equipment to isolate system problems to the component and connector pin level; and understand the function of subsystems which make up the system, including digital computer organization, power supplies, CRT circuits, radar circuits, data conversion circuits, and liquid cooling systems. *Version 2:* Upon completion of the course, the student will be able to operate, maintain, and repair a computer-based video signal processing system, including displays, computers, communications, power supplies, and cooling equipment; use general purpose and specialized test equipment to isolate system problems to the component and connector pin level; and understand the function of subsystems which make up the system, including digital computer organization, power supplies, CRT circuits, radar circuits, data conversion circuits, and liquid cooling systems.

Instruction: *Version 1:* Half classroom and half laboratory instruction cover the above topics. *Version 2:* Half classroom and half laboratory instruction cover the above topics.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 3 in computer systems troubleshooting and maintenance (5/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization, 3 in electronic systems troubleshooting and maintenance, and 3 in computer systems troubleshooting and maintenance (12/88).

NV-1715-1302

1. Aegis Weapon System Mk 7 Operation and Maintenance (CG-47-64)
2. Aegis Weapon System Operation and Maintenance (AN/SPY-1A/B)

Course Number: *Version 1:* S-121-0551. *Version 2:* A-104-0190; A-121-0551; S-121-0551.

Location: Aegis Training Center, Dahlgren, VA.

Length: *Version 1:* 16 weeks (641 hours). *Version 2:* 17 weeks (678 hours).

Exhibit Dates: *Version 1:* 4/94–Present. *Version 2:* 1/90–3/94.

Learning Outcomes: *Version 1:* Upon completion of the course, senior personnel will be able to direct the maintenance operations of the Aegis phased array radar weapon system Mk 7 and its subsystems. *Version 2:* Upon completion of the course, the student will be able to direct the maintenance operations of a phased array radar system; describe the Aegis weapon system and all of its subsystems, including the radar system, radar set, fire control system, and the operational readiness test system; manually initiate fault detection and isolation tests, and evaluate and analyze test results.

Instruction: *Version 1:* This course is divided into units covering the various systems in the Aegis weapon system Mk 7. Each unit covers the general physical and function description, operating theory, maintenance description, basic troubleshooting procedures, and interfacing of each subsystem to each other. The subsystems examined are 400 Hz power supplies, water coolers, dehydrators, computer set, magnetic tape recorders, data processing set, built-in operational test system, computer display consoles, combat display consoles, radar systems, signal processors, transmitter group, antenna group, and Aegis combat systems. *Version 2:* Classroom lectures and practical exercises cover the above topics.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic/electromechanical maintenance and troubleshooting and 3 in computer systems maintenance and troubleshooting (5/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 2 in computer systems troubleshooting and maintenance (12/88).

NV-1715-1303

1. Radar System AN/SPY-1A Operation and Maintenance (CG-47-58)
2. Aegis Radar System AN/SPY-1A Operation and Maintenance

Course Number: *Version 1:* S-104-0191. *Version 2:* A-104-0191; S-104-0191.

Location: Aegis Training Center, Dahlgren, VA.

Length: *Version 1:* 24 weeks (912 hours). *Version 2:* 24 weeks (908 hours).

Exhibit Dates: *Version 1:* 1/94–Present. *Version 2:* 1/90–12/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate and maintain a phased array radar system, including high voltage power supplies, cooling systems, computerized control and signal processing systems, microwave transmitter/receivers, and antenna/waveguide structures; use standard and RF-specific test equipment to test, troubleshoot, align, and maintain radar; and understand the function of system components, including power, computer controls, RF signal generation and detection, digital signal processing, and cooling/conditioning equipment. *Version 2:* Upon completion of the course, the student will be able to operate and maintain a phased array radar system, including high voltage power supplies, cooling systems, computerized control and signal processing systems, microwave transmitter/receivers, and antenna/waveguide structures; use standard and RF-specific test equipment to test, troubleshoot, align, and maintain radar; and understand the function of system components, including power, computer controls, RF signal generation and detection, digital signal processing, and cooling/conditioning equipment.

Instruction: *Version 1:* Methods are primarily classroom lecture. One-third of class hours consists of performance-based practical exercises. *Version 2:* Half classroom lecture and half practical exercises cover the above topics.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in digital logic and computer interfacing technology, 4 in radar systems, and 3 in electronic systems troubleshooting and maintenance (5/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems and organization, 4 in radar systems, and 6 in electronic systems troubleshooting and maintenance (12/88).

NV-1715-1304

Aegis Fire Control System/ORTS Operation and Maintenance

Course Number: A-104-0192; S-104-0192.

Location: Aegis Training Center, Dahlgren, VA.

Length: 25 weeks (907 hours).

Exhibit Dates: 1/90–12/94.

Learning Outcomes: After 12/94 see NV-1715-1750. Upon completion of the course, the student will be able to operate and maintain a complex computer-based weapons control system; troubleshoot computer-based equipment, including interfaces (analog and digital), peripherals, printers, and displays; understand technical manuals incorporating schematics, wiring diagrams, and logic charts; perform alignment procedures using test equipment such as oscilloscopes; and use diagnostic computer programs to localize equipment faults.

Instruction: Lectures and laboratory exercises include theory, operation, routine maintenance, and troubleshooting of a computer-based weapons system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer systems troubleshooting and maintenance, 4 in electronic systems troubleshooting and maintenance, and 4 in computer interface and peripheral systems (12/88).

NV-1715-1305

Remote Pressure/Tank Level/Liquid Airflow Indicating Equipment Maintenance

Course Number: A-623-0084.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay GA.

Length: 2 weeks (77 hours).

Exhibit Dates: 1/90–8/95.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory needed to support corrective, journeyman level maintenance on electronic and mechanical components of remote pressure, tank level, liquid flow, and pneumatic systems using authorized fault isolation and repair procedures.

Instruction: Group-paced lectures and laboratory exercises cover the operation and maintenance of remote pressure indicating equipment, differential pressure tank level indicator, magnetic tank level indicator, airflow indicator equipment, and liquid flow indicator equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in industrial instrumentation laboratory (2/89).

NV-1715-1306

Common Alarm, Temperature Monitoring and Salinity Systems Equipment Maintenance

Course Number: A-623-0083.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 1 week (56 hours).

Exhibit Dates: 1/90–6/94.

Learning Outcomes: Upon completion of the course, the student will be able to apply appropriate theory to maintain temperature monitoring, salinity, and common alarm systems found on the Trident submarine.

Instruction: Group-paced lectures and laboratory exercises cover the operation and maintenance of alarm systems, temperature monitoring equipment, and salinity equipment. Maintenance is at the journeyman level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in instrumentation mechanics (2/89).

NV-1715-1307

Atmosphere Support Equipment Maintenance

Course Number: A-623-0085.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 1 week (44 hours).

Exhibit Dates: 1/90–4/94.

Learning Outcomes: Upon completion of the course, the student will be able to perform documented corrective maintenance on the Trident control atmosphere monitoring system and the hydrogen detector.

Instruction: Group-paced lectures and laboratory exercises cover the operation and maintenance of a hydrogen detector and an atmosphere monitoring system at the journeyman level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in instrumentation laboratory (2/89).

NV-1715-1308

Ship Control System Maintenance

Course Number: A-623-0086.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 5 weeks (158 hours).

Exhibit Dates: 1/90–5/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform documented corrective maintenance on a ship control system and associated systems at the journeyman level using the necessary test equipment.

Instruction: Group-paced lectures and laboratory exercises cover the operation and maintenance of multiplexer, ship control system, steering and diving control equipment, hovering equipment, missile compensating equipment, and variable ballast and trim equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical laboratory (2/89).

NV-1715-1309

Trident Ship Control and Atmosphere Support Technician Level I

Course Number: A-623-0080.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 9 weeks (372 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance at the apprentice level on specific atmosphere support equipment on board a Trident submarine. Technician will be able to give a general, physical, and written description of the specific equipment on board the Trident submarine for which the student is responsible.

Instruction: Lectures and laboratory exercises cover the theory, maintenance, and operation of the power distribution system, alarm system, valve control equipment, position indication equipment, liquid flow indicator equipment, level indicator, salinity equipment, temperature monitoring equipment, depth detector, public address system, ballast and trim equipment, and position control system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical controls and 3 in industrial instrumentation (mechanical) (2/89).

NV-1715-1310

1. Integrated Announcing System AN/WIC-2B(V) Advanced Maintenance
2. Integrated Announcing System

Course Number: *Version 1:* A-623-0093. *Version 2:* A-623-0093.

BEST COPY AVAILABLE

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 1-2 weeks (68-69 hours). *Version 2:* 2 weeks (69 hours).

Exhibit Dates: *Version 1:* 6/94–Present. *Version 2:* 1/90–5/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the theory to support advanced corrective maintenance using all fault isolation techniques, test equipment, and repair procedures on the integrated announcing system. *Version 2:* Upon completion of the course, the student will be able to apply proper theory to perform corrective maintenance on an integrated announcing system. Student will be able to use all authorized fault isolation, test equipment, and repair procedures.

Instruction: *Version 1:* Lectures and laboratory sessions cover the operation and maintenance of the integrated announcing system. Topics include the use of special tools and equipment to align and calibrate the system. Instruction also covers relays, signal flow, frequencies, modes, inputs/outputs, signal generation, and circuits. *Version 2:* Group-paced lectures and advanced laboratory exercises cover the operation and maintenance of the integrated announcing system. Advanced laboratory exercises include the use of special tools and test equipment used in alignment and calibration after fault identification and correction.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (4/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting (2/89).

NV-1715-1311

Hovering and Missile Compensation and Associated Position Control Units Electrical Maintenance

Course Number: A-623-0114.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform advanced electromechanical maintenance and undocumented troubleshooting on hovering and missile compensation systems and associated position control units.

Instruction: Group-paced lectures and advanced laboratory exercises cover the operation and maintenance of hovering equipment, position control units, and missile compensating equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical systems laboratory (2/89).

NV-1715-1312

Steering/Diving Ship's Control Station and Variable Ballast and Trim Electrical Maintenance

Course Number: A-623-0113.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2-3 weeks (110 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform advanced maintenance and undocumented troubleshooting on steering/diving system, ship control station, and variable ballast and trim associated position control units.

Instruction: Group-paced lectures and advanced laboratory exercises cover the operation and maintenance of ship control station, ballast and trim equipment, steering and diving control equipment, and position control equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical control laboratory (2/89).

NV-1715-1313

Trident Sonar Subsystem Operation and Maintenance Level 1

Course Number: A-130-0126.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 24 weeks (956 hours).

Exhibit Dates: 1/90–8/94.

Learning Outcomes: Upon completion of the course, the student will be able to perform alignment, operational tests, corrective maintenance, disassembly, repair, and reassembly of sonar subsystems at the apprentice level.

Instruction: Group-paced lectures and laboratory exercises cover the operation, maintenance, and reconfiguration of the sonar subsystems, including the command and control system, detection-tracking group, broadband detection spherical array, broadband detection towed array, passive broadband tracking array, and torpedo detection and classification communications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic communications systems laboratory (2/89).

NV-1715-1314

Trident Sonar Subsystem Operation and Maintenance Level 3

Course Number: A-130-0129.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 8 weeks (288 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform authorized fault isolation and repair at the advanced journeyman level; describe components of the sonar subsystem group; describe the functional interface between the AGC and related external equipment; and describe signal flow frequencies, input/output frequencies, power supplies, and protection devices.

Instruction: Group-paced lectures and advanced laboratory exercises cover the operation and maintenance of sonar subsystems, including the acoustic communications group, depth/sound speed group, depth sounding group, bathythermograph group, and the recorder-reproducer group.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems laboratory (2/89).

NV-1715-1315

Trident Sonar Subsystem Operation and Maintenance Level 2

Course Number: A-130-0127.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 9 weeks (330 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: See individual exhibits for learning outcomes. This is a pipeline course.

Instruction: See exhibits NV-1715-1316 (A-130-0131), NV-1715-1319 (A-130-0132), NV-1715-1318 (A-130-0307), NV-1715-1317 (A-130-0305), and NV-1715-1320 (A-130-0306).

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (2/89).

NV-1715-1316

AN/BQQ-6 Group A Preamplifier, Filter, Equalizer, Clipper (PFEC)/Spherical Array, Passive Beamforms (SAPB) Maintenance

Course Number: A-130-0131.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (62 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to adhere to personnel and equipment safety precautions while performing corrective maintenance, troubleshoot using advanced diagnostic methods, and isolate faults which cannot be located using prescribed maintenance documentation.

Instruction: Group-paced lectures and advanced laboratory exercises cover the functional operation and maintenance of the spherical array passive beamforms preamplifier, filter, equalizer, clipper, and spherical array hydrophone.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic communications laboratory (2/89).

NV-1715-1317

AN/BQQ-6 Group A Primary Power Control (PCC)/SSDC Advanced Maintenance

Course Number: A-130-0305.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 1 week (52 hours).

Exhibit Dates: 1/90–1/95.

Learning Outcomes: Upon completion of the course, the student will be able to describe authorized techniques to isolate faults/failures which cannot be located using standard procedures, recognize and interpret malfunctions, and repair the equipment.

Instruction: Group-paced lectures and advanced laboratory exercises cover the functional operation of the primary power control and units of the detection-tracking group.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 1 semester hour in electronic troubleshooting laboratory (2/89).

NV-1715-1318

AN/BQQ-6 Group A Multipurpose Interface Unit Digital Spectrum Analyzer Advanced Maintenance

Course Number: A-150-0307.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 1 week (56 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to recognize and interpret malfunctions, use authorized techniques to isolate faults/failures which cannot be located using procedures contained in prescribed maintenance documentation, and repair the equipment.

Instruction: Group-paced lectures and advanced laboratory exercises cover the functional operation and maintenance of the multipurpose interface unit and digital spectrum analyzer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic communications laboratory (2/89).

NV-1715-1319

AN/BQQ-6 Sonar Set Detection Tracking

Course Number: A-130-0132.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a sonar set at an advanced level.

Instruction: Group-paced lectures and advanced laboratory exercises cover the fault isolation and repair procedures on the sonar detection-tracking group control display console.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic troubleshooting laboratory (2/89).

NV-1715-1320

AN/BQQ-6 Group A Interference Rejection Processor/Spherical Array, Passive Processor/Precision Data Recorder Advanced Maintenance

Course Number: A-130-0306.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair electronic equipment at an advanced level.

Instruction: Group-paced lectures and advanced laboratory exercises over specialized electronic equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic troubleshooting laboratory (2/89).

NV-1715-1321

Fire Control System Mk 98 Mod 0 Maintenance Procedures
(Fire Control System Advanced Maintenance)

Course Number: A-121-0436A.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (63 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform documented repair procedures on weapons system interconnections and troubleshoot and repair fire control system faults.

Instruction: Lectures and laboratory exercises cover nonroutine maintenance of fire control system software and hardware.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial electronics laboratory (4/96).

NV-1715-1322

1. Fire Control System Mk 98 Mod O Advanced Operations
2. Fire Control System Mk 98 Mod O Rev A Advanced Operations

Course Number: *Version 1:* A-121-0431A; A-121-0431. *Version 2:* A-121-0431.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 3-4 weeks (77-78 hours). *Version 2:* 3 weeks (76 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 1/90–7/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the characteristics, capabilities, and functional operation and interfaces of all subsystems of the fire control system and operate the system. *Version 2:* Upon completion of the course, the student will be able to describe characteristics, capabilities, and functional operation and interfaces of all subsystems of the fire control system and operate the system.

Instruction: *Version 1:* Lectures and laboratory exercises cover the description and operation of the fire control system. *Version 2:* Lectures and laboratory exercises cover the description and operation of the fire control system.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial electronics laboratory (4/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial electronics laboratory (2/89).

NV-1715-1323

Launcher Control Group Mk 13 Mod O Advanced

Course Number: A-121-0452.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (52 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use special tools to perform fault isolation and corrective maintenance on the equipment of the launcher control group.

Instruction: Lectures and laboratory activities cover basic theory, functions, operation, and maintenance procedures of the launcher control group. Instruction covers schematic diagrams, system test modes, control logic, signal flow, and sequential operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronics technology (2/89).

NV-1715-1324

Controllers and Circuit Breakers Combined Maintenance

Course Number: *Version 1:* A-662-0108. *Version 2:* A-662-0108.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 11/94–Present. *Version 2:* 1/90–10/94.

Learning Outcomes: *Version 1:* This version is pending evaluation. Upon completion of the course, the student will be able to perform preventive and corrective maintenance on electrical controllers and circuit breakers used on submarines. *Version 2:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance on electrical controllers and circuit breakers used on submarines.

Instruction: *Version 1:* This version is pending evaluation. Lectures and laboratory instruction cover operation, maintenance, and fault detection for high voltage circuit breakers, motor controllers, and switch gear. *Version 2:* Lectures and laboratory instruction cover operation, maintenance, and fault detection for high voltage circuit breakers, motor controllers, and switch gear.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electrical technology laboratory (2/89).

NV-1715-1325

Basic Electronics Test Equipment

Course Number: A-198-0054.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2 weeks (54-57 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate basic electronic test equipment to measure electrical values.

Instruction: Theory and laboratory exercises cover basic electronic test equipment with topics on analog and digital multimeters, oscilloscopes, power supplies, transistor testers, generators, impedance meters, and AC/DC differential voltmeters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic instruments laboratory (4/97).

NV-1715-1326

Mk 118 Fire Control System Basic Maintenance

Course Number: A-130-0232.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 3 weeks (99 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic preventive/corrective maintenance on a fire control system.

Instruction: Lectures and laboratory exercises cover the theory, operation, and maintenance of power supplies, and power distribution and firing circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer control/interfacing techniques laboratory (2/89).

NV-1715-1327

OCEAN SYSTEMS TECHNICIAN MAINTAINER, CLASS A

Course Number: J-130-0295.

Location: Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: 31-32 weeks (1223 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to solve algebra and trigonometric problems, solve AC and DC passive circuits and devices, analyze solid state circuits and devices, analyze digital circuits and devices, use basic laboratory instruments, and troubleshoot electronic systems.

Instruction: Lectures and practical exercises cover basic electronics and specific military systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in DC circuits, 2 in AC circuits, 2 in basic electronics laboratory, 3 in solid state electronics, 2 in digital principles, and 3 in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1328

AN/SRQ-4 LIGHT AIRBORNE MULTIPURPOSE SYSTEM (LAMPS) MK 3 MAINTENANCE

Course Number: A-101-0209.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 4 weeks (133-160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, operate, and maintain a data link transceiver under operational conditions at the organizational level.

Instruction: Instructional methods include lectures and supporting laboratories in analyzing, locating, and correcting faults using such equipment as spectrum analyzers, oscilloscopes, and digital multimeters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (4/91).

NV-1715-1329

COMMUNICATIONS MAINTENANCE, CLASS C

Course Number: J-130-0267.

Location: Fleet Antisubmarine Training Center, Norfolk, VA.

Length: 7-8 weeks (288 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and repair a secure data relay system, an automatic switching terminal, and teletype equipment.

Instruction: Instruction includes lectures and supporting laboratories in analyzing, locating, and repairing faults to the board level on several complex electronic systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1330

MICROMINIATURE ELECTRONICS REPAIR

Course Number: *Version 1:* A-100-0073. *Version 2:* A-100-0073.

Location: *Version 1:* Maintenance Training Group, Atsugi, Japan; Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA; Fleet Training Center, Rota, Spain; Fleet Training Center, Mayport, FL; Fleet Training Center, Pearl Harbor, HI; Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA. *Version 2:* Service School Command, San Diego, CA; Fleet Training Center, Pearl Harbor, HI; Fleet Training Center, Mayport, FL; Fleet Mine Warfare Training Center, Charleston, SC; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 6/94–Present. *Version 2:* 1/90–5/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to solder and desolder through board components and surface mounted components to printed circuit boards; repair single-sided, double-sided, and multilayer boards; and practice electrostatic discharge precautions. *Version 2:* Upon completion of the course, the student will be able to repair and replace components on rigid and flexible printed circuit boards.

Instruction: *Version 1:* Lectures, demonstrations, and laboratory experiences cover high reliability interconnection technology and include circuit board repair and component handling precautions. *Version 2:* Lectures, demonstrations, and practical experience cover the techniques of printed circuit board repair including component handling precautions.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in interconnection technology or basic electronic fabrication techniques (3/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic fabrication techniques (3/89).

NV-1715-1331

GENERAL PURPOSE ELECTRONIC TEST EQUIPMENT FUNCTIONAL AND OPERATIONAL USE

Course Number: J-100-0707.

Location: Fleet Training Center, Mayport, FL; Fleet Training Center, Norfolk, VA.

Length: 1-2 weeks (68 hours).

Exhibit Dates: 1/90–11/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate test equipment (meters, signal generators, frequency counters, oscilloscopes, spectrum analyzers, and power meters) and perform routine maintenance on that equipment.

Instruction: Lectures and practical exercises cover electronic test equipment use and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic electronics laboratory (3/89).

NV-1715-1332

AN/SPS-67(V)1 RADAR SET MAINTENANCE

Course Number: A-104-0177.

Location: Advanced Electronics School, San Diego, CA; Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 5 weeks (166-200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify, analyze, locate, and correct malfunctions occurring in a specific military radar set.

Instruction: Lectures and laboratory exercises cover the maintenance and repair of the radar set. Subject matter includes electronic circuitry, troubleshooting techniques, test equipment, and maintenance methods.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (4/89).

NV-1715-1333

AN/SPS-64(V)9 RADAR SET MAINTENANCE

Course Number: A-104-0195.

Location: Advanced Electronics School, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (66-80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a specific shipboard radar set.

Instruction: Lectures and practical exercises cover maintaining a shipboard radar set. Emphasis is on the ability to identify, analyze, locate, and correct malfunctions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (4/89).

NV-1715-1334

SURFACE ELECTRONIC WARFARE OPERATIONS INTERMEDIATE

Course Number: K-233-0022.

Location: Fleet Training Group WESTPAC, Japan; Fleet Training Group, Pearl Harbor, HI; Fleet Combat Training Center, San Diego, CA; Fleet Training Center, Mayport, FL; Fleet Training Center, Norfolk, VA.

Length: 3 weeks (116 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe principles of electronic warfare, warfare systems, detection, classification, and targeting.

Instruction: Lectures and classroom exercises cover topics in electronic warfare.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/89).

NV-1715-1335

AN/SPS-40E AIR SEARCH RADAR SET MAINTENANCE

Course Number: A-104-0199.

Location: Fleet Training Center, Norfolk, VA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and maintain air search radar equipment using built-in and other laboratory test equipment under operational conditions with no supervision.

Instruction: Instructional methods include lectures and supporting laboratories in analyzing, locating, and correcting malfunctions in radar equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1336

AN/SPS-49(V)8 RADAR MAINTENANCE
(AN/SPS-49(V)5 ATD Operation and Maintenance)

Course Number: A-104-0209.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 16 weeks (640 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the radar system under all shipboard readiness conditions using built-in and other laboratory test equipment with no supervision.

Instruction: Lectures and supporting laboratories cover operational setup and the use of built-in test equipment to maintain and troubleshoot the radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/94).

NV-1715-1337

1. AN/SPA-25G AND CV-3989/SG REPEATER MAINTENANCE
   (AN/SPA-25G Radar Indicator and CV-3989/SP Signal Converter Maintenance)
2. AN/SPA-25G RADAR INDICATOR GROUP MAINTENANCE

Course Number: *Version 1:* A-104-0205. *Version 2:* A-104-0205.

Location: *Version 1:* Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA. *Version 2:* Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: *Version 1:* 3 weeks (100-120 hours). *Version 2:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 1/91–9/96. *Version 2:* 1/90–12/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain, troubleshoot, and repair a specific radar system and signal converter. *Version 2:* Upon completion of the course, the student will be able to maintain, troubleshoot, and repair a specific radar system and signal converter.

Instruction: *Version 1:* Lectures and practical exercises cover the the major functions of the equipment, operating procedures, adjustments, troubleshooting procedures, and removal and replacement procedures. *Version 2:* Lectures and practical exercises cover the major functions of the equipment, operating procedures, adjustments, troubleshooting procedures, and removal and replacement procedures.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in radar system troubleshooting and maintenance (6/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1338

AN/USQ-74 DATA TERMINAL MAINTENANCE
(AN/USQ-74 Link Data Terminal Maintenance)

Course Number: A-101-0222.

Location: Advanced Electronics School, San Diego, CA; Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 4 weeks (152-156 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain data terminals using diagnostic tests and measurement equipment.

Instruction: Lectures and laboratory exercises cover the operation and maintenance procedures of keyboards, teletypes, tape readers, and associated equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (6/94).

NV-1715-1339

MK NC-2 MOD 2/2A PLOTTING SYSTEM MAINTENANCE

Course Number: J-623-0016.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair a shipboard navigation plotting system.

Instruction: Lectures and laboratories cover solid state devices, voltage networks, transistors, synchro/servo systems, dead reckoning analyzer-indicator, plotting table, and troubleshooting procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1340

HIGH FREQUENCY SYSTEMS TECHNICIAN
(High Frequency Systems Technician Maintenance)

Course Number: *Version 1:* A-101-0258. *Version 2:* A-101-0258.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: *Version 1:* 11-12 weeks (366-430 hours). *Version 2:* 11 weeks (440 hours).

Exhibit Dates: *Version 1:* 10/91–Present. *Version 2:* 1/90–9/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to troubleshoot and maintain high frequency communications and SATCOM systems operating in the VHF and UHF range including ancillary equipment. *Version 2:* Upon completion of the course, the student will be able to troubleshoot and perform corrective and preventive maintenance on high frequency shipboard communication systems.

Instruction: *Version 1:* Lectures and laboratory exercises cover high frequency communications system configuration, operation, performance monitoring, troubleshooting, and maintenance. Course includes ancillary equipment, such as antenna systems, transmission lines, switchboards, signal converters, and function boxes, using test equipment up to 2.5GHz frequency. *Version 2:* Lectures and practical exercises teach student to isolate and repair equipment malfunctions as well as to perform preventive maintenance.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in HF communications system troubleshooting and maintenance and 2 in communications systems (6/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1341

AN/SRN-19(V)2 RADIO NAVIGATION SET MAINTENANCE

Course Number: A-102-0266.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–12/94.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a specific military radio navigation set.

Instruction: Lectures and practical exercises are specific to the radio navigation set with emphasis on isolation and correction of malfunctions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1342

TSEC/KY-65A/75A AN/USC-43 ADVANCED NARROWBAND DIGITAL VOICE TERMINAL LIMITED MAINTENANCE

Course Number: A-160-0087.

Location: Combat Systems Technical Schools Command, Mare Island, CA; Fleet Training Center, Norfolk, VA.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform limited maintenance on a specific cryptographic set.

Instruction: Lectures and practical exercises are focused on the maintenance of the cryptographic set.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/89).

NV-1715-1343

Officer in Tactical Command Information Exchange System (TADIX Maintenance)
(Officer in Tactical Command Information Exchange System)

Course Number: A-101-0221.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2-3 weeks (80-96 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain cryptographic equipment and peripherals.

Instruction: Lectures and practical exercises cover the operation, troubleshooting, and repair of the electronic system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/95).

NV-1715-1344

AN/WSC-6(V)2 Maintenance

Course Number: A-101-0149.

Location: Fleet Training Center, Norfolk, VA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain specific satellite communications modems.

Instruction: Lectures and practical exercises cover theory of operation, preventive maintenance, and alignment procedures of specific satellite communications data links (modems).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1345

Miniature Electronics Repair

Course Number: *Version 1:* A-100-0072. *Version 2:* A-100-0072.

Location: *Version 1:* Afloat Training Center, Pearl Harbor, HI; Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, Mayport, FL; Maintenance Training Group, Rota, Spain; Maintenance Training Group, Atsugi, Japan; Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA. *Version 2:* Service School Command, San Diego, CA; Fleet Training Group, Pearl Harbor, HI; Fleet Training Center, Mayport, FL; Fleet Mine Warfare Training Center, Charleston, SC; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 4 weeks (160 hours).

Exhibit Dates: *Version 1:* 8/94–Present. *Version 2:* 1/90–7/94.

Learning Outcomes: *Version 1:* This version is pending evaluation. Upon completion of the course, the student will be able to repair two-sided printed circuit boards to original specifications and maintain repair station equipment without supervision. *Version 2:* Upon completion of the course, the student will be able to repair two-sided printed circuit boards to original specifications and maintain repair station equipment without supervision.

Instruction: *Version 1:* This version is pending evaluation. Instructional methods include lectures and supporting laboratories in disassembling and replacing or repairing connectors and components. *Version 2:* Instructional methods include lectures and supporting laboratories in disassembling and replacing or repairing connectors and components.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic fabrication (3/89).

NV-1715-1346

OM-55/USC Super High Frequency Satellite Communication Modular Demodulator Group Maintenance

Course Number: A-101-0244.

Location: Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair specific satellite communications modems.

Instruction: Lectures and practical exercises cover operation, fault isolation, repair, and preventive maintenance of specific communications system modems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1347

Ultra High Frequency-Demand Assigned Multiple Access (DAMA)

Course Number: A-101-0164.

Location: Fleet Training Center, San Diego, CA; Advanced Electronics School, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain a multiplexer set and related rack equipment under limited supervision.

Instruction: Instructional methods include lecture and supporting laboratories in analyzing, locating, and correcting faults using such test equipment as frequency counters, oscilloscopes, and digital voltmeters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/89).

NV-1715-1348

High Frequency Surface Communications System Operator

Course Number: A-260-0063.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 6 weeks (236 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain several specific radio and satellite communications systems.

Instruction: Lectures and practical exercises provide comprehensive system level training for operating and isolating faults on communications systems found on surface ships.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (6/94).

NV-1715-1349

Electromagnetic Compatibility Technician

Course Number: A-101-0250.

Location: Fleet Training Center, Norfolk, VA.

Length: 2-3 weeks (115-120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform electromagnetic interference surveys and correct interference.

Instruction: Instructional methods include lectures and supporting laboratories in detecting and correcting electromagnetic interference. Training in the use of spectrum analyzers, an antenna test set, a time domain reflectometer, a broadband radiation monitor, a thruline wattmeter, a megohmmeter, and an RF burn meter are emphasized.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications (11/95).

NV-1715-1350

AN/USQ-74 Link System Maintenance

Course Number: A-101-0264.

Location: Advanced Electronics School, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course the student will be able to operate and maintain a computer system at the user level under all operational conditions with no supervision.

Instruction: Instructional methods include lectures and supporting laboratories in basic digital theory, computer systems and organization, and system troubleshooting and maintenance. Major topics include number systems, Boolean algebra, logic gates, macro and micro instructions, I/O and memory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital principles, 3 in computer systems and organization, and 3 in computer systems troubleshooting and maintenance (3/89).

NV-1715-1351

AN/SPS-40B/C/D DMTI Radar Set Maintenance

Course Number: A-104-0183.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 9 weeks (286-344 hours).

Exhibit Dates: 1/90–12/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain specific radar equipment under shipboard operational conditions with no supervision.

Instruction: Instructional methods include lectures and supporting laboratories in analyzing, locating, and correcting various malfunctions in radar equipment using the associated test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/90).

NV-1715-1352

AN/TRQ-35(V) Tactical Frequency Management System

Course Number: A-101-0225.

Location: Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–9/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on a specific receiver subsystem.

Instruction: Lectures and practical experience cover preventive maintenance and isolation and correction of system malfunctions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/95).

NV-1715-1353

Trident Exterior Communications System (ECS) Level 2 Basic Maintenance

Course Number: A-101-0157.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 26 weeks.

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform corrective maintenance on the AN/BSC-2 except the OJ-326 SIDS console.

Instruction: This course is composed of A-150-0228 (NV-1715-1354), A-101-0170 (NV-1715-1355), A-101-0175 (NV-1715-1359), A-101-0172 (NV-1715-1357), A-101-0173 (NV-1715-1358), A-101-0171, (NV-1715-1356), A-101-0256.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (3/87).

NV-1715-1354

1. Trident Exterior Communications Subsystem Control Monitoring and Testing Subsystem Maintenance
2. Trident Exterior Communications System (ECS) AN/UYY-20X(V) Data Processing Set/Control, Monitor and Test Subsystem Maintenance

Course Number: *Version 1:* A-150-0228C; A-150-0228. *Version 2:* A-150-0228.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 17 weeks (520 hours). *Version 2:* 6 weeks (260 hours).

Exhibit Dates: *Version 1:* 2/95–Present. *Version 2:* 1/90–1/95.

Learning Outcomes: *Version 1:* Upon successful completion of this course, the Trident radio operator will be able to define the abbreviations and terms associated with the exterior communications subsystems; state the operational characteristics of the subsystem; describe all major components of the subsystem and use all technical documentation required to support basic corrective maintenance of the control, monitor, and test the subsystem. *Version 2:* Upon completion of the course, the student will be able to define the abbreviations and terms associated with the control, monitor, and test (CMT) subsystem; state the operational characteristics of the subsystem; describe all major components of the subsystem; and use all technical documentation required to support basic corrective maintenance of the CMT subsystem.

Instruction: *Version 1:* Lectures and hands-on troubleshooting exercises uses specific equipment as trainers. Fault isolation and corrective maintenance are taught on the indicator processor (ID-2156), interface unit (J-3565), recorder-reproducer control (C-10447), and demodulation group (OM-56/BSC-1). *Version 2:* Lectures and hands-on laboratory exercises cover operation, fault isolation, and corrective maintenance of electronic equipment, including indicator processor, interface unit, power supplies, recorder-reproducer control, and demodulator group.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in communications techniques and 3 in electronic maintenance and troubleshooting (4/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical/electronics laboratory (3/89).

NV-1715-1355

1. Trident Exterior Communications Subsystem Very Low Frequency/Low Frequency (VLF/LF) Subsystem Basic Maintenance
2. Trident Exterior Communications System (ECS) Level 2 VLF/LF Subsystem

Course Number: *Version 1:* A-101-0170; A-101-0170B. *Version 2:* A-101-0170.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 4 weeks (120 hours). *Version 2:* 5 weeks (208 hours).

Exhibit Dates: *Version 1:* 9/94–Present. *Version 2:* 1/90–8/94.

Learning Outcomes: *Version 1:* Upon successful completion of the course, the student will be able to perform all the operational tests on a VLF/LF subsystem, identify by symptom the probable cause of a malfunction and explain how a fault in a specific area can affect the entire VLF/LF subsystem. Based on a specific fault indication, the student will be able to list all probable circuits/modules that could cause the fault indication and explain what actions are required to bring the equipment back to normal operation. *Version 2:* Upon successful completion of the course, the trainee will be able to state the operational characteristics of the VLF/LF subsystem, define the abbreviations and terms used in system documentation, and describe the organization and content of all technical documentation used in the support of basic preventive/corrective maintenance at the component level.

Instruction: *Version 1:* Lectures and hands-on laboratory exercises cover diagnostic procedures, disassembly, repair, and reassembly of the VLF/LF communications system and subsystems, including demodulators, power supplies, radio receivers, and teletypes. Test equipment used includes digital multimeters, oscilloscopes, and frequency meters. *Version 2:* Lectures and hands-on laboratory exercises cover diagnostic procedures, disassembly, repair, and reassembly of the VLF/LF communications system and subsystems, including demodulators, power supplies, radio receivers, and teletypes. Test equipment used includes digital multimeters, oscilloscopes, and frequency meters.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in analog/ digital communication laboratory (4/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in digital communications laboratory (3/89).

NV-1715-1356

Trident Exterior Communications System (ECS) Data Switching Subsystem Basic Maintenance

Course Number: A-101-0171.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (152 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon successful completion of this course, the level I radioman will have the necessary skills to perform basic corrective maintenance on data switching devices.

Instruction: Lectures and hands-on laboratory exercises cover the fault isolation and repairs of the switch interconnect, a cryptographic set, a demodulator/converter, a power switchboard, and power supplies.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electromechanical systems laboratory (3/89).

NV-1715-1357

Trident Exterior Communications System (ECS) Support Subsystem Basic Maintenance

Course Number: S-101-0172.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 3 weeks (110 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon successful completion of this course, the Level I radioman will have the necessary skills to perform basic corrective maintenance on the Trident ECS support system including power and control units and high speed printers.

Instruction: Lectures and hands-on laboratory exercises cover the fault isolation and repair of teleprinters, power switchboard, and electronic air coolers.

Credit Recommendation: In the vocational certificate category, 2 semester hours in teletype repair (3/89).

NV-1715-1358

Trident Exterior Communications System (ECS) Antennas/Antenna Interface System

Course Number: A-101-0173.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon successful completion of the course, the level I radioman will have the necessary skills to perform basic corrective maintenance on antennas, antenna couplers, and antenna switches.

Instruction: Lecture and hands-on laboratory exercises cover the fault isolation and corrective maintenance of antennas/antenna interface systems, including antenna coupler, antenna control indicator, towed buoy antenna, and antenna interconnect box.

Credit Recommendation: In the vocational certificate category, 2 semester hours in antenna systems laboratory (3/89).

NV-1715-1359

1. Trident Exterior Communication System High Frequency/Ultra High Frequency (HF/UHF) Subsystem Basic Maintenance
2. Trident Exterior Communications System (ECS), Level 2 HF/VHF

Course Number: *Version 1:* A-101-0175C. *Version 2:* A-101-0175.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: *Version 1:* 5 weeks (160 hours). *Version 2:* 3 weeks (128 hours).

Exhibit Dates: *Version 1:* 1/95–Present. *Version 2:* 1/90–12/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to state the operational characteristics of the HF/UHF subsystem, define the abbreviations and terms used in system documentation, and describe the organization and content of all technical documentation used in the support of basic preventive/corrective maintenance at the component level. *Version 2:* Upon completion of the course, the trainee will be able to state the operational characteristics of the VHF/HF subsystem, define the abbreviations and terms used in system documentation, and describe the organization and content of all technical documentation used in the support of basic preventive/corrective maintenance at the component level.

Instruction: *Version 1:* Lectures and hands-on laboratory exercises cover diagnostic procedures, disassembly, repair, and reassembly of the HF/UHF communications system and subsystems, including radio transmitters/receivers, RF amplifiers, digital data encryption device, a voice switch, and power supplies. Test equipment used includes oscilloscopes, digital multimeters, frequency meters, and alignment tools. *Version 2:* Lectures and hands-on laboratory exercises cover diagnostic procedures, disassembly, repair, and reassembly of the VHF/HF communications system and subsystems, including radio transmitters/receivers, RF amplifiers, analog/digital converters, voice switch, and power supplies. Test equipment used includes oscilloscopes, digital multimeter, frequency meters, and alignment tools.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in analog communications laboratory (4/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in analog communications laboratory (3/89).

NV-1715-1360

Trident Exterior Communications Subsystem Advanced Maintenance, Level 3

Course Number: A-101-0169.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 9 weeks (357 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon successful completion of this course, the senior Trident radioman will have the necessary skills to perform advanced corrective maintenance on critical equipment used in the Trident exterior communications subsystems.

Instruction: Laboratory exercises and lectures cover the operation and maintenance of digital communications systems and the capability and functions of the central communications software program, including loading procedures, inserting authorized software patches, and reboot procedures in the event of a software error. The digital message interface unit and disk drive memory system is described. Approximately half of the course is devoted to maintenance procedures and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital computer operation and maintenance (3/89).

NV-1715-1361

Trident Exterior Communication System, Level 1

Course Number: A-101-0168.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 11 weeks (448 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon successful completion of this course, the trainee will be able to state the purpose, function, and location of Trident submarine exterior communications systems; perform, with supervision, preventive maintenance at the systems level; and describe the theory necessary to understand and support the normal operation of communications equipment found on Trident Submarines.

Instruction: Lectures and hands-on laboratory exercises cover the basic theory, operation, and preventive maintenance at the systems level on power distribution panels, teleprinters/typewriters, antenna systems, radio buoys, and HF/UHF and LF/ULF subsystems.

Credit Recommendation: In the vocational certificate category, 4 semester hours in communications systems laboratory (3/89).

NV-1715-1362

Trident (ECS) Electronics Command and Control System Technician Conversion

Course Number: A-102-0249.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 6 weeks.

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain electronic equipment unique to the Trident submarine.

Instruction: This is a composite course consisting of A-100-0077, A-102-0251 (NV-1715-1364), A-102-0252 (NV-1715-1363), and A-102-0261.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (4/87).

NV-1715-1363

1. AN/BPS-15B Radar Combined Maintenance
2. AN/BPS Radar Combined Maintenance

Course Number: *Version 1:* A-102-0252A; A-102-0252. *Version 2:* A-102-0252.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 3 weeks (119 hours).

Exhibit Dates: *Version 1:* 2/95–Present. *Version 2:* 1/90–1/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform preventive maintenance and authorized fault isolation and repair procedures on the Trident radar subsystem. *Version 2:* Upon completion of the course, the student will be able to perform preventive maintenance and authorized fault isolation and repair procedures on the Trident radar subsystem.

Instruction: *Version 1:* Lectures and hands-on laboratory exercises cover the operation and preventive maintenance of the radar systems. *Version 2:* Lectures and hands-on laboratory exercises cover the operation and preventive maintenance of the radar systems.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in radar maintenance laboratory (4/96). *Version 2:* In the vocational certificate category, 2 semester hours in radar maintenance laboratory (3/89).

NV-1715-1364

AN/UPX-28 Identify Friend or Foe Combined Maintenance

(Trident Command and Control System (CCS) Electronics Technician Conversion)

Course Number: A-102-0251.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (56 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory necessary to support the normal operation and repair of Trident radar subsystems.

Instruction: Lectures and hands-on laboratory exercises cover the operation and preventive maintenance on a transponder test set and IFF equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in radar laboratory (3/96).

NV-1715-1366

Trident Navigation Subsystem Theory

Course Number: *Version 1:* A-193-0345. *Version 2:* A-193-0345.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 2-3 weeks (77 hours). *Version 2:* 2 weeks (77 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the theory to support corrective maintenance on the Trident navigation subsystem. *Version 2:* Upon completion of the course, the student will be able to describe the functions of the Trident navigation subsystem.

Instruction: *Version 1:* Lectures cover advanced training on the functional operation of Trident navigation subsystems. Each of the 17 components of the navigation subsystem and its interaction with the other components are covered. *Version 2:* Lectures cover the functional operation of Trident navigation subsystems. Each of the 17 components of the navigation subsystem is covered.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in microprocessor control laboratory (4/96). *Version 2:* Credit is not recommended because of the military-specific nature of the course (3/89).

NV-1715-1367

1. Navigation Control Console Mk 3 Mod 1/ 2 Maintenance
2. Navigation Control Console Mk 3 Mod 2 Maintenance

Course Number: *Version 1:* A-193-0342. *Version 2:* A-193-0342.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 2 weeks (68 hours). *Version 2:* 2 weeks (63 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 1/90–7/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the functional operation of the navigation control console (NCC); describe the control, test logic, and functional interface circuitry of the NCC; and perform all authorized fault isolation and repair procedures on the NCC. *Version 2:* Upon completion of the course, the student will be able to describe the functional operation of the navigation control console (NCC); describe the control, test logic, and functional interface circuitry of the NCC; and perform all authorized fault isolation and repair procedures on the NCC.

Instruction: *Version 1:* Lectures and laboratory exercises support corrective maintenance procedures on the Mk 3 Mod 2 navigation control console. Included are X-Y plotter, teleprinter, CNC controls, status displays, and power supplies. *Version 2:* Lectures and laboratory exercises cover corrective maintenance procedures on the Mk 3 Mod 2 navigational control console and include the X-Y plotter, teleprinter, CNC controls, status displays, and power supplies.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in basic digital systems (4/96). *Version 2:* In the vocational certificate category, 1 semester hour in applied electronics (control consoles) (3/89).

NV-1715-1368

Sonar Sounding Set AN/BQN-3J
Maintenance

Course Number: *Version 1:* A-193-0329A. *Version 2:* A-193-0329.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 4 weeks (97-140 hours). *Version 2:* 3 weeks (92 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 1/90–7/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe in detail the construction features of sonar sounding set subassemblies and their functional operation and perform authorized fault isolation and repair procedures on the equipment. *Version 2:* Upon completion of the course, the student will be able to describe in detail the construction features of sonar sounding set subassemblies and their functional operation and perform authorized fault isolation and repair procedures on the equipment.

Instruction: *Version 1:* Lectures and laboratory exercises cover corrective maintenance procedures on the AN/BQN-3J sonar sounding set and include the system training unit, control display unit, transmitter/receiver groups, sonar readout, computer interface, digital depth measuring system, automatic power level control, external display interface, and performance monitor/fault locater. *Version 2:* Lectures and laboratory exercises cover corrective maintenance procedures on the sonar sounding set and include the system training unit, control display unit, transmitter receiver groups, sonar readout, computer interface, digital depth measuring system, automatic power level control, external display interface, and performance monitor/ fault locater.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in applied techniques in electronics (sonar systems) (4/96). *Version 2:* In the vocational certificate category, 1 semester hour in applied techniques in electronics (sonar systems) (3/ 89).

NV-1715-1369

1. Ship's Inertial Navigation System (SINS) Mk 2 Mods 6 and 7 Theory and Maintenance 2
2. Ship's Inertial Navigation System (SINS) Theory and Maintenance 2

Course Number: *Version 1:* A-193-0322A; A-193-0322. *Version 2:* A-193-0322.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: *Version 1:* 2 weeks (72 hours). *Version 2:* 2 weeks (72 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 1/90–7/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the functional operation of a ship's inertial navigation system (SINS) temperature control, monitoring, alarm, and support circuits including loop functions; perform corrective maintenance using special tools, electronic test equipment, off-line diagnostics, maintenance checks, and adjustments on the SINS modules; and disassemble, repair, and reassemble the SINS. *Version 2:* Upon completion of the course, the student will be able to describe the functional operation of a ship's inertial navigation system (SINS) temperature control, monitoring, alarm, and support circuits including loop functions; perform corrective maintenance using special tools, electronic test equipment, off-line diagnostics, maintenance checks, and adjustments on the SINS modules; and disassemble, repair, and reassemble the SINS.

Instruction: *Version 1:* Lectures and laboratory exercises cover the advanced theory and maintenance of SINS, including temperature control, monitoring, alarm, and support circuits; data monitoring; transmission; and gyro monitor circuits. *Version 2:* Lectures and laboratory exercises cover the advanced theory and maintenance of SINS, including temperature control, monitoring, alarm, and support circuits; data monitoring; transmission; and gyro monitor circuits.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (4/96). *Version 2:* In the lower-division baccalaureate/ associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1370

Trident Electrostatically Supported Gyro
Monitor (ESGM) Navigation Aids
Technician Replacement

Course Number: A-193-0309.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 17 weeks (730 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, monitor, and test navigation equipment.

Instruction: This course is comprised of A-193-0398 (NV-1715-1371) and A-193-0399 (NV-1715-1372).

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (3/89).

NV-1715-1371

Trident Electrostatically Supported Gyro
Monitor (ESGM) NAVAIDS
Technician Replacements

Course Number: A-143-0398.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 13 weeks (566 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform all normal and casualty operations on the navigation subsystem, sonar sounding set, radio navigation set, Loran receiving set, ESGM, and navigation equipment. Student will also perform preventive maintenance and fault isolation/repair procedures on various pieces of electronic navigation equipment.

Instruction: Lectures and laboratory exercises cover the operation, testing, and maintenance of electronic navigation equipment, including central navigation computer, navigation control console, radio navigation set, Loran set, sonar sounding set, ESGM, and strategic weapons system ventilation and power distribution.

Credit Recommendation: In the vocational certificate category, 6 semester hours in electronic navigation systems maintenance (3/89).

NV-1715-1372

TRIDENT I NAVIGATION SUBSYSTEMS

Course Number: A-193-0399.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (116-164 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform all normal and casualty procedures or the Trident I navigation subsystem, perform all preventive maintenance procedures on subsystems; and perform documented fault isolation and repair procedures on subsystems.

Instruction: Lecture and laboratory exercises cover operation and maintenance of strategic weapons systems and navigation subsystems, including strategic weapon system ventilation; 400Hz, 600Hz, and DC power supplies; and navigation subsystem interface and calibration.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electromechanical systems technology (3/96).

NV-1715-1373

TRIDENT I CENTRAL NAVIGATION COMPUTER (CNC) EQUIPMENT REPLACEMENT

Course Number: A-193-0396.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 16-20 weeks (592-939 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the navigation subsystem, perform preventive maintenance procedures at the subsystem level, and perform documented fault isolation and repair procedures on the subsystem.

Instruction: Lectures and laboratory exercise cover the operation, testing, and maintenance of navigation computer systems, including navigation computer CP-890B/UYK, digital-to-digital and analog-to-digital converters, tape I/O, and the navigation control console.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer technology and 2 in digital systems maintenance laboratory (4/96).

NV-1715-1374

SHIPS INERTIAL NAVIGATION SYSTEM (SINS) MK 2 MODS 6 AND 7 CALIBRATION

(Advanced Theory of Ship's Inertial Navigation Systems (SINS) Calibration)

Course Number: A-193-320A; A-193-0320.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 1 week (51-53 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform calibration procedures on the ship's inertial navigation system.

Instruction: Lectures and laboratory exercises cover the theory and detailed logic analysis of the ship's inertial navigation system, familiarization with the operation, special tools and support documentation, and repair procedures.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/96).

NV-1715-1375

ELECTROSTATICALLY SUPPORTED GYRO MONITOR (ESGM) CALIBRATION

Course Number: A-193-0331.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (63 hours).

Exhibit Dates: 1/90–7/91.

Learning Outcomes: Upon completion of the course, the student will be able to calibrate the electrostatically supported gyro monitor (ESGM).

Instruction: Lecture and laboratory exercises cover the calibration of ESGM system equipment.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/89).

NV-1715-1376

SHIPS INERTIAL NAVIGATION SYSTEM (SINS) MK 2 MODS 6 AND 7 THEORY AND MAINTENANCE I

(Advanced Theory and Maintenance I Ship's Inertial Navigation System (SINS) Mk 2 Mods 6/7)

Course Number: A-193-0321A; A-193-0321.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on a ship's inertial navigation system (SINS); use electronic test equipment and special tools required for maintenance, adjustments, and off-line diagnostic procedures; recognize and interpret indications of malfunctions for the SINS power distribution system and control loops; and observe personnel and equipment safety precautions while performing corrective maintenance.

Instruction: Lectures and laboratory exercises cover advanced theory and maintenance of ship's inertial navigation systems, including temperature control, monitoring, alarm, and support circuits; data monitoring; transmissions and gyro monitoring circuits; and on-line diagnostic monitoring circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (1/96).

NV-1715-1377

TRIDENT I FIRE CONTROL TECHNICIAN REPLACEMENT

Course Number: A-121-0412.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 23 weeks (532 hours).

Exhibit Dates: 1/90–8/92.

Learning Outcomes: Upon completion of the course, the student will be able to operate the Mk 98 Mod 0 fire control system and associated equipment and perform preventive maintenance and fault isolation/repair procedures on the system and associated equipment.

Instruction: Lectures and laboratory exercises cover operational and maintenance procedures on fire control equipment, including computer network software, diagnostic disk file, magnetic tape file, keyboard and display, printer subsystem, master clock, data base equipment, power and switching subsystems, and optical alignment group.

Credit Recommendation: In the vocational certificate category, 4 semester hours in applied electronics (fire control systems) (3/89); in the lower-division baccalaureate/associate degree category, 2 semester hours in basic electronics and 2 in computer technology (3/89).

NV-1715-1378

TRIDENT I MISSILE TECHNICIAN CONVERSION

Course Number: A-121-0440.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 23 weeks (562 hours).

Exhibit Dates: 1/90–8/92.

Learning Outcomes: Upon completion of the course, the student will be able to transfer skills as a missile technician to the Trident system, perform standard test procedures on Trident missile launching systems, perform routine preventive maintenance on missile launching systems, and troubleshoot and isolate faults on the system to the component level.

Instruction: Lectures/laboratory exercises cover the theory, operation, and troubleshooting of a missile launching system and includes the use of computer-aided diagnostics and troubleshooting flow charts; pneumatic, hydraulic, and electric power conversion subsystems and digital/computer components; and use of basic digital/computer theory and systems knowledge. Troubleshooting to the component level is also emphasized.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electromechanical systems (3/89); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital systems maintenance laboratory (3/89).

NV-1715-1379

TRIDENT I SHIP'S INERTIAL NAVIGATION SYSTEM (SINS) EQUIPMENT

Course Number: *Version 1:* A-193-0397. *Version 2:* A-193-0397.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: *Version 1:* 21 weeks (1054 hours). *Version 2:* 17 weeks (620 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to apply basic concepts of physics, electronics, and electromechanical devices; operate the ship's inertial navigation system (SINS) and related equipment; and perform preventive and corrective maintenance on the SINS and related equipment. *Version 2:* Upon completion of the course, the student will be able to apply basic concepts of physics, electronics, and electromechanical devices; operate the ship's inertial navigation system (SINS) and related equipment; and perform preventive and corrective maintenance on the SINS and related equipment.

Instruction: *Version 1:* Lectures and laboratory exercises cover the application of basic electronics, physics, and computer science to support the operation and maintenance of a ship's inertial navigation system (Mk2 Mod 7). Specific applications include servo loops, gyros, power supplies, printer interfacing, and computer operations. *Version 2:* Lectures and laboratory exercises cover applying basic electronics, physics, and computer science to support the operation and maintenance of a ship's inertial navigation system (Mk2 Mod 7). Specific applications include servo loops, gyros, power supplies, printer interfacing, and computer operations.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in applied electronics (inertial navigation systems maintenance) (4/96); in the lower-division baccalaureate/associate degree category, 3 semester hours in physical science and 3 in computer technology (4/96). *Version 2:* In the vocational certificate category, 2 semester hours in applied electronics (inertial navigation systems maintenance) (3/89); in the lower-division baccalaureate/associate degree category, 2 semester hours in physical science and 2 semester hours in computer technology (3/89).

NV-1715-1380

Ship's Inertial Navigation System (SINS) Mk 2 Mod 7 Technician Replacement

Course Number: A-193-0307.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 21 weeks (784 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and test SINS and associated equipment.

Instruction: This is a pipeline course, composed of A-193-0397 (NV-1715-1379) and A-193-0399 (NV-1715-1372).

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (3/89).

NV-1715-1381

Trident Central Navigation Computer Technician Replacement

Course Number: A-193-0308.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 20 weeks (756 hours).

Exhibit Dates: 1/90–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to perform operational, maintenance, and testing functions required onboard the Trident class SSBN and understand normal/casualty/alternate operation of the CP-8908/UYK computer, D/D converter, A/D converter, a magnetic tape unit, and other associated equipment.

Instruction: This is a pipeline course, consisting of A-193-0396 and A-193-0399. See NV-1715-1373 and NV-1715-1372.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (4/87).

NV-1715-1382

Terrier Mk 152 Computer Complex

Course Number: A-150-0085.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 19-20 weeks (784 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand the operation of a digital computer and associated I/O equipment, including operating console, terminal, and data recorder; understand the instruction set of the computer and be able to write machine language programs which perform arithmetic, control, and I/O tasks; and maintain and troubleshoot the computer system using automated diagnostics and manual signal tracing routines.

Instruction: Lectures and practical experience cover the specific computer and auxiliary input/output equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization, 3 in electronic systems troubleshooting and maintenance, and 3 in computer systems troubleshooting and maintenance (6/89).

NV-1715-1383

Fleet Ballistic Missile Navigation Maintenance NAVAIDS

Course Number: A-193-0037.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 3-4 weeks (128 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, align, and maintain several submarine navigation aids and optical test equipment.

Instruction: Lectures and practical exercises cover maintenance of the specific equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in optical systems maintenance and 2 in electronic systems troubleshooting and maintenance (5/89).

NV-1715-1384

Tartar Weapons System Mk 74 Mod 6

Course Number: A-121-0183.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to supervise the operation, testing, and maintenance of a guided missile control and firing system, including radar, digital logic, and launching systems.

Instruction: Lectures and practical exercises cover the specific equipment used in the weapon system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1385

Fire Control System Technician Mk 88 Mod 1 Replacement

Course Number: A-121-0245.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 27-28 weeks (1136 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand the organization of a computer system and be able to troubleshoot and repair a missile fire control system, including the computer, tape drive, and printer.

Instruction: Lectures and practical exercises emphasize the maintenance of the fire control system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance, 3 in computer systems troubleshooting and maintenance, and 2 in computer systems and organization (6/89).

NV-1715-1386

AN/SPG-55B Mod 9 Radar Difference

Course Number: A-104-0194.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–12/92.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair all parts of a specific radar system, including transmitter, receiver, and signal processing circuits.

Instruction: Lectures and practical exercises emphasize the maintenance of the radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1387

Close-In Weapon System Mk 15 Block 0/1 Difference

Course Number: A-113-0095.

Location: Fleet Training Center, San Diego, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain a weapon system, including digital equipment; solid state devices; and RF transmission, receiving, and processing equipment.

Instruction: Lectures and practical exercises cover the maintenance of the weapon system.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1388

Close-In Weapon System Mk 15 Mod 11/14 Operation and Maintenance

Course Number: A-113-0114.

Location: Service School Command, Great Lakes, IL; Fleet Training Center, San Diego, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 29 weeks (1160 hours).

Exhibit Dates: 1/90–6/91.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain a weapon system, including digital equipment; solid state devices; and RF transmission, receiving, and processing equipment.

Instruction: Lectures and practical exercises cover the maintenance of the weapon system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1389

NATO Seasparrow Surface Missile System Officer

Course Number: A-2F-0055.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will supervise system maintenance and administration and tactically employ a missile system consisting of radar, signal processing, computer, and aiming components.

Instruction: Lectures and practical exercises cover the function and operation of the major subsystems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/89).

NV-1715-1390

3D Radar Search AN/SPS-39A

Course Number: A-104-0103.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 20-21 weeks (840 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a military radar system and adaptive video processor.

Instruction: Lectures and practical exercises cover the operation, maintenance, and alignment of radar system components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems and 2 in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1391

Tartar Weapons Direction System (WDS) Mk 4 WDE Mk 1

Course Number: A-121-0029.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 16 weeks (640 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a weapons direction system to the component level.

Instruction: Lectures and practical exercises cover troubleshooting and corrective maintenance of the weapons system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/88).

NV-1715-1392

Central Navigation Computer (CNC) Technician Replacement

Course Number: A-193-0392.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 12-13 weeks (512 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair a navigation computer and its peripherals.

Instruction: Lectures and practical exercises cover the computer system and include computer organization.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance and 3 in computer systems and organization (6/89).

NV-1715-1393

Ship's Inertial Navigation System (SINS) Mk 2 Mod 6 Equipment Technician Replacement

Course Number: A-193-0391.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain a submarine navigation system, including computer, repeaters, test equipment, and navigation equipment.

Instruction: Lectures and practical exercises cover troubleshooting the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1394

NATO Seasparrow 7M Maintenance

Course Number: *Version 1:* A-104-0204. *Version 2:* A-104-0204.

Location: *Version 1:* Service Schools Command, Mare Island, Vallejo, CA. *Version 2:* Combat Systems Technical Schools Command, Mare Island, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 30 weeks (1200 hours). *Version 2:* 30 weeks (1200 hours).

Exhibit Dates: *Version 1:* 3/93–Present. *Version 2:* 1/90–2/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, maintain, and troubleshoot a radar-directed, computer-controlled missile system; understand the functions of the major system components, including radar, signal processing, digital computer, and servomechanism aiming; perform hardware and software preventive maintenance using automated and manual test methods and equipment; and troubleshoot and repair all systems to the module level. *Version 2:* Upon completion of the course, the student will be able to operate, maintain, and troubleshoot a radar-directed, computer-controlled missile system; understand the functions of the major system components, including radar, signal processing, digital computer, and servomechanism aiming; perform hardware and software preventive maintenance using automated and manual test methods and equipment; and troubleshoot and repair all systems to the module level.

Instruction: *Version 1:* Lectures and practical exercises prepare the student to operate, maintain, and troubleshoot complex electronic equipment. There is extensive troubleshooting experience. The course includes instruction in high frequency receiver/transmitters, bus configurations, digital-to-analog and analog-to-digital concepts, logic gates (TTL), multivibrators, pulse shaping circuits, signal timing, microprocessor configuration, interrupts, memory design, I/O control, programming, overall operation, synchros/servos, and various test equipment operation and maintenance. *Version 2:* Lectures and practical exercises prepare the student to operate, maintain, and troubleshoot complex electronic equipment. There is extensive troubleshooting experience.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance, 3 in computer systems troubleshooting and maintenance, 2 in computer systems and organization, 3 in radar systems, and 3 in applied control systems (3/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance, 3 in computer systems troubleshooting and maintenance, 2 in computer systems and organization, 3 in radar systems, and 3 in control systems (6/89).

NV-1715-1395

Strategic Weapon System Command Poseidon Weapons Officer

Course Number: A-2F-0031.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 3-4 weeks (144 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand the major systems which make up a missile fire control system including digital computers and data transmission.

Instruction: Lectures and practical exercises cover the operation of the major subsystems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/89).

NV-1715-1396

Terrier CG/DDG Standard Missile (ER) Officer Advanced

Course Number: A-2F-0061.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to supervise maintenance, administration, and employment of a missile fire control system, including radar, computer, and launching subsystems.

Instruction: Lectures and practical exercises cover the system's components.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/89).

NV-1715-1397

Electrostatically Supported Gyro Monitor (ESGM) Backfit Strategic Weapon System Command Replacement/ Navigation

Course Number: A-2E-0039.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the basic principles of inertial navigation and the mechanical and electronic systems which make up a ship's inertial navigation system.

Instruction: Lectures and homework cover the navigation system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/89).

NV-1715-1398

Trident 1 Backfit Strategic Weapon Systems Command Replacement

Course Number: A-2F-0050.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 3-4 weeks (144 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will understand and operate, at the command level, major subsystems of a missile fire control system including computers and data transmission.

Instruction: Lectures and practical exercises cover the function and operation of major system components.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/89).

NV-1715-1399

Fire Control System Mk 88 Mod 2 Advanced Technician

Course Number: A-121-0526.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 1-2 weeks (72 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform corrective maintenance on the cabling and interconnections of a missile weapons system.

Instruction: Lectures and practical exercises cover wire wrap techniques, soldering techniques, and missile weapons systems.

Credit Recommendation: In the vocational certificate category, 1 semester hour in soldering and wire wrap techniques (6/89).

NV-1715-1400

Strategic Weapons System Electronic, Class A

Course Number: A-121-0142.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 13-14 weeks (544 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use terms specific to electricity and electronics; use basic algebra and arithmetic, including power of ten notation, to analyze basic electric and electronic circuits for pertinent qualities; use multimeters, oscilloscopes, and signal generators to troubleshoot circuits; recognize circuit components by inspection; correctly assemble electronic and electric circuits using schematic diagrams; convert between number systems including decimal, octal, binary, hexadecimal, one's complement, and two's complement; analyze digital circuits including and/or gates and flip-flops; and analyze counters, encoders, decoders, multiplexers, adders, and registers. The student will have a basic understanding of the physics of linear and circular motion and the electromechanical devices for the sensing and control of such motion; understand the fundamental operation of synchros, resolvers, inductosyns, and servomechanism systems; and be able to troubleshoot and repair, to the major component level, electromechanical servomechanism systems.

Instruction: School includes lectures and laboratories and is divided into basic electricity and electronics (7 weeks), computer fundamentals (4 weeks), and special electronics and mechanical skills (2-3 weeks).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electronics laboratory, 2 in DC circuits, 2 in AC circuits, 3 in digital principles, 3 in solid state electronics, 3 in computer systems and organization, and 3 in control systems (6/89).

NV-1715-1401

Electronic Special Circuits

Course Number: A-121-0529.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be familiar with electron tubes (vacuum tubes), basic electronic communications, and radar systems.

Instruction: Very little laboratory work is required. The students learn terminology and basic facts. Course prepares them for further study.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electronic communications (6/89).

NV-1715-1402

Central Navigation Computer (CNC) Technician
(Computer Intermediate Level Maintenance)
(Fleet Ballistic Missile Tender Navigation Maintenance Computer)

Course Number: A-193-0038.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair components of electromechanical control systems, including servomechanisms and attendant gear trains, using electronic and mechanical test sets.

Instruction: Lectures and laboratory exercises involve the use of a servomechanism test set, attendant XY recorder, and electronic test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in servomechanism/ robotics equipment troubleshooting, maintenance, and repair (6/89).

NV-1715-1403

NATO Seasparrow 7M Difference Maintenance

Course Number: A-104-0203.

Location: Combat Systems Technical Schools Command, Mare Island, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 6-7 weeks (256 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair a guided missile fire control system, launch system, and associated computer.

Instruction: Lectures and practical exercises emphasize repair and maintenance of a surface missile system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1404

NAVAIDS Equipment Technician Replacement

Course Number: A-193-0393.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 16 weeks (640 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a sonar set, a radio navigation set, a frequency standard, a Loran receiving set, and a gyro monitor.

Instruction: Lectures and practical exercises cover maintenance of the specific submarine navigation system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1405

AN/SQR-15 Maintenance Training

Course Number: J-130-0101.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a towed-array sonar system and its associated subsystems.

Instruction: Lectures and practical exercises cover the sonar system with emphasis on corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1406

UNIVERSAL INTERMEDIATE LEVEL MAINTENANCE (ILM) TENDER

Course Number: A-121-0554.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 21 weeks (840 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and perform preventive and corrective maintenance on specific missile systems.

Instruction: Instruction includes classroom and laboratory work on the operation of electrical and electronic systems and their interface with other systems required to launch missiles. Course includes procedures for fault isolation and and correction on these systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in mechanical systems maintenance (6/89); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1407

VERTICAL LAUNCHER SYSTEM MK 41

Course Number: A-121-0522.

Location: Fleet Training Center, San Diego, CA; Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 19-20 weeks (784 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain the computers, tape units, terminals, control systems, and mechanical systems that comprise a missile launch system.

Instruction: Lectures and practical exercises cover all parts of the missile launch system. Emphasis is placed on troubleshooting and corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 3 in computer systems troubleshooting and maintenance (6/89).

NV-1715-1408

MK 152 DIGITAL COMPUTER

Course Number: A-150-0079.

Location: Guided Missiles School, Dam Neck, Virginia Beach, VA.

Length: 19-20 weeks (784 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operation of a digital computer and associated I/O equipment, including operating console, terminal, and data recorder; use the instruction set of the computer to write machine language programs to perform arithmetic, control, and I/O tasks; and maintain and troubleshoot the computer system using automated diagnostics and manual signal tracing routines.

Instruction: Lectures and practical experience cover the specific computer and auxiliary input/output equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems and organization, 3 in electronic systems troubleshooting and maintenance, and 3 in computer systems troubleshooting and maintenance (6/89).

NV-1715-1409

AN/SQR-17A(V) DIFFERENCE MAINTENANCE

Course Number: K-130-0277.

Location: Fleet Antisubmarine Warfare Training Center, Atlantic, Norfolk, VA.

Length: 5-6 weeks (230 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair a specific sonar system.

Instruction: Lectures and practical exercises cover the sonar system with emphasis on corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/89).

NV-1715-1410

MINIATURE ELECTRONICS REPAIR

Course Number: C-100-3182.

Location: Air Station, Beaufort, SC; Air Station, Oceana, Virginia Beach, VA; Air Station, Norfolk, VA; Air Station, Cecil Field, FL; Air Station, Lemoore, CA; Air Station, Miramar, San Diego, CA; Air Station, Moffett Field, CA; Air Station, El Toro, CA; Air Station, Whidbey Island, Oak Harbor, WA; Air Station, Atsugi, Japan; Air Station, Rota, Spain.

Length: 6 weeks (200 hours).

Exhibit Dates: 1/90–4/94.

Learning Outcomes: Upon completion of the course, the student will be able repair printed circuit boards, remove and replace laminate material, remove and replace conducting tracks, remove and replace conformal coatings, install lead wires on various types of terminal and connectors, and use repair equipment including those operations which require microscopic viewing.

Instruction: Lecture and lab experience cover printed circuit board construction, component types and mounting methods, electronic sounder and fluxer, removal and replacement of discrete components and multilead through-hole devices, removal and replacement of surface mount devices, laminated board and trace repair, and lead preparation and connection techniques.

Credit Recommendation: In the vocational certificate category, 2 semester hours in miniature repair techniques (11/92).

NV-1715-1411

AN/AAS-33A DETECTING AND RANGING SET RECEIVER GROUP/RECIPROCATING COMPRESSOR/INFRARED INDICATOR INTERMEDIATE MAINTENANCE COURSE

Course Number: C-102-3980.

Location: Air Station, Whidbey Island, Oak Harbor, WA.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under supervision, intermediate maintenance on an infrared/laser detecting and ranging set, using the AN/AAM-60 electro-optical systems test set.

Instruction: Lectures and laboratory assignments cover operation, maintenance, troubleshooting, and repair of the electro-optical test set with digital logic, phase locked loops, CRT display electronics and signal processing, servo system electronics, and an HP 218B 16 bit microcomputer; the detecting and ranging receiver with IR detectors, optics, cooling, vacuum, and signal processing; four gimbaled gyro-stabilized platform with synchros, resolvers, and phase-locked loops; and laser generation, transmitting, receiving, and signal processing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electro-optical systems maintenance (8/89).

NV-1715-1412

OQ-35A/ASM-347(V) PROGRAMMER COMPARATOR INTERMEDIATE MAINTENANCE

Course Number: *Version 1:* C-198-3011. *Version 2:* C-198-3011.

Location: *Version 1:* Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA. *Version 2:* Air Station, Oceana, Virginia Beach, VA; Air Station, Whidbey Island, Oak Harbor, WA.

Length: *Version 1:* 8 weeks (320 hours). *Version 2:* 11 weeks (320 hours).

Exhibit Dates: *Version 1:* 1/94–4/97. *Version 2:* 1/90–12/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to program, troubleshoot, and repair a programmable signal processor. *Version 2:* Upon completion of the course, the student will be able to list the input power requirements for the programmer comparator (PC), demonstrate written knowledge of the functional operation of the analog-to-digital converter including solving theoretical troubleshooting problems, state the function and modes of operation of the calibration interface adapter, trace signal from one point in the PC to another, use applicable publications to isolate and correct faults in the PC, and develop programs in machine code to sequence the PC through a sampling cycle.

Instruction: *Version 1:* Lectures and practical exercises focus on the specific equipment. Course includes detailed study of programming techniques that cause the equipment to perform a sequence of operations. Course also includes extensive practice in troubleshooting the equipment. *Version 2:* Lecture and laboratory exercises on the programmer-comparator.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in programmable controllers and 3 in electronic system troubleshooting and maintenance (10/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in programmable controllers (8/89).

NV-1715-1413

C-8610/AWE Armament Control Panel Intermediate Maintenance

Course Number: C-646-3767.

Location: Air Station, Oceana, Virginia Beach, VA; Air Station, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–5/96.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and repair the armament control panel and operate the associated maintenance adapter set.

Instruction: Lectures and lab experience cover the armament control panel and associated controls and indicators and the SRA maintenance adapter SRT.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (8/89).

NV-1715-1414

Electro-Optics/Cryogenics Fundamentals

Course Number: C-102-3981.

Location: Air Station, Moffett Field, CA; Air Station, Whidbey Island, Oak Harbor, WA; Air Station, Oceana, Virginia Beach, VA.

Length: 2 weeks (59 hours).

Exhibit Dates: 1/90–11/91.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, under supervision, an electro-optical and cryogenic systems. The student will demonstrate a written knowledge of the properties of electromagnetic waves and beam dynamics, relationships of the different frequencies of light and color, principles of wave optics, principles of light polarization, principles and definitions of lens optics, fundamentals of the particle theory of light, basic atomic structure and energy levels, principles of photon absorption and emission, basic characteristics of laser operation, and introduction to cryogenics.

Instruction: Lectures and practical exercises cover the theory, operation, maintenance, and troubleshooting of electro-optical and cryogenic systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in applied physics (8/89).

NV-1715-1415

GT-3 OK-441/ALM Controller Intermediate Maintenance

Course Number: C-102-4743.

Location: Air Station, Whidbey Island, Oak Harbor, WA.

Length: 4 weeks (120 hours).

Exhibit Dates: 1/90–12/94.

Learning Outcomes: Upon completion of the course, the student will be able to describe the four main sections of the HP 1000 computer and their functions; enter machine language programs via the computer front panel; load and unload the disk cartridge; test, troubleshoot, align, adjust, and maintain the dual disk drive unit; operate, test, and maintain a display terminal; and demonstrate knowledge of the operating system, including its purpose, subdivisions, utilities program system prompts, command structure, and security codes.

Instruction: Lectures and laboratory exercises cover computer operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer operations (8/89).

NV-1715-1416

OJ-511/ALM Exciter Test Station Intermediate Maintenance

Course Number: *Version 1:* C-102-4745A. *Version 2:* C-102-4745.

Location: *Version 1:* Air Station, Whidbey Island, WA. *Version 2:* Air Station, Whidbey Island, Oak Harbor, WA.

Length: *Version 1:* 5 weeks (154 hours). *Version 2:* 5 weeks (160 hours).

Exhibit Dates: *Version 1:* 2/97–Present. *Version 2:* 1/90–1/97.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to maintain, analyze, and troubleshoot, under close supervision, a test station which uses the IEE-488 bus to interface various test equipment, such as digital multimeters, spectrum analyzers, timers, and oscilloscopes.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures and laboratory activities cover functional operation, circuit operation, testing using computer diagnostics, and troubleshooting and repair of the exciter test station.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance and repair of computer-controller test equipment (8/89).

NV-1715-1417

AN/USM-467 Radar Communication Test Station Operator Intermediate Maintenance

Course Number: C-198-3046.

Location: Air Station, Whidbey Island, Oak Harbor, WA; Air Station, Oceana, Virginia Beach, VA.

Length: 4 weeks (148 hours).

Exhibit Dates: 1/90–1/92.

Learning Outcomes: Upon completion of the course, the student will be able to operate and perform minor hardware and software maintenance on a radar communications test station.

Instruction: Classroom lectures and laboratory application cover operation and programming of a radar communications test station. Subjects covered and tasks mastered include operation of system; knowledge of real-time, executive operating system, self-test programs, and operator usage; and knowledge of and programming facility with the ATLAS (Abbreviated Languages for All Systems) language as applied to a real-time control system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (8/89).

NV-1715-1418

AN/USM-467 Radar Communications Test Station Maintainer Intermediate Maintenance

Course Number: C-198-3047.

Location: Air Station, Oceana, Virginia Beach, VA; Air Station, Whidbey Island, Oak Harbor, WA.

Length: 9 weeks (315 hours).

Exhibit Dates: 1/90–1/92.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair a radar communications test station, using self-test diagnostic and conventional test equipment, down to the component level.

Instruction: Classroom lectures and laboratory exercise cover the theory of operation and circuitry of various devices, such as power supplies, digital computers, disc controllers, dual disk drives, programmable multifunction meters, digital word generators, color graphics units, bus test units, programmable oscilloscopes, multiple matrix switches, synchro/resolvers, auto function generators, auto spectrum analyzers, RF Interface units, signal analyzers, HP-436A power meters, and rubidium oscillator. Also covered are the use of the IEE-488 bus to control and interface the above devices and the use of system programming languages.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer interfacing (8/89).

NV-1715-1419

AN/APM-375 Mini-SACE Search Radar Test Console AN/APQ-156 and AN/APS-130 Search Radar Systems and MSRTC Tested AN/AAS-33A WRAS Intermediate Maintenance

Course Number: C-104-3771.

Location: Air Station, Oceana, Virginia Beach, VA; Air Station, Whidbey Island, Oak Harbor, WA.

Length: 19 weeks (560 hours).

Exhibit Dates: 1/90–3/96.

Learning Outcomes: Upon completion of the course, the student will demonstrate understanding of the search radar test console and the search radar systems, including system analysis and troubleshooting techniques. The student will be able to perform intermediate level maintenance under close supervision.

Instruction: Lectures and laboratories cover the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in analog and power supply circuit analysis and 1 in troubleshooting techniques (8/89).

NV-1715-1420

IP-722F/AVA-1 Analog Display Indicator Intermediate Maintenance

Course Number: C-198-3762.

Location: Air Station, Whidbey Island, Oak Harbor, WA.

Length: 6 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform supervised maintenance on a video display subsystem, including power supplies, signal generating, processing and shaping circuits, video amplifiers, and analog-to-digital converters.

Instruction: Lectures cover basic operation and circuits and practical laboratory troubleshooting covers test setup and procedures. Topics include low-voltage and high-voltage power supplies; video circuits and indicator lamps; generation of field scans, buffering, and drive signals; video amplifier; analog-to-digital conversion circuits; timers; symbol generation for flight path; alphanumerics and other externally input display symbols; and a video mixer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in video interfacing (8/89).

NV-1715-1421

OJ-615/ALM Countermeasures Test Console Intermediate Maintenance

Course Number: C-198-3763.

Location: Air Station, Whidbey Island, Oak Harbor, WA.

Length: 5 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot and repair a countermeasures test console under close supervision.

Instruction: Lectures and Laboratory application are related to transmitter test station theory, power supplies, line filters, test equipment, IEEE-488 bus analysis, and matrix switch.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (8/89).

NV-1715-1422

AN/ALR-50 Support Equipment Intermediate Maintenance

Course Number: *Version 1:* C-102-3097. *Version 2:* C-102-3097.

Location: *Version 1:* Air Maintenance Training Group, Oceana, Virginia Beach, VA; Air Maintenance Training Detachment, Whidbey Island, Oak Harbor, WA. *Version 2:* Air Station, Whidbey Island, Oak Harbor, WA.

Length: *Version 1:* 2-4 weeks (80 hours). *Version 2:* 4 weeks (112 hours).

Exhibit Dates: *Version 1:* 2/93–Present. *Version 2:* 1/90–1/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to analyze the test set system by tracing signal flow through a system block diagram and state the basic function of each subsystem (plug-in module). The student will isolate instructor-induced troubles down to the component level in subsystems that include tone generator, formal generator, code generator, sequence generator, control board, interface analyzer board, and timer and analog interface board. The student will also be able to calibrate and align test set. *Version 2:* Upon completion of the course, the student will be able to analyze the test set system by tracing signal flow through a system block diagram and will state the basic function of each subsystem (plug-in module). The student will isolate instructor-induced troubles down to the component level in the tone generator, formal generator, code generator, sequence generator, control board, interface analyzer board, and timer and analog interface board. The student will also be able to calibrate and align test set.

Instruction: *Version 1:* Classroom lectures and laboratory application cover the operation and maintenance of the test set system. *Version 2:* Classroom lectures and laboratory application cover the operation and maintenance of the test set system.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (10/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (8/89).

NV-1715-1424

Advanced First Term Avionics, Class A1

Course Number: C-100-2010.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 11 weeks (437 hours).

Exhibit Dates: 1/90–12/92.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, test, and maintain, under minimum supervision, navigation, communications, and radar systems.

Instruction: Lectures and practical exercises cover AC and DC circuits; resonance; time constants; decibels; ideal transistors; transistor theory, including biasing, load line analysis, equivalent circuits, RC transformers, direct couplers, feedback, video, and power amplifiers; power supplies, regulators, waveshaping circuits, and oscillators; fundamentals of computer logic and systems with emphasis on maintenance of equipment; microwave principles, including characteristics of transmission lines, waveguides, cavities, antennas, microwave tubes, and circuits; fundamentals of AM, FM, and SSB; and block diagrams and operation of radar and navigation equipment with emphasis on maintenance and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in AC circuits, 3 in active devices and circuits, and 3 in communications electronics (7/91).

NV-1715-1425

AN/FPN-63(V) Maintenance, Class C1

Course Number: C-103-2037.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot the precision approach radar system and turntable system.

Instruction: Lectures and practical exercises cover electronic systems, process of timing devices, transmitters, receivers, indicators, turntables, power circuits, radar alignment, and systems troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems and 3 in computer systems troubleshooting and maintenance (9/89).

NV-1715-1426

AN/GPN-27 Maintenance, Class C1

Course Number: C-103-2036.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance on an airport surveillance radar system.

Instruction: Lectures and practical exercises cover radar systems and their controls, power supplies, transmitters, receivers, AC power distribution, system alarm/fault logic synchronizers, and preventive maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radar systems and 4 in electronic communications (9/89).

NV-1715-1427

AN/SPN-35A Maintenance
(AN/SPN-35A Maintenance, Class A1)
(AN/SPN-35A Maintenance, Class G1)

Course Number: C-103-2012.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 7-8 weeks (312 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and perform preventive and corrective maintenance on a radar system.

Instruction: Lectures and practical exercises cover electronic block diagrams, power distribution, power supplies, antenna control and drive circuits, azimuth and elevation controls, antenna alignment, radio frequency monitors, IF and video amplifiers, receivers and transmitters, sweep circuits, trigger delay generators, control computations and target generators, and special emphasis on system troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (11/95).

NV-1715-1428

1. AN/SPN-41 Maintenance
2. AN/SPN-41 Maintenance, Class C1

Course Number: *Version 1:* C-103-2023. *Version 2:* C-103-2023.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Technical Training Center, Millington, TN. *Version 2:* Air Technical Training Center, Memphis, Millington, TN.

Length: *Version 1:* 5 weeks (153 hours). *Version 2:* 4-5 weeks (176 hours).

Exhibit Dates: *Version 1:* 2/95–Present. *Version 2:* 1/90–1/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance and align and operate the radar system. This course is designed to teach personnel who are competent in electricity/electronics of the AN/SPN-43B radar system. *Version 2:* Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair radar systems.

Instruction: *Version 1:* This course is taught using formal classroom presentation coupled with laboratory periods. Extensive hands-on experience in the laboratory is an integral part of the course with about an eight to one laboratory to lecture ratio. Most of the instruction provided is equipment specific. *Version 2:* Lectures and practical exercises cover power distribution, elevation drives, azimuth drives, antenna alignment, synchro/servo fundamentals, transmitter stabilization, digital logic, and radar system troubleshooting.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electric safety and 3 in radar systems (11/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in radar system (9/89).

NV-1715-1429

AN/SPN-42A Maintenance, Class C1

Course Number: C-103-2013.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 22 weeks (880 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course the student will be able to operate and maintain an all weather carrier landing system including its computers and subsystems.

Instruction: Lectures and practical exercises in radar systems, controls, operation, DC power distribution, radar subsystems, data stabilization subsystems, control and monitoring equipment, input and output buffers, data link monitors. Includes systems analysis and ability to isolate and repair faults. Includes console alignment, encoder alignment, radar alignment, computer maintenance procedure, machine language programming, computer subsystem power supplies, control logic circuiting, program translation, computer diagnostic tests, and fault diagnosis using diagnostic programs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer operation, 8 in computer systems and organization, and 4 in radar systems (9/89).

NV-1715-1430

AN/SPN-43A Maintenance, Class C1

Course Number: C-103-2014.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 4-5 weeks (176 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair a radar system.

Instruction: Lectures and practical exercises cover block diagrams, power supplies, power distribution, high-voltage circuits, oscillators, amplifiers, frequency control, stabilization relay circuits, and azimuth drive and elevation tilt circuits. Emphasis is placed on practical exercises and troubleshooting laboratories.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems (9/89).

NV-1715-1431

AN/SPN-44 Maintenance, Class C1

Course Number: C-103-2024.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 3 weeks (104 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair a radar system.

Instruction: Lectures and practical exercises cover power distribution, low- and high-voltage power supplies, receivers and transmitters, Doppler processors, servo systems, recorders, and indicators. Emphasis is placed on radar systems and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radar systems (9/89).

NV-1715-1432

AN/TPX-42A Basic Direct Altitude Identity Readout (DAIR) Maintenance, Class C1

Course Number: C-103-2034.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 7 weeks (272-280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair the direct altitude identity readout system.

Instruction: Lectures and practical exercises cover the operation and basic maintenance of the radar system. Topics include semiconductor devices, logic devices, powers supplies, coders, receivers, transmitters, analog-to-digital converters, processor operation, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 1 in radar systems (8/92).

NV-1715-1433

AN/TPX-42A(V)5 Direct Altitude Identity Readout (DAIR) Maintenance, Class C1

Course Number: C-103-2028.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 5-6 weeks (208 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair the direct altitude identity readout system.

Instruction: Lectures and practical exercises cover the operation and maintenance of the radar system. Topics include semiconductors, power supplies, digital sweep generators, data processor memory circuits, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (5/96).

NV-1715-1434

AN/TPX-42A(V)8 Carrier Air Traffic Control Center (CATCC) Direct Altitude Identity Readout (DAIR) Maintenance, Class C1

Course Number: C-103-2033.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–9/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair a radar system.

Instruction: Lectures and practical exercises cover control and maintenance panels, maintenance procedures, electrostatic devices, block diagrams, fault isolation, circuit analysis, and keyboard familiarization. Special emphasis is placed on troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (9/89).

NV-1715-1435

AN/TPX-42A(V)10 Radar Air Traffic Control Facility (RATCF) Direct Altitude Identity Readout (DAIR) Maintenance, Class G1

Course Number: C-103-2035.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 7-9 weeks (296-360 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair a radar system.

Instruction: Lectures and practical exercises cover introduction to computers, programming, console operations, power supplies, circuit analysis, and direct memory access. Emphasis is placed on troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (4/98).

NV-1715-1436

Aviation Antisubmarine Warfare (ASW) Operator, Class A1

(Antisubmarine Warfare (ASW) Operator, Class A1)

Course Number: C-210-2010.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 10-11 weeks (436 hours).

Exhibit Dates: 1/90–8/96.

Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of an antisubmarine warfare operator.

Instruction: Lectures and practical exercises cover radar systems, including plotting codes and tactics, sonar and sonar operations, and fundamentals of oceanography.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in oceanography and 1 in radar systems (9/89).

NV-1715-1437

Aviation Ordnance, Class A1

Course Number: C-646-2010.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 10-11 weeks (415 hours).

Exhibit Dates: 1/90–1/96.

Learning Outcomes: Upon completion of the course, the student will have the basics skills to become an apprentice aviation ordnanceman.

Instruction: Lectures and laboratories cover mathematics; hardware; use of general and special tools; safety, electricity, including series, parallel, and series/parallel circuits; measuring devices; troubleshooting; corrosion control; ammunition and magazines; ordnance; aircraft guns; and guided missiles and their function, operation, and safety precautions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in DC circuits (9/89).

NV-1715-1438

Avionics Intermediate, Class C7

Course Number: C-100-2012.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 30-31 weeks (1225 hours).
Exhibit Dates: 1/90–5/91.
Learning Outcomes: Upon completion of the course, the student will be able to maintain and repair electronic, avionic, digital, radar, and communications systems.
Instruction: Lectures and laboratories cover mathematics, physics, electronic devices and systems, digital computer systems, communications and microwave principles, waveform devices, radar principles, systems analysis, avionics principles, servomechanisms, and test equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in technical mathematics, 6 in semiconductor devices, 4 in AC circuits, 4 in digital computers, 3 in digital fundamentals, 3 in communications electronics, 4 in radar systems, 2 in avionic systems, and 1 in physics (9/89).

NV-1715-1439

Avionics Technician, Class A1

Course Number: C-100-2013.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 26-27 weeks (1040 hours).
Exhibit Dates: 1/90–5/96.
Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot solid state devices, radar systems, and electrical and electronic systems with little supervision.
Instruction: Lectures and laboratories cover mathematics and computer, electrical, electronic, communications, and radar systems. Included are the fundamentals of amplitude and frequency modulation, receiver circuits, use of test equipment, and troubleshooting to the component level. Topics include RF/IF and radio amplifiers, mixers, oscillators, detectors, modulators, and power supplies. Course also includes introduction to digital logic, principles, and circuits, as well as the organization, programming, and troubleshooting of basic digital computers. Other topics include AC and DC fundamentals, semiconductor devices, and electronic system troubleshooting and repair.
Credit Recommendation: In the vocational certificate category, 3 semester hours in shop mathematics (2/93); in the lower-division baccalaureate/associate degree category, 6 semester hours in communications electronics, 4 in computer organization, 4 in microprocessors, 4 in computer systems troubleshooting and maintenance, and 3 in radar systems (2/93).

NV-1715-1440

Avionics Technician, Class A1

Course Number: C-100-2014.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 8-9 weeks (344 hours).
Exhibit Dates: 1/90–Present.
Learning Outcomes: Upon completion of the course, the student will be able to use test equipment to perform circuit analysis.
Instruction: This course is made up of the first eight weeks and three days of the AVA school (NV-1715-1439). Lectures and practical exercises cover the fundamentals of DC and AC circuits including analog and digital meter principles and use; principles of transformers, bridge circuits, and circuit analysis; and technical mathematics.
Credit Recommendation: In the vocational certificate category, 3 semester hours in shop mathematics (9/89); in the lower-division baccalaureate/associate degree category, 1 semester hour in DC circuits and 1 in AC circuits (9/89).

NV-1715-1441

Marine Air Traffic Control Communications Technician, Class C1

Course Number: C-103-2032.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 30-31 weeks (1216 hours).
Exhibit Dates: 1/90–9/95.
Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, and repair communications systems and data processing equipment.
Instruction: Lectures and laboratories cover analog electronic components and circuits, including semiconductors, diodes, transistors, power supply filters and rectifiers, amplifiers, oscillators, multivibrators, mixers, modulators, antennas, and gain and frequency control. Course also covers theory of digital components and circuits, including logic gates, integrated circuits, flip-flops, I/O devices, memory devices, and microprocessors. Emphasis is placed on fault isolation and repair of equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in electronic devices and circuits, 4 in digital devices and circuits, 2 in computer principles, and 2 in electronic systems troubleshooting and maintenance (9/89).

NV-1715-1442

Marine Air Traffic Control Navigational Aids Technician, Class C1

Course Number: C-103-2030.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 33-34 weeks (1336 hours).
Exhibit Dates: 1/90–9/95.
Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, install, and repair navigation equipment and data processing equipment.
Instruction: Lectures and laboratories cover analog electronic components, including semiconductors, diodes, transistors, power supply filters and rectifiers, oscillators, multivibrators, mixers, modulators, antennas, and gain and frequency control. Course also covers digital theory, including logic gates, integrated circuits, flip-flops, I/O devices, memory devices, and microprocessors. Emphasis is placed on troubleshooting navigation aids systems.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in electronic devices and circuits, 4 in digital devices and circuits, 2 in computer principles, and 2 in electronic systems troubleshooting and maintenance (9/89).

NV-1715-1443

Marine Air Traffic Control Radar Technician, Class C1

Course Number: C-103-2031.
Location: Air Technical Training Center, Memphis, Millington, TN.
Length: 35-36 weeks (1432 hours).
Exhibit Dates: 1/90–9/95.
Learning Outcomes: Upon completion of the course, the student will be able to operate, test, troubleshoot, install, and repair radar equipment and data processing equipment.
Instruction: Lectures and laboratories cover analog electronic components, including semiconductors, diodes, transistors, power supply filters and rectifiers, oscillators, multivibrators, mixers, modulators, antennas, and gain and frequency control. Course also covers digital theory, including logic gates, integrated circuits, flip-flops, I/O devices, memory devices, and microprocessors. Emphasis is placed on troubleshooting radar systems.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in electronic devices and circuits, 4 in digital devices and circuits, 2 in computer principles, and 6 in electronic systems troubleshooting and maintenance (9/89).

NV-1715-1444

Basic Electronics Rate Training

Course Number: A-100-0089.
Location: Submarine School, New London, Groton, CT.
Length: 14 weeks (560 hours).
Exhibit Dates: 1/90–2/94.
Learning Outcomes: Upon completion of the course, the student will be able to make mathematical calculations and solve problems using basic algebraic and trigonometric methods; calculate voltages and currents in DC series and parallel circuits; calculate AC circuit variables in RL, RC, and RLC circuits; analyze the operation of solid state devices, including diodes, bipolar transistors, and solid state circuits, including power supplies, amplifiers, operational amplifiers, oscillators, and waveshapers; describe the operation of digital gates, flip-flops, counters, registers, adders, and A/D converters; and perform arithmetic in binary, octal, and hexadecimal numbering systems.
Instruction: Lectures and practical exercises cover topics in basic technical mathematics and electronics.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics, 2 in DC circuits, 3 in AC circuits, 3 in digital principles, and 6 in solid state electronics (10/89).

NV-1715-1445

AN/BRQ-1 AN/WYQ-1 Combined Maintenance

Course Number: A-102-0128.
Location: Submarine School, New London, Groton, CT.
Length: 8 weeks (328 hours).
Exhibit Dates: 1/90–12/93.
Learning Outcomes: Upon completion of the course, the student will be able to operate,

troubleshoot, repair and maintain HF receivers with emphasis on types of signal generation, frequencies, and inputs/outputs.

Instruction: Theory and laboratory exercises cover the operation and maintenance of receivers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1446

Cryptologic Maintenance Technician AN/WLQ-4(V) Subsystem Maintenance Pipeline

Course Number: A-233-0052.

Location: Submarine School, New London, Groton, CT.

Length: 27 weeks (1080 hours).

Exhibit Dates: 1/90–3/94.

Learning Outcomes: Upon completion of this pipeline, the student will be able to perform subsurface cryptologic maintenance.

Instruction: This pipeline course consists of A-150-0267, AN/UYK-20(V) Basic Maintenance; A-233-0049 AN/WLQ-4(V) (E-Suite) Combined Maintenance; A-102-0128, AN/BRQ-1 AN/WYQ-1 Combined Maintenance; and A-233-0050, AN/WLQ-4(V) N-Suite Combined Maintenance. See exhibits NV-1402-0145, NV-1715-1448, NV-1715-1445, and NV-1715-1447 for further information.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1447

AN/WLQ-4(V) N-Suite Combined Maintenance

Course Number: A-233-0050.

Location: Submarine School, New London, Groton, CT.

Length: 7 weeks (270 hours).

Exhibit Dates: 1/90–3/94.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a wideband recorder, a frequency converter, an FM multiplexer, and a signal distribution unit.

Instruction: Lectures and laboratories emphasize equipment maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1448

AN/WLQ-4(V) E-Suite Combined Maintenance

Course Number: A-233-0049.

Location: Submarine School, New London, Groton, CT.

Length: 10 weeks (440 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a navigation system that includes antennas and signal processing equipment.

Instruction: Lectures and practical exercises cover the maintenance of a naval navigation system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1449

Application of Static Control Devices

Course Number: A-662-0139.

Location: Guided Missiles School Detachment, Dam Neck, Virginia Beach, VA; Submarine Training Center, Pearl Harbor, HI; Submarine Training Facility, San Diego, CA; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able describe a wide variety of applications of solid state components, basic measurement and control circuits, and logic circuits. Student will analyze solid state circuit function, determine circuit outputs, and troubleshoot devices.

Instruction: Lectures, demonstrations, and laboratory exercises cover applied solid state circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in DC machinery and 1 in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1450

Mk 19/27 Advanced Theory and Maintenance

Course Number: A-670-0051.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe basic feedback theory including synchros and solid state electronic control systems, as applied to multidimensional orientation measurement systems. Student will be able to analyze circuit diagrams for function and troubleshoot and repair functions on the control systems, power supplies, and measurement systems.

Instruction: Lectures, demonstrations, and laboratory exercises cover the above areas using a sophisticated gyrocompass.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours lecture and 1 semester hour laboratory in electromechanical systems (10/89).

NV-1715-1451

Combined Integrated Submarine Communications Antenna Subsystem Maintenance

Course Number: A-101-0137.

Location: Submarine School, New London, Groton, CT.

Length: 5-6 weeks (161 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will operate and maintain basic submarine loop and whip antennas.

Instruction: Lectures and practical exercises cover the antennas and antenna systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/89).

NV-1715-1452

Analog-to-Digital Converter Mk 65 Mods 1 and 2 Maintenance

Course Number: *Version 1:* A-193-0253. *Version 2:* A-193-0253.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: *Version 1:* 2 weeks (54 hours). *Version 2:* 1-2 weeks (57 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will have knowledge and skills needed to perform the procedures required to service the analog-to-digital converter. *Version 2:* Upon completion of the course, the student will be able to describe functional components of a specialized analog-to-digital converter and be familiar with maintenance procedures.

Instruction: *Version 1:* Lectures and laboratory sessions cover the functional operation and circuit characteristics of the synchro, resolver, DC circuits, and power supplies of the analog-to-digital converter and tools and test equipment needed to maintain the system. *Version 2:* Lectures and laboratories cover the specific converter.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in digital electronics (4/96). *Version 2:* Credit is not recommended because of the military-specific nature of the course (10/89).

NV-1715-1454

1. Magnetic Tape Input/Output Device MX-7988A and B/UYK Maintenance
2. Magnetic Tape Input/Output Device MX-7988A,B UYK Maintenance

Course Number: *Version 1:* A-193-0341. *Version 2:* A-193-0341.

Location: *Version 1:* Trident Training Facility, Bangor, Bremerton, WA. *Version 2:* Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: *Version 1:* 2-3 weeks (64-67 hours). *Version 2:* 2 weeks (76 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a magnetic tape unit. *Version 2:* Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a magnetic tape unit.

Instruction: *Version 1:* Lectures and laboratory exercises cover the maintenance and repair of magnetic tape units, including a magnetic tape transport, read/write switching amplifiers, power supplies, combination logic functions, command code execution, and use of special tools and test equipment. *Version 2:* Lectures and laboratory exercises cover the maintenance and repair of magnetic tape units, including a magnetic tape transport, read/write switching amplifiers, power supplies, combination logic functions, command code execution, and use of special tools and test equipment.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree

category, 2 semester hours in computer systems troubleshooting and maintenance (4/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (10/89).

NV-1715-1455

Radio Navigation Set AN/BRN-3B Maintenance

Course Number: A-193-0261.

Location: Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (79 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe and operate an HF radio receiver, including knowledge of preamplifiers, limiters, RF amplifiers, IF amplifiers, and audio amplifiers; perform diagnostic checks using computer programs; and align, adjust, and maintain the RF receiver.

Instruction: Lectures and laboratory exercises cover the subject matter.

Credit Recommendation: In the vocational certificate category, 2 semester hours in repair and maintenance of RF receivers (10/89).

NV-1715-1456

Guidance System Mk 3 Mod 0 Theory and Maintenance

Course Number: A-121-0296.

Location: Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (75 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a missile guidance system.

Instruction: Lectures and practical exercises cover the circuitry and components of the missile guidance system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1457

Electrostatically Supported Gyro Monitor (ESGM) Backfit Navigation Subsystem Theory

Course Number: A-193-0346.

Location: Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory which supports the corrective maintenance of the navigation system.

Instruction: Lectures and practical exercises cover the function and operation of the navigation system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/89).

NV-1715-1458

Electrostatically Supported Gyro Monitor (ESGM) Calibration

Course Number: A-193-0431.

Location: Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory of the equipment and calibrate the gyro monitor.

Instruction: Lectures and laboratory exercises cover the specific equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/89).

NV-1715-1459

AN/BPS-14 Radar Combined Maintenance

Course Number: A-104-0165.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a naval radar system.

Instruction: Lectures and practical exercises focus on the maintenance of a specific radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1460

Static Inverter 5Kw Combined Maintenance (5Kw Static Inverter Combined Maintenance)

Course Number: A-662-0030.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Center, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (64-68 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe solid state electronic circuits as applied to DC and AC power conversion systems at the functional level. Student will be able to analyze circuit function from diagrams and repair, troubleshoot, and maintain the power conversion and monitoring systems.

Instruction: Lectures, demonstrations, and practical exercises cover solid state electronic power conversion.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in solid state electronics (3/93).

NV-1715-1461

Mk 3 Mod 6 Ship's Inertial Navigation System (SINS) Combined Maintenance

Course Number: A-193-0357.

Location: Submarine School, New London, Groton, CT.

Length: 16-17 weeks (646 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, repair, and maintain an inertial navigation system.

Instruction: Lectures and practical exercises cover the theory of computer organization, timing circuits, register logic, and test equipment for computer maintenance and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer systems and organization and 3 in computer systems troubleshooting and maintenance (10/89).

NV-1715-1462

Inertial Navigation System (ESGM) AN/WSN-3A(V)2 Combined Maintenance

Course Number: A-193-0354.

Location: Submarine School, New London, Groton, CT.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair an inertial navigation system.

Instruction: Lectures and practical exercises cover the navigation system including a microprocessor-based special purpose computer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1463

AN/WLQ-4(V) Direct Support Element Basic Operator

Course Number: A-233-0051.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 4 weeks (154 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be operate the communications subsystem under supervision.

Instruction: Theory and laboratory exercises cover the function and operation of the subsystem including speakers, loud speakers, interface box, audio recorders, and magnetic tape drives.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/89).

NV-1715-1464

Magnetic Disk File (MDF) Theory and Electrical Maintenance

Course Number: A-121-0304.

Location: Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a magnetic disk drive used for computer data storage.

Instruction: Lectures and laboratory exercises cover the circuitry and components of a computer disk drive.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1465

Subsurface Direct Support Maintenance

Course Number: A-233-0074.

Location: Submarine School, New London, Groton, CT.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair basic receivers and transmitters.

Instruction: Lectures and laboratories cover audio detection, IF, RF, amplifiers, and oscillator stages. Course also includes bandwidth switching, prescaling, frequency conversion, video amplification, power supplies, and alignment of complex electronic assemblies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1466

Sonar Receiving Set AN/BQR-23 Basic Maintenance

Course Number: A-130-0156.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate remote controlled CRT displays and understand the use of the CPU, I/O address register, and data control.

Instruction: Lectures and practical exercises cover signal processing, beam tracing, and video amplifiers.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/89).

NV-1715-1467

AN/BQR-15 SPALT 9080 Operations and Maintenance

Course Number: A-130-0332.

Location: Submarine School, New London, Groton, CT.

Length: 1-2 weeks (52 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair a sonar receiving set.

Instruction: Experienced technicians are introduced to the theory, operation, and maintenance of a particular sonar receiving set. Instruction is also provided on electrical, mechanical, and hydraulic maintenance of the set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1468

Static Control Device Theory

Course Number: A-662-0138.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Guided Missile School Detachment, Norfolk, VA; Submarine Training Facility, Charleston, SC; Submarine Training Facility, San Diego, CA; Submarine School, New London, Groton, CT.

Length: 1-2 weeks (75 hours).

Exhibit Dates: 1/90–8/93.

Learning Outcomes: Upon completion of the course, the student will understand the theory of solid state components, basic circuits, and logic circuits; make algebraic computations associated with solid state components and circuits such as gain and impedance of transistors and including FETs; and determine outcomes for logic circuits.

Instruction: Lectures, demonstrations and laboratory exercises cover solid state electronics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in solid state electronics (10/89).

NV-1715-1469

AN/BSC-2 Data Link Communications System (DLCS) Equipment Combined Maintenance

Course Number: A-101-0230.

Location: Submarine School, New London, Groton, CT.

Length: 5 weeks (134-200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, repair, and maintain a data link communications system.

Instruction: Lectures and practical exercises emphasize maintenance of the data link communications system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (8/95).

NV-1715-1470

AN/WRR-7 Combined Maintenance

Course Number: A-101-0068.

Location: Submarine School, New London, Groton, CT; Submarine Training Facility, Charleston, SC.

Length: 6 weeks (214 hours).

Exhibit Dates: 1/90–2/92.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a digital data processor, a radio receiver, a power supply, a frequency standard, and a cryptologic device.

Instruction: Lectures and practical exercises emphasize the maintenance of the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1471

Submarine Satellite Information Exchange Subsystem Combined Maintenance

Course Number: A-101-0083.

Location: Submarine School, New London, Groton, CT.

Length: 8 weeks (375 hours).

Exhibit Dates: 1/90–6/94.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair a submarine satellite information exchange system.

Instruction: Lectures and practical exercises cover the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1472

AN/WIC Integrated Announcing System

Course Number: A-623-0051.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair shipboard internal communications equipment and describe the theory of operation at the system and subsystem level.

Instruction: Lectures, tests, practical exercises, demonstrations, individualized practice, and solution of practical problems are methodologies. Topics include fault isolation, component-level repair, and electrical safety.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1473

Underwater Fire Control, Class A

Course Number: A-113-0133.

Location: Submarine School, New London, Groton, CT.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze and maintain electromechanical control systems, including step motors, servo systems, and synchros; describe the organization of general purpose computers; and troubleshoot and repair an electronic fire control system and a submarine warfare system.

Instruction: Lectures and practical exercises cover topics in electromechanical systems, computer theory, and specific military systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical control systems, 3 in electronic systems troubleshooting and maintenance, and 3 in computer systems and organization (10/89).

NV-1715-1474

Submarine Communications Equipment Combined Maintenance

Course Number: A-101-0061.

Location: Submarine School, New London, Groton, CT.

Length: 17 weeks (688 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will operate and maintain submarine radio receivers, antennas, MF/HF transmitters, and special communications equipment.

Instruction: This pipeline course consists of A-101-0237, Special Communications Equipment Combined Maintenance (NV-1715-1475); A-101-0135, Receivers Combined Maintenance (NV-1715-0984); and A-101-0137, Combined Integrated Communications Antenna Subsystem Maintenance (NV-1715-1451). The remaining course component is classified and was not evaluated. Please see the exhibits listed above for further information.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1475

Special Communications Equipment Combined Maintenance

Course Number: A-101-0237.

Location: Trident Training Facility, Kings Bay, GA; Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 8 weeks (304 hours).

Exhibit Dates: 1/90–6/94.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a radio transmitter system.

Instruction: Lectures and practical exercises cover the maintenance of the transmitters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1476

AN/BRN-6/SRN-9A Combined Maintenance

Course Number: A-102-0168.

Location: Submarine School, New London, Groton, CT.

Length: 2 weeks (74 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair a navigation satellite receiver.

Instruction: This course covers both theory and laboratory on the physical, functional, and interface description of the troubleshooting and repair of a radio receiver. The course also covers the use of special tools and test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/89).

NV-1715-1477

Submarine Tactical Communications Equipment Combined Maintenance

Course Number: A-101-0133.

Location: Submarine School, New London, Groton, CT.

Length: 13 weeks (506 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory of operation and be able to perform routine preventive and corrective maintenance on submarine tactical communications equipment.

Instruction: This is a pipeline course consisting of A-101-0083, Submarine Satellite Information Exchange System For Shipboard Installations Combined Maintenance and A-101-0251, Submarine Digital Teletype Combined Maintenance. For further information, see NV-1715-1471 and NV-1404-0011.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1478

Navigation Technician 594/688 Class Pipeline

Course Number: A-193-0103.

Location: Submarine School, New London, Groton, CT.

Length: 14 weeks (547 hours).

Exhibit Dates: 1/90–4/94.

Learning Outcomes: Upon completion of the pipeline, the student will be able to operate, maintain, and repair navigation systems, including radar, receivers, and identify friend or foe systems.

Instruction: This is a pipeline course consisting of A-102-0253, DMINS AN/WSN-1(V)2 Combined Maintenance; A-102-0199, AN/BPS-15 Radar Combined Maintenance; A-102-0168, BRN-6/SRN-9A Combined Maintenance; and A-102-0229 and A-102-0131. The last two courses were too short for evaluation. See NV-1715-0994, NV-1715-0491, and NV-1715-1476.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1479

Navigation Technician 637/688 Class Pipeline

Course Number: A-193-0363.

Location: Submarine School, New London, Groton, CT.

Length: 14 weeks (550 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the pipeline, the student will be able to operate, maintain, and repair navigation systems, including radar, receivers, and identify friend or foe systems.

Instruction: This is a pipeline course consisting of A-193-0354, Inertial Navigation System (ESGM) AN/WSN-3A(V)2 Combined Maintenance; A-102-0199, AN/BPS-15 Radar Combined Maintenance; A-102-0168, BRN-6/SRN-9A Combined Maintenance; and A-102-0229 and A-102-0131. The last two courses were too short for evaluation. See NV-1715-1462, NV-1715-0491, and NV-1715-1476.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1480

Subsurface Cryptologic Technician (CT) Augmentee Operator Pipeline

Course Number: A-233-0079.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate subsurface cryptographic equipment.

Instruction: This is a pipeline course consisting of A-233-0051 (NV-1715-1463), AN/WLQ-4(V) Direct Support Element (DSE) Basic Operator and A-233-0073 and A-233-0086, both of which were too short for evaluation. Please see exhibit for NV-1715-1463 for further information.

Credit Recommendation: Please refer to the exhibit noted above for credit recommendation (10/89).

NV-1715-1481

Subsurface Cryptologic Technician (CT) Augmentee Operator Pipeline

Course Number: A-233-0081.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate subsurface cryptographic equipment.

Instruction: This is a pipeline course consisting of A-233-0051, AN/WLQ-4(V) Direct Support Element (DSE) Basic Operator (NV-1715-1463) and A-233-0027, AN/WLR-8(V)2 Basic Operation (NV-1714-0989). See these exhibits for further information.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1482

Subsurface Cryptologic Technician (CT) Augmentee Operator Pipeline

Course Number: A-233-0080.

Location: Submarine School, New London, Groton, CT.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate subsurface cryptographic equipment.

Instruction: This is a pipeline course consisting of A-233-0051, AN/WLQ-4(V) Direct Support Element (DSE) Basic Operator (NV-1715-1463); A-233-0029, AN/WRQ-1, AN/WYQ-1 Operator (NV-1715-0445); and A-233-0073 and A-233-0086, both of which were too short for evaluation. Please see exhibits for A-233-0051 and A-233-0029 for further information.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1483

Electronic Support Measures (ESM) 637 Class Type 2 Combined Maintenance Pipeline

Course Number: A-233-0055.

Location: Submarine School, New London, Groton, CT.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair electronic support systems.

Instruction: This pipeline course consists of A-150-0267, AN/UYK-20(V) Basic Maintenance (NV-1402-0145); A-233-0049, AN/WLQ-4(V) (E-Suite) Combined Maintenance (NV-1715-1448); and A-102-0157, Periscope Type 18 Combined Maintenance (NV-1715-1221). See individual exhibits for further information.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1484

Magnetic Disk File (MDF) Theory and Mechanical Maintenance Fire Control (FC) Mk 88

Course Number: A-121-0305.

Location: Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 1-2 weeks (48 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and repair computer magnetic disk drives and operate and repair electro/hydraulic/mechanical systems serving the computer disk drive units.

Instruction: Lectures and laboratories cover the disk drives.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour lecture and 1 semester hour laboratory in mechanical systems (disk drives) (10/89).

NV-1715-1485

AN/BQH-5(V)4 Combined Maintenance

Course Number: A-130-0290.

Location: Submarine Training Center, Pearl Harbor, HI; Submarine School, New London, Groton, CT.

Length: 4 weeks (154 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot recorder/reproducer tape transport equipment.

Instruction: Lectures and laboratory instruction cover the above topic.

Credit Recommendation: In the vocational certificate category, 1 semester hour in audio tape recorder repair (10/89).

NV-1715-1486

Intermediate Maintenance Activity (IMA) Machinery Maintenance

Course Number: A-210-0014.

Location: Submarine School, New London, Groton, CT.

Length: 1-2 weeks (54-80 hours).

Exhibit Dates: 1/90–4/94.

Learning Outcomes: Upon completion of the course, the student will be able to describe the basic concepts of acoustics, rotating machinery vibration, noise generation, structure-borne and fluid-born transmission, machinery balancing and noise measurement, and reduction procedures. Student will operate vibration monitoring equipment and understand the maintenance implications of the measurements.

Instruction: Lectures, demonstrations, and laboratory exercises cover acoustics, vibrations, and measurement.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester lecture and 1 semester hour laboratory in acoustics or vibrations (10/89).

NV-1715-1487

Navigation Technician Type 2 637 Class Pipeline

Course Number: A-193-0372.

Location: Submarine School, New London, Groton, CT.

Length: 23 weeks (910 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of this pipeline, the student will be able to operate and perform preventive and corrective maintenance on a number of navigation system components, including radar, NAVSAT, and identify friend or foe (IFF) systems.

Instruction: This course consists of A-193-0357, Mk 3 Mod 6 Ship's Inertial Navigation System Combined Maintenance (NV-1715-1461); A-102-0199, AN/BPS-15 Radar Combined Maintenance (NV-1715-0491); A-102-0168, BRN-6/SRN-9A Combined Maintenance (NV-1715-1476); and A-102-0229. The last was too short for evaluation. Please refer to the individual exhibits.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (10/89).

NV-1715-1488

1. Torpedoman's Mate Basic
2. Torpedoman's Mate, Class A1

Course Number: *Version 1:* A-123-0127. *Version 2:* A-123-0127.

Location: *Version 1:* Service School Command, Great Lakes, IL. *Version 2:* Service School Command, Orlando, FL.

Length: *Version 1:* 8 weeks (320 hours). *Version 2:* 10 weeks (400 hours).

Exhibit Dates: *Version 1:* 10/94–Present. *Version 2:* 1/90–9/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to calculate the resistance, current, power, and voltage in series, parallel, and complex DC circuits, and perform basic maintenance duties aboard ships and shore installations as a torpedoman. *Version 2:* Upon completion of the course, the student will be able to solve problems using basic math and linear equations and analyze circuits to calculate resistance, current, and voltage in series, parallel, and complex DC circuits, and capacitance and inductance in basic AC circuits.

Instruction: *Version 1:* This course includes group-paced lectures and performance activities on series DC circuits, parallel DC circuits, complex DC circuits, laboratory exercises on basic DC measurement techniques, hydraulics, pneumatics and explosives, and maintenance and troubleshooting torpedo systems. *Version 2:* Topics include principles of basic mathematics and algebra, solving linear equations, series and parallel DC circuits, complex DC circuits, capacitance, inductance, reactance, and transformers. Laboratory exercises cover basic techniques of measurement for AC and DC circuits, explosives, underwater sound, hydraulics and pneumatics, nucleonics, and planned maintenance and safety related to torpedoes and torpedo systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits (10/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits and 1 in technical mathematics (2/90).

NV-1715-1489

Electronics Technician, Class A

Course Number: A-100-0084.

Location: Service School Command, Orlando, FL.

Length: 17 weeks (680 hours).

Exhibit Dates: 1/90–12/94.

Learning Outcomes: Upon completion of the course, the student will be able to solve for voltage, current, power, and resister values in DC series, parallel, and series-parallel circuits; use common laboratory instruments and perform laboratory work; calculate transient voltages and currents in RC and RL circuits; calculate voltages, currents, and impedances in sinusoidal RLC circuits; analyze transformer circuits; analyze filters; analyze vacuum tube circuits; analyze circuits containing diodes, transistors, and circuit protection devices; analyze Class A, B, AB, and C power amplifiers; analyze rectifier circuits and regulated power supplies; describe the operation of solid state nonlinear semiconductor devices; analyze multivibrators, limiters, clampers, oscillators, integrators, differentiators; analyze and troubleshoot AM transmitter and receiver circuits; describe antenna characteristics and radio wave propagation; and troubleshoot and repair electric and electronic circuits to the component level.

Instruction: Lectures and laboratory exercises cover topics in basic electricity and electronics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic electronics laboratory, 3 in DC circuits, 3 in AC circuits, 7 in solid state electronics, 3 in electronic systems troubleshooting and maintenance, and 2 in electronic communications (2/90).

NV-1715-1490

Tomahawk Missile Intermediate Maintenance

Course Number: A-121-0487.

Location: Service School Command, Orlando, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance, documented fault isolation, and repair procedures on a cruise missile under supervision.

Instruction: Lectures and practical exercises cover the maintenance of the missile. Course does not go into detailed circuit analysis or mechanical component breakdown.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/90).

NV-1715-1491

Torpedo Mk 48 Intermediate Maintenance Activity Supervisor

Course Number: A-123-0181.

Location: Service School Command, Orlando, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–11/91.

Learning Outcomes: Upon completion of the course, the student will be able to manage the maintenance activities of a torpedo weapons system.

Instruction: Lectures and practical exercises cover the maintenance of a torpedo system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/90).

NV-1715-1492

Torpedo Technician Advanced

Course Number: A-123-0147.

Location: Service School Command, Orlando, FL.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–1/93.

Learning Outcomes: Upon completion of the course, the student will be able to analyze operation of basic DC series, parallel, series-parallel, bridge and DC networks, including Thevenin's theorem, AC theory, algebra, inductance, and capacitance; solve for current, voltage, and time relationships in DC RL circuits, transformers, filters, RCL circuits; solder and wire wrap; operate basic test equipment, transistor amplifiers, oscillators, switching circuits, synchros, and resolvers; use digital numbering systems, Boolean algebra; and describe logic circuits, flip-flops, counters, shift registers, and A/D and D/A converters and multiplexers.

Instruction: Topics include lectures in DC and AC circuits, including series, parallel circuits, Thevenin's theorem, capacitance, inductance, RL and RCL circuits, AC transformers, resonance. Lectures and practical exercises cover digital electronics, including numbering systems, Boolean algebra, and logic circuits. Laboratory exercises cover soldering and wire wrap techniques, electrostatic discharge, and failure analysis.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronic shop practice (2/90); in the lower-division baccalaureate/associate degree category, 2 semester hours in DC circuits, 3 in AC circuits, 4 in solid state electronics, and 3 in digital principles (2/90).

NV-1715-1493

Torpedo Mk 48 Advanced Capability
(ADCAP) Intermediate Maintenance

Course Number: A-123-0183.

Location: Service School Command, Orlando, FL.

Length: 15 weeks (600 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and repair the Mk 48 torpedo and its test sets.

Instruction: Lectures and practical exercises cover the maintenance of the torpedo and its associated systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/90).

NV-1715-1494

General Purpose Electronic Test Equipment
Repair Intermediate Maintenance

Course Number: C-198-3041.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Norfolk, VA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze transistor amplifier circuits, operational amplifier circuits, and power supplies; convert between binary, octal, hexadecimal, and BCD number systems; construct truth tables for logic circuits; describe counters, decoders, and multiplexers; and troubleshoot and repair signal generators, voltmeters, oscilloscopes, and frequency counters.

Instruction: Lectures and practical exercises emphasize troubleshooting common electronic laboratory instruments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital principles, 1 in solid state electronics, and 3 in electronic systems troubleshooting and maintenance (3/90).

NV-1715-1495

1. Intermediate Level Calibration of Physical/Dimensional Test and Measuring Systems, Phases B/D
2. Intermediate Level Calibration of Physical/Dimensional Test and Measuring Systems Phases B/D

Course Number: *Version 1:* C-198-3034. *Version 2:* C-198-3034.

Location: *Version 1:* Technical Training Unit, Keesler AFB, MS. *Version 2:* Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Norfolk, VA.

Length: *Version 1:* 3 weeks (120 hours). *Version 2:* 3 weeks (120 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/90–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to calibrate various physical/mechanical measuring devices, such as pressure and vacuum devices, torque and tension measuring devices, temperature measuring devices, and dimensional measuring devices. *Version 2:* Upon completion of the course, the student will be able to calibrate various physical/mechanical measuring devices, such as pressure and vacuum devices, torque and tension measuring devices, temperature measuring devices, and dimensional measuring devices.

Instruction: *Version 1:* Lectures and practical exercises cover physical/dimensional calibration techniques. Basic analytical/mathematical theory and equations are used to emphasize what each instrument is measuring. *Version 2:* Lectures and practical exercises cover physical/dimensional calibration techniques. Analytical/mathematical techniques are not stressed.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in mechanical measuring instrument calibration (4/97). *Version 2:* In the vocational certificate category, 3 semester hours in mechanical measuring instrument calibration (3/90).

NV-1715-1496

Intermediate Level Test Equipment
Calibration

Course Number: C-198-3033.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Norfolk, VA.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to calibrate oscilloscopes, meters, counters, and signal generators and adjust or replace components to ensure operational standards.

Instruction: Classroom lectures cover theory and laboratory exercises on equipment calibration. Extensive laboratory time is devoted to signal generators and power measurements.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in the calibration of electronic test equipment (3/90).

NV-1715-1497

AN/SQR-17(V) Series Operator

Course Number: K-130-0274.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–4/96.

Learning Outcomes: Upon completion of the course, the student will be able to operate a particular sonar set.

Instruction: Lectures and practical exercises cover the operation of the sonar set.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1498

AN/SQR-18A(V)1 Operator

Course Number: K-130-0216.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–8/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate a sonar receiving set.

Instruction: Lectures and laboratory exercises cover the specific sonar equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1499

Surveillance Towed Array Sensor System
(SURTASS) Shore

Course Number: J-130-0288.

Location: Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to recognize, analyze, locate, and correct malfunctions by using diagnostic routines and associated test equipment.

Instruction: Lectures and practical exercises cover disk controllers, disk packs, CRT monitors, trackballs, display controllers, keyboards, magnetic tape controllers, magnetic tape transports, and the synchronous channel multiplexer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (3/90).

NV-1715-1500

Advanced Digital Theory

Course Number: J-130-0299.
Location: Fleet Antisubmarine Warfare Training Center, Norfolk, VA.
Length: 3 weeks (120 hours).
Exhibit Dates: 1/90–Present.
Learning Outcomes: Upon completion of the course, the student will be able to analyze digital circuits containing gates, flip-flops, registers, counters, adders and subtractors; convert between binary, decimal, octal, hexadecimal, and BCD number systems; program a specific microprocessor using machine language; describe the principles and the uses of flags, stocks, interrupts, and interfaces; and troubleshoot a microprocessor-based computer to the component level.
Instruction: Lectures and laboratory exercises cover the above topics. Laboratories emphasize troubleshooting microprocessor-based computer.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital principles and 3 in microprocessors (3/90).

NV-1715-1501

AN/SQQ-23 PAIR Operations Basic

Course Number: K-130-0097.
Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.
Length: 5 weeks (200 hours).
Exhibit Dates: 1/90–9/93.
Learning Outcomes: Upon completion of the course, the student will be able to operate a specific sonar system and a specific receiving system using existing or provided environmental and tactical data to detect, classify, and track submarine and nonsubmarine contacts.
Instruction: Lectures and practical exercises cover the operation of a specific sonar system.
Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1502

Passive Equipment Cabinet (PEC) Operation and Maintenance

Course Number: J-130-0263.
Location: Fleet Antisubmarine Warfare Training Center, Norfolk, VA.
Length: 3 weeks (120 hours).
Exhibit Dates: 1/90–Present.
Learning Outcomes: Upon completion of the course, the student will be able to analyze printed circuit boards and chassis-mounted components; troubleshoot; isolate faults; and maintain boards and components to the module replacement level.
Instruction: Classroom instruction and major laboratory exercises cover fault isolation and troubleshooting techniques. Topics include AC/DC power distribution, test diagrams, audio circuits, and switch matrix circuits.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/90).

NV-1715-1503

FF-1052 Sonar Supervisor

Course Number: K-130-1119.
Location: Fleet Antisubmarine Training Center, San Diego, CA; Fleet Antisubmarine Training Center, Norfolk, VA.
Length: 4 weeks (160 hours).
Exhibit Dates: 1/90–6/92.
Learning Outcomes: Upon completion of the course, the student will be able to supervise the operation of a sonar team in antisubmarine warfare.
Instruction: Lectures and practical exercises cover topics in antisubmarine warfare, including sonar systems, search plan development, detection and classification, tracking, attack, and sonobuoy operation.
Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1504

AN/SQQ-89(V)1/3 Sonar Watch Supervisor

Course Number: K-130-1102.
Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.
Length: 4 weeks (160 hours).
Exhibit Dates: 1/90–Present.
Learning Outcomes: After 9/92 see NV-1715-1851. Upon completion of the course, the student will be able to supervise a sonar team in antisubmarine warfare operations; recommend a sonar search plan; obtain and evaluate data; and supervise search methodology.
Instruction: Lectures and practical exercises cover search methodology using equipment in the sonar suite.
Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1505

Advanced Acoustic Analysis, Class C

Course Number: *Version 1:* K-210-0529. *Version 2:* J-210-0529.
Location: *Version 1:* Fleet Antisubmarine Warfare Training Center, San Diego, CA. *Version 2:* Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.
Length: *Version 1:* 13 weeks (510 hours). *Version 2:* 5 weeks (200 hours).
Exhibit Dates: *Version 1:* 5/97–Present. *Version 2:* 1/90–4/97.
Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform advanced acoustic analysis of sonar contacts in accordance with recently published intelligence data. *Version 2:* Upon completion of the course, the student will be able to perform advanced acoustic analysis of sonar contacts in accordance with recently published intelligence data.
Instruction: *Version 1:* Lectures and practical exercises cover Soviet sonar technology, underwater communications systems, and signature analysis of Soviet submarines. *Version 2:* Lectures and practical exercises cover Soviet sonar technology, underwater communications systems, and signature analysis of Soviet submarines.
Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (10/97). *Version 2:* Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1506

AN/SQQ-89(V)2 Sonar Watch Supervisor

Course Number: *Version 1:* K-130-1103. *Version 2:* K-130-1103.
Location: *Version 1:* Fleet Antisubmarine Warfare Training Center, San Diego, CA. *Version 2:* Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.
Length: *Version 1:* 4 weeks (146 hours). *Version 2:* 4 weeks (160 hours).
Exhibit Dates: *Version 1:* 5/94–4/98. *Version 2:* 1/90–4/94.
Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to effectively execute the responsibilities of sonar watch supervisor and improve the tactical employment of the shipboard sonar suite. *Version 2:* Upon completion of the course, the student will supervise the operation of a specific antisubmarine warfare sonar system.
Instruction: *Version 1:* Lectures and practical application exercises include search plan development, sonar operations, sonobuoy operations, and mission operations. *Version 2:* Lectures and practical exercises cover topics in antisubmarine warfare tactics, development of sonar search plans, sonobuoy use, detection, classification, and tracking.
Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (10/97). *Version 2:* Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1507

1. AN/SQQ-89(V)2 Surface Antisubmarine Warfare Combat Systems Operator, Class C
2. AN/SQQ-89(V)2 Surface Antisubmarine Warfare (ASW) Combat System Operator, Class C

Course Number: *Version 1:* K-130-0269. *Version 2:* K-130-0269.
Location: *Version 1:* Fleet Antisubmarine Warfare Training Center, San Diego, CA. *Version 2:* Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.
Length: *Version 1:* 4 weeks (247 hours). *Version 2:* 10 weeks (400 hours).
Exhibit Dates: *Version 1:* 7/93–Present. *Version 2:* 1/90–6/93.
Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate a specific antisubmarine warfare sonar system. *Version 2:* Upon completion of the course, the student will be able to operate a specific antisubmarine warfare sonar system.
Instruction: *Version 1:* Lectures and practical exercises cover topics in sonar, antisubmarine warfare tactics, sonobuoys, detection and classification, tracking, and searching. *Version 2:* Lectures and practical exercises cover topics in sonar, antisubmarine warfare tactics, sonobuoys, detection and classification, tracking, and searching.

Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (10/97). *Version 2:* Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1508

1. AN/SQQ-89(V)1/3 Antisubmarine Warfare Combat System Operator, Class C
2. AN/SQQ-89(V)1 Surface Antisubmarine Warfare (ASW) Combat System Operator, Class C

Course Number: *Version 1:* K-130-0283. *Version 2:* K-130-0283.

Location: *Version 1:* Fleet Antisubmarine Warfare Training Center, San Diego, CA. *Version 2:* Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: *Version 1:* 6 weeks (240 hours). *Version 2:* 15 weeks (600 hours).

Exhibit Dates: *Version 1:* 7/97–Present. *Version 2:* 1/90–6/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate the combat sensors and support equipment of a specific surface antisubmarine warfare combat system in all phases of the mission. *Version 2:* Upon completion of the course, the student will be able to operate the combat sensors and support equipment of a specific surface antisubmarine warfare combat system in all phases of the mission.

Instruction: *Version 1:* Lectures and practical exercises cover the operation of a sonar system and its associated subsystems. *Version 2:* Lectures and practical exercises cover the operation of a sonar system and its associated subsystems.

Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (10/97). *Version 2:* Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1509

Antisubmarine Warfare (ASW) Evaluator Common Core

Course Number: *Version 1:* K-2G-0539. *Version 2:* J-2G-0539.

Location: *Version 1:* Fleet Antisubmarine Warfare Training Center, San Diego, CA. *Version 2:* Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 3 weeks (120 hours).

Exhibit Dates: *Version 1:* 6/95–Present. *Version 2:* 1/90–5/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to use technical knowledge and skills to employ antisubmarine sensors and weapons. *Version 2:* Upon completion of the course, the student will be able to use technical knowledge and skills to employ antisubmarine sensors and weapons.

Instruction: *Version 1:* Lectures, laboratories and demonstrations cover the subject matter. *Version 2:* Lectures, laboratories and demonstrations cover the subject matter.

Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (10/97). *Version 2:* Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1510

Antisubmarine Warfare (ASW) Officer

Course Number: J-2G-0536.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA; Fleet Antisubmarine Warfare Training Center, Norfolk, VA.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–6/94.

Learning Outcomes: Upon completion of the course, the student will be able to supervise antisubmarine operations.

Instruction: Lectures, laboratories, and demonstrations cover oceanography, sound propagation, fire control systems, torpedoes, missiles, launching systems, and tactical considerations.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (3/90).

NV-1715-1511

Dental Equipment Repair Technology, Class C

Course Number: B-198-0013.

Location: School of Dental Assisting and Technology, San Diego, CA.

Length: 24 weeks (840 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use basic electronic test equipment to maintain, troubleshoot, and repair dental equipment.

Instruction: Lectures and practical exercises cover topics in basic electricity, tools, dental chairs, X-rays, pneumatic systems systems, sterilizers, plumbing equipment, dental operating equipment, ultrasonic equipment, film processors, and dental laboratory equipment. Emphasis is on troubleshooting, repair, and maintenance.

Credit Recommendation: In the vocational certificate category, This course is equivalent to a certificate in dental equipment maintenance and repair (6/90); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 3 in basic electronics laboratory (6/90).

NV-1715-1514

Microminiature Electronics Repair

Course Number: C-100-3187.

Location: Air Station, Rota, Spain; Air Station, Miramar, San Diego, CA; Air Station, Cecil Field, FL; Air Station, Lemoore, CA; Air Station, Miramar, San Diego, CA; Air Station, El Toro, CA; Air Station, Norfolk, VA; Air Station, Moffett Field, CA; Air Station, Oceana, Virginia Beach, VA; Air Station, Whidbey Island, Oak Harbor, WA; Air Station, Atsugi, Japan.

Length: 1-2 weeks (64 hours).

Exhibit Dates: 1/90–4/94.

Learning Outcomes: Upon completion of the course, the student will be able to repair microelectronic multilayer and flexible printed circuit boards and panels; demonstrate proper replacement of static sensitive devices; maintain and operate the microminiature station; and repair boards requiring electroplating and welded-lead components.

Instruction: Instruction covers the techniques and procedures used to repair electronic circuit boards, including selection of proper tools, flexible conductor repair, static sensitive device replacement, electroplating, encapsulation, and evaluation of repair techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic circuit board repair/miniature component repair techniques (3/91).

NV-1715-1515

SH-2F Light Airborne Multipurpose Systems (LAMPS) Avionics Equipment Organizational Maintenance

Course Number: C-102-3376.

Location: Air Station, North Island, San Diego, CA; Air Station, Norfolk, VA.

Length: 3-4 weeks (116 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair avionics systems, including communications, navigation, radar, and antisubmarine warfare by analyzing the systems and troubleshooting using applicable publications and test equipment.

Instruction: Lectures and practical experiences cover the operation, troubleshooting, and component replacement of the avionics system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/91).

NV-1715-1516

Miniature/Microminiature (2M) Electronics Repair Instructor Certification

Course Number: C-100-3194.

Location: Air Station, Norfolk, VA; Air Station, Miramar, San Diego, CA; Air Station, Cecil Field, FL; Air Station, Moffett Field, CA; Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3-4 weeks (120 hours).

Exhibit Dates: 1/90–11/90.

Learning Outcomes: Upon completion of the course, the student will be able to teach miniature/microminiature electronics repair.

Instruction: Using applicable publications and other references, the student will complete a number of written assignments and progress tests.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/92).

NV-1715-1517

E-2C Basic Airborne Early Warning (AEW) Systems Analyst Organizational Maintenance

Course Number: C-102-3480.

Location: Air Station, Norfolk; Air Station, Miramar, San Diego, CA.

Length: 15 weeks (440 hours).

Exhibit Dates: 9/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, and troubleshoot navigation, communications, and computerized weapons systems.

Instruction: Lectures and practical exercises cover electronic weapons systems, vapor cycle systems, computer programming, memory modules, power supplies, and radar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aviation electronics (3/91).

NV-1715-1518

E-2 Search Radar Set (Transmitter) Intermediate Maintenance

Course Number: C-102-3486.

Location: Air Station, Norfolk, VA.

Length: 10 weeks (400 hours).

Exhibit Dates: 8/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and perform component level repair on a search radar set and a radar test bench set using the appropriate maintenance manuals and procedures.

Instruction: Lectures and laboratory assignments include functional assemblies and subassemblies that make up the search radar set and its support bench set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/91).

NV-1715-1519

E-2C Passive Detection System (PDS) AN/ALR-73 Organizational Maintenance

Course Number: C-102-3495.

Location: Air Station, Miramar, San Diego, CA; Air Station, Norfolk, VA.

Length: 8 weeks (240 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and service the passive detection systems installed in E-2C aircraft using applicable maintenance publications and procedures.

Instruction: Classroom and laboratory instruction cover theory of operation, system overview, block diagram, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/91).

NV-1715-1520

MH-53E Electrical and Instrument Systems Organizational Maintenance

Course Number: C-602-4442.

Location: Air Station, Norfolk, VA.

Length: 9-10 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot typical helicopter electrical and instrument systems, including landing gear, switches, main rotor, tail rotor, instrument systems, and lighting.

Instruction: Lectures and practical exercises use technical data, electrical systems mock-ups, and proper calibration and test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical systems maintenance and troubleshooting (3/91).

NV-1715-1521

E-2C Airborne Early Warning (AEW) Systems Analyst Organizational Maintenance

Course Number: C-102-3481.

Location: Air Station, Miramar, San Diego, CA; Air Station, Norfolk, VA.

Length: 14-15 weeks (480 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, repair, and operate navigation, communications, and computerized weapons systems.

Instruction: Classroom and practical exercises cover the troubleshooting and repair of VHF/UHF radios, navigation systems, and computerized weapons systems using avionics test and calibration instruments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aviation electronics maintenance (3/91).

NV-1715-1522

MH-53E Communication, Navigation, and Identification (CNI) Systems Organizational Maintenance

Course Number: C-102-3444.

Location: Air Station, Norfolk, VA.

Length: 2-3 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair aircraft communications, navigation, and identification systems using proper publications and test equipment.

Instruction: Lectures and practical exercises cover the operation, troubleshooting, and component replacement of the avionic system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/91).

NV-1715-1523

Tactical Oceanography Support Operator, Class C1

Course Number: C-420-2020.

Location: Navy Detachment, Chanute AFB, IL.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the Hewlett-Packard 9020A computer with HP-UNIX interface using the Tactical Environmental Support System software and prepare environmental briefing packets to support naval operations.

Instruction: Classroom instruction and laboratories cover the operation of the computer system; satellite operations; meteorological, electromagnetic, and electro-optical applications; and oceanography and acoustics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer familiarization and 2 in computer applications (3/91).

NV-1715-1524

Tactical Oceanography Support Interpreter/Briefer, Class C

Course Number: C-420-2019.

Location: Navy Detachment, Chanute AFB, IL.

Length: 7-8 weeks (312 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate oceanographic, meteorological, acoustic, and electromagnetic application programs and generate and analyze tactical environmental support system (TESS) data; prepare tactical and oceanographic summaries; analyze and predict oceanographic and acoustic data; assess environmental impacts on tactical requirements; perform routine operator maintenance on the TESS system.

Instruction: Classroom instruction covers computer basics and software functions, and laboratory training covers the TESS system involving the applications listed in the learning outcomes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in data analysis and 3 in computer applications (3/91); in the upper-division baccalaureate category, 3 semester hours in applied marine acoustics (3/91).

NV-1715-1525

Shore Communication Systems Maintenance

Course Number: A-101-0069.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/91–8/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain specific shore communications systems; identify and name the function of all the front panel controls and indicators of each system; given test equipment and technical manuals, troubleshoot a system to the component level; operate the system in all configurations and modes; and measure, trace, and record specific signal, control, and DC Voltages for each subassembly in the transmitter/receiver.

Instruction: Group-paced lectures, written criterion-referenced progress tests, and timed performance tests cover microwave radio assemblies, transmitter fundamentals, and microwave multiplexing.

Credit Recommendation: In the vocational certificate category, 1 semester hour in communications maintenance (6/91).

NV-1715-1526

Terrier Guided Missile Launching System Mk 10 SSCS Analog Difference

Course Number: A-121-0046.

Location: Service School Command, Great Lakes, IL.

Length: 6 weeks (240 hours).

Exhibit Dates: 3/90–6/95.

Learning Outcomes: Before 3/90 see NV-1715-1083. Upon completion of the course, the student will be able to operate and maintain the electrical/electronic, mechanical, and hydraulic systems of a guided missile launching system.

Instruction: Classroom instruction and practical laboratory exercises cover launching system operations, controls, electrical/electronic circuits, and safety precautions.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 3 semester hours in electromechanical maintenance (6/91).

NV-1715-1527

Guided Missile Launching System Mk 13 Mod 4

Course Number: A-121-0474.

Location: Service School Command, Great Lakes, IL.

Length: 19 weeks (760 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the electro/hydraulic/mechanical components of a computer-controlled guided missile launch system, troubleshoot electrical/electronics problems down to the module, and use flow charts and mechanical/hydraulic drawings to identify and correct mechanical problems.

Instruction: Lectures and practical laboratory exercises cover system operation, controls, indicators, readouts, electrical/electronic circuits, computer codes, diagnostic procedures, and basic safety precautions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in mechanical maintenance and 2 in electronic maintenance (6/91).

NV-1715-1528

AN/FRT-83, 84, 85 Radio Transmitters with the AN/FSO-98 Remote Control System

Course Number: A-101-0052.

Location: Service School Command, Great Lakes, IL.

Length: 13 weeks (520 hours).

Exhibit Dates: 2/91–4/94.

Learning Outcomes: Before 2/91 see NV-1715-0325. Upon completion of the course, the student will be able to identify high frequency exciters, RF amplifiers, power amplifiers, modulation techniques, and digital remote transmitter control and operate, maintain, and troubleshoot 40kw high-frequency (2-30 MHz) transmitters.

Instruction: Lectures and performance exercises use meters, oscilloscopes, frequency counters, distortion meters, and spectrum analyzers in understanding, maintaining, and diagnosing HF transmitters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic communications (6/91).

NV-1715-1529

Terrier Guided Missile Launching System Mk 10 SSCS

Course Number: A-121-0552.

Location: Service School Command, Great Lakes, IL.

Length: 22 weeks (880 hours).

Exhibit Dates: 2/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to identify mechanical, hydraulic, pneumatic, electrical, electronic, and computer systems used in guided missile launching systems and operate, maintain, and troubleshoot the missile launch system.

Instruction: Lectures and performance exercises use meters and oscilloscopes to troubleshoot electronic control systems. Topics include the repair and overhaul of mechanical, hydraulic, and pneumatic components. Students learn to troubleshoot computer problems to the board level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in mechanical maintenance, 2 in electrical maintenance, 2 in electronic maintenance, and 2 computer maintenance (6/91).

NV-1715-1530

Mk 15 Close-In Weapons Systems Operation and Maintenance

Course Number: A-113-0078.

Location: Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA; Service School Command, Great Lakes, IL.

Length: 29 weeks (1160 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Before 1/91 see NV-1715-1068. Upon completion of the course, the student will be able to apply electronics, mechanics, and hydraulics principles to the operation, maintenance and troubleshooting of rapid-fire gun systems using search and track radar.

Instruction: Lectures and performance exercises use meters, oscilloscopes, frequency counters, and spectrum analyzers in troubleshooting power controllers, environmental systems, computers, search and track radar, servo control systems, and guns.

Credit Recommendation: In the vocational certificate category, 3 semester hours in servo system maintenance (6/91); in the lower-division baccalaureate/associate degree category, 4 semester hours in computer control and 3 in radar maintenance (6/91).

NV-1715-1531

AN/FRT-96 Maintenance Technician

Course Number: A-101-0273.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 9/90–8/93.

Learning Outcomes: Upon completion of the course, the student will apply knowledge of high-frequency exciters, RF amplifiers, power amplifiers, modulation techniques, and digital remote transmitter control to the operation, maintenance, and troubleshooting of the high-frequency (2-30 MHz) transmitter.

Instruction: Lectures and performance exercises use meters, oscilloscopes, frequency counters, distortion meters, and spectrum analyzers in understanding, maintaining, and diagnosing HF transmitters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications (6/91).

NV-1715-1532

TACAN Maintenance

Course Number: A-102-0045.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–7/91.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain TACAN navigation equipment and associated antenna systems; identify, isolate, and correct malfunctions found in the system; perform receiver sensitivity tests; use test equipment to trace signal through the receiver; and replace power klystrons.

Instruction: Lectures and practical laboratory exercises cover the TACAN navigation system using electronic test equipment. Topics covered include TACAN beacon, AC/DC power supplies, antenna group, and radio frequency monitors.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications (6/91).

NV-1715-1533

1. Tactical Support Communications Maintenance Technician
2. Antisubmarine Communications Maintenance

Course Number: *Version 1:* J-101-0817. *Version 2:* J-101-0817.

Location: *Version 1:* Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA. *Version 2:* Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 12 weeks (478 hours). *Version 2:* 25 weeks (960 hours).

Exhibit Dates: *Version 1:* 1/95–Present. *Version 2:* 7/90–12/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, troubleshoot, and perform basic maintenance and repair on message processing systems, fiber optic equipment, computers, modems, voice communications systems, data link systems, radio receivers, transceivers, RF propagation equipment and antennas and identify and avoid personnel safety hazards. *Version 2:* Before 7/90 see NV-1715-1175. Upon completion of the course, the student will be able to operate and maintain an antisubmarine communications system comprising a computer, multiplexer/demultiplexer, analog low-and high-speed modems, HF and UHF radio voice and data links, audio tape recorders, and HF/UHF antennas.

Instruction: *Version 1:* Methods of instruction include lectures, laboratory, audiovisuals, group-paced and team-oriented problem solving training, and practical troubleshooting exercises. Topics covered include message processing systems, fiber optic repair/maintenance, computer, printers, modems, signal converters, circuit exchange terminals, multiplexers, data links, keyers/converters, troubleshooting, multichannel tape recorders/reproducers, Vinson shore radio terminals, and radio receivers/transmitters. *Version 2:* Lectures and practical exercises cover the operation and maintenance of data terminals, computers, and data and voice communications systems, including HF and UHF radio and radio antennas.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance, 2 in electronic systems troubleshooting and maintenance, and 2 in data communications systems (5/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance, 3 in electronic systems troubleshooting and maintenance, 3 in communications systems troubleshooting and maintenance, 1 in computer literacy and 3 in data communications systems (10/91).

NV-1715-1534

1. Fire Control System Mk 92 Mod 2 Operation and Maintenance
2. Fire Control System Mk 92 Mod 1/2 Maintenance

Course Number: *Version 1:* A-113-0080. *Version 2:* A-113-0080.

Location: *Version 1:* Fleet Training Center, San Diego, CA. *Version 2:* Fleet Training Center, San Diego; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 32 weeks (1280 hours). *Version 2:* 32 weeks (1280 hours).

Exhibit Dates: *Version 1:* 1/94–Present. *Version 2:* 10/91–12/93.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a weapon system radar cluster consisting of multiple radar types, the equipment which controls the radar cluster, and associated computer-based weapon (gun and missile) control consoles. *Version 2:* Before 10/91 see NV-1715-1087. Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a weapon system radar cluster consisting of multiple radar types, the equipment which controls the radar cluster, and associated computer-based weapon (gun and missile) control consoles.

Instruction: *Version 1:* Lectures, laboratories, and practical exercises cover the operation, troubleshooting, repair, and maintenance of the computer, computer peripherals, servomechanisms, radar displays, continuous-wave radar, and radar and system power supplies and amplifiers. *Version 2:* Lectures, laboratories, and practical exercises cover the operation, troubleshooting, repair, and maintenance of the computer, computer peripherals, servomechanisms, radar displays, continuous-wave radar, and radar and system power supplies and amplifiers.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance, 3 in electronic systems troubleshooting and maintenance, 3 in radar systems, and 3 in computer systems and organization (10/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance, 3 in electronic systems troubleshooting and maintenance, 3 in radar systems, and 3 in computer systems and organization (10/91).

NV-1715-1535

3"/50 Rapid Gun Fire Twin Mount Power Drive and Gun

Course Number: J-041-0120.

Location: Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 6 weeks (240 hours).

Exhibit Dates: 3/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot a basic electrical circuit using analog or digital multimeters and determine the expected operation of an electrical circuit from a schematic.

Instruction: Lectures and practical exercises cover the use of multimeters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic electricity laboratory (10/91).

NV-1715-1536

Mk 47 Computer Operational Maintenance

Course Number: J-113-0105.

Location: Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 1-2 weeks (73 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain an electromechanical gun control system.

Instruction: Lectures and practical exercises cover electromechanical gun control mechanisms and circuitry.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/91).

NV-1715-1537

1. Carrier Based Tactical Support Center Acoustic System Maintenance
2. CV Antisubmarine Warfare (ASW) M Acoustic Systems Maintenance Technician

Course Number: *Version 1:* J-102-0393. *Version 2:* J-102-0393.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 19 weeks (760 hours). *Version 2:* 19 weeks (760 hours).

Exhibit Dates: *Version 1:* 7/94–Present. *Version 2:* 1/90–6/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain and troubleshoot an electronic submarine detection system consisting of sonar, acoustic signal processing disk drives, CRT monitor, telemetry receiver, and operator console equipment. *Version 2:* Upon completion of the course, the student will be able to maintain, troubleshoot, and repair an electronic submarine detection system consisting of sonar, acoustic signal processing and analysis, disk and tape drive, CRT monitor, telemetry receiver, and operator console equipment.

Instruction: *Version 1:* Lectures and practical exercises cover computer-based signal processing equipment. Topics include CRTs, operator consoles, computer telemetry, data receiver/transmitter, sonar equipment, specialized digital signal processing circuits, and associated power supplies. *Version 2:* Lectures and practical exercises cover computer-based signal processing and analysis of circuits, including tape and disk drives, CRTs, operator console, computer, telemetry and data receiver/transmitter, sonar equipment, and specialized digital signal processing circuits and associated power supplies.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in computer system maintenance and repair (communications), 3 in UNIX system administration, and 3 in telecommunication systems and repair (5/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance, 3 in electronic systems troubleshooting and maintenance, 3 in computer literacy, 3 in radio communications systems troubleshooting and maintenance, and 3 in sonar systems (10/91).

NV-1715-1538

Harpoon Weapon System AN/SWG(V)/1A(V) Engagement Planner (Surface Application)

Course Number: J-113-1001.

Location: Fleet Training Group, Pearl Harbor, HI; Fleet and Mine Warfare Training Center, Charleston, SC; Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and direct the deployment of a missile weapon system, including missile selection, missile tactics, missile safety, missile launching, and launch problem solving.

Instruction: Lectures and practical exercises cover launching a tactical guided missile.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/91).

NV-1715-1539

Mk 56 Gun Fire Control System Operation and Maintenance

Course Number: J-113-0097.

Location: Fleet Combat Training Center, Yorktown, VA.

Length: 16 weeks (624 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a vacuum tube gun fire control system.

Instruction: Lectures and practical exercises cover the gun fire control system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic systems (vacuum tube) troubleshooting (10/91).

NV-1715-1540

Harpoon Weapon System AN/SWG-1(V)/1A(V) Maintenance Differences

Course Number: J-113-1004.

Location: Fleet Training Group, Pearl Harbor, HI; Fleet and Mine Warfare Training Center, Charleston, SC; Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a shipboard weapons system.

Instruction: Lectures and practical exercises cover the weapon system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/91).

NV-1715-1541

Armored Box Launcher Maintenance and All Up Round Handling

Course Number: J-121-0506.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain an electrohydraulic guided missile mechanical launching system to the module and component level.

Instruction: Lectures and laboratory exercises cover missile launcher electrical, hydraulic, mechanical, fire suppression, and missile firing control circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electromechanical troubleshooting and maintenance and 3 in electrical systems troubleshooting (10/91).

NV-1715-1542

Air Intercept Controller

(Air Intercept Controller Naval Tactical Data Systems (NTDS) Qualification)

Course Number: *Version 1:* K-221-0027. *Version 2:* K-221-0027.

Location: *Version 1:* Fleet Combat Training Center, Pacific, San Diego, CA; Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA. *Version 2:* Fleet Training Center, San Diego, CA; Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: *Version 1:* 6 weeks (148 hours). *Version 2:* 6 weeks (240 hours).

Exhibit Dates: *Version 1:* 5/95–Present. *Version 2:* 1/90–4/95.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to direct intercept aircraft to a target aircraft using information provided by aircraft plotting displays.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures and practical exercises cover air intercept control, including fleet anti-air warfare, threat intelligence, interceptor aircraft characteristics and air-to-air weapons systems, air navigation aids, communications equipment, intercept control communications procedures and vocabulary, radar indicator equipment, identification equipment, and preparation and procedures for NTDS control.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in air traffic control and 5 in air traffic control laboratory (1/93).

NV-1715-1543

5"/54 Mk 45 Mod 0 Gun Mount, Class C1

Course Number: J-113-0054.

Location: Fleet Combat Training Center, Dam Neck, Virginia Beach, VA.

Length: 17 weeks (657 hours).

Exhibit Dates: 8/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify electronic components/circuits used in control circuit applications, including diodes, transistors, relays, SCRs, DIACs, TRIACs, and NAND/NOR digital logic elements.

Instruction: Lectures and laboratories cover the subject matter.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronic circuit applications (10/91).

NV-1715-1544

AN/BSY-1 Acoustic Combined Basic Maintenance

Course Number: A-130-0311.

Location: Submarine School, New London, Groton, CT.

Length: 12 weeks (424 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and maintain a computer-based sonar system used in submarines.

Instruction: Lectures and practical exercises focus on the maintenance of the sonar system. Computer is used to run diagnostic software.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1545

AN/BSY-1 Acoustic Advanced Maintenance Conversion

Course Number: A-130-0317.

Location: Submarine School, New London, Groton, CT.

Length: 12 weeks (413 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and maintain a computer-based sonar system and troubleshoot a mainframe computer, microprocessor-based computer, computer interfaces, computer monitors, and disk drives.

Instruction: Lectures and practical exercises emphasize advanced troubleshooting problems. Course includes signal tracing troubleshooting techniques on sonar high-frequency transmitters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance, 3 in computer systems troubleshooting and maintenance, 1 in microprocessors, and 1 in computer systems and organization (10/91).

NV-1715-1546

AN/BSY-1 Acoustic Advanced Maintenance

Course Number: A-130-0314.

Location: Submarine School, New London, Groton, CT.

Length: 18 weeks (577 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and maintain a computer-based sonar system and troubleshoot a mainframe computer, microprocessor-based computer, computer interfaces, computer monitors, and disk drives.

Instruction: Lectures and practical exercises emphasize advanced troubleshooting problems. Course includes signal tracing troubleshooting techniques on sonar high-frequency transmitters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance, 3 in computer systems troubleshooting and maintenance, 1 in microprocessors, and 1 in computer systems and organization (10/91).

NV-1715-1547

Shipboard Non-Tactical Automated Data Processing (SNAP 2) Ship System Coordinator

Course Number: A-531-0020.

Location: Trident Training Facility, Bangor, Bremerton, WA; Submarine School, New London, Groton, CT.

Length: 2 weeks (55 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a shipboard computer system used for supply, administration, and maintenance.

Instruction: Lectures and practical exercises cover basic computer operations and use of appropriate manuals.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (10/91).

NV-1715-1548

AN/BSY-1 Acoustic Combined Basic Maintenance Conversion

Course Number: A-130-0316.

Location: Submarine School, New London, Groton, CT.

Length: 9 weeks (312 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and maintain a computer-based sonar system used in submarines.

Instruction: Lectures and practical exercises focus on the maintenance of the sonar system. Computer is used to run diagnostic software.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1549

Submarine Interior Communications Systems

Course Number: A-623-0110.

Location: Submarine School, New London, Groton, CT.

Length: 3 weeks (83 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe and maintain synchro signal amplifiers and associated components like power supply, alarm relays, control transformers, servo motor, and gear train and use special tools and test equipment required for preventive and documented corrective maintenance of the submarine interior communications system.

Instruction: Lectures and practical exercises cover the above subject matter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in control systems and 2 in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1550

Submarine Sonar Technician Unique Electronics

Course Number: A-130-0258.

Location: Submarine School, New London, Groton, CT.

Length: 4 weeks (152 hours).

Exhibit Dates: 6/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe electromechanical, synchro, servo, and digital systems related to submarine sonar systems and be operate and analyze computer data processing equipment.

Instruction: Lectures and performance exercises use meters, signal generators, bridges, and oscilloscopes in troubleshooting sonar systems. Sonar-generated computer data is analyzed.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in control systems and 3 in digital computers (10/91).

NV-1715-1551

AN/WLR-1G Combined Maintenance

Course Number: A-233-0030.

Location: Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 5-6 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Objectives: Upon completion of the course, the student will be able to describe the mechanical, synchro, servo amplifiers, electrical, electronic, and computer systems necessary to operate, maintain, and troubleshoot a spectrum analyzer-based system used on submarines to collect and analyze radio frequency data in the UHF to SHF range.

Instruction: Lectures and performance exercises use meters, RF generators, frequency counters, and oscilloscopes in diagnosing the UHF to SHF receivers used in an electronic support measures system. Students repair and overhaul the system to the component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in control systems, 1 in electronic communications, and 1 in microwave systems (10/91).

NV-1715-1552

Combat Control System (CCS) Mk 1 Mod 0 Combined Maintenance

Course Number: A-130-0278.

Location: Submarine School, New London, Groton, CT.

Length: 10 weeks (366 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and repair a combat control system, perform tests, recognize and interpret malfunctions, follow fault isolation procedures, and perform repairs.

Instruction: Lectures and practical exercises use meters, generators, and oscilloscopes to troubleshoot and analyze the attack control consoles, graphics plotter, weapon control console, digital missile simulator, weapons monitor panel, and memory storage unit used in a combat control system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1553

Electronic Surveillance Measures (ESM) AN/BLD-1 Direction Finding Set Combined Maintenance

Course Number: A-102-0271.

Location: Submarine School, New London, Groton, CT.

Length: 4 weeks (156 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, operate, and maintain a radar detection system used to identify and locate radar emanating sources.

Instruction: Lectures and performance exercises use meters, signal generators, oscilloscopes, and spectrum analyzers in maintaining and analyzing the above deck antenna array, receiver processing unit, display, general-purpose computer, and recording unit used in the direction finding set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1554

Submarine Communications Supervisor

Course Number: A-101-0235.

Location: Submarine School, New London, Groton, CT.

Length: 7 weeks (223 hours).

Exhibit Dates: 1/90–9/92.

Learning Outcomes: Upon completion of the course, the student will be able to describe basic communications principles, operational procedures, and equipment repair techniques and repair ELF, VLF, HF, UHF, and SHF systems commonly used for submarine communications systems.

Instruction: Lectures and tests are used to ensure knowledge and comprehension of safety, test equipment, component testing, power supplies, amplifiers, oscillators, receivers, transmitters, ESD, and troubleshooting techniques for the many different communications systems used on submarines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance and 2 in electronic communications (10/91).

NV-1715-1555

NAVSTAR Global Positioning System (GPS) AN/WRN-6(V) Combined Maintenance

Course Number: A-102-0332.

Location: Fleet Submarine Training Facility, Pearl Harbor, HI; Submarine Base, New London, Groton, CT; Fleet Antisubmarine Training Center, Charleston, SC.

Length: 1-2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe global positioning theory, operate a specific GPS receiver, and perform operator maintenance on the receiver.

Instruction: Lectures and practical exercises cover the GPS receiver.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1556

Electronics Technician, Class A for Attack Class Submarines

Course Number: *Version 1:* A-100-0090. *Version 2:* A-100-0090.

Location: Submarine School, New London, Groton, CT.

Length: *Version 1:* 10 weeks (401 hours). *Version 2:* 12 weeks (477 hours).

Exhibit Dates: *Version 1:* 7/91–2/94. *Version 2:* 1/90–6/91.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe functional characteristics of communications systems, including radio wave propagation, radio receivers, and radar systems; and describe the computer organization and digital and microprocessor systems used in a microcomputer. *Version 2:* Upon completion of the course, the student will be able to describe vacuum tube operations, functional properties of communications systems, including radio wave propagation, radio receivers, and radar systems; and describe the computer organization and digital and microprocessor systems used in a microcomputer.

Instruction: *Version 1:* Lectures and laboratory exercises supported by audiovisual materials cover modulation and demodulation techniques, radio receivers, electromechanical systems, motors and generators, fundamentals of digital systems and test equipment, radio wave propagation, antenna theory, radar fundamentals, and electronic warfare support measures. *Version 2:* Lectures and laboratory exercises supported by audiovisual materials cover vacuum tubes, modulation and demodulation techniques, radio receivers, electromechanical systems, motors and generators, fundamentals of digital systems and test equipment, radio wave propagation, antenna theory, radar fundamentals, and electronic warfare support measures.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications, 3 in radar systems, and 4 in computer systems troubleshooting and maintenance (10/91). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in fundamentals of vacuum tubes, 3 in electronic communications, 3 in radar systems, and 4 in computer systems troubleshooting and maintenance (10/91).

NV-1715-1557

Digital/Microprocessor Basics

Course Number: A-662-0149.

Location: Submarine School, New London, Groton, CT.

Length: 2-3 weeks (104 hours).

Exhibit Dates: 9/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to convert between decimal, binary, octal, hexadecimal, and 2's complement number systems; create truth tables; simplify Boolean expressions; analyze digital circuits containing gates, flip-flops, registers, and counters; analyze digital-to-analog and analog-to-digital circuits; and describe microprocessor memories, hardware, and software.

Instruction: Lectures and practical exercises cover the subject matter listed above.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital principles and 1 in microprocessors (10/91).

NV-1715-1558

Mk 48 Torpedo Basic Maintenance

Course Number: A-123-0158.

Location: Submarine Training Center, Pacific, Pearl Harbor, HI; Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA; Submarine Training Facility, San Diego, CA; Submarine Training Facility, Charleston, SC; Submarine School, New London, Groton, CT.

Length: 2 weeks (56 hours).

Exhibit Dates: 1/90–5/94.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot the mechanical, hydraulic, pneumatic, electrical, electronic, and computer systems of a submarine-launched torpedo.

Instruction: Lectures and performance exercises use digital voltmeters in maintaining and calibrating the drive and control system of the specific torpedo.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in control systems (10/91).

NV-1715-1559

AN/BSY-1(V) Combat Control Combined Maintenance

Course Number: A-113-0120.

Location: Submarine School, New London, Groton, CT.

Length: 11 weeks (440 hours).

Exhibit Dates: 6/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair a plotter, acoustic sensor, and missile launch system used in submarines.

Instruction: Lectures and practical exercises cover electrostatic discharge, safety, maintenance procedures, plotters, alarms, displays, acoustic sensors, control computers, and missile launch control systems. Missile launch control systems include electrical and hydraulic actuators for positioning missiles for launch. Also included are basic sonar principles.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in automated control systems and 3 in electronic systems troubleshooting and maintenance (10/91).

NV-1715-1560

SEAL Delivery Vehicle Electronic Maintenance

Course Number: K-102-0306.

Location: Special Warfare Training Center, San Diego, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and repair all electronic systems and subsystems on a submersible vehicle.

Instruction: Lectures and laboratories provide instruction on video circuitry of navigation devices, analog and digital circuitry of computer and communications systems, electrical systems of power storage devices and electric motor propulsion systems, and test equipment for troubleshooting and analysis.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/92).

NV-1715-1561

SH-60F/HH-60H Electronic Systems Consolidated Maintenance

Course Number: E-102-0823.

Location: Helicopter Antisubmarine Squadron 10, North Island, CA.

Length: 13 weeks (502 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair avionic/electronic systems using appropriate technical data and testing equipment.

Instruction: Lectures and practical exercises cover navigation, LF and HF communications, TACAN, radar, electronic altimeter, transponder, sonar, and computer systems. Students learn troubleshooting and repair of helicopter avionic/electronic/computer systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer basics and 3 in advanced avionics (3/92).

NV-1715-1562

AN/ARM-155-156 TACAN Test Sets and UN/UPM-137A Radar Test Set Calibration/Repair Intermediate Maintenance

Course Number: C-198-3065.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Norfolk, VA.

Length: 6 weeks (240 hours).

Exhibit Dates: 6/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use basic and high-frequency test and calibration equipment like oscilloscopes, RF signal generators, spectrum analyzers, and RF power meters; and troubleshoot, repair, and calibrate high-frequency systems like radar test sets.

Instruction: Lectures and practical exercises cover the operation, repair, and calibration of the test sets including receiver and display terminal and use of microwave test and calibration equipment like oscilloscope, RF signal generator, counter, power meter, shop safety precautions, and electrostatic discharge handling procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (5/92).

NV-1715-1564

AN/ASA-65(V) Magnetic Compensator Group Intermediate Maintenance

Course Number: C-102-3594.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the students will be able to operate, maintain, and troubleshoot the magnetic compensator.

Instruction: Lectures, practical exercises, and examinations cover the operation of magnetic amplifiers, computer control circuitry, servo systems, power supplies, balanced modulators, and summing amplifiers within the compensator.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1565

SG-791/ARR-72(V) Acoustic Sensor Signal Generator Intermediate Maintenance

Course Number: C-102-3603.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 1-2 weeks (48 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot acoustic sensors and signal generators used for underwater sensing and detection.

Instruction: Lectures and performance exercises use meters, oscilloscopes, and test sets to analyze and troubleshoot an acoustic sensor station signal generator.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1566

AN/AQA-7A(V)8 Sonar Computer-Recorder Group and AN/ASA-76A Generator Transmitter Group Intermediate Maintenance

Course Number: C-130-3573.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 15-16 weeks (624 hours).

Exhibit Dates: 4/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot a sonar computer system used to detect and track submarines and apply sonar, computer, and UHF radio principles in analyzing system performance.

Instruction: Lectures, performance exercises, and examinations use meters, storage oscilloscopes, distortion analyzers, counters, and wave analyzers to analyze and troubleshoot sonobuoys and the UHF receiver computer system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 1 in computer systems troubleshooting and maintenance (7/92).

NV-1715-1567

AN/AQA-7A(V)10, 11, 12 SONAR COMPUTER-RECORDER GROUP AND AN/ASA-76A GENERATOR TRANSMITTER GROUP INTERMEDIATE MAINTENANCE

Course Number: C-130-3585.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 16 weeks (640 hours).

Exhibit Dates: 9/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot a sonar computer system used to identify and track underwater objects and apply sonobuoy data collection, display, and storage principles.

Instruction: Lectures, performance exercises, and examinations use meters, signal generators, distortion analyzers, spectrum analyzers, and test sets to analyze and repair a sonar computer system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 1 in computer systems troubleshooting and maintenance (7/92).

NV-1715-1568

P-3 ARMAMENT/ORDNANCE INTERMEDIATE MAINTENANCE

Course Number: C-646-3532.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 12/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect, assemble, and disassemble, troubleshoot, and measure an electromechanical systems.

Instruction: Lectures, practical exercises, and examinations cover procedural inspection guidelines, precision measuring devices, multimeter applications, scales, calipers, and torque wrench.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical systems troubleshooting and maintenance (7/92).

NV-1715-1569

P-3C ARMAMENT/ORDNANCE SYSTEM ORGANIZATIONAL MAINTENANCE

Course Number: C-646-3571.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 10/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot the P-3C armament ordnance weapon delivery system.

Instruction: Lectures, laboratory exercises, and examinations cover armament ordnance interface system, bomb bay stores system, wing stores system, jettison system, harpoon weapons system, and search stores system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical systems troubleshooting and maintenance (7/92).

NV-1715-1570

AN/APX-100(V) TRANSPONDER INTERMEDIATE MAINTENANCE

Course Number: C-102-4025.

Location: Air Maintenance Training Group Detachment, Lemoore, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot an IFF microwave transponder system used on aircraft to send critical flight information to aircraft controllers, including microwave transmitters and receivers, interrogation signals, and antennas.

Instruction: Lectures, performance exercises, and examinations use meters and oscilloscopes to analyze and repair IFF transponders.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1572

AN/APX-72 RADAR IDENTIFICATION SYSTEM INTERMEDIATE MAINTENANCE

Course Number: C-102-3067.

Location: Air Maintenance Training Group Detachment, Cherry Point, NC; Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Lemoore, CA; Air Maintenance Training Group Detachment, Tustin, CA; Air Maintenance Training Group Detachment, New River, NC; Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–12/94.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot a microwave identification transponder (IFF) used in aircraft; apply IFF principles including mode 1, 2, 3, 4, and C coding, oscillators, triggers, bandpass filters, IIF decoding logic, and antennas.

Instruction: Lectures, performance exercises, and examinations use meters, oscilloscopes, and test sets to analyze and repair an aircraft IFF transponder.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (8/93).

NV-1715-1573

AN/AKT-22(V) TELEMETRIC DATA TRANSMITTING SET INTERMEDIATE MAINTENANCE

Course Number: C-102-3400.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a telemetric data transmitting system.

Instruction: Lectures, performance exercises, and examinations cover the operation, troubleshooting, and repair of a telemetric data set, including transmitter operations, antenna coupling, and circuitry repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1574

OA-8962/ASH RECORDING GROUP INTERMEDIATE MAINTENANCE

Course Number: C-102-3571.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 1-2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to align, troubleshoot, and repair an aircraft recording system used to record infrared picture information and apply video principles including composite, noncomposite, sync signals, blanking, and CRTs.

Instruction: Lectures, performance exercises, and examinations use meters, oscilloscopes, video generators, and test sets to analyze and troubleshoot video recording systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1575

AN/APN-187 DOPPLER RADAR (DIVARS) INTERMEDIATE MAINTENANCE

Course Number: C-102-3574.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course the student will be able to maintain and troubleshoot a Doppler radar system used to measure altitude and ground speed in aircraft navigation; and apply microwave principles including FM and CW modulation, computer frequency tracking and antennas.

Instruction: Lectures, performance exercises, and examinations using meters, oscilloscopes, spectrum analyzers, and signal generators to analyze and troubleshoot Doppler radar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in microwave radar systems (7/92).

NV-1715-1576

AN/ARC-143, AN/ARC-143A, and AN/ARC-143B UHF Radio Set Intermediate Maintenance

Course Number: C-102-3581.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot UHF radio sets used for transmitting sonar information from sonobuoys to aircraft and air-to-ground voice communication and apply communication principles including AM, FM, FSK modulation and direction finding techniques, receivers, and transmitters.

Instruction: Course includes lectures and performance exercises using meters, oscilloscopes, spectrum analyzers, and test sets to analyze and troubleshoot UHF radio systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications (7/92).

NV-1715-1577

P-3C Navigation/Communication Organizational Maintenance

Course Number: C-102-3591.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 7-8 weeks (304 hours).

Exhibit Dates: 5/90–Present.

Learning Outcomes: Before 5/90 see NV-1715-0533. Upon completion of the course, the student will be able to operate, test, and troubleshoot aircraft communications and navigation systems.

Instruction: Course includes lectures and practical exercises in the operation, testing, and troubleshooting of communications, radar, radar altimeters, radio navigation systems, teletype, teleprinter, digital data link, and computers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications and 6 in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1578

AN/AQH-4 and AN/AQH-4(V)2 Sound Recorder/Reproducer Set Intermediate Maintenance

Course Number: C-102-3596.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot a 28 channel audio recording system used to record multiple sonar signals and crew conversations and apply principles of audio amplifiers and magnetic tape recording devices.

Instruction: Lectures, performance exercises, and examinations cover meters and oscilloscopes to analyze and repair audio recording and playback tape systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1579

P-3C AN/ASW-31 Automatic Flight Control System Intermediate Maintenance

Course Number: C-102-3604.

Location: Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain an automatic flight control system using the universal avionic component test set.

Instruction: Lectures, practical exercises, and examinations cover the universal avionics component test set, control panels, measurement displays, check out procedures, signal modules, axis amplifiers, control and bite panels, and gyroscope assembly, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1580

AN/AAS-36 Infrared Detection System Intermediate Maintenance

Course Number: *Version 1:* C-198-3571A. *Version 2:* C-198-3571.

Location: *Version 1:* Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA. *Version 2:* Air Maintenance Training Group Detachment, Moffett Field, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: *Version 1:* 8 weeks (240 hours). *Version 2:* 5 weeks (200 hours).

Exhibit Dates: *Version 1:* 11/95–Present. *Version 2:* 1/90–10/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to troubleshoot, perform operational testing, align, and repair infrared detection systems. *Version 2:* Upon completion of the course, the student will be able to troubleshoot, align, and repair infrared detection systems.

Instruction: *Version 1:* Lectures, practical exercises, and examinations cover thermal imaging, temperature and electromagnetic energy relationships, wavelength, transmission of infrared energy, and basic concepts of infrared systems. Block-diagram analysis using applicable publications and equipment to test and repair infrared detection systems is also covered. *Version 2:* Lectures, practical exercises, and examinations cover thermal imaging, temperature and electromagnetic energy relationships, wavelength, transmission of infrared energy, and basic concepts of infrared systems. Block-diagram analysis using applicable publications and equipment to test and repair infrared detection systems is also covered.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electro-optical systems troubleshooting and maintenance (10/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electro-optical systems troubleshooting and maintenance (7/92).

NV-1715-1581

AN/ASQ-81(V) Magnetic Anomaly Detection Set Intermediate Maintenance

Course Number: C-102-3109.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 1-2 weeks (72 hours).

Exhibit Dates: 9/91–Present.

Learning Outcomes: Before 9/91 see NV-1715-0559. Upon completion of the course, the student will be able to maintain and troubleshoot a magnetic anomaly detection set used to detect objects underwater and apply magnetic principles, magnetic fields, anomaly detection principles, magnetometers, and towed reel devices.

Instruction: Course includes lectures, performance exercises, and examinations using meters, oscilloscopes, synchronizers, counters, and test sets to analyze and repair the detector.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance and 1 in electrical control systems (7/92).

NV-1715-1582

AN/APN-182A(V) Radar Navigation Set Intermediate Maintenance

Course Number: C-102-3398.

Location: Air Maintenance Training Group Detachment, North Island, San Diego, CA; Air Maintenance Training Group Detachment, Jacksonville, FL.

Length: 4-5 weeks (184 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot a Doppler radar navigation system used to measure aircraft velocity and drift and apply the principles of receivers, transmitters, antennas, waveguides, and display devices.

Instruction: Lectures, performance exercises, and examinations use meters, oscilloscopes, spectrum analyzers, and test sets to analyze and repair a Doppler radar navigation set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in microwave systems and 2 in electronic systems troubleshooting and maintenance (7/92).

NV-1715-1583

Miniature Microminiature Electronic Repair Inspector

Course Number: A-100-0058.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 4 weeks (133-160 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to disassemble, repair, and solder miniature circuit card components, surface mount devices, terminals, solderable connections, circuit card assembly laminates and conductors; replace multilead devices on single- and double-sided circuit card assemblies; and perform preventive maintenance procedures for the repair station.

Instruction: Instruction includes lectures and practical exercises with an emphasis on practice. Topics include high-reliability soldering theory and techniques, removal and installation of circuit board components, SMD, handling of sensitive electronic devices, and electrical safety procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic maintenance and troubleshooting (10/92).

NV-1715-1584

Miniature Microminiature Instructor Certification

Course Number: A-100-0057.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 3 weeks (100-120 hours).

Exhibit Dates: 1/92–11/94.

Learning Outcomes: Upon completion of the course, the student will be able to disassemble, repair, and solder miniature circuit card components, surface mount devices, terminals, solderable connections, circuit card assembly laminates and conductors; replace multilead devices on single- and double-sided circuit card assemblies; and perform preventive maintenance procedures for the repair station.

Instruction: Instruction contains lecture and practical exercises with an emphasis on practice. Topics include high-reliability soldering theory and techniques, removal and installation of circuit board components, SMD, handling of sensitive electronic devices, and electrical safety procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic maintenance and troubleshooting (10/92).

NV-1715-1585

AN/SPS-55 Radar Set Maintenance

Course Number: A-104-0162.

Location: Fleet Training Center, San Diego, CA; Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3 weeks (100-120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of this course, the student will have the skills and knowledge necessary to operate and to maintain the radar set.

Instruction: Course includes operation and maintenance of the radar set, including power distribution, timing and frequency generation, receiving and video systems, antenna systems, and system troubleshooting and repair to the lowest repairable or replaceable component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radar troubleshooting and system maintenance (6/94).

NV-1715-1586

AN/SPA-25(V), SB-1505/SP Maintenance
(AN/SPA-25 Series Radar Indicator, C-11300/SPA-25E Off-Centering Controller and SB-15005C/SP Switchboard Maintenance)

Course Number: A-104-0129.

Location: Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 5 weeks (166-200 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Before 4/91 see NV-1715-0029. Upon completion of the course, personnel will be able to maintain, troubleshoot, and perform preventive maintenance on a radar signal distribution switchboard, modified radar indicators, an off-centering controller, and a radar indicator at the organizational level.

Instruction: Lectures and laboratory exercises cover operation and troubleshooting to the circuit board/component level using logical procedures. Course includes maintenance of various units of a series radar repeater and radar switchboard using high-frequency test equipment, digital troubleshooting and alignment procedures, and high-voltage DC supplies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar troubleshooting and systems maintenance (6/94).

NV-1715-1587

AN/URN-25 Afloat TACAN Maintenance
(AN/URN-25 TACAN Maintenance)

Course Number: A-102-0239.

Location: Service School Command, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Before 1/92 see NV-1715-1137. Upon completion of the course, personnel will be able to do preventive and corrective maintenance on the tactical air navigation system (TACAN) AN/URN-25 which includes a beacon and two antenna groups. The corrective maintenance is limited to card/module level replacement.

Instruction: For an earlier version of the course, see NV-1715-1137. Lectures and laboratory exercises in operation, maintenance, and repair of the AN/URN-25 navigational set including AC/DC power supplies, coder-keyer circuits, receiver transmitter circuits, control indicator circuits, and FSK circuits. The power and monitoring circuits of the OE-273/URN antenna group and the power, monitoring, and modulation generator circuits of the OE-258/URN antenna are included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar system troubleshooting and maintenance (6/94).

NV-1715-1588

1. AIMS Mk 12 IFF Maintenance
2. AIMS Mk 12 IFF System Maintenance

Course Number: *Version 1:* A-102-0062. *Version 2:* A-102-0062.

Location: *Version 1:* Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA. *Version 2:* Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: *Version 1:* 22 weeks (880 hours). *Version 2:* 18 weeks (720 hours).

Exhibit Dates: *Version 1:* 6/94–Present. *Version 2:* 12/91–5/94.

Learning Outcomes: *Version 1:* Before 11/91 see NV-1715-0812. Upon completion of the course, the student will be able to demonstrate the necessary skills to operate, troubleshoot, and maintain a complete aircraft interrogation system. The student must apply digital and analog circuit theory to troubleshoot various electronic circuits to the component level. *Version 2:* Before 12/91 see NV-1715-0812. Upon completion of the course, the individual will have the knowledge and skills necessary to align, maintain, troubleshoot, and repair all aspects of the aircraft identification system to the component level.

Instruction: *Version 1:* Lectures, lab exercises, and practical examples cover the aircraft interrogation system, transponder systems, interrogator systems, interface blankers, and decoder circuit systems. Topics covered in these systems include digital logic, serial communications, signal transmitters, operational amplifiers, advanced electronic circuits, and circuit analysis to the component level. *Version 2:* Lecture and hands-on experience in the laboratory includes pulse modulated transmitters, receivers, digital signal processing circuits, displays, pulse timing, power supplies, and antennas. Circuits analysis and troubleshooting to the component level are stressed.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in digital circuit logic, 3 in analog circuits, and 3 in communications circuit analysis (11/95). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic troubleshooting and maintenance (10/92).

NV-1715-1589

AN/URN-20 Radio Set Maintenance
(AN/URN-20 TACAN Maintenance)

Course Number: A-102-0034.

Location: Service School Command, San Diego, CA.

Length: 6 weeks (186-187 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Before 1/92 see NV-1715-0193. Upon completion of the course, personnel will be able to do preventive and corrective maintenance on a tactical air navigation system which includes a beacon and antenna group.

Instruction: Lectures and practical exercises cover radio receiver/transmitter operation, including basic air navigation systems, power distribution, antenna system, receiver, keyer, coder, and transmitter. Maintenance, test equipment operation, and troubleshooting techniques are also included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar system troubleshooting and maintenance (11/95).

NV-1715-1590

FFG-7 Class Navigation Electronics Subsystem Maintenance

Course Number: A-102-0295.

Location: Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 15 weeks.

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of this pipeline course, consisting of four independent courses, the student will be able to to troubleshoot and repair a specific military radio navigation set.

Instruction: Lectures and practical exercises specific to the radio navigation set are presented with emphasis on isolation and correction of malfunctions. For complete descriptions, see A-104-0129 (NV-1715-0029 and NV-1715-1586), A-102-0239 (NV-1715-1137 and NV-1715-1587), and A-104-0162 (NV-1715-1585).

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (11/95).

NV-1715-1591

Field Calibration Activity Maintenance

Course Number: *Version 1:* A-198-0056. *Version 2:* A-198-0056.

Location: *Version 1:* Technical Training Unit, Keesler AFB, MS. *Version 2:* Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: *Version 1:* 3 weeks (120 hours). *Version 2:* 3 weeks (120 hours).

Exhibit Dates: *Version 1:* 10/95–Present. *Version 2:* 1/92–9/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will apply the basic theory and operation of electronic test equipment identify measurement errors and perform field calibration of electronic test equipment covered under the Navy meteorology and calibration program. *Version 2:* Upon completion of the course, the student will be able to identify measurement errors and perform field calibration of electronic test equipment covered under the Navy meteorology and calibration program.

Instruction: *Version 1:* Lectures and laboratory exercises cover identification of measurement errors and actual calibration procedures for modularly equipped and configured calibrators and analyzers, including digital multimeters, oscilloscopes, frequency counters, and signal generators. Also included is instruction in using an instrument controller and the associated software. *Version 2:* Laboratory exercises cover identification of measurement errors and actual calibration procedures for modularly equipped and configured calibrators and analyzers, including digital multimeters, oscilloscopes, frequency counters, and signal generators. Also included is instruction in using an instrument controller and the associated software.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in electronic test equipment calibration (4/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic test equipment calibration (10/92).

NV-1715-1592

SB-4220/SP Switchboard Maintenance
(SB-4220/SP Radar Signal Distribution Switchboard Maintenance)

Course Number: A-104-0213.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (66-80 hours).

Exhibit Dates: 6/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and perform preventive and corrective maintenance on a specific radar switchboard.

Instruction: Instruction includes lecture and practical exercises in major functional components, technical documentation, operational procedures, documented fault isolation, alignment adjustments, and proper safety procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in radar system troubleshooting and maintenance (6/94).

NV-1715-1593

AN/WRN-5A Satellite Navigation Set Maintenance

Course Number: A-102-0357.

Location: Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 5-6 weeks (133-160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair a specific satellite receiving set.

Instruction: Lectures and practical exercises cover the major functions of the equipment; operating procedures, adjustments, and troubleshooting procedures to the card level; and removal and replacement procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in communications systems troubleshooting and maintenance and 1 in communications systems laboratory (10/92).

NV-1715-1594

AN/SPS-49(V)1 Radar Maintenance

Course Number: A-104-0176.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 12 weeks (480 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Before 1/92 see NV-1715-1093. Upon completion of the course, the individual will have the knowledge and skills necessary to align, maintain, troubleshoot, and repair all aspects of the radar system to the board level.

Instruction: Lectures, hands-on experience in the laboratory, and performance examinations cover pulsed transmitters, receivers, digital signal processing, displays, antennas, pressurized waveguides, and power supplies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (6/94).

NV-1715-1595

AN/SYQ-7(V)5 Naval Modular Automated Communications System (NAVMACS V5) Operator
(AN/SYQ-7(V)5 Naval Modular Automated Communications System Operator)

Course Number: A-260-0065.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 11/91–Present.

Learning Outcomes: Upon completion of the course, the individual will have the knowledge and skills required to operate and maintain a naval modular automated communications system. In addition, the student will be able to use appropriate diagnostic aids isolate faults and take corrective actions to maintain system integrity.

Instruction: Lectures and laboratory experiences include the theory of operation of an computer-controlled satellite communications system and specific operational characteristics, maintenance, and fault isolation techniques for the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in communications systems theory and maintenance (6/94).

NV-1715-1596

DD-963 Facilities Control Quality Monitoring Operator

Course Number: A-202-0035.

Location: Service School Command, San Diego, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 6/90–10/92.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot systems within the Spruance class destroyer HF radio communications system.

Instruction: Instruction includes lectures and practical exercises in HF transister and receiver circuitry, antenna couplers, circuit monitoring, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in communications systems operation and maintenance (10/92).

NV-1715-1597

AN/SPS-40B/C/D Radar Set Maintenance

Course Number: A-104-0133.

Location: Service School Command, San Diego, CA.

Length: 9 weeks (300 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Before 2/92 see NV-1715-0809. Upon completion of this course, the individual will be able to troubleshoot and repair all aspects of the radar system.

Instruction: Lectures and laboratory experiences are used to present system operation and maintenance and troubleshooting of power control and distribution, air and cooling systems, antenna, timing, trigger and frequency generation, low- and high-power transmitters and receivers, and high-voltage power supplies of a radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in radar systems maintenance (6/94).

NV-1715-1598

AN/VRC-46 Radio Transmitter Set

Course Number: A-101-0063.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 2 weeks (66-67 hours).

Exhibit Dates: 12/90–Present.

Learning Outcomes: Before 12/90 see NV-1715-0249. Upon completion of the course, the student will have the knowledge and skills necessary to maintain a radio transceiver set and a remote-controlled transceiver systems.

Instruction: Lectures and laboratory exercises cover a radio transceiver system including DC distribution and operation, analysis, and alignment of the receiver, transmitter, and servo systems. Laboratory exercises involve use of the oscilloscope, signal generator, frequency counter, multimeter, RF test set, and deviation meter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in communications systems troubleshooting and maintenance (2/96).

NV-1715-1599

DD-963 Class HF Communications Systems Maintenance

Course Number: A-101-0096.

Location: Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 13 weeks (496 hours).

Exhibit Dates: 3/91–Present.

Learning Outcomes: Before 3/91 see NV-1715-0870. Upon completion of the course, the student will be able to operate, align, and repair a radio communications system for naval vessels.

Instruction: Lectures and laboratories cover circuit analysis and block diagrams of receivers and transmitters, RF and control sections, frequency distribution, power supplies and antennas, and use of test equipment to troubleshoot and repair the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems maintenance, 3 in communications systems, and 2 in communications systems laboratory (10/92).

NV-1715-1600

AN/URC-94(V) Radio Set Maintenance

Course Number: A-101-0151.

Location: Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (66-67 hours).

Exhibit Dates: 9/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the transceiver.

Instruction: Instruction includes lectures and practical exercises on signal analysis, inputs/outputs, logic elements, circuits and registers, signal/data formats, power supplies, alignment and adjustment procedures, protective devices, transceiver operations, corrective maintenance procedures, and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in communications systems maintenance (10/92).

NV-1715-1601

Flight Deck Communications Maintenance

Course Number: A-101-0210.

Location: Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 6 weeks (200-240 hours).

Exhibit Dates: 4/90–Present.

Learning Outcomes: Upon completion of the course, the individual will be able to maintain, troubleshoot, and repair all aspects of a flight deck communications system.

Instruction: Lectures and laboratory exercises cover physical, functional, and operational descriptions of the system; preventative and corrective maintenance techniques; use of test equipment and diagnostics; and use of technical documentation for a Z-80 microprocessor-based system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in communications systems maintenance (10/92).

NV-1715-1602

Single Audio System Maintenance

Course Number: A-101-0163.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: 2 weeks (66 hours).

Exhibit Dates: 9/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain an automated voice switching system.

Instruction: Lectures and laboratory exercises include maintenance, disassembly, and repair of an automated single audio system consisting of telephone sets, transmitter, transfer and communications patching switchboard, control interface and switching units, audio system, remote switching unit, and automated voice switching equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in communications system troubleshooting and maintenance (10/92).

NV-1715-1603

Prospective Electronics Material Officer Pacific

Course Number: A-4B-0018.

Location: Service School Command, San Diego, CA.

Length: Self-paced average, 4 weeks.

Exhibit Dates: 8/91–Present.

Learning Outcomes: The student will gain the necessary knowledge and skills to administer and supervise the electronics maintenance division on board a Pacific fleet ship.

Instruction: Course includes audio-tutorial instruction in electronics materials management, hazardous materials, communications systems, radar systems, navigation aids, electronic warfare, safety, training programs, and test equipment management.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/92).

NV-1715-1604

AN/WTC-3(V) AT&T Dimension 2000 PBX Telephone System, Class C1

Course Number: A-623-0111.

Location: Service School Command, San Diego, CA.

Length: 5 weeks (165 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will have the knowledge and skills necessary to maintain the Dimension 2000 PBX telephone systems.

Instruction: Lectures cover operational theory, basic operation, and maintenance theory of Dimension 2000 PBX telephone systems. Hands-on instruction includes preventive and basic corrective maintenance of the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (10/92).

NV-1715-1605

Integrated Voice Communication System (IVCS) AN/STC-1

Course Number: A-623-0042.

Location: Service School Command, San Diego, CA.

Length: 19 weeks (760 hours).

Exhibit Dates: 7/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a bit slice processor-based integrated voice communications system.

Instruction: Topics covered include microcomputer fundamentals, voice communications system operation, troubleshooting and corrective maintenance using basic test equipment, teleprinter and tape recorder operation, and a basic integrated computer rack housing all systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance and 3 in digital systems (10/92).

NV-1715-1606

Mk 9 Mod 4 Dead Reckoning Analyzer Indicator (DRAI) Maintenance

(Dead Reckoning Analyzer Indicator Mk 9/Mod 4)

(Dead Reckoning Tracer Mk 6/Mod 4B (DRAI/DRT) Maintenance, Class C1)

Course Number: J-623-0028.

Location: Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 5 weeks (200-230 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain both dead reckoning analyzer indicator and dead reckoning tracer in ship's interior communications, both ashore and afloat.

Instruction: Lectures and practical exercises cover the operation and repair of the dead reckoning analyzer indicator and the dead reckoning tracer, including review of the 3M system, digital fundamentals, electronics, synchros, control transformers, resolvers, servo loops, and test equipment; operation of specified equipment and components; functional analysis of circuits; block-diagram analysis; and troubleshooting and preventive maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 1 semester hour in electromechanical systems and 2 in electronic troubleshooting (6/94).

NV-1715-1608

Integrated Voice Communication System (IVCS) Terminal Maintenance, Class C1

Course Number: A-623-0106.

Location: Service School Command, San Diego, CA.

Length: 4-5 weeks (126-166 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain an integrated voice communication system, comprising a basic telephone system, intercommunications stations, and various types of telephone terminals.

Instruction: Lectures and laboratory cover review of basic electricity, basic electronics, digital principles, and blueprint reading. Function of various types of IVCS terminals, operation and corrective maintenance using the six steps troubleshooting procedure, and basic electronics test equipment are also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic electronics and 2 in electronic systems troubleshooting and maintenance (10/92).

NV-1715-1609

Radioman, Class C7

Course Number: A-202-0033.

Location: Service School Command, San Diego, CA.

Length: 11-12 weeks (400 hours).

Exhibit Dates: 1/90–5/93.

Learning Outcomes: Upon completion of the course, the student will demonstrate knowledge of the basics of electricity, electronics, antennas, radio wave propagation, radio transmitters and receivers, and satellite communication system operation and will be able to manage specific Navy communications equipment.

Instruction: Lectures and practical exercises cover management by objective, accountability, control, evaluation, and other management tools as they apply to Navy security, organization, and maintenance management systems. The course also covers basic electricity, basic electronics, antennas, radio wave propagation, and operation and maintenance of specific Navy communications systems. Laboratory exercises include use of the oscilloscope, frequency counters, spectrum analyzer, and communications quality monitoring systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in maintenance management, 2 in basic electronics, and 1 in electronic communications systems (10/92).

NV-1715-1610

AN/UGC-143A(V) Navy Standard Teleprinter Maintenance

Course Number: *Version 1:* A-160-0110. *Version 2:* A-160-0110.

Location: *Version 1:* Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA. *Version 2:* Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA; Fleet Training Center, San Diego, CA.

Length: *Version 1:* 3 weeks (112 hours). *Version 2:* 2 weeks (76 hours).

Exhibit Dates: *Version 1:* 3/94–Present. *Version 2:* 3/91–2/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate a teleprinter and perform routine preventive and corrective maintenance to the subsystem level using common laboratory equipment. *Version 2:* Upon completion of the course, the individual will be able to describe the operation of a teleprinter and perform routine preventive and corrective maintenance to the subsystem level.

Instruction: *Version 1:* Lectures and hands-on experience cover the teleprinter. Topics include safety, identification and purpose of subsystems, preventive maintenance procedures, symptom identification and corrective maintenance, and troubleshooting using common laboratory equipment. *Version 2:* Instruction includes lectures and hands-on experience on the teleprinter. Topics include safety, identification and purpose of subsystems, preventive maintenance procedures, symptom identification, and subsystem corrective maintenance.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in electronic systems troubleshooting and repair (11/95). *Version 2:* In the vocational certificate category, 1 semester hour in systems troubleshooting (10/92).

NV-1715-1611

Communications Quality Monitoring System

Course Number: A-202-0036.

Location: Fleet Training Center, Pearl Harbor, HI; Service School Command, San Diego, CA.

Length: 2 weeks (64 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to effectively monitor shipboard communications systems and determine location of system degradation or failure.

Instruction: Course includes lectures and demonstrations on digital, audio, and communications electronics.

Credit Recommendation: In the vocational certificate category, 1 semester hour in systems troubleshooting (10/92).

NV-1715-1612

Communication System Technician

Course Number: A-202-0013.

Location: Service School Command, San Diego, CA.

Length: 11-12 weeks (374-400 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, personnel will be able to operate, troubleshoot, and repair specific types of high-frequency communications equipment at the system level.

Instruction: Lectures and laboratories cover communications systems, including receivers, transmitters, transceivers, and teletype equipment. Testing and fault isolation procedures for HF, digital, and satellite communications circuits and systems are covered. Laboratory exercises cover video terminals, multiplexers, LF/MF/HF receivers, UHF antenna couplers, antenna control, demultiplexers, and satellite communications set operation and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic communications systems and 2 in electrical laboratory (10/92).

NV-1715-1613

1. EA-6B Integrated Electronic Attack System (CAREER) Organizational Maintenance
2. EA-6B Integrated Electronic Countermeasures System Organizational Maintenance
3. EA-6B Integrated Electronic Countermeasures System Consolidated Organizational Maintenance

Course Number: *Version 1:* C-102-9742A. *Version 2:* C-102-9742. *Version 3:* C-102-9742.

Location: *Version 1:* Air Station, Whidbey Island, WA. *Version 2:* Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA. *Version 3:* Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: *Version 1:* 5 weeks (200 hours). *Version 2:* 8 weeks (320 hours). *Version 3:* 9-10 weeks (384 hours).

Exhibit Dates: *Version 1:* 9/95–Present. *Version 2:* 10/93–8/95. *Version 3:* 7/90–9/93.

Learning Outcomes: *Version 1:* This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to describe principles of a 1553 data bus and control an integrated avionics countermeasures system. Students will have the ability to test and troubleshoot down to line replaceable units. Students will also be able to describe fundamentals of data loaders, video displays, warning annunciator panels, and computers. *Version 3:* Upon completion of the course, the student will be able to troubleshoot and repair an integrated electronic countermeasures system.

Instruction: *Version 1:* This version is pending evaluation. *Version 2:* Lectures and practical application involve operation, theory, testing, and troubleshooting pulse-microwave transceivers and 1553-based video and computer processing equipment down to line replaceable units. *Version 3:* Lectures and laboratory experience cover theory, maintenance, troubleshooting, and repair of the above equipment.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in principles of avionics data buses, displays, and computer integration (10/94). *Version 3:* Credit is not recommended because of the limited, specialized nature of the course (10/92).

NV-1715-1614

CM-453/ALQ-99D(V) and CM-484/ALQ-99F(V) Signal Comparator-Converters Intermediate Maintenance

Course Number: C-102-4949.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (72 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain the signal-comparator converter using automatic test equipment.

Instruction: Lectures and laboratories in small groups cover use of test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/92).

NV-1715-1615

AN/ALQ-99 Jamming Transmitters
Intermediate Maintenance

Course Number: C-102-4952.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 9 weeks (360 hours).

Exhibit Dates: 1/90–2/97.

Learning Outcomes: Upon completion of the course, the student will understand the theory of high- and low-band jamming transmitters, built-in test equipment, and associated antenna systems and troubleshoot and repair transmitters, high- and low-voltage power supplies, and antennas.

Instruction: Lectures and laboratory experience are used to cover theory, troubleshooting, and repair of high- and low-band jamming transmitters, high- and low-voltage power supplies, built-in test equipment, and associated antenna systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications (10/92).

NV-1715-1616

AN/ASN-123 Digital Display Group (DDG)
Intermediate Maintenance

Course Number: C-102-4396.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–1/97.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a 1553-based computer system and digital display using appropriate test sets under close supervision. Student will also be able to troubleshoot and repair the test sets.

Instruction: Lectures and laboratory instruction on computer theory, construction, and maintenance of the computer equipment as well as theory, construction, and maintenance of associated test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (10/94).

NV-1715-1617

AN/UYH-4 Recorder Reproducer

Course Number: C-102-3994.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under limited supervision, maintenance on a recorder/reproducer set; troubleshoot and repair at the systems level; and mechanically repair the tape transport mechanism.

Instruction: Lectures, demonstrations, and laboratory in a small group-paced setting cover the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in consumer electronics (tape deck repair) and 2 in electronic systems troubleshooting and maintenance (10/92).

NV-1715-1618

AN/ALQ-99 Surveillance Receivers
Intermediate Maintenance

Course Number: *Version 1:* C-102-4953. *Version 2:* C-102-4953.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 5 weeks (200 hours).

Exhibit Dates: *Version 1:* 1/93–Present. *Version 2:* 1/90–12/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe system operation, signal analysis, and circuit theory of microwave threat warning receiver. *Version 2:* Upon completion of the course, the student will be able to analyze, troubleshoot, and repair surveillance receivers.

Instruction: *Version 1:* Lectures and written exercises provide the student with a theoretical understanding of microwave receiver principles. There is no laboratory component. *Version 2:* Lectures and and practical application in a laboratory setting includes receiver theory.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic communications (10/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic communications (10/92).

NV-1715-1619

CV-3650/AYA-6C Computer Interface Unit
(CIU) Intermediate Maintenance

Course Number: C-102-3989.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able, under limited supervision, to use functional analysis and appropriate publications to troubleshoot and repair small computer interface circuitry.

Instruction: Lectures and laboratories cover digital test bench. Emphasis is on troubleshooting using digital techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (10/92).

NV-1715-1620

AN/AAS-33A Electronic Control Amplifier
Intermediate Maintenance

Course Number: C-102-3983.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform systems analysis and maintenance, under close supervision, on the electronic control amplifier.

Instruction: Lectures and laboratories in small self-paced groups emphasize troubleshooting skills.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (10/92).

NV-1715-1621

OF-17/ARC-105 Antenna Coupler Group and
AN/ARM-158 Radio Test Set
Intermediate Maintenance

Course Number: C-102-3955.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (64-80 hours).

Exhibit Dates: 1/90–1/95.

Learning Outcomes: Upon completion of the course, the student will be able to maintain a high-frequency radio and its associated test equipment.

Instruction: Lectures and laboratory instruction are used to teach operation of the radio and the test equipment. Limited experience on actual aircraft allows some troubleshooting.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/95).

NV-1715-1622

OJ-510/ALM Digital Test Bench
Intermediate Maintenance

Course Number: C-102-4942.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze and troubleshoot, under limited supervision, a digital test bench.

Instruction: Lectures and practical exercises in small groups cover the test bench.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital principles, 1 in microprocessors, and 1 in computer systems troubleshooting and maintenance (10/92).

NV-1715-1623

ID-2311/A Control Display Indicator (CDI)
Intermediate Maintenance

Course Number: C-102-4746.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (68 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a control display indicator.

Instruction: Lectures and practical application in test operations use test equipment and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital principles and 1 in electronic systems troubleshooting and maintenance (10/92).

NV-1715-1624

CV-3649/ALQ-99 Universal Exciter
Intermediate Maintenance

Course Number: C-102-4744A; C-102-4744.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 4-5 weeks (134-160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under close supervision, maintenance on a universal exciter (multiple RF waveform generator).

Instruction: Lectures, demonstrations, workbooks, and written exams are the course methods. Strong emphasis is placed on block analysis, waveform identification, and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance and 1 in communications electronics (12/97).

NV-1715-1625

RT-712/ARC High Frequency Radio Intermediate Maintenance

Course Number: C-102-3104.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student, under supervision, will be able to troubleshoot and repair a radio set.

Instruction: Lectures and laboratory instruction provide students with basic radio theory, specific information on the radio set, and procedures for troubleshooting and aligning.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radio theory (10/92).

NV-1715-1626

IP-933 Video Display and CV-2434 Analog-Digital Converter Intermediate Maintenance

Course Number: C-102-3999.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–6/92.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under limited supervision, maintenance on cathode ray tubes, video display equipment, and microprocessor controlled A/D and D/A interfaces.

Instruction: Lectures, demonstrations, and workbooks are the methods of instruction. Applications include system analysis and waveform identification.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electronics laboratory, 1 in systems analysis (block level), and 1 in digital principles (10/92).

NV-1715-1627

AN/USM-608(V) Inertial Measurement Unit Test Set Operator/Maintainer Intermediate Maintenance

Course Number: C-198-3060.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 7 weeks (280 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, disassemble, troubleshoot to the circuit card level, and reassemble a computer-controlled inertial measurement unit.

Instruction: Small-group lectures with laboratories are methods of instruction.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance and 1 in computer systems troubleshooting and maintenance (12/92).

NV-1715-1628

AT 1161 X 42640 Miltope Magnetic Tape Transport Unit Intermediate Maintenance

Course Number: C-198-3026.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and repair (component level) magnetic tape transport systems.

Instruction: Methods include lectures and laboratories with workbooks. Emphasis is on component-level mechanical and electrical troubleshooting and repair using simulated faults.

Credit Recommendation: In the vocational certificate category, 2 semester hours in consumer electronics (12/92); in the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (12/92).

NV-1715-1629

ATM13-II Magnetic Tape Transport Unit (MTTU) Intermediate Maintenance

Course Number: C-198-3020.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 2/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to disassemble, troubleshoot (component level), replace defective components, test, and reassemble a magnetic tape transport system.

Instruction: Course methods are lectures and supervised laboratories.

Credit Recommendation: In the vocational certificate category, 1 semester hour in consumer electronics (12/92); in the lower-division baccalaureate/associate degree . category, 1 semester hour in electronic systems troubleshooting and maintenance (12/92).

NV-1715-1630

AN/USM-247(V) Versatile Avionic Shop Test (VAST) On Line Intermediate Maintenance

Course Number: C-198-3014.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 11 weeks (440 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the organization and operation of an integrated circuit-based minicomputer to the individual logic component level; describe the structure and control action of computer software machine code to the bit level; describe the operation of tape drives, disk drives, keyboards, printers, and solid state displays; and be able to test and troubleshoot, to the circuit card level, a computer-based automatic test set.

Instruction: Lectures and practical exercises cover CPU organization, software, timing, operation at the bit level, I/O, interrupt-driven I/O, automatic signal generation and response, and peripheral operation. Laboratories include testing and troubleshooting of the computer and associated peripherals to the card level using multimeters, oscilloscopes, and test programs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in computer systems troubleshooting and maintenance and 3 in electronic systems troubleshooting and maintenance (12/92); in the upper-division baccalaureate category, 3 in mainframe computer systems (12/92).

NV-1715-1632

AN/AAD-5A Infrared Line Scanner Set (TARPS) AN/AAM-76 Test Bench Set Intermediate Maintenance

Course Number: C-198-4870.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 5-6 weeks (224 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance, under minimum supervision, on infrared line scanner equipment and test equipment.

Instruction: Lectures and practical exercises cover operational testing and troubleshooting of infrared line scanning equipment used to edit and annotate film, using the appropriate test benches.

Credit Recommendation: In the vocational certificate category, 2 semester hours in consumer electronics (12/92).

NV-1715-1633

OJ-621A/AWM-23(V) (AWG-9) Module Test Station (MTS) Intermediate Maintenance

Course Number: C-121-3013.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 7-8 weeks (288 hours).

Exhibit Dates: 6/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze, troubleshoot, and repair digital circuits using standard test equipment such as digital oscilloscope, multimeter, function generator, and frequency counter.

Instruction: Small self-paced groups attend lectures and demonstrations. Laboratories cover troubleshooting to the module level and involve circuit card replacement.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital equipment troubleshooting and maintenance (12/92).

NV-1715-1634

F-14D Avionics Technician Integrated Organizational Maintenance

Course Number: C-102-9899.

Location: Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 12-13 weeks (512 hours).

Exhibit Dates: 12/92–6/96.

Learning Outcomes: Upon completion of the course, the student will be able to describe the function and identify the major components of modern aircraft avionic systems, including flight computer, VHF/UHF communications, navigation, aircraft flight instruments, and radar, as well as military armament and electronic countermeasure systems troubleshoot using automated test procedures to the major component level.

Instruction: Lectures, laboratories, and field (aircraft) exercises cover safety, flight computer/instruments, voice and data communications, transponder, navigation, radar, armaments, television, infrared, and electronic countermeasures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic systems troubleshooting and maintenance, 3 in computer systems troubleshooting and maintenance, and 3 in aircraft avionic systems (12/92).

NV-1715-1635

AN/AWM-23 (AN/AWG-9) Radio Frequency Test Station (RFTS) Intermediate Maintenance

Course Number: C-121-3011.

Location: Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Miramar, San Diego, CA.

Length: 14 weeks (560 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, calibrate (align), and troubleshoot a missile guidance radar system; calibrate the test station; and troubleshoot, to the module level, test station faults.

Instruction: Lectures cover the automatic test equipment and associated equipment including RF voltmeters, signal generators, spectrum analyzers, counters, oscilloscopes, power supplies, and liquid cooling systems. Laboratories cover operation, maintenance, and repair of the test system and associated subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems and 3 in electronic systems troubleshooting and maintenance (12/92).

NV-1715-1636

1. Submarine Periscope Repair
2. Type 18 Submarine Periscope (Optical) Repair

Course Number: *Version 1:* A-670-0047. *Version 2:* A-670-0047.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 19 weeks (665 hours). *Version 2:* 12 weeks (400 hours).

Exhibit Dates: *Version 1:* 4/95–Present. *Version 2:* 1/90–3/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate and maintain a type 18 submarine periscope (optical). *Version 2:* Upon completion of the course, the student will be able to operate and maintain a type 18 submarine periscope (optical).

Instruction: *Version 1:* Lectures, demonstrations, and hands-on laboratory exercises cover structure of matter, conductivity, magnetism, current, color codes, types of resistors, voltage sources, and measuring instruments; Kirchhoff's voltage and current laws, series and parallel circuits, loop and nodal analysis, and Thevenin's and Norton's theorems; AC circuits including phaser concepts and calculations; Faraday's law of inductance and RL circuits and transformers; capacitors, capacitance, RC circuits, RLC circuits, resonance, and Q; and DC and AC motors and generators; basic solid state theory; purpose and operation of oscilloscopes, frequency standards, signal generators, digital multimeters, and counters; power supplies, amplifiers, receivers, and antenna and transmission lines; number systems, truth tables, and digital logic; and the theory, operation, and maintenance of a type 18 periscope, including: optical magnification, optical theory, and image motion compensation photography. *Version 2:* Lectures, demonstrations, and hands-on laboratory exercises cover structure of matter, conductivity, magnetism, current, color codes, types of resistors, voltage sources, and measuring instruments; Kirchhoff's voltage and current laws, series and parallel circuits, loop and nodal analysis, and Thevenin's and Norton's theorems; AC circuits including phaser concepts and calculations; Faraday's law of inductance, RL circuits and transformers; capacitors, capacitance, RC circuits, RLC circuits, resonance, and Q; DC and AC motors and generators; basic solid state theory; purpose and operation of oscilloscopes, frequency standards, signal generators, digital multimeters, and counters; power supplies, amplifiers, receivers, and antenna and transmission lines; number systems, truth tables, and digital logic; and the theory, operation, and maintenance of a type 18 periscope.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in DC/AC circuits, 2 in basic electronics, 3 in basic digital logic, and 3 in electromechanical laboratory (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in DC/AC circuits, 2 in basic electronics, 1 in basic digital logic, and 3 in electromechanical laboratory (1/93).

NV-1715-1637

Outboard Maintenance Common Core

Course Number: A-102-0384.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 15-16 weeks (616 hours).

Exhibit Dates: 5/91–1/93.

Learning Outcomes: Upon completion of the course, the student will be able to operate and perform preventive and corrective maintenance on the AN/SLR-16A and the AN/SRD-19A without supervision.

Instruction: Classroom lecture and hands-on laboratory cover operational procedures; functional and circuit diagrams; troubleshooting induced faults located in various parts of the equipment, such as receiver, RF input and RF generation, memory, receiver alignment, and memory; alarm signal recognition; record and track assignment; decode and print circuitry; backlog and frequency measurement; PAN display; and power/logic circuitry and system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in system troubleshooting (1/93).

NV-1715-1638

Outboard 2 Systems Maintenance

Course Number: A-102-0325.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6-7 weeks (248 hours).

Exhibit Dates: 1/90–4/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform operational, preventive, and corrective maintenance on a countermeasures receiving set and a communications control group, without supervision.

Instruction: Classroom lectures and hands-on laboratory cover operational procedures; functional and circuit diagrams; and troubleshooting induced faults located in various parts of the equipment, such as power and HF circuits, VHF/UHF circuitry, display and data processing interfaces, receiver, processor output multiplexers, and time code generator.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in troubleshooting laboratories (1/93).

NV-1715-1639

AN/SLQ-32A (V)3 Journeyman Maintenance

Course Number: A-230-0023.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (380-400 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify and isolate faults and perform preventive and advanced corrective maintenance on the system.

Instruction: Lectures and laboratory exercises cover security requirements and the functional operation of the countermeasures set; receiver and transmitter hardware; theory and advanced corrective maintenance; use of special tools and test equipment; and alignment, adjustment, and calibration procedures for the countermeasures set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic instruments and measurements (1/93).

NV-1715-1640

Outboard 1 Systems Maintenance

Course Number: A-102-0298.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2-3 weeks (87-104 hours).

Exhibit Dates: 5/91–1/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform, without supervision, operational, preventive, and corrective maintenance.

Instruction: Classroom lectures and hands-on laboratory cover operational procedures with practice troubleshooting induced faults.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in system troubleshooting (1/93).

NV-1715-1641

ADVANCED TECHNOLOGY
(Electronic Warfare Advanced Technology)

Course Number: A-102-0385.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8-9 weeks (266-360 hours).

Exhibit Dates: 1/90–6/92.

Learning Outcomes: Upon completion of the course, the student will be able to apply digital and microprocessor principles.

Instruction: Group-paced lectures hands-on training cover superheterodyne receivers, timing and display circuits, transmission lines, waveguides, antenna characteristics, logic circuits, computer architecture, diagnostic troubleshooting, and test equipment operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital logic and microprocessors, 4 in introduction to electronic communications, and 1 in quality assurance (10/97).

NV-1715-1642

CRYPTOLOGIC TECHNICIAN (TECHNICAL), CLASS A

Course Number: A-231-0073.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 12 weeks (392 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a superheterodyne receiver and direction finding equipment; intercept and log ELINT signals; associate ELINT emissions to weapons systems; measure ELINT signal parameters using the AN/ULQ-16; and perform operational checks on collection equipment.

Instruction: Group-paced lectures/laboratories use the 10H1 training device, oscilloscopes, pulse analyzers, and recording equipment. Topics covered include introduction to electronic warfare, radar parameters and characteristics, 10H1 familiarization, pulse analyzer familiarization, and parameter measurement.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in telecommunication laboratories (1/98).

NV-1715-1643

AN/SLQ-32(V)5 MAINTENANCE

Course Number: *Version 1:* A-102-0382. *Version 2:* A-102-0382.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 3 weeks (105-120 hours). *Version 2:* 6 weeks (200-240 hours).

Exhibit Dates: *Version 1:* 10/96–Present. *Version 2:* 8/92–9/96.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, maintain, and repair the equipment to the authorized maintenance levels. *Version 2:* Upon completion of the course, the student will be able to operate, maintain, and repair the equipment to the authorized maintenance levels.

Instruction: *Version 1:* This course includes group-paced lectures and laboratory exercises that cover theory, operation, and maintenance of primary power, equipment cooling systems, controls, indicators, digital switching unit, and exciter. Students will learn troubleshooting procedures and use of specialized equipment and tools (spectrum analyzer, frequency synthesizer). *Version 2:* Lectures and laboratory topics cover theory, operation, and maintenance of primary power; interlocks; equipment cooling system; interfaces; controls; indicators; system diagnostic tests; digital switching unit; and exciter.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic troubleshooting and maintenance (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic troubleshooting laboratory (1/93).

NV-1715-1644

ELECTRONIC WARFARE ADVANCED REFRESHER

Course Number: A-102-0359.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2 weeks (63 hours).

Exhibit Dates: 1/90–3/93.

Learning Outcomes: Upon completion of the course, the student will be able to define terms associated with atmospheric propagation, solve problems relative to electromagnetic propagation, describe the types of pulsed transmissions, describe the types of electronic counter-countermeasures, analyze foreign capabilities as threats to US Navy sea control, and describe the purpose and application of electronic warfare documentation and publications used in the analysis and assessment of potential hostile force assets.

Instruction: Group-paced lecture course covers electronics countermeasures; search and detention; frequency modulation; jamming techniques; and foreign capabilities as threats to US Navy sea control, operations, and missions.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1715-1645

CRYPTOLOGIC COMBAT SUPPORT SYSTEMS MAINTENANCE

Course Number: A-102-0324.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 3 weeks (100 hours).

Exhibit Dates: 10/90–11/96.

Learning Outcomes: Upon completion of the course, the student will be able to operate and perform preventive and corrective maintenance on the cryptologic combat support system.

Instruction: Group-paced instruction, demonstrations, and hands-on laboratories cover operation, function, interfacing, and use of built-in test equipment for electrical, electronic, and digital equipment. Students are given practice in setup, operation, and troubleshooting down to the lowest replaceable unit.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in system maintenance and troubleshooting (1/93).

NV-1715-1646

VARIABLE CONFIGURATION ANTENNA TEST SYSTEM
(VCATS)

Course Number: A-102-0381.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 1-2 weeks (45 hours).

Exhibit Dates: 5/91–1/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on variable configuration antenna test systems equipment employed at Air Force intelligence command sites.

Instruction: Group-paced lectures and laboratory exercises supported by audiovisual materials are used to prepare the student to perform preventive and corrective maintenance on a variable configuration antenna test set and to troubleshoot the system to the lowest modular unit.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1715-1647

FLAGHOIST OUTSTATION COMMUNICATIONS SUBSYSTEM MAINTENANCE

Course Number: *Version 1:* A-102-0342. *Version 2:* A-102-0342.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 12 weeks (480 hours). *Version 2:* 6-7 weeks (220 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 1/90–7/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to state the purpose of the Uncrypt Flaghoist Vax equipment and associated DEC peripherals; describe the theory necessary to understand the performance of the system; and operate, maintain, and repair the Flaghoist System Micro Vax II computer, and peripherals. *Version 2:* Upon completion of the course, the student will be able to perform preventive and corrective maintenance on all components/equipment comprising the (AN/FSQ-138) classic Flaghoist system.

Instruction: *Version 1:* This course includes lectures and group-paced performance exercises on digital bus theory, bus devices, and the multiprogramming environment; preventive and basic corrective maintenance of the disk drive and associated equipment; preventive and corrective maintenance of the MXT-1200 printer; and documented fault isolation and repair on the Flaghoist System. *Version 2:* Group-paced lectures, laboratory experiences, and timed fault isolation exercises are used to prepare the student for preventive and corrective maintenance. Topics covered include processor console terminal, printer theory, data communications, fault isolation, and corrective maintenance.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (2/98). *Version 2:* Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1715-1648

1. AN/WLR-1H(V)3/(V)5 Electronic Support Measures (ESM) Combined Maintenance
   (AN/WLR-1H(V)3 and (V)5 Maintenance)
2. AN/WLR-1H(V)3/(V)5 Electronic Surveillance Measures System Combined Maintenance

Course Number: *Version 1:* A-102-0217. *Version 2:* A-102-0217.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 8 weeks (280-320 hours)., *Version 2:* 10 weeks (400 hours).

Exhibit Dates: *Version 1:* 12/96–Present. *Version 2:* 8/91–11/96.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, maintain, and repair equipment to the component level as supported by documentation. *Version 2:* Before 8/91 see NV-1715-1250. Upon completion of the course, the student will be able to operate, maintain, and repair the equipment to the highest levels supported by documentation.

Instruction: *Version 1:* This course includes group-paced lectures and laboratory covering theory and preventive and basic maintenance of signal acquisition subsystem, physical and functional interface between modules/circuit card assemblies, recognition and interpretation of malfunctions for RF to IF conversions, special tools and test equipment, systematic fault isolation procedures, antenna alignments and adjustments, and theory and preventive, and basic maintenance of AC/DC power. *Version 2:* Lectures and laboratory exercises cover topics on theory and operation of the system; functional operation of the system to a block diagram level, including sequential operation, indications, frequencies, inputs, and outputs; signal acquisition and data management subsystem; theory and corrective maintenance of AC/DC power distribution; alignment, adjustment, and calibration procedures; and tools and test equipment.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic troubleshooting and maintenance (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic troubleshooting and maintenance laboratory (1/93).

NV-1715-1649

AN/SLQ-17A(V)2 Maintenance

Course Number: A-102-0218.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 11-17 weeks (680 hours).

Exhibit Dates: 1/90–3/93.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on electronic countermeasures sets using electronic test program and various test equipment. The student will be able to maintain the system with minimum supervision.

Instruction: Lectures and laboratory instructions cover system introduction, safety, theory, and maintenance of video data processor, antennas, high-power amplifiers, control and display systems, and test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic communications systems (1/93).

NV-1715-1650

1. Electronic Warfare Technician AN/SLQ-32(V) 4 Maintenance
2. Electronic Warfare Technician AN/SLQ-32(V)4 Maintenance

Course Number: *Version 1:* A-102-0361. *Version 2:* A-102-0361.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 3 weeks (120 hours). *Version 2:* 9 weeks (360 hours).

Exhibit Dates: *Version 1:* 7/97–Present. *Version 2:* 10/92–6/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain and repair electronic warfare equipment. *Version 2:* Upon completion of the course, the student will be able to maintain and repair electronic warfare equipment.

Instruction: *Version 1:* This course includes group-paced lectures and laboratory. Topics cover theory and operation of electronic warfare equipment; maintenance of primary power; theory and maintenance of port buffer, interface processor, and pulse correlator unit; maintenance of display processor system diagnostic; and maintenance of the radio frequency memory unit driver/transmitter and high-voltage circuits. *Version 2:* Lectures and laboratory topics cover theory and operation of equipment; preventive and corrective maintenance of primary power, interlocks, and antenna pedestals; theory and maintenance of the buffer unit, interface processor unit, and pulse correlator unit; maintenance of the digital switching unit and countermeasures generator unit; and maintenance of the radio frequency memory unit, driver/transmitter, and high-voltage circuits.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic troubleshooting (1/93).

NV-1715-1651

Aviation Electronic Warfare Fundamentals and Organizational Level Maintenance

Course Number: A-102-0301.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Before 1/93 see NV-1715-1146. Upon completion of the course, the trainee will be able to describe the normal operation of the UHF/VHF receiver/down converter, AN/ARR-81 receiver, and AN/ALR-44 and RF; audio and video distributions systems without going into circuit theory; and basic radar terms and systems. The use the oscilloscope and spectrum analyzer in providing preventive maintenance as well as good soldering skills is also stressed in this program.

Instruction: Lectures and laboratories with working models of specific equipment studies cover basic radar systems, basic radar terms, quality soldering techniques, ESM receivers, receivers and down converters, and preventive maintenance techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic communications and 3 in quality assurance (1/93).

NV-1715-1652

Electronic Warfare Support Systems and Test Equipment

Course Number: A-102-0369.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 3 weeks (120 hours).

Exhibit Dates: 4/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe radar fundamentals and transmission lines, DC and AC motors, and pulse electronic test equipment.

Instruction: Lectures and laboratories cover support systems and test equipment. Topics include basic radar theory and applications; antennas; synchros and servo systems; operation, construction, and troubleshooting of DC and AC motors; and the use of test equipment such as the oscilloscope, pulse/function generator, counter, spectrum analyzer, and digital multimeter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic test equipment laboratory (1/93).

NV-1715-1653

Electronic Warfare Technician AN/SLQ-32A(V)2 Maintenance

Course Number: A-102-0215.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8-11 weeks (440 hours).

Exhibit Dates: 3/90–Present.

Learning Outcomes: Before 3/90 see NV-1402-0075. Upon completion of the course, the student will be able to state the purpose and function of the countermeasure set, describe the theory and functional performance of equipment operation, and maintain and repair equipment without going into detailed logic and circuit analysis.

Instruction: Lectures and laboratories cover theory of operation and preventive maintenance. Topics cover displays, controls, and indicators; preventive maintenance procedures; and basic corrective maintenance of the display control console, digital processing unit, and digital tracking unit.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications maintenance (1/93).

NV-1715-1654

Type 2 & 15 Submarine Periscope Repair
(Submarine Periscope (Optical) Repairman)

Course Number: A-670-0019.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 11 weeks (440 hours).

Exhibit Dates: 7/91–Present.

Learning Outcomes: Before 7/91 see NV-1715-1065. Upon completion of the course, the student be able to describe the periscope system and subsystem, operate the periscope, and maintain the system and related subsystems.

Instruction: Lectures, demonstrations, and hands-on laboratory exercises cover properties and theories of light, basic optical systems, electric circuit theory, basic electronics, and the operation and maintenance of the type 2 and 15 submarine periscopes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in physical optics, 1 in DC/AC circuits, 1 in basic electronics, and 2 in optical/mechanical laboratories (1/93).

NV-1715-1655

AN/SLQ-32A(V)3 Electronic
Countermeasure Maintenance

Course Number: A-102-0216.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (240 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Before 1/93 see NV-1715-1145. Upon completion of the course, the student will be able to maintain and repair equipment to the authorized level by explaining the purpose, function, and location of equipment problems and by performing corrective maintenance.

Instruction: Lectures and laboratories on troubleshooting and repairing the digital switching unit, countermeasure generator unit, frequency selection receiver, transponder, radio frequency memory unit, and high voltage circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications maintenance laboratory (1/93).

NV-1715-1656

Electronic Warfare Operations
(Basic Electronic Warfare Operations)

Course Number: *Version 1:* A-102-0209. *Version 2:* A-102-0209.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 14 weeks (490 hours). *Version 2:* 9-15 weeks (315-525 hours).

Exhibit Dates: *Version 1:* 10/97–Present. *Version 2:* 1/90–9/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to intercept and identify electronic emissions and to communicate evaluated information to other station and ships. The student will be able to demonstrate the practical applications required to support electronic warfare operations in a single ship and battle group environment. *Version 2:* Upon completion of the course, the student will be able to intercept and identify electronic emissions, communicate evaluated information to other stations and ships, and demonstrate the practical applications required to support electronic warfare operations in a single ship and battle group environment.

Instruction: *Version 1:* Group-based lectures and laboratory cover security of classified information, electronic warfare operations, electromagnetic energy, radio wave propagation, basic radar principles and antenna characteristics, communications systems, and electronic warfare equipment and operations. *Version 2:* Lectures and discussions cover security of classified information, electronic warfare operations, electromagnetic energy, radio wave propagation, fundamentals of communications, and electronic warfare equipment and operations.

Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (2/98). *Version 2:* Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1715-1657

Fleet Digital

Course Number: A-102-0235.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 11/92–Present.

Learning Outcomes: Before 11/92 see NV-1402-0072. Upon completion of this course, the student will be able to maintain digital and microprocessor-based equipment down to the chip level.

Instruction: Group-paced lectures and laboratory cover gates, flip-flops, counters, timing circuits, encoders/decoders, multiplexers/demultiplexers, tristate gates, registers, number systems, memory, DA/AD converters, and the Intel 8080 microprocessor.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital logic and microprocessors (10/97).

NV-1715-1658

Electronic Warfare Electronic Technology

Course Number: A-102-0214.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7-8 weeks (280-320 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Before 7/92 see NV-1715-1252. Upon successful completion of this course, the student will have acquired the basic knowledge and skills to complete advanced electronic equipment maintenance training.

Instruction: Group-paced lectures and performance-oriented training in a combined classroom/laboratory setting cover basic electricity, DC/AC circuit analysis, linear power supplies, audio amplifiers, solid state devices, the use of the basic test equipment, and preventive and corrective maintenance on a launching.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in AC/DC circuit analysis (1/98).

NV-1715-1659

Cryptologic Technician Maintenance, Class
A

Course Number: A-102-0109.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 20 weeks (700-800 hours).

Exhibit Dates: 12/92–11/94.

Learning Outcomes: Before 12/92 see NV-1715-0829. Upon successful completion of this course, the graduate will be able to maintain digital and microprocessor-based equipment at a basic level.

Instruction: Group-paced lectures and performance-oriented training cover test equipment operation, digital fundamentals, microprocessor-based computer principles, MS-DOS, communications systems, high-reliability soldering, recorder/receiver systems, and preventive maintenance techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital logic and microprocessors, 4 in personal computer repair, and 1 in quality assurance (1/93).

NV-1715-1660

Advanced Non-Morse Operator

Course Number: A-231-0068.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 10 weeks (400 hours).

Exhibit Dates: 2/92–4/94.

Learning Outcomes: Upon successful completion of this course, the student will be able to recognize ideas, phenomena, symbolism, and terminology necessary for non-Morse collection operations. The student will apply the principles, rules, and concepts to the analysis of problems in collection and will be able to describe the theory necessary to understand operational tasks without circuit diagrams.

Instruction: Group-paced lectures/laboratory exercises cover cryptologic operations, signal classification, operational description of a radio receiver, a dynamic signal analyzer, a digital sonograph, a tunable demodulator, a magnetic tape recorder, and a printer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications laboratory (2/93).

NV-1715-1661

Advanced Non-Morse Operator

Course Number: A-231-0068.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 10 weeks (333 hours).

Exhibit Dates: 4/91–1/92.

Learning Outcomes: Upon successful completion of this course, the student will be able to recognize ideas, phenomena, symbolism, and terminology necessary for non-Morse collection operations. Student will apply the principles, rules, and concepts necessary to analyze problems in collection and will describe the theory necessary to understand operational tasks without circuit diagrams.

Instruction: Group-paced lectures/laboratory exercises cover cryptologic operations, signal classification, operational description of the a radio receiver and basic operation of a dynamic signal analyzer, a digital sonograph, a tunable demodulator, a magnetic tape recorder, and a printer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications laboratory (2/93).

NV-1715-1662

Advanced Non-Morse Operator Preparatory

Course Number: A-231-0067.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2 weeks (70 hours).

Exhibit Dates: 12/91–1/94.

Learning Outcomes: Upon successful completion of the course, the student will be able to recognize or recall the ideas, phenomena, symbolism, and terminology necessary for the non-Morse collection operators. The student will apply the principles, rules, and concepts necessary to solve problems related to Morse code, modulation, multiplexing, and antenna systems.

Instruction: Group-paced lectures and laboratory exercises cover Morse code, terms associated with automatic data processing, antenna theory and selection, knowledge and application of modulation types, bandwidth measurement, multiplexing, and satellite/nonsatellite communications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic communications laboratory (2/93).

NV-1715-1663

AN/AAM-60(V)2 Electro-Optical Systems
Test Set Intermediate Maintenance

Course Number: *Version 1:* C-102-3572A. *Version 2:* C-102-3572.

Location: *Version 1:* Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA. *Version 2:* Air Maintenance Training Group Detachment, Jacksonville, FL; Air Maintenance Training Group Detachment, Moffett Field, CA.

Length: *Version 1:* 7-10 weeks (280 hours). *Version 2:* 5-6 weeks (216 hours).

Exhibit Dates: *Version 1:* 2/95–Present. *Version 2:* 1/90–1/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to use a general purpose test equipment bench to test and troubleshoot electro-optical systems. This version is pending evaluation. *Version 2:* Upon completion of the course, the student will be able to use a general purpose test equipment bench to test and troubleshoot electro-optical systems.

Instruction: *Version 1:* Lectures and practical exercises cover the test set. This version is pending evaluation. *Version 2:* Lectures and practical exercises cover the test set.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1664

P-3C Integrated Avionics Update III
Integrated Organizational
Maintenance

Course Number: C-102-9595.

Location: Air Maintenance Training Group Detachment, Jacksonville, FL; Air Maintenance Training Group Detachment, Moffett Field, CA.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to load, initialize, and use software to troubleshoot and test electronic systems on an aircraft.

Instruction: Lectures and practical exercises emphasize troubleshooting procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1665

P-3C Integrated Avionics Systems CP-901(V)/
ASQ-114(V) Integrated
Organizational Maintenance
(P-3C Integrated Avionics Systems CP-
901(V)3 and 4/114(V) Organizational
Maintenance)

Course Number: C-102-4587; C-102-9587.

Location: Air Maintenance Training Group Detachment, Jacksonville, FL; Air Maintenance Training Group Detachment, Moffett Field, CA.

Length: 3-4 weeks (120-136 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, analyze, troubleshoot, and repair a military computer.

Instruction: Lectures and practical exercises cover computer function and structure. Emphasis is on troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (3/93).

NV-1715-1666

P-3, C-130, C-2 Electrical Components
Intermediate Maintenance

Course Number: C-102-3560.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 5/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate oscilloscope test equipment, troubleshoot instrument systems, understand and troubleshoot propeller synchrophaser system, troubleshoot AC generation system, and align and troubleshoot navigation equipment.

Instruction: Lectures and laboratory experiences encompass theory and operation of oscilloscopes, power generation, propeller synchrophasing, aircraft flight instrumentation, and power and aligning. Course also includes troubleshooting navigation equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in solid state electronics and 2 in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1667

P-3B (Modified) Weapon System Technician
Organizational Maintenance

Course Number: C-102-4531.

Location: Air Maintenance Training Group, Moffett Field, CA.

Length: 8 weeks (440 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, students will be able to maintain the various communications and navigation components of a surveillance aircraft, including the communications system (HF, VHF, intercom); the navigation system using Loran, Doppler, and radar altimeter; and search and IFF radars.

Instruction: Lectures and practical exercises cover the specific procedures required to support the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications and 3 in radar systems (3/93).

NV-1715-1668

P-3C Integrated Avionics System Data
Processing Systems 1 and 2 Integrated
Organizational Maintenance
(P-3C Integrated Avionics System Data Pro-
cessing Systems 1 and 2 Organizational
Maintenance)

Course Number: C-102-4596; C-102-9596.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 2-3 weeks (80-88 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, and troubleshoot two military-specific aircraft data processing systems.

Instruction: Course consists of lectures and practical exercises related to the data processing systems. Topics include an interface unit, power system, control panel, multiplexers, and key sets.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (3/93).

NV-1715-1669

AN/AQA-7A(V) 10, 11, 12 Intermediate
Maintenance

Course Number: C-130-3575.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform systems analysis, troubleshooting, and programming of a specific sonar computer-recorder.

Instruction: Lectures and laboratory exercises cover testing and troubleshooting the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (3/93).

NV-1715-1670

AN/ASH-20A Flight Recorder/Locater
System Intermediate Maintenance

Course Number: C-102-3601.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify flight recorder/locater system components and analyze, troubleshoot, and maintain the system.

Instruction: Lectures and laboratories focus on basic block-diagram analysis, checkout, alignment, troubleshooting, and repair of electronic circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1671

P-3C UPDATE 3 MODERNIZED LOGIC UNITS INTEGRATED ORGANIZATIONAL MAINTENANCE

(P-3C Update 3 OL-337(V)1/AY Modernized Logic Units Organizational Maintenance)

Course Number: C-102-4593; C-102-9993.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 2-3 weeks (88 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair a special-purpose military computer.

Instruction: Lectures and practical exercises focus on the specific equipment. Students study the electronic circuits and practice test procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1672

P-3C RD-319/AYA-8, RD-319A/AYA-8 MAGNETIC TAPE TRANSPORTS AND MX-8024/AYA-8 DATA PROCESSING SYSTEM TWO INTEGRATED ORGANIZATIONAL MAINTENANCE

(P-3C RD-319/AYA-8, RD-319A/AYA-8 Magnetic Tape Transports and MX-8024/AYA-8 Data Processing System Two Organizational Maintenance)

Course Number: C-102-4588; C-102-9998.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, remove, and replace components on two specific magnetic tape transports and a data processing system.

Instruction: Lectures and practical exercises relate to the specific equipment. Subjects include timing signals, power supplies, control panels, magnetic tape control logic, and magnetic tape transports.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer systems troubleshooting and maintenance (3/93).

NV-1715-1673

P-3C INTEGRATED AVIONICS SYSTEM SENSOR STATION ONE AND TWO SYSTEMS INTEGRATED ORGANIZATIONAL MAINTENANCE

(P-3C Integrated Avionics System Sensor Station One and Two Systems Organizational Maintenance)

Course Number: C-102-4582; C-102-9582.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 3-4 weeks (128-136 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to align, troubleshoot, and repair a specific electronic sonobuoy sensor system.

Instruction: Lectures and practical exercises focus on understanding the equipment and on troubleshooting procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1674

P-3C SENSOR STATION 1 AND 2 AN/AQA-7(V)10 INTEGRATED ORGANIZATIONAL MAINTENANCE

(P-3C Sensor Station 1 and 2 AN/AQA-7(V)10 Organizational Maintenance)

Course Number: C-130-3576; C-130-9576.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 3-5 weeks (144-184 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform system analysis and troubleshooting techniques on various data handling and tracking subsystems used in submarine tracking.

Instruction: Lectures and practical exercises relate to the specific equipment. Instruction includes setup, programming, and testing of subsystems in the laboratory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (3/93).

NV-1715-1675

P-3C UPDATE 3 SENSOR STATIONS 1 AND 2 INTEGRATED ORGANIZATIONAL MAINTENANCE

(P-3C Update 3 Sensor Stations 1 and 2 Organizational Maintenance)

Course Number: C-102-4575; C-102-9575.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 2-4 weeks (112-144 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test and repair a system consisting of a passive and active sonar and a transceiver using various general purpose pieces of test equipment.

Instruction: Lectures and practical exercises cover the specific equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1676

P-3C MX-9360/AYA-8B LU-4 INTEGRATED ORGANIZATIONAL MAINTENANCE

Course Number: C-102-9589.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a specific military computer.

Instruction: Lectures and practical exercises focus on understanding and repairing the computer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer systems troubleshooting and maintenance (3/93).

NV-1715-1677

AN/APX-76A/B AIR/AIR IDENTIFY FRIEND OR FOE (IFF) INTERROGATOR INTERMEDIATE MAINTENANCE

Course Number: C-102-3066.

Location: Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group, Beaufort, SC; Air Maintenance Training Group, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, align, and maintain an IFF radar system using appropriate test equipment and safety procedures.

Instruction: Lectures and laboratory exercises cover a specific IFF system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1678

P-3C NAVIGATION/COMMUNICATION INTEGRATED ORGANIZATIONAL MAINTENANCE

Course Number: C-102-9591.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 9-10 weeks (384 hours).

Exhibit Dates: 11/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot a navigation/communications system. System includes Doppler; inertial; altimeter navigation; and UHF, VHF, and HF communications. Secure communications systems are covered along with various terminal devices.

Instruction: Lectures and practical exercises cover the various devices.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance and 3 in electronic communications (3/93).

NV-1715-1679

P-3C INTEGRATED AVIONICS SYSTEM SENSOR STATION 3 INTEGRATED ORGANIZATIONAL MAINTENANCE

Course Number: C-102-9581.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 5-6 weeks (232 hours).

Exhibit Dates: 11/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain a specific piece of military electronic equipment used in collecting analog data from various monitoring devices.

Instruction: Lectures and practical exercises focus on the equipment. Emphasis is on electronic circuitry and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1680

P-3C Integrated Avionics Systems Navigation/Communication Systems Integrated Organizational Maintenance

Course Number: C-102-9590.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 3-4 weeks (152 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a specific aircraft navigation/communications system. The equipment uses Doppler sensing and VHF communications.

Instruction: Lectures and practical exercises cover the above equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1681

AN/APS-115B Search Radar System Intermediate Maintenance

Course Number: C-100-3571.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 5-6 weeks (168 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain a military radar system.

Instruction: Lectures and practical exercises cover the radar system and the repair of its electronic circuitry.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1682

P-3C Integrated Avionics Systems Display Systems Integrated Organizational Maintenance

Course Number: C-102-9580.

Location: Air Maintenance Training Group, Moffett Field, CA; Air Maintenance Training Group, Jacksonville, FL.

Length: 1-2 weeks (48 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and troubleshoot an aircraft display panel.

Instruction: Lectures and practical exercises cover the specific hardware.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1683

P-3C Integrated Avionics Systems Data Processing Systems 1 and 3 Integrated Organizational Maintenance

Course Number: C-102-9579.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 1-2 weeks (64 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and maintain a special military computer system.

Instruction: Lectures and practical exercises focus on the equipment which includes a digital multiplexer, a sonobuoy receiver, a key set, and a data processor.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer systems troubleshooting and maintenance (3/92).

NV-1715-1684

Universal Cryptologic Processor Training (UNCRYPT) RSX/VMS FORTRAN

Course Number: A-532-0033.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 16 weeks (480 hours).

Exhibit Dates: 5/91–4/93.

Learning Outcomes: Before 5/91 see NV-1402-0110. Upon completion of the course, the student will be able to develop and maintain software by utilizing Digital Equipment Corporation's VAX/VMS operating system and the FORTRAN-77 programming language.

Instruction: Group-paced lectures and laboratory exercises are used to introduce students to basic computers; number system conversion; memory organization/data representation; arithmetic operations; booting, functions, and controls; text editors; theory of program development; Boolean algebra (algorithms); logic/structure of programming; FORTRAN; and the FORTRAN compiler.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer operating systems/FORTRAN (2/93).

NV-1715-1685

Cryptologic Technician Maintenance Preparatory

Course Number: A-102-0234.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7 weeks (304 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Before 7/92 see NV-1715-1254. Upon successful completion of this course, the student will have acquired the basic knowledge and skills necessary to complete advanced electronic equipment maintenance training.

Instruction: Group-paced lectures with performance-oriented laboratories cover basic electricity, DC/AC circuit analysis, linear power supplies, audio amplifiers, solid state devices, and the proper use of basic test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in AC/DC circuit analysis (1/98).

NV-1715-1687

1. Electronic Warfare Applications Advanced
2. Electronic Warfare Applications (Advanced)

Course Number: *Version 1:* A-230-0018. *Version 2:* A-230-0018.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 7 weeks (280 hours). *Version 2:* 8 weeks (265 hours).

Exhibit Dates: *Version 1:* 7/97–Present. *Version 2:* 7/92–6/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to integrate, plan, coordinate, and support weapons systems; prepare correspondence in support of the operation; and administer maintenance and training. *Version 2:* Before 7/92 see NV-1715-1143. Upon completion of the course, the student will be able to integrate, plan, and coordinate equipment with other weapons systems; prepare correspondence in support of the operation; and organize maintenance and training support.

Instruction: *Version 1:* Lectures and discussions cover management and supervision of shipboard operations and doctrines, electronic warfare, training, support measures, communications, and battle group planning. *Version 2:* Lectures and discussions cover management and supervision of shipboard operations and doctrines, electronic warfare training, support measures, communications, and law enforcement operations.

Credit Recommendation: *Version 1:* Credit is not recommended because of the military-specific nature of the course (2/98). *Version 2:* Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1715-1688

Electronic Warfare Technician AN/SLQ-32 Operator

Course Number: A-102-0210.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (199 hours).

Exhibit Dates: 6/90–10/92.

Objectives: Before 6/90 see NV-1715-1144. To operate a specific piece of military equipment.

Learning Outcomes: Upon completion of the course, the student will be able to perform electronic warfare presail and underway watch duties aboard an AN/SLQ-32 equipped ship.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/93).

NV-1715-1689

Aviation Electronic Warfare Intelligence Operator

Course Number: A-233-0022.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (143 hours).

Exhibit Dates: 1/90–10/97.

Learning Outcomes: Upon completion of the course, the trainee will be able to intercept and recognize signals from Soviet early warning, ground control intercept, and air traffic control. The student will be familiar with identification and correlation of US and free world shipboard emitters.

Instruction: Lectures and laboratory presentation use the 10H1 generic trainer to log, record, and analyze signals of interest. Topics covered are Soviet military philosophy; basic radar functions; RF, PRF and PD propagation; and identification of Soviet land-based surface-to-air missile system emitters, Soviet shipboard fire control emitters, and land-based free world emitters.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/93).

NV-1715-1690

P-3C Integrated Avionics Systems Integrated Organizational Maintenance Full Systems Troubleshooting

Course Number: C-102-9991.

Location: Air Maintenance Training Group, Jacksonville, FL; Air Maintenance Training Group, Moffett Field, CA.

Length: 1-2 weeks (64 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify, troubleshoot, and isolate faults within aircraft avionics systems.

Instruction: Lectures and laboratory exercises involve the operational testing and troubleshooting of aircraft avionics systems, including electronic preflight checks, operational data loading and retrieval, and full systems operational troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (3/93).

NV-1715-1692

F/A Weapons Control System Organizational Maintenance

Course Number: C-102-3866.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 5 weeks (176 hours).

Exhibit Dates: 1/90–6/91.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and maintain weapons and environmental control systems under close supervision.

Instruction: Through lectures and practical exercises, the topic areas covered include an introduction to radar systems and weapons display and delivery systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1715-1693

AN/USM-470(V)2 Avionic Test Set Advanced Intermediate Maintenance Activity (IMA) Technician Intermediate Maintenance

Course Number: C-198-3866.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 9 weeks (344 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to program electronic test equipment using the Vulcan operating system and use software to operate an avionics test set.

Instruction: Lectures and practical exercises cover the software control of automatic electronic test equipment systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1715-1694

AN/ARC-182 Communication Equipment Intermediate Maintenance

Course Number: C-102-4017.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA; Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, Cherry Point, NC.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform, with minimum supervision, intermediate maintenance of communications equipment including troubleshooting to the subassembly level.

Instruction: Lectures and practical exercises cover troubleshooting, alignment, and subassembly-level maintenance of VHF and UHF AM/FM receivers and transmitters and operation of associated test equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours (1 theory, 1 laboratory) in electronic communications equipment maintenance (8/93).

NV-1715-1695

AN/USM-470(V)1 Aircraft Test Set Advanced Intermediate Maintenance Activity (IMA) Technician Intermediate Maintenance

Course Number: C-198-3870.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 10 weeks (292 hours).

Exhibit Dates: 7/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to program electronic test equipment using the Vulcan operating system and use software to operate an avionics test set.

Instruction: Lectures and practical exercises cover the software control of automated electronic test equipment systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1715-1696

AN/USM-484 Hybrid Test Station Advanced Intermediate Maintenance Activity (IMA)

Course Number: C-198-3876.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 11 weeks (360 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to program electronic test equipment using the Vulcan operating system and use software to operate a hybrid test system.

Instruction: Lectures and practical exercises cover the software control of electronic test equipment systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1715-1697

Integrated Voice Communication System (IVCS) AN/STC-2(V) Aegis, Maintenance, Class C1

Course Number: A-623-0101.

Location: Service School Command, San Diego, CA.

Length: 14 weeks (467-560 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, operate, and maintain a microprocessor-based integrated voice communications system.

Instruction: Lectures and laboratory exercises cover installation, operation, and corrective maintenance of a 6800 microprocessor-based IVCS. Instruction includes microprocessor fundamentals, programming, interfacing techniques for a 6800 MPU, and troubleshooting and corrective maintenance of the various units in the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in microprocessors and 2 in electronic systems troubleshooting and maintenance (10/92).

NV-1715-1698

AN/USM-470(V)1 Avionics Test Set Technician Intermediate Maintenance

Course Number: C-198-3869.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 16 weeks (480 hours).

Exhibit Dates: 4/91–Present.

Learning Outcomes: Upon completion of the course, student will be able to program automated electronic test equipment using the Atlas programming language, interface test instruments using the IEEE-488 standard bus, and operate and troubleshoot an avionics test set.

Instruction: Lectures and practical exercises cover the operation and troubleshooting of automated electronic test equipment systems, incorporating synthesized function generators, calibrators, counters, multimeters, and related electronic test equipment. Course includes practice in computer control and programming of automatic test systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours (2 theory, 1 laboratory) in automated test equipment (8/93).

NV-1715-1699

AN/USM-484 Hybrid Test System/Operator Maintainer Intermediate Maintenance

Course Number: C-198-3063.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 12 weeks (360 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to program automated electronic test Equipment using the Atlas programming language, interface test instruments using the IEEE-488 standard bus, and operate and troubleshoot a hybrid test system.

Instruction: Lectures and practical exercises cover the operation and troubleshooting of automated test equipment systems, incorporating programmable power supplies, analog-to-digital converters, function generators, digital counters, digital word generators, and related electronic test equipment. Course also includes practice in computer control and programming of automatic test systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours (2 theory, 1 laboratory) in automated test equipment (8/93).

NV-1715-1700

AN/USM-470(V)2 Avionics Test Set
Technician Intermediate Maintenance

Course Number: C-198-3874.

Location: Air Maintenance Training Group, North Island, CA; Air Maintenance Training Group, Lemoore, CA.

Length: 15 weeks (440 hours).

Exhibit Dates: 10/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to program automated electronic test equipment using the Atlas programming language, interface test instruments using the IEEE-488 standard bus, and operate and troubleshoot an avionics test set.

Instruction: Lectures and practical exercises cover the operation and troubleshooting of automated electronic test equipment systems, incorporating oscilloscopes, signal generators, power meters, spectrum analyzers, time domain reflectometers, multimeters, and related electronic test equipment. Course includes practice in computer control and programming of automatic test systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours (3 theory, 1 laboratory) in automated test equipment (8/93).

NV-1715-1701

AN/APM-446 Radar Set Test Station
Operator/Maintainer Intermediate
Maintenance

Course Number: C-198-4868.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 13 weeks (520 hours).

Exhibit Dates: 12/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a radar set test station and use it to troubleshoot radar systems to the subassembly level.

Instruction: Lectures, demonstrations, and practice testing radar system components with an automated test station are course methods. Topics include use of spectrum analyzers, power meters, signal generators, waveguide, and coaxial interconnect components, as well as related instruments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours (2 theory, 1 in laboratory) in radar systems (8/93).

NV-1715-1702

AN/ARN-118(V) TACAN System
Intermediate Maintenance

Course Number: C-102-4024.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group, Cherry Point, NC; Air Maintenance Training Group, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA; Air Maintenance Training Group, Lemoore, CA.

Length: 3 weeks (120 hours).

Exhibit Dates: 4/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and maintain a TACAN navigation system to the subassembly level.

Instruction: Lectures and practice exercises cover the operation and maintenance of the system, including theory of operation, circuit analysis, block diagrams of system components, and troubleshooting and alignment procedures.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic systems troubleshooting and maintenance (8/93).

NV-1715-1703

F/A-18 Data Processing Set Operator
(F/A-18 Communications, Navigation, Identification, and Countermeasures Organizational Maintenance)

Course Number: C-102-3867.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 6 weeks (214 hours).

Exhibit Dates: 1/90–6/91.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under close supervision, organizational maintenance on the communications, navigation, identification, carrier landing, electronic countermeasures, and inflight test equipment systems of the F/A-18 aircraft.

Instruction: Lectures, demonstrations, and practical exercises cover the maintenance of communications and navigation systems and subsystems, carrier landing systems, and electronic countermeasures subsystems.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic communications theory (8/93).

NV-1715-1704

F/A-18 Integrated Weapons System
Technician Organizational
Maintenance

Course Number: C-102-3868.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 8 weeks (324 hours).

Exhibit Dates: 1/90–6/91.

Learning Outcomes: Upon completion of the course, the student will be able to analyze the software/displays of the master aircraft modes of the F/A-18, under close supervision.

Instruction: Lectures and practical exercises use simulators and actual systems.

Credit Recommendation: In the vocational certificate category, 1 semester hour in laboratory in electronic navigation system maintenance (8/93).

NV-1715-1705

AN/USM-470(V)1 Off-line Maintenance
Training

Course Number: C-198-4866.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 8 weeks (320 hours).

Exhibit Dates: 9/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform, under close supervision, off-line maintenance of components of an avionic test set using a specialized hybrid test system.

Instruction: Lectures and practical exercises cover troubleshooting procedures, fault isolation, adjustment, and calibration of automated test equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours (1 theory, 1 laboratory) in electronic systems troubleshooting and maintenance (8/93).

NV-1715-1706

Stores Management System Integrated
Organizational Level Maintenance
(F/A-18 Stores Management System Organizational Maintenance)

Course Number: C-646-9974; C-646-3866.

Location: Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Lemoore, CA.

Length: 4-5 weeks (160-200 hours).

Exhibit Dates: 1/90–3/91.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, test, and troubleshoot the F/A-18 aircraft stores management and weapon delivery systems, under supervision.

Instruction: Lectures and practical exercises cover stores management, weapon control and gun systems, and scheduled maintenance for the F/A aircraft.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (8/93).

NV-1715-1707

AN/SPG-53F Modified Radar Maintenance

Course Number: A-113-0093.

Location: Service School Command, Great Lakes, IL.

Length: 16-17 weeks (781 hours).

Exhibit Dates: 6/92–6/94.

Learning Outcomes: Before 6/92 see NV-1715-1066. Upon completion of the course, the student will be able to troubleshoot, maintain, and repair a radar and its control system by performing problem analysis at the component and equipment level.

Instruction: Lectures, demonstrations, and laboratory exercises on the function of radar and radar control are used to support problem analysis, fault isolation, and repair. Topics include power supplies, synchronizer circuits, antenna scanners, video circuits, ranging circuits, D/S converter circuits, modulation circuits, and display circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in radar electronic maintenance, 3 in basic electronics laboratory, 3 in control systems, and 3 in radar systems (10/93).

NV-1715-1708

Mk 68 Mod 19 Digital Upgrade (DU) Gun Fire Control System (GFCS) Maintenance

Course Number: A-113-0096.

Location: Service School Command, Great Lakes, IL.

Length: 17-18 weeks (700 hours).

Exhibit Dates: 1/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance including using special tools; perform operational and diagnostic tests and programs; and isolate faults and assess problems at the component, equipment, and system level. Student will follow systematic procedures in disassembly, repair, reassembly, postrepair testing, and safety precautions pertaining to a digital computer-controlled gun fire control system, including mechanical interface, data processing and storage, digital control systems, and local area networks.

Instruction: Lectures, demonstrations, and hands-on equipment training are used to teach system, equipment, and component theory and function at a level that supports the analysis of problems, their isolation, and their repair. Topics include digital computers, control systems, information storage and retrieval, local area networks, hard-wired information processing systems, electronic sensing and indicating, and electronic test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance, 3 in computer systems troubleshooting and maintenance, 3 in solid state electronics, 3 in computer systems, and 3 in control systems (10/93).

NV-1715-1709

Shore Communications Maintenance Technician

Course Number: A-101-0227.

Location: Service School Command, Great Lakes, IL.

Length: 10-11 weeks (400-440 hours).

Exhibit Dates: 8/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to diagnose, isolate, and correct malfunctions in a high-frequency microwave communications system at a shore-based communications site.

Instruction: Lectures and practical exercises cover the operation and maintenance of a high-frequency transmitter, a frequency-synthesized high-frequency receiver, a low-speed multiplexer, and a digital microwave communications system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic systems troubleshooting and maintenance (10/97).

NV-1715-1710

DD-963 60/400 Hertz Frequency Converter (Air Cooled) System Maintenance

(DD-963 60/400 Hertz Frequency Converter (Air Cooled) Maintenance)

Course Number: A-652-0241.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, and repair the shipboard 60 to 400 Hertz static frequency changer system.

Instruction: Lectures and practical exercises include operating procedures, electronics review, operating principles, and troubleshooting of the frequency changer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (10/93).

NV-1715-1712

Gunner's Mate, Class A

Course Number: A-041-0010.

Location: Service School Command, Great Lakes, IL.

Length: 24 weeks (944 hours).

Exhibit Dates: 4/92–Present.

Objectives: Before 4/92 see NV-1715-0652. Upon completion of the course, the student will be able to maintain, test, isolate faults, and repair components of the electrical, electronic, and hydraulic systems associated with gun mounts and missile launching systems.

Instruction: For earlier related courses, see NV-1715-0652 and NV-1715-1079. Lectures and practical exercises cover electrical fundamentals, including elements of matter, electron theory, magnetism, AC and DC theory, and circuitry; application of circuits including transformers; control system fundamentals and computers used to solve control problems; hand tool use; explosive characteristics; hydraulics; and synchro-servo system troubleshooting and alignment. Course also includes theory and practice of AC/DC motors and generators, solid state power supplies, number systems, logic gates, digital arithmetic and circuits, and counters and registers.

Credit Recommendation: In the vocational certificate category, 8 semester hours in principles of technology, 2 in hydraulics and pneumatics, and 1 in industrial safety (10/93); in the lower-division baccalaureate/associate degree category, 4 semester hours in basic AC/DC circuits and 3 in solid state electronics (10/93).

NV-1715-1713

Fire Controlman, Class A

Course Number: A-113-0010.

Location: Service School Command, Great Lakes, IL.

Length: 35 weeks (1400 hours).

Exhibit Dates: 10/92–Present.

Learning Outcomes: Before 10/92 see NV-1715-0155. Upon completion of the course, the student will be able to maintain, test, and repair components of electrical and electronic systems associated with gun and missile fire control systems.

Instruction: Lectures and practical exercises cover basic AC/DC circuit theory. Course includes test equipment, transmitters, receivers, motor-generators, gyros, synchros, resolvers, servo system fundamentals, oscilloscope operation, amplifiers, oscillators, and waveforming circuitry without a rigorous mathematical treatment. Course also includes microwave tubes, waveguides, video amplifiers, antennas, radar principles, numbering systems, arithmetic, logic blocks, Boolean expressions, adders, counters, digital computers, I/O systems, converters, programming, analog computer fundamentals, encoders, decoders, core memory, and fire control radar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits, 3 in AC circuits, 3 in solid state electronics, 1 in digital principles, 1 in control systems laboratory, 1 in radar systems, and 1 in basic electronics laboratory (10/93).

NV-1715-1714

Amphibious Assault Ship Aircraft Inertial Alignment System

(Aircraft Inertial Alignment System)

Course Number: A-670-0054.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (80 hours).

Exhibit Dates: 12/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot an aircraft guidance system.

Instruction: Lectures and practical exercises cover the description, operation, and maintenance of the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (7/95).

NV-1715-1715

AN/USQ-82(V) Data Multiplex System Maintenance

(Data Multiplex System)

Course Number: A-670-0053.

Location: Service School Command, Great Lakes, IL.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot a data multiplex system used for local communications onboard.

Instruction: Lectures and practical exercises cover system description, corrective maintenance, and preventive maintenance of the subsystems which comprise the data multiplex system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic systems troubleshooting and maintenance (7/95).

NV-1715-1716

1. Gas Turbine Electrical Maintenance DD-963/DDG-993/CG-47
2. Gas Turbine Electrical Phase II, Class C, DD-963 Strand

Course Number: *Version 1:* A-652-0328. *Version 2:* A-652-0328.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 13 weeks (520 hours). *Version 2:* 10 weeks (400 hours).

Exhibit Dates: *Version 1:* 5/94–Present. *Version 2:* 5/91–4/94.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain gas turbine main propulsion consoles and auxiliary system consoles. *Version 2:* Upon completion of the course, the student will be able to maintain gas turbine main propulsion consoles and auxiliary system consoles.

Instruction: *Version 1:* Lectures use interactive electronic classroom and practical exercises in digital system fundamentals, signal processing, and gas turbine control console troubleshooting and maintenance. *Version 2:* Lectures and practical exercises cover digital system fundamentals, microprocessors, number systems, signal conditioning, gas turbine engines, and maintenance of the local operating panel.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in digital technology and 3 in control system technology (12/95). *Version 2:* In the vocational certificate category, 1 semester hour in gas turbine system operations (10/93); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital principles and 2 in electronic systems troubleshooting and maintenance (10/93).

NV-1715-1717

1. Gas Turbine Electrical Maintenance (FFG-7)
   (Advanced Training Field Phase 2 Electrical Maintenance (FFG-7))
2. Gas Turbine Electrical Phase II, Class C, FFG-7 Strand

Course Number: *Version 1:* A-652-0327. *Version 2:* A-652-0327.

Location: Service School Command, Great Lakes, IL.

Length: *Version 1:* 15 weeks (600 hours). *Version 2:* 10 weeks (400 hours).

Exhibit Dates: *Version 1:* 6/95–Present. *Version 2:* 5/92–5/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to maintain gas turbine propulsion consoles and auxiliary system consoles. *Version 2:* Upon completion of the course, the student will be able to maintain gas turbine main propulsion console and auxiliary system consoles.

Instruction: *Version 1:* Lectures use interactive electronic classroom, and practical exercises cover digital system fundamentals, signal processing, and gas turbine control console troubleshooting and maintenance. *Version 2:* Lectures and practical exercises cover digital system fundamentals, microprocessors, number systems, basic electronics, propulsion control consoles, gas turbine system theory, and line printers.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in control systems maintenance (12/95); in the lower-division baccalaureate/associate degree category, 3 semester hours in digital technology and 3 in control systems technology (12/95). *Version 2:* In the vocational certificate category, 1 semester hour in gas turbine system operations (10/93); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital principles and 2 in electronic systems troubleshooting and maintenance (10/93).

NV-1715-1718

Gas Turbine Phase II, Class C

Course Number: A-652-0302.

Location: Service School Command, Great Lakes, IL.

Length: 10 weeks (400 hours).

Exhibit Dates: 3/91–3/95.

Learning Outcomes: Upon completion of the course, the student will be able to maintain gas turbine main propulsion consoles and auxiliary system control consoles.

Instruction: Lectures and practical exercises cover basic electricity, basic electronics, test equipment, logic gates, number systems, signal conditioning, and gas turbine operation.

Credit Recommendation: In the vocational certificate category, 1 semester hour in gas turbine operation (10/93); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital principles and 2 in electronic systems troubleshooting and maintenance (10/93).

NV-1715-1719

H-46 Aircraft Communication, Navigation, and Identification Systems Organizational Maintenance

Course Number: C-102-3416.

Location: Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, New River, NC.

Length: 2 weeks (80 hours).

Exhibit Dates: 5/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, troubleshoot, and maintain communications, navigation, and identification systems and external and auxiliary power supplies.

Instruction: This course covers communications, navigation, identification, and power supply systems including maintenance and troubleshooting procedures using analog and digital multimeters and wattmeters. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (7/94).

NV-1715-1720

AN/APN-171B(V) Radar Altimeter High and Low Level Intermediate Maintenance

Course Number: C-102-3036.

Location: Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, North Island, CA; Air Maintenance Training Group, New River, NC; Air Maintenance Training Group, Jacksonville, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, troubleshoot, and maintain receiver/transmitter systems, receiver circuits, transmitter circuits, power supplies, and receiver/transmitter control circuits.

Instruction: Course covers receiver/transmitter, including power supply; overall block-diagram signal flow; related control circuitry, including gain, bandwidth, memory, and relay; and test, maintenance, and troubleshooting procedures. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/94).

NV-1715-1721

490T-1/1A/9 Antenna Coupler Intermediate Maintenance

Course Number: C-102-3012.

Location: Air Maintenance Training Group, Willow Grove, PA; Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, Cherry Point, NC.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, troubleshoot, and maintain antennas, antenna couplers, major components, and related systems.

Instruction: Course covers antenna component identification with special emphasis on antenna couplers, phase and loading discriminaters, RF circuits, antenna troubleshooting, and maintenance procedures using basic test equipment. Course theory includes series-parallel, capacitive and inductive reactance, and resonance. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (7/94).

NV-1715-1722

AN/ARC-131 Receiver Transmitter Intermediate Maintenance

Course Number: C-102-3016.

Location: Air Maintenance Training Group, New River, NC; Air Maintenance Training Group, Cherry Point, NC; Air Maintenance Training Group, Tustin, CA.

Length: 2-3 weeks (96 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the purpose, function, and theory of operation of two-way radio communications systems, including operational checking, alignment, testing, troubleshooting, repair, and maintenance.

Instruction: Course covers basic receiver/transmitter communications theory, RF carrier modulation; comparison of AM/FM signals; signal discrimination circuits; overall input signal flow in block diagrams; and system troubleshooting, maintenance, and safety procedures. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (7/94).

NV-1715-1723

AN/USM-406A(V) and AN/USH-27 Intermediate Maintenance

Course Number: C-102-3017.

Location: Air Maintenance Training Group, Cherry Point, NC; Air Maintenance Training Group, Lemoore, CA; Air Maintenance Training Group, Oceana, Virginia Beach, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 2/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze, operate, troubleshoot, and maintain the test equipment at the intermediate level.

Instruction: Course covers physical and functional description, operation, and maintenance of the test equipment. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (7/94).

NV-1715-1724

RT-648/ARC-94 RT-698/ARC-102 High Frequency Transmitter Intermediate Maintenance

Course Number: C-102-3026.

Location: Air Maintenance Training Group, Willow Grove, PA; Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Group, Cherry Point, NC; Air Maintenance Training Group, New River, NC.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, repair, troubleshoot, and describe single-sideband transceivers down to the component level.

Instruction: Course covers single-sideband characteristics, power supply system, block-diagram analysis, circuit analysis, operating procedures, performance testing, system alignment, troubleshooting, and component repair. Methodology includes group-paced lecture, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in high-frequency communications (7/94).

NV-1715-1725

AN/ARC-114 Radio Set Intermediate Maintenance

Course Number: C-102-3100.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 3 weeks (120 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, repair, adjust, and functionally test the UHF radio set.

Instruction: Course covers UHF radio operation, overall signal flow block diagrams, signal tracing, maintenance, and troubleshooting and repair procedures. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications (7/94).

NV-1715-1726

AN/ARC-159(V) Transceiver and Associated Equipment Intermediate Maintenance

Course Number: *Version 1:* C-102-3116. *Version 2:* C-102-3116.

Location: *Version 1:* Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA; Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA; Air Maintenance Training Group, Tustin, CA; Air Maintenance Training Detachment, Cherry Point, NC; Air Maintenance Training Group, Miramar, San Diego, CA. *Version 2:* Air Maintenance Training Group, Cherry Point, NC; Air Maintenance Training Group, El Toro, CA; Air Maintenance Training Group, Cecil Field, FL; Air Maintenance Training Group, Miramar, San Diego, CA; Air Maintenance Training Group, Oceana, Virginia Beach, VA; Air Maintenance Training Group, Whidbey Island, Oak Harbor, WA.

Length: *Version 1:* 2 weeks (80 hours). *Version 2:* 3 weeks (120 hours).

Exhibit Dates: *Version 1:* 10/92–Present. *Version 2:* 1/90–9/92.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to explain the purpose and operation of components and modules of aircraft UHF transceivers. In addition, students will be able to bench test, troubleshoot, repair, and align the receiver and transmitter circuitry, using frequency generators, counters, wattmeters, and modulation performance instruments. *Version 2:* Upon completion of the course, the student will be able to describe system purpose, function, and theory of operation and troubleshoot and maintain receiver/transmitter systems, receiver circuits, transmitter circuits, power supplies, and receiver/transmitter control circuits.

Instruction: *Version 1:* Lectures and practical experience emphasize testing, troubleshooting, repairing, and aligning receivers, transmitters, and radio control heads. *Version 2:* Course covers receiver/transmitter, including power supply; overall block-diagram signal flow; related control circuitry, including gain, bandwidth, memory, and relay; and test, maintenance, and troubleshooting procedures. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in theory and maintenance of aircraft UHF transceivers and 1 in maintenance of aircraft UHF transceivers in laboratory (10/94). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (7/94).

NV-1715-1727

AN/USM-406C Electronic Equipment Test Set Operation and Intermediate Maintenance Training

Course Number: C-102-4026.

Location: Air Maintenance Training Group, Lemoore, CA; Air Maintenance Training Group, Oceana, Virginia Beach, VA.

Length: 5 weeks (156 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain an electronic module test console.

Instruction: This course covers transistor theory, AC and DC power distribution, logic circuits, test equipment, oscilloscopes, and programming and testing various components and modules. Methodology includes group-paced lecture, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronics laboratory (7/94).

NV-1715-1728

AV-8B Aircraft Wire/Connector and Fiber Optics Repair/Assembly Organizational Maintenance

Course Number: C-602-4891.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain wire, fiber optic communications materials, and associated woodware.

Instruction: Course covers repair of wire and fiber optic communications materials, including stripping tools; splice crimpers; and procedures to repair shielded cable, compact cable assemblies, and cable stub splice areas; repair verifications; and safety precautions. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour electronic systems troubleshooting and maintenance (7/94).

NV-1715-1729

AN/ALQ-157(V) Infrared Countermeasures Set Intermediate Maintenance

Course Number: C-102-4022.

Location: Air Maintenance Training Group, Cherry Point.

Length: 2 weeks (80 hours).

Exhibit Dates: 6/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform intermediate maintenance and troubleshooting of an infrared countermeasures set.

Instruction: Course covers safety precautions; troubleshooting procedures; theory of operation; and removal, cleaning, and installation. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/94).

NV-1715-1730

AN/ALE-39 Countermeasures Dispensing System Intermediate Maintenance

Course Number: C-102-3107.

Location: Air Maintenance Training Group, Cherry Point, NC; Air Maintenance Training Group, Lemoore, CA.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 2/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform intermediate maintenance on countermeasures dispenser, dispenser housing, and sequence switch.

Instruction: Course covers countermeasure dispenser troubleshooting, maintenance, and safety precautions. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/94).

NV-1715-1731

AN/APR-39(V)1 Radar Signal Detecting Intermediate Maintenance

Course Number: C-102-4019.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 2 weeks (80 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the purpose, function, and theory of operation of a radar signal detecting set and test, troubleshoot, repair, and maintain the equipment.

Instruction: Course covers radar receiver function and theory, overall receiver signal block-diagram flows, signal detection and discrimination, logic function identification, video processing function and theory, troubleshooting, repair, and maintenance procedures. Methodology includes group-paced lectures, practical demonstrations, and laboratory work.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (7/94).

NV-1715-1732

AN/ALQ-144(V)1 Countermeasures Set Intermediate Maintenance

Course Number: C-102-4020.

Location: Air Maintenance Training Group, Cherry Point, NC.

Length: 1-2 weeks (48 hours).

Exhibit Dates: 11/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform intermediate maintenance, troubleshooting, and alignment checks on various countermeasures sets.

Instruction: Course covers safety procedures, troubleshooting procedures, theory of operation, and security of classified material. Methodology includes classroom lectures and practical exercises.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/94).

NV-1715-1733

GT-3A Operator and Intermediate Maintenance

Course Number: C-102-4748.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 2 weeks (80 hours).

Exhibit Dates: 8/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform limited maintenance on a personal computer and peripherals under close supervision.

Instruction: Lectures and laboratory exercises cover a personal computer system, including printer, floppy drive, and hard drive.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in computer system troubleshooting and maintenance (10/94).

NV-1715-1734

AN/ASM-459 Mini-SACE Flight System Test Console Intermediate Maintenance

Course Number: C-104-3769.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA.

Length: 4-5 weeks (196 hours).

Exhibit Dates: 2/92–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair a test console and program the test console to sequence through a series of test procedures.

Instruction: Lectures and practical exercises focus on troubleshooting and repairing the test console. Course also includes study and practice of programming procedures for the module.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in programmable controllers and 2 in electronic systems troubleshooting and maintenance (10/94).

NV-1715-1735

A-6/EA-6A Electronic Systems Integrated Organizational Maintenance

Course Number: C-102-9966.

Location: Air Maintenance Training Group Detachment, Whidbey Island, Oak Harbor, WA; Air Maintenance Training Group Detachment, Oceana, Virginia Beach, VA.

Length: 9-10 weeks (376 hours).

Exhibit Dates: 11/92–4/96.

Learning Outcomes: Upon completion of the course, the student will be able to use a digital multimeter, oscilloscope, RF wattmeter, portable ramp testers, and the time domain reflectometer to troubleshoot aircraft communications; audio integration; digital data link; transponder; radar altimeter; carrier instrument landing; Omega/VLF; and TACAN, ADF, and Doppler navigation systems at the line-replaceable unit level.

Instruction: Lectures and practical application addressing methods, theory, and efficiency in troubleshooting aircraft avionic systems at the black-box level. Emphasis is on troubleshooting defective components and replacing/testing systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in theory of avionics ramp testing and systems troubleshooting and 1 in avionics ramp testing and systems troubleshooting laboratory (10/94).

NV-1715-1736

Electronics Technician, Class A

Course Number: A-661-0105.

Location: Nuclear Power Training Command, Orlando, FL.

Length: 28 weeks (765 hours).

Exhibit Dates: 3/94–Present.

Learning Outcomes: Upon successful completion of this course, the student will have a good working knowledge of electricity and electronics, solid state devices, communications systems, digital logic, microprocessors, and radar. The student will be able to interpret schematic diagrams and use appropriate test equipment to isolate and correct faults in both military and civilian electronic equipment.

Instruction: This is a lecture course with the necessary laboratories to support the theory taught in the classroom. This course covers the fundamental concepts of mathematics, basic electricity, electronic fundamentals, communications fundamentals, digital microprocessors, and radar fundamentals. The mathematics component covers arithmetic operations, scientific notation, first-order algebraic equations, metric prefixes, conversions, exponents and polynomials, introduction to trigonometric functions and vector notation, colinear and noncolinear vectors, complex numbers, phaser and rectangular conversions, phaser diagrams, and solution of electrical problems using phasers. Basic concepts of geometry include calculating area, volume, and perimeter. Problem solving in all of the above includes multiple concept problems. The basic electricity component covers electrical quantities; power, series, parallel, and series-parallel circuit analysis; magnetism; inductance, capacitance, and transient circuits; AC fundamentals; reactance, impedance, and analysis of RL, RC, and RLC circuits; AC power, power factor, three-phase circuits, delta, Wye connections, resonance, and transformers; DC and AC motors and generators, series, induction, and synchronous motors, rotating field multiphase motors; basic soldering techniques, troubleshooting and repair of electrical circuits using multimeter, function generator, and oscilloscope; electrical safety practices; and use of basic hand tools. The electronics fundamentals (solid state devices) cover solid state physics; diodes (rectifiers, Zener, tunnel, LEDs, photo, and Shockley); transistors (bipolar, JFETS, MOSFETS, and photo); amplifiers (classes including A, B, and AB), biasing (self and voltage divider), configuration (CE, CB, and CC), and troubleshooting; oscillators and multivibrators (Colpits, Hartley, Clapp, and Wein bridge); operational amplifiers (noninverting, inverting, summing, differential, and active filters); and thyristors (silicon controlled rectifiers (SCRs), DIAC, TRIAC, and unijunction transistors). The digital microprocessor fundamentals include number systems, binary arithmetic, Boolean algebra, logic gates, combinational logic, and flip-flops; counters; Schmitt triggers; logic families; encoders; decoders; multiplexers and demultiplexers; and 8085 microprocessor (instruction set, memories and peripherals, basic hardware concepts, addressing decoding, registers and breakpoints, troubleshooting microprocessor systems, and assembly language programming). The communications fundamentals component covers AM/FM receivers, AM/FM transmitters, antennas and transmission lines, impedance matching, single-sideband, multiplexing and RF circuits, and digital communications. The radar fundamentals include the theory and application of basic radar systems and components covering topics, including waveguides, pulse radar, klystrons, magnetrons, Doppler radar, microwave, and UHF.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics including algebra II, 3 in DC circuits, 3 in AC circuits, 4 in solid state devices and circuits, 3 in electrical troubleshooting and repair, 4 in digital logic and microprocessors, 4 in electronic communications systems, and 4 in radar fundamentals (2/95).

NV-1715-1737

LHD Exterior Communication System Operations

(LHD Exterior Communication Operations)

Course Number: A-202-0044.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 9 weeks (369 hours).

Exhibit Dates: 12/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operation of an integrated communications system with particular emphasis on the receiver/transmitter circuits. In addition, the student should be able to configure the system to various modes of operation and be able to perform both corrective and preventive maintenance.

Instruction: Lectures and practical laboratory exercises are integrated into this course. Included in this course of instruction is detailed instruction on two particular communications sets. Operational modes (SSB, AM, FM, etc.), operational characteristics, bus configuration, antenna theory, and detailed instruction at the block-diagram level along with appropriate troubleshooting techniques are included. Antenna theory with SWR, power management, and test equipment operation conclude the course.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications (3/95).

NV-1715-1738

Mk 23 Target Acquisition System

Course Number: A-121-0471.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 22 weeks (880 hours).

Exhibit Dates: 3/93–Present.

Learning Outcomes: Upon completion of the course, the student will possess a working knowledge of the target acquisition system and be able to operate and perform maintenance on the system and subsystems. The subsystems are a computer complex, computer peripherals, display subsystem, radar subsystem, and IFF subsystem. To be able to perform these tasks, the student will have to display competence in electricity and electronics, digital electronics, microprocessors, radar, troubleshooting/repair techniques, and continuous wave and antenna theory.

Instruction: This course is composed of both formal lectures and hands-on laboratory experiments. While some operational theory is included, the majority of the instruction is directed toward maintenance and repair. A prerequisite to the course is a solid background in basic electronics and completion of this course will demonstrate competence in both analog and digital electronic basics. Extensive training in microprocessor and computer peripheral maintenance theory is also included in the course with lecture/laboratory session on transmitter/receivers and video processors.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar system operation and maintenance, 3 in electronic/logic troubleshooting, and 1 in computer system operation (3/95).

NV-1715-1739

Tartar CGN-36 Baseline Medium Range Missile Systems Technician
(CGN-36 Medium Range Missile System Technician New Threat Upgrade)

Course Number: A-121-0557.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 9 weeks (360 hours).

Exhibit Dates: 3/93–Present.

Learning Outcomes: Upon completion of the course, the student will be equipped to operate and do basic maintenance on a medium-range missile system.

Instruction: Lectures and practical exercises discuss system overview, radar sensors, missile detection and tracking, threat evaluation, power distribution, fire control system, launching systems, system testing, and fault isolation.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/95).

NV-1715-1740

CGN/NTU Medium Range Missile System Technician
(CGN Medium Range Missile System Technician New Threat Upgrade)

Course Number: A-121-0527.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 12 weeks (480 hours).

Exhibit Dates: 3/91–2/93.

Learning Outcomes: Upon completion of the course, the student will be equipped to operate and maintain a medium-range missile system.

Instruction: Lectures and practical exercises discuss system overview, radar sensors, missile detection and tracking, threat evaluation, power distribution, fire control system, launching systems, system testing, and fault isolation.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/95).

NV-1715-1741

Joint Tactical Information Distribution System
(Joint Tactical Information Distribution System Navy Shipboard Radio Set AN/URC-107(V)7 Organizational Level Maintenance)

Course Number: A-101-0259.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 2 weeks (70-80 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be qualified to operate, perform preventive maintenance, and use diagnostic software to isolate faults in a shipboard radio set.

Instruction: Lectures and practical exercises cover equipment operation, preventive maintenance, and fault isolation.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/95).

NV-1715-1742

Tartar Medium Range Missile System Officer New Threat Upgrade
(New Threat Upgrade (NTU) Officer)

Course Number: A-2F-4627.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 3/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the functions of the the Tartar medium-range missile system.

Instruction: Classroom lectures and some minimal laboratory experiences introduce the student to the missile combat system components, including search radars, detection and tracking systems, launch and direction control, and fire control supervision.

Credit Recommendation: Credit is not recommended because the course is a survey course and covers functions of the missile system from a high-level perspective. The nature of the course is entirely military-specific (3/95).

NV-1715-1743

FFG-7 Data Display Group Subsystem
(FFG-7/36/61 Class Ships Data Group Subsystem Maintenance)

Course Number: A-150-0136.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 22 weeks (902 hours).

Exhibit Dates: 6/91–Present.

Learning Outcomes: Upon completion of the course, the student will be equipped to perform preventive and corrective maintenance on radar subsystems, including pulse amplifiers, synchro-digital converters, data switching and distribution, displays, power supplies, motion converters, jam detectors, and target detectors.

Instruction: Lectures and practical exercises relate to the operation and troubleshooting of radar display subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic systems troubleshooting and maintenance (3/95).

NV-1715-1744

DD-963 Data Display Subsystem Maintenance

Course Number: A-150-0137.

Location: Service Schools Command, Mare Island, Vallejo, CA.

Length: 31 weeks (1271 hours).

Exhibit Dates: 1/92–Present.

Learning Outcomes: Upon completion of the course, the student will be qualified to perform preventive and corrective maintenance on the DD-963 data display system. This system is based on discrete logic.

Instruction: Lectures and practical exercises cover radar target simulation, power distribution, synchros, A/D and D/A converters, vaster and vector displays, display multiplexers, thermal printer/plotter, digital switchboard, and basic soldering techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in electronic systems troubleshooting and maintenance (3/95).

NV-1715-1745

Aegis Combat System Maintenance Manager
(CG-65-73/DDG)

Course Number: S-121-0548.

Location: Aegis Training Center, Dahlgren, VA.

Length: 6 weeks (224 hours).

Exhibit Dates: 10/94–Present.

Learning Outcomes: Upon completion of the course, the individual will be able to describe the theory necessary to understand normal operational tasks and to direct operational procedures and maintenance for the Aegis Combat System and other radar and support systems.

Instruction: Instruction is lecture-based with topics relating to the general, physical, functional, and interface relationship of combat weapon systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (5/95).

NV-1715-1746

Aegis Combat System Maintenance Manager
(CG-47-64)

Course Number: S-121-0483.

Location: Aegis Training Center, Dahlgren, VA.

Length: 6 weeks (213 hours).

Exhibit Dates: 10/94–Present.

Learning Outcomes: Upon completion of the course, the individual will be able to describe the theory necessary to understand normal operational tasks and to direct operational procedures and maintenance for the Aegis Combat System and other radar and support systems.

Instruction: Instruction is lecture-based with topics relating to the general, physical, and functional interface relationship of combat weapon systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (5/95).

NV-1715-1747

Aegis Display System Operating and
Maintenance (CG-60-73/DDG)

Course Number: S-150-0273.

Location: Aegis Training Center, Dahlgren, VA.

Length: 26 weeks (1020 hours).

Exhibit Dates: 9/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair to the module or connection level a computer-based video signal processing and display system; use electronic equipment and instruments to isolate faults; and confirm proper system operation.

Instruction: The instructional method in this course is half classroom activity and half laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems operation and repair and 3 in electronic equipment operation and repair (5/95).

NV-1715-1748

Radar System AN/SPY-1B/D Operation and
Maintenance (CG-59-73/DDG)

Course Number: S-104-0210.

Location: Aegis Training Center, Dahlgren, VA.

Length: 24 weeks (861 hours).

Exhibit Dates: 12/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a phased array radar system, including high voltage power supplies, cooling systems, computerized control and signal processing systems, microwave transmitter/receivers, and antenna/waveguide structures; use standard and RF specific test equipment to test, troubleshoot, align, and maintain radar; and understand the function of system components, including power, computer controls, RF signal generation and detection, digital signal processing, and cooling/conditioning equipment.

Instruction: Course consists primarily of classroom lectures with nearly one-half of class time consisting of performance-based practical exercises in the above areas.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital logic and computer interfacing, 4 in radar systems, and 3 in electronic systems troubleshooting and maintenance (5/95).

NV-1715-1749

Aegis FCS/ORTS Operation and Maintenance
(CG-65-73/DDG)

Course Number: S-104-0211.

Location: Aegis Training Center, Dahlgren, VA.

Length: 20 weeks (676 hours).

Exhibit Dates: 8/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, troubleshoot, and repair a computer-based combat control system.

Instruction: Course consists primarily of classroom lecture; one-half of class hours consists of performance-based practical exercises. Topics include digital logic, microprocessors, data processing systems, radar theory and maintenance, power supplies, and power protection circuitry.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital and microprocessor applications, 2 in computer peripherals maintenance, and 4 in electronic/electromechanical systems troubleshooting (5/95).

NV-1715-1750

Aegis FCS/ORTS Operation and Maintenance
(CG-47-64)

Course Number: S-104-0192.

Location: Aegis Training Center, Dahlgren, VA.

Length: 29 weeks (1086 hours).

Exhibit Dates: 1/95–Present.

Learning Outcomes: Before 1/95 see NV-1715-1304. Upon completion of the course, the student will be able to test, troubleshoot, and repair a computer-based combat control system.

Instruction: Course consists primarily of classroom lectures; one-half of class hours consist of performance-based practical exercises. Topics include digital logic, microprocessors, data processing systems, radar theory and maintenance, power supplies, and power protection circuitry.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in digital and microprocessor application, 2 in computer peripherals maintenance, and 4 in electronic/electromechanical systems troubleshooting (5/95).

NV-1715-1751

Aegis Weapon System Mk 7 Operation and
Maintenance (CG-65-73/DDG)

Course Number: S-121-0547.

Location: Aegis Training Center, Dahlgren, VA.

Length: 15 weeks (583 hours).

Exhibit Dates: 4/93–Present.

Learning Outcomes: Upon completion of the course, the student will have an understanding of the basic theory, mission, functional operation, and maintenance procedures of the various subunits of an Aegis phased array radar weapon system. The purpose is to provide senior personal with sufficient knowledge to direct and supervise personnel using this equipment.

Instruction: The course is directed into units covering the various systems in the Aegis weapon system Mk 7. Each unit covers the general physical and function description, operating theory, maintenance description, basic troubleshooting procedures, and the interfacing of each subsystem to each other. The subsystems examined are 400Hz power supplies and distribution equipment, water coolers, dehydrators, computer set, data processing set, built-in test system, computer display consoles, combat display consoles, radar systems, signal processors, transmitter group, antenna group, and weapons and fire control systems of the Aegis Mk 7 phased array radar system. Nearly one-half of class time consists of performance-based exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems maintenance and troubleshooting (5/95).

NV-1715-1752

Aegis Computer AN/UYK-43 Operation and
Maintenance (CG-65-73/DDG)

Course Number: S-150-0274.

Location: Aegis Training Center, Dahlgren, VA.

Length: 20 weeks (670 hours).

Exhibit Dates: 8/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform computer system maintenance and troubleshooting, including fault isolation in central processing unit, magnetic data storage unit, and related digital control panels. Troubleshooting and system integrity checks are accomplished through use of diagnostic software.

Instruction: This course includes an initial overview of the computer system, a detailed modular analysis of the subsystems within, and an integration of those subsystems in the total control system. In addition, system operation, detailed module operation, fault isolation, and corrective action are practiced to develop system integrated competence in operation and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems operation and maintenance and 3 in electricity/mechanical systems troubleshooting (5/95).

NV-1715-1753

Advanced Avionics Integrated Weapons
Systems Maintenance, Class C1
(Advanced Avionics Integrated Computer
System Maintenance, Class C7)

Course Number: *Version 1:* C-100-2012 C1. *Version 2:* C-100-2012 C1.

Location: *Version 1:* Air Technical Training Center, Pensacola, FL; Air Technical Training

Center, Memphis, Millington, TN. *Version 2:* Air Technical Training Center, Memphis, Millington, TN.

Length: *Version 1:* 29 weeks (1153 hours). *Version 2:* 29 weeks (1153 hours).

Exhibit Dates: *Version 1:* 2/94–Present. *Version 2:* 1/91–1/94.

Learning Outcomes: *Version 1:* Upon completion of this course, the student will be able to maintain and repair electronic devices and digital devices and will be able to repair and operate radar, ADF, and communications systems. *Version 2:* Upon completion of this course, the student will be able to maintain and repair electronic devices and digital devices and repair and operate radar.

Instruction: *Version 1:* Lectures and laboratories in mathematics; physics; electronic devices and systems; and digital systems, communications and microwave principles, waveform devices, radar principles, avionics principles, and ADF principles and equipment. This course is designed for enlisted personnel who have already had basic training in electricity and electronics. The course provides detailed instruction in electronics/electricity, digital circuits/Boolean algebra, analog communications, and radar theory. *Version 2:* Lectures and laboratories in mathematics, physics, electronic devices and systems, digital systems, communications and microwave principles, waveform devices, radar principle, and avionics principles. This course is designed for enlisted personnel who have already had basic training in electricity and electronics. The course provides detailed instruction in electronics/electricity, digital circuits/Boolean algebra, analog communications, and radar theory.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in technical mathematics, 6 in semiconductor devices, 6 in electric circuits (AC/DC), 4 in digital circuits/Boolean algebra, 3 in electronic communications, 4 in radar systems, and 3 in systems analysis/troubleshooting (1/97). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in technical mathematics, 6 in electric circuits (AC/DC), 4 in digital circuits/Boolean algebra, 3 in communications, 4 in radar systems, and 3 in systems analysis/troubleshooting (11/95).

NV-1715-1754

AN/SPN-43B

Course Number: C-103-2064.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5 weeks (200 hours).

Exhibit Dates: 8/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance,align, and operate the radar system.

Instruction: This course is taught using formal classroom presentation coupled with laboratory periods. Extensive hands-on experience in the laboratory is an especially integral part of the course with about an 8 to 1 ratio (lab to lecture). Most of the instruction provided is equipment specific.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electric safety and 3 in radar systems (5/96).

NV-1715-1755

Avionics Systems Integration, Class A1

Course Number: C-100-2015.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/92–8/95.

Learning Outcomes: Upon completion of the course, the student will be able to operate, test, and troubleshoot all subsystems of the integrated electronics airborne system. The course is designed to provide graduates with the knowledge and skill training to perform entry-level organizational and intermediate maintenance of avionics systems.

Instruction: The course is composed of periods of formal classroom presentations and associated laboratories. Students in this class are graduates from class A school and already have been trained in basic electricity/electronics. This course is specifically designed to teach an airborne integrated system (composed of communications, navigation, radar, and computer systems).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical safety, 3 in radar systems, 3 in electronic systems troubleshooting and maintenance, and 3 in microprocessor hardware (11/95).

NV-1715-1756

AN/UYX-1(V) Bright Radar Alpha-Numeric Display System (BRANDS)

Course Number: C-103-2043.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 6 weeks (218 hours).

Exhibit Dates: 4/90–Present.

Learning Outcomes: Upon completion of the course, the student will have the knowledge and skills necessary to operate and maintain the equipment to the component level with limited supervision under all conditions.

Instruction: The necessary technical information is provided to enable the adjustment, alignment, and troubleshooting of the system using appropriate tools, test equipment, and technical publications. All applicable safety precautions are observed. Troubleshooting procedures necessary to isolate the fault to the defective component are stressed.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting (5/96).

NV-1715-1757

AN/SPN-46 Maintenance

Course Number: C-103-2046.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 14 weeks (488 hours).

Exhibit Dates: 6/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain an all weather landing system including its components and subsystem.

Instruction: Lectures and practical exercises cover radar systems, power distribution, subsystems, data stabilization subsystems, control and monitors, input and output buffers, and data link monitors. Course also includes analysis, isolation, and repair procedures. Alignment of consoles, encoders, radar, computer maintenance procedures, power supplies, control logic circuits, program translation, and computer diagnostic tests are all covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer systems troubleshooting and maintenance, 4 in radar systems, and 1 in electrical safety (11/95).

NV-1715-1758

AN/FAC-6(V) Fiber Optics Intersite Maintenance, Class C1

Course Number: C-103-2062.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 4 weeks (176 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot the fiber-optic intersite system, operate the fiber-optic intersite system and, maintain the fiber-optic intersite system.

Instruction: Course includes lectures and laboratories in systems operation, maintenance, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic system maintenance and troubleshooting (11/95).

NV-1715-1759

Flight Data Input/Output, Class C1

Course Number: C-103-2065.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 2 weeks (80 hours).

Exhibit Dates: 12/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair the flight data input/output system including its various subsystems.

Instruction: Instruction in this course is composed of formal classroom presentations coupled with laboratories designed to emphasize the lecture material. All training provided is specific to flight data input/output with practically no general knowledge in technical areas included. This course is designed to provide board-level knowledge.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical safety and 2 in electronic troubleshooting and maintenance (11/95).

NV-1715-1760

AN/SPN-43C Maintenance

Course Number: C-103-2113.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 7 weeks (217 hours).

Exhibit Dates: 1/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and operate the radar system.

Instruction: Course includes equipment-specific lectures and laboratories in systems operation, maintenance, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical system safety and 3 in electronics system maintenance (11/95).

NV-1715-1761

AN/FSC-104(V) Standard Emergency
Communications System, Class G1

Course Number: C-103-2118.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 8 weeks (320 hours).

Exhibit Dates: 6/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform operational checks, alignments, and preventive/corrective maintenance on a standard emergency communications system.

Instruction: Instruction is provided using both classroom presentations and laboratory experiments. Experiment time far exceeds lecture time.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic troubleshooting/maintenance (11/95).

NV-1715-1762

Marine Air Traffic Control and Landing
Systems (MATCALS) Radio
Maintenance
(Marine Air Traffic Control and Landing
Systems (MATCALS) Radio Maintenance, Class M3)

Course Number: C-103-2091-M3.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 7-8 weeks (312 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install and perform preventive and corrective maintenance on the marine air traffic control communications system at the organizational and intermediate level maintenance.

Instruction: Group-paced instruction and laboratory exercises cover performing operability checks, troubleshooting faulty component, measuring system parameters, and aligning and adjusting the radio set. Preventive maintenance and radio set are taught using applicable technical publications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in communications systems maintenance, 2 in electronic troubleshooting and maintenance, and 1 electrical safety (8/96).

NV-1715-1763

AN/TPS-73 Radar Maintenance, Class M3
(AN/TPS-73 Maintenance)
(AN/TPS-73 Radar Maintenance)

Course Number: C-103-2084-M3.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 10-11 weeks (416 hours).

Exhibit Dates: 8/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot TPS 73 analog circuits to the faulty component; perform operability checks on the radar set; measure and compare system parameters; set up/align the radar; and perform preventive maintenance on the radar system.

Instruction: Course is taught using both formal classroom presentations and associated laboratories.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electric safety, 3 in radar systems, 2 in digital circuits, and 2 in electronic troubleshooting/maintenance (8/96).

NV-1715-1764

AN/UYQ-34 Processor Maintenance, Class
M3
(AN/UYQ-34 Maintenance)
(AN/UYQ-34(V) Processor Maintenance)

Course Number: C-103-2083-M3.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the radar set at the organizational and intermediate levels.

Instruction: Group-paced lectures and laboratory instruction include operational checks, measurement of system parameters, alignment and adjustment, preventive maintenance, and troubleshooting and repair of the system using applicable test equipment and technical manuals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in radar systems (8/96).

NV-1715-1765

AN/TRN-44 Radar Maintenance, Class M3
(AN/TRN-44 Maintenance)

Course Number: C-103-2101-M3.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 10 weeks (400 hours).

Exhibit Dates: 12/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install and perform preventive and corrective maintenance on a Marine air traffic control navigation system.

Instruction: Lectures and extensive laboratories enable the student to install and maintain Marine air traffic control navigation aid systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic system maintenance (8/96).

NV-1715-1766

AN/TSQ-120 Maintenance
(AN/TSQ-120 Maintenance, Class M3)

Course Number: C-103-2092-M3.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 4 weeks (160 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install a Marine air traffic control communications system and perform preventive and corrective maintenance on Marine air traffic control communications systems.

Instruction: Lectures and extensive laboratories cover communications systems installation practices and preventive and corrective maintenance applications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems maintenance (8/96).

NV-1715-1767

AN/TSQ-131 Maintenance
(AN/TSQ-131 Maintenance, Class M3)

Course Number: C-103-2093-M3.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 4 weeks (160 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install Marine air traffic control communications systems and perform preventive and corrective maintenance on Marine air traffic control communications systems.

Instruction: Lectures and extensive laboratories cover communications systems installation practices and preventive and corrective maintenance applications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems maintenance (8/96).

NV-1715-1768

AN/TPN-30 Radar Maintenance, Class M3
(AN/TPN-30 Maintenance)

Course Number: C-103-2102-M3.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5-6 weeks (232-312 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance tasks on a Marine instrument landing system.

Instruction: Lectures and extensive laboratories cover operational theory, preventive and corrective maintenance procedures, and troubleshooting applications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours electronic systems troubleshooting (8/96).

NV-1715-1769

AN/TRN-33 Maintenance

Course Number: C-103-2103.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 3 weeks (120 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to install and perform preventive and corrective maintenance on Marine air traffic control navigation aids systems.

Instruction: Lectures and extensive laboratories cover operational theory and preventive and corrective maintenance on air traffic control navigation aids.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting (11/95).

NV-1715-1770

AN/UPS-1G Radar Maintenance
(AN/UPS-1G Radar Maintenance, Class C1)

Course Number: C-103-2082-M3.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 5 weeks (200 hours).

Exhibit Dates: 7/90–6/95.

Learning Outcomes: Upon completion of the course, the student will be able to perform both preventive and corrective maintenance on the radar set.

Instruction: Instruction is provided in this course using both formal lecture and laboratory experiments. The majority of the time is spent in laboratory experiments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems (10/95).

NV-1715-1772

Marine Air Traffic Control Radar Technician

Course Number: C-103-2080.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 23-25 weeks (840-860 hours).

Exhibit Dates: 7/90–Present.

Learning Outcomes: This is a pipeline course. Upon completion of all courses in the pipeline, this course number is assigned.

Instruction: See C-103-2081 (NV-1714-0074), C-103-2083 (NV-1715-1763), and C-103-2084 (NV-1715-1764). This is a pipeline course.

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (11/95).

NV-1715-1773

Marine Air Traffic Control Communications Technician

Course Number: C-103-2090.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 16 weeks (630-640 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: This is a pipeline course. Upon completion of all courses in the pipeline, this course number is assigned.

Instruction: This is a composite course. See C-103-2091 (NV-1715-1762), C-103-2092 (NV-1715-1766), and C-103-2093 (NV-1715-1767).

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (11/95).

NV-1715-1774

Marine Air Traffic Control Navigational Aids Technician

Course Number: C-103-2100.

Location: Air Technical Training Center, Memphis, Millington, TN.

Length: 16-17 weeks (630-640 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: This is a pipeline course. Upon completion of all courses in the pipeline, this course number is assigned.

Instruction: This is a composite course. See C-103-2101 (NV-1715-1768) and C-103-2102 (NV-1715-1765).

Credit Recommendation: Please refer to the exhibits noted above for credit recommendation (11/95).

NV-1715-1775

AN/SYQ-7(V)3 Naval Modular Automated Communications Systems (NAVMACS V3)

Course Number: A-101-0214.

Location: Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 18 weeks (90 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Before 5/92 see NV-1715-0875. Upon completion of the course, the student will be able to operate and maintain a modular automated communications system under surface shipboard conditions.

Instruction: Course includes lectures and performances exercises covering the operation, maintenance, and troubleshooting of computer peripherals, including line printers, data terminals, memory interfaces, and registers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer system troubleshooting (11/95).

NV-1715-1776

AN/WSC-3 UHF Defense Assigned Multiple Access (DAMA) Communication Set Maintenance

Course Number: A-101-0138.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 12 weeks (480 hours).

Exhibit Dates: 6/94–Present.

Learning Outcomes: Before 6/94 see NV-1715-0876. Upon completion of the course, the student will be able to describe the operational characteristics and capabilities of the communications set, including antenna groups, perform preventive and corrective maintenance, and become familiar with shipboard UHF communications systems in general.

Instruction: Lectures and hands-on experiences cover the operation, troubleshooting, and corrective maintenance of communications systems including antenna groups and subsystems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic systems troubleshooting and repair (11/95).

NV-1715-1777

Submarine Satellite Information Exchange Subsystem 2 (SSIXS 2) Maintenance

Course Number: A-101-0262.

Location: Fleet Training Center, Norfolk, VA.

Length: 10 weeks (400 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Upon completion of the course, the student will be trained to maintain and repair the AM/FSQ-163/164 subsystems under all shore station readiness conditions using technical manuals and associated test equipment without supervision.

Instruction: Lectures and practical experiences in the maintenance, troubleshooting, and repair of data systems and subsystems using technical manuals, operating instructions, maintenance instructions, and parts lists.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems maintenance and repair (11/95).

NV-1715-1778

Submarine Satellite Information Exchange System Shore (SSIXS 2) Communications Operator

Course Number: A-260-0031.

Location: Fleet Training Center, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Before 2/93 see NV-1715-1138. Upon completion of the course, the student will be able to operate and maintain a submarine satellite communications system including peripheral equipment and failure handling procedures.

Instruction: Lectures and practical experience cover the hardware configuration and software functions on both satellite and LF/VLF broadcast systems including setup and initialization procedures, system shutdown, and recovery procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in broadcast communications equipment maintenance and operation (11/95).

NV-1715-1779

Naval Modular Automated Communications System (NAVMACS) V5 Data Base Management

Course Number: A-260-0047.

Location: Service School Command, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 5/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify and define data base formats used in the naval modular automated communications systems, use them in data base operations, and perform the steps necessary to construct a data base.

Instruction: Group-paced instruction includes lectures, hands-on experience, and homework assignments including the use of viewgraphs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in data base management (11/95).

NV-1715-1780

1. SQQ-89(V) On-Board Trainer Operator and Administration
2. AW/SQQ 89(V)-T Onboard Trainer Operator and Administration

Course Number: *Version 1:* K-130-1117. *Version 2:* K-130-1117.

Location: *Version 1:* Fleet Antisubmarine Warfare Training Center, San Diego, CA. *Version 2:* Fleet Training Center, Norfolk, VA;

Fleet Antisubmarine Warfare Training Center, Pacific, San Diego, CA.

Length: *Version 1:* 2 weeks (49-80 hours). *Version 2:* 4 weeks (72 hours).

Exhibit Dates: *Version 1:* 8/97–Present. *Version 2:* 4/92–7/97.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to set up and describe the purpose of onboard trainer; implement a training program involving explanation of abbreviations, terms, and symbols used with the onboard trainer; identify the need for training; develop exercises and scenarios; brief and debrief; monitor performance; maintain training records; and document results. *Version 2:* Upon completion of the course, the student will be able to equip the onboard trainer; identify and define the purpose of the onboard trainer for individual training operations; describe and identify the functions of each component of the trainer; describe the abbreviations, terms, and symbols used with the onboard trainer; describe the operational characteristics of the trainer and the documentation system used; and identify the need for training, implement the training, and document the results of training.

Instruction: *Version 1:* Instructional methods include lectures, discussions, visual aids, and hands-on training. Topics covered are general documentation procedures, record keeping, and functional and interfacing procedures. *Version 2:* The instructor uses a combination of lectures, discussions, visual aids, and hands-on training. The topics covered are general documentation procedures, physical descriptions, functional and interfacing procedures, operational descriptions, and basic operational procedures.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in records and information management (10/97). *Version 2:* Credit is not recommended because of the military-specific nature of the course (11/95).

NV-1715-1781

AN/SYQ-7(V)5 Naval Modular Automated Communications Systems (NAVMACS V5) Maintenance

Course Number: A-101-0236.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA; Service School Command, San Diego, CA.

Length: 5 weeks (200 hours).

Exhibit Dates: 2/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain a modular automated communications system to the card/modular level.

Instruction: Lectures and practical experiences cover the operation and maintenance of a modular automated communications system, including the central processing unit, line printer, magnetic tape subsystem, perforated tape reader, and data terminal set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer system operation and maintenance (11/95).

NV-1715-1782

General Purpose Electronic Test Equipment (GPETE) Field Calibration Activity Operator

Course Number: A-198-0056.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 3 weeks (120 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, calibrate, and perform minor repairs on basic test equipment, including meters, signal generators, oscilloscopes, and frequency counters.

Instruction: Lectures, demonstrations, and laboratory experiences cover the use, calibration, and minor repair of test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in test equipment use, calibration, and minor repair (11/95).

NV-1715-1783

General Purpose Electronic Test Equipment (GPETE) Fleet Electronic Calibration Laboratory Maintenance

Course Number: A-198-0057.

Location: Fleet Training Center, San Diego, CA; Fleet Training Center, Norfolk, VA.

Length: 12 weeks (480 hours).

Exhibit Dates: 4/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, calibrate, and repair meters, oscilloscopes, frequency counters, spectrum analyzers, power meters, and signal generators.

Instruction: Lectures, demonstrations, and laboratory exercises cover fault insertion, troubleshooting, and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic test equipment operation, calibration, and repair (11/95).

NV-1715-1784

Combat Systems Electronics Administration Atlantic Fleet

Course Number: A-4B-0019.

Location: Fleet Training Center, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 7/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe combat systems electronic equipment; perform the administrative procedures followed in the combat systems electronics division; and perform other necessary administrative procedures related to maintenance, repair, training, reports, and inspections.

Instruction: Instruction is delivered in a lecture format. Topics include an introduction to combat systems electronic equipment and the application of administrative procedures used in a combat systems electronics division.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/95).

NV-1715-1785

AN/SPS-67(V)3 Radar Maintenance

Course Number: A-104-0215.

Location: Fleet Training Center, Norfolk, VA.

Length: 7 weeks (280 hours).

Exhibit Dates: 5/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and operate the radar set under all shipboard readiness conditions using the associated test equipment.

Instruction: Methodology includes group-paced lectures with emphasis on hands-on performance-oriented training in a combined classroom/laboratory setting. Topics covered include familiarization with the radar set, its basic operation, and corrective and preventive maintenance (serial data communication, power distribution, and radar transmitting and receiving).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (11/95).

NV-1715-1786

LAMPS Mk 3 Recovery Assist, Securing and Traversing (RAST) Electrical Technician

Course Number: K-652-2204.

Location: Fleet Training Center, Norfolk, VA; Fleet Training Center, San Diego, CA.

Length: 5 weeks (199 hours).

Exhibit Dates: 4/94–Present.

Learning Outcomes: Before 4/94 see NV-1715-1287. Upon completion of the course, the student will be able to perform electrical/electronic maintenance, troubleshooting, and repair to the component level.

Instruction: Lectures and laboratory exercises ensure student comprehension of system operation, troubleshooting, corrective repair, and maintenance of the RAST and HRS electrical/electronic systems. A review of solid state circuits is also covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in motor control devices and 3 in electrical/electronic troubleshooting (11/95).

NV-1715-1787

Dead Reckoning Analyzer Indicator Mk 10 Mod 0/Dead Reckoning Tracer Mk 6 Mod 4D

Course Number: J-623-0069.

Location: Fleet Training Center, Norfolk, VA.

Length: 4 weeks (160 hours).

Exhibit Dates: 10/93–Present.

Learning Outcomes: Before 10/93 see NV-1715-1139. Upon completion of the course, the student will be able to operate and maintain a dead reckoning analyzer and tracer.

Instruction: Lectures and practical exercises cover the fundamentals of electronics. Topics covered include AC/DC circuits; electronic devices; digital logic devices; the fundamentals of control transformers; synchros; resolvers; and the operational procedures, calibration, and circuit checks of both the Mk 10 and Mk 6 equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic devices (11/95).

NV-1715-1788

Combat Systems Technical Core Electronics Technician/Fire Control Technician

Course Number: A-100-0139.

Location: Service School Command, Great Lakes, IL.

Length: 24 weeks (960 hours).

Exhibit Dates: 3/95–9/97.

Learning Outcomes: Upon completion of the course, the student will apply knowledge and skills in basic electricity and electronics theory along with technical manuals to operate, test, and troubleshoot electronic equipment to the component level.

Instruction: Group-paced lectures and laboratory activities cover the electronics technical core. Instruction includes topics on characteristics of matter, energy, and direct current circuits; basic AC theory and circuits; electromagnetism; inductance, capacitance, impedance, and transformers; circuit protective devices; theory and use of meters and electrical measuring instruments; wiring diagrams, conductors, insulators, and soldering; AC and DC generators; vacuum tubes and vacuum tube power supplies; solid state devices and solid state power supplies; amplifiers and classes of amplifiers; communications fundamentals, transmission lines and antennas; microwave oscillators and amplifiers; concepts of number systems, Boolean algebra, logic circuits, and digital computers; basic test equipment and application; and fundamentals of fiber optics. The course is designed to provide the knowledge and skills needed to prepare for entry level performance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits, 3 in AC circuits, 4 in solid state devices, 4 in transistor amplifiers, 4 in communications systems, 4 in digital computer fundamentals, and 2 in basic electronic troubleshooting (12/95).

NV-1715-1789

Gun Fire Control System Mk 86 System Maintenance

Course Number: A-113-0151.

Location: Service School Command, Great Lakes, IL.

Length: 33 weeks (1320 hours).

Exhibit Dates: 10/94–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair the gun fire control system with appropriate technical documentation; describe the theory of operation of the electrical, electronic, communications, and computing sections of the system; and perform basic preventive maintenance on the power system, central processing unit, unit instruction sequence, core memory, and input/output controller.

Instruction: Group-paced lectures and laboratory exercises cover the gun fire control system and support subsystems. Support subsystems include radar, A/D-D/A converters, multiplexers, computers, TV monitors, and power distribution systems. Students are required to use a schematic, oscilloscope, and DVM to identify and isolate faults programmed into the system. Students are also required to use software diagnostic routines in fault isolation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in computer maintenance and repair and 4 in electronic systems maintenance (12/95).

NV-1715-1790

AN/WSN-2 Stabilizer Gyrocompass Maintenance

Course Number: A-670-0048.

Location: Service School Command, Great Lakes, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 4/95–Present.

Learning Outcomes: Before 3/95 see NV-1715-1067. Upon completion of the course, the student will be able to operate, maintain, and repair the stabilizer gyrocompass.

Instruction: Lectures and laboratory exercises cover operation, alignment, troubleshooting, and maintenance of the gyrocompass system.

Credit Recommendation: In the vocational certificate category, 2 semester hours in gyrocompass principles and maintenance (12/95).

NV-1715-1791

AN/WSN-5 Inertial Navigation System Maintenance

Course Number: A-670-0049.

Location: Service School Command, Great Lakes, IL.

Length: 4 weeks (160 hours).

Exhibit Dates: 8/94–Present.

Learning Outcomes: Before 10/93 see NV-1715-1119. Upon completion of the course, the student will be able to operate, maintain, and troubleshoot an inertial navigation system.

Instruction: Lectures and practical exercises cover the operation, maintenance, and troubleshooting of an inertial navigation system to the circuit card level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in microprocessor-based navigation systems (12/95).

NV-1715-1792

Advanced Digital

Course Number: A-100-0142.

Location: Service School Command, Great Lakes, IL.

Length: 7 weeks (280 hours).

Exhibit Dates: 2/96–12/97.

Learning Outcomes: Upon completion of the course, the student will be able to make flow charts and write programs in assembly language (hand assembled) using the instruction set of the COM-TRAN trainer which is similar to the Intel 8086. The student will know how the buss structure, ALU, and instruction and condition code registers interface in the microprocessor architecture. Using fault analysis cards, the student will create, identify, and correct software and/or hardware faults down to the chip level.

Instruction: Group-paced lectures and laboratory exercises use the COM-TRAN 10 digital trainer. The student will write and run programs using the CT-10 instruction set. The student will construct flow charts to aid in diagnostic maintenance and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in microprocessors I (12/95).

NV-1715-1793

Engineering Electrical Core

Course Number: A-651-0119.

Location: Service School Command, Great Lakes, IL.

Length: 12 weeks (456 hours).

Exhibit Dates: 7/94–Present.

Learning Outcomes: Upon completion of the course, the student will apply the basic concepts of DC and AC theory to electronic and electromechanical devices and systems, power distribution systems, and internal communications systems.

Instruction: Lectures, practical exercises, and laboratory experiments cover AC and DC circuits, analog and digital electronics, motors and generators, shipboard power distribution systems, internal communications systems, and basic electrical maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in technical mathematics, 2 in DC circuits, 2 in AC circuits, 3 in electronics technology, and 3 in electromechanical technology (12/95).

NV-1715-1794

Electronics Technician, Class A

Course Number: A-100-0085.

Location: Service School Command, Great Lakes, IL.

Length: 47 weeks (1880 hours).

Exhibit Dates: 4/94–3/96.

Learning Outcomes: Upon completion of the course, the student will be able to apply knowledge of DC and AC electricity, solid state devices, digital logic, microprocessors, and communications systems. Using appropriate test equipment and schematic diagrams, the student will be able to troubleshoot and repair equipment to the component level.

Instruction: Lectures and laboratory topics cover mathematics, electronic fundamentals, communications systems, digital logic, and microprocessors. The mathematics topics include arithmetic operations, scientific notation, algebraic equations, prefixes, conversions, trigonometric functions, and phaser diagrams. DC and AC topics include the analysis of series, parallel, and series-parallel circuits; inductance; capacitance; transient circuits; AC fundamentals; reactance; and analysis of RC, RL, and RLC circuits. The solid state component includes solid state physics, diodes, transistors, amplifiers, and power supplies. Communications systems cover basic communications principles, AM transmitter and receiver circuits, single-sideband fundamentals, waveforms and frequency spectra, and the operation and use of the spectrum analyzer. Digital microprocessor fundamentals include number systems, binary arithmetic, Boolean algebra, logic gates, combinational logic, microprocessor instruction set, memories, and peripherals. Instruction is provided on the troubleshooting and repairing of electronic systems and equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic electronics laboratory, 3 in DC circuits, 3 in AC circuits, 7 in solid state electronics, 8 in electronic communications, 3 in digital microprocessor fundamentals, 4 in radio/radar fundamentals, and 3 in electronic systems troubleshooting (12/95).

NV-1715-1795

Fire Controlman, Class A, School Strand

Course Number: A-100-0141.

BEST COPY AVAILABLE

Location: Service School Command, Great Lakes, IL.

Length: 11 weeks (438 hours).

Exhibit Dates: 5/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe radio wave theory and identify its basic components; describe basic antenna theory and the radiation characteristics of common types of antennas; state the purpose of search, navigation, and fire control radar; describe the general characteristics and types of transmission lines; perform maintenance procedures associated with radar; describe in detail the theory and operation of synchros; describe the use of basic test equipment associated with electromechanical systems; perform basic adjustment, alignment, and calibration procedures on electromechanical systems and devices; and diagnose motor and generator faults.

Instruction: Group-paced lectures and laboratory exercises cover electromechanical systems, servos, antenna systems, radar, motors, and generators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in motor control laboratory, 3 in electromechanical systems, and 3 in servo control (12/95).

NV-1715-1796

Electronics Technician Strand, Class A

Course Number: A-100-0140.

Location: Service School Command, Great Lakes, IL.

Length: 23 weeks (920 hours).

Exhibit Dates: 5/95–7/97.

Learning Outcomes: Upon completion of the course, the student will be able to identify and describe the components of a single-sideband radio, UHF transceiver, and radar system; discuss the characteristics and major subsections in SSB radio, UHF radio, and radar; discuss the characteristics that affect radio/radar performance; identify the types and functions of various transmission lines; interpret schematic diagrams; and use the appropriate test equipment to perform preventive maintenance and repair on radio and radar systems.

Instruction: Group-paced lectures and laboratory exercises cover the various AM/FM radios, UHF transceivers, and radar systems for which the student may be responsible in the fleet.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in basic communications fundamentals, 4 in radio/radar fundamentals, and 6 in electronic communications laboratory (12/95).

NV-1715-1797

Trident Common Navigation Technician
Conversion

Course Number: A-193-0375.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 13-14 weeks (578-579 hours).

Exhibit Dates: 9/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory and operation of the Trident common navigation equipment with reference to the maintenance support data system, navigation subsystem, data processing and system control equipment, and data transmission and miscellaneous equipment. The student will also be able to describe and use test instruments such as the digital multimeter, oscilloscope, relay module tester, Simpson multimeter, pulse/function generator, and electronic counter.

Instruction: Lectures and laboratory session cover the Trident common navigation system with topics on the operation and maintenance of the power supply and clock circuits, computer interface, memory, inertial loops and gyro support circuits, primary control circuits, mode sequencing, and preventive maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in microprocessors and 1 in electronic instruments and measurements laboratory (4/96).

NV-1715-1798

Trident Exterior Communications Subsystems
Maintenance Technician

Course Number: A-101-0727.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 42-50 weeks (1180-1279 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: This is a pipeline course consisting of other courses. See individual exhibits.

Instruction: See individual exhibits listed under A-101-0170, A-101-0172, A-101-0173, A-101-0175, A-101-0237, and A-101-0228.

Credit Recommendation: Credit is not recommended for this course; see exhibits above cited that comprise this course (4/96).

NV-1715-1799

Trident Fire Control Technician Basic
Operations

Course Number: A-113-0159; A-113-0159A.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 15 weeks (394 hours).

Exhibit Dates: 10/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform manual and computer-assisted target motion analysis, weapon prelaunch/postlaunch operations, and the basic operation of the combat control system Mk 2 Mod 3 and defensive weapons system Mk 118. The student will be able to understand the theory and operation of the ship's control subsystem.

Instruction: Lectures and hands-on exercises cover command and control laboratory and control room or defense weapons system operator trainer.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (4/96).

NV-1715-1800

Trident 1 Navigational Aids/Electrostatically Supported Gyro Monitor
(ESGM) Equipment

Course Number: A-193-0398.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 16 weeks (402-435 hours).

Exhibit Dates: 9/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform the operational, maintenance and testing functions required of an Navigation aids/electrostatiscally supported gyro compass monitor (NAVAIDS/ESGM) electronics replacement technician.

Instruction: Lecture and laboratory exercises cover the AN/BRN-8 radio navigation set, AN/BQN-3J sonar sounding set, electrostatically supported gyro monitor, and associated test equipment. Emphasis is placed on the operation, maintenance and testing of NAVAIDS/ESGM equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours of electronics systems troubleshooting (4/96)

NV-1715-1801

Ship Silencing Team
(Ship Silencing Team Analyst)

Course Number: A-210-0025.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2 weeks (78 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will apply the principles, rules, and concepts necessary to solve problems assigned to the ship silencing team; state the purpose of submarine sound silencing; describe the equipment available to acquire noise and vibration data; and identify the sources of noise and vibration; and describe the paths for noise transmission.

Instruction: Methods include lectures and monitoring subsystem laboratories or data processing subsystem trainer laboratories.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (4/96).

NV-1715-1802

Electrostatically Supported Gyro Navigator
Theory and Maintenance I

Course Number: A-193-0389.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 3-4 weeks (107 hours).

Exhibit Dates: 6/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory necessary to support, understand, and maintain the digital systems of the electrostatically supported gyro navigation system.

Instruction: Lectures and laboratory exercises cover the operation and maintenance of the electrostatically supported gyro with topics on basic digital logic fundamentals, power supply system, test control, and advanced fault isolation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital electronics (4/96).

NV-1715-1803

Controllers and Circuit Breakers Combined
Maintenance

Course Number: A-652-0108.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 2-3 weeks (94 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance, fault isolation, and repair on controllers and circuit breakers and an arc fault detector.

Instruction: Lecture and laboratory exercises lead to familiarity with several types of controllers and circuit breakers and on arc fault detector and support preventive and corrective maintenance.

Credit Recommendation: In the vocational certificate category, 2 semester hours in maintenance of controllers and circuit breakers (4/96).

NV-1715-1804

Electrostatically Supported Gyro Navigator
Theory and Maintenance 2

Course Number: A-193-0390.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 3-4 weeks (108 hours).

Exhibit Dates: 6/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the theory and operational tasks requiring advanced analysis, all preventive maintenance, and fault isolation and repair of the electrostatically supported gyro navigator.

Instruction: Lectures and laboratory exercises cover the theory, operation, and maintenance of the gyro navigator with topics on control circuits, processor, readout circuits, servo circuits, computer programs, advanced theory and maintenance, and corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital systems (4/96).

NV-1715-1805

Trident 1 Fire Control Technician To Missile
Technician Conversion

Course Number: A-121-0562.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 7 weeks (215 hours).

Exhibit Dates: 6/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the basic theory, operation, and maintenance of the launching system and associated equipment.

Instruction: Lecture and laboratory sessions cover system data flow, theory of operation, hydraulic system, and testing and maintenance procedures of the Mk 35 Trident launching system and associated equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in industrial electronics (4/96).

NV-1715-1806

Trident 1 Missile Technician Conversion

Course Number: A-121-0561.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 7-8 weeks (242-243 hours).

Exhibit Dates: 3/93–Present.

Learning Outcomes: Upon completion of the course, the experienced Mk-35 Mod-0 missile technician will have the necessary knowledge and skills to operate and maintain the Mk-98 Mod-0 fire control system readiness equipment and missile test and readiness equipment (MTRE) Mk-6 Mod-4 missile.

Instruction: Through lectures and laboratories emphasis is placed on system data flow, theory of operation, and maintenance procedures. Equipment trainers used are MCC system and MC/OAG laboratories.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in microcomputer systems operations (4/96).

NV-1715-1807

Trident 1 Missile Technician Replacement

Course Number: A-121-0560.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 35 weeks (902-910 hours).

Exhibit Dates: 1/93–Present.

Learning Outcomes: Upon completion of the course, the student will have the knowledge and skills necessary to operate and maintain the Trident I (C4) missile Mk-98 Mod-0 fire control system, Mk-34 Mod-0 launcher system, and weapons system support equipment.

Instruction: This course provides group-paced lectures and hands-on laboratory exercises on the Trident 1 weapons system. Emphasis is placed on system data flow, theory of operation, testing, and basic maintenance operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours microcomputer systems operation (4/96).

NV-1715-1808

Trident Exterior Communications Subsystem
Level 1 Operator
(Trident Exterior Communications Operator)

Course Number: A-101-0726.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 11 weeks (440 hours).

Exhibit Dates: 8/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to define the abbreviations and terms associated with the exterior communications system, state the operational characteristics of each subsystem, and describe all the major components of the subsystem. The student will be able to use all the technical documentation required to support basic operations.

Instruction: Lecture and hands on laboratory using trainers that are equipment specific. ECS subsystems studied are control, monitor, and test, subsystems; data switching subsystem; antenna interface subsystem, special communications subsystem, VLF/LF subsystems, HF/UHF subsystems; and ELF subsystems.

Credit Recommendation: In the vocational certificate category, 6 semester hours in communications techniques (1/97).

NV-1715-1809

Trident Exterior Communications Subsystem
Support Subsystem Basic Maintenance

Course Number: A-101-0172; A-101-0172B.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 4 weeks (120 hours).

Exhibit Dates: 9/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the organization, content, and use of all technical documentation that relates to the exterior communication subsystem; state the function and operational characteristics of the power distribution group; perform corrective maintenance on power switchboards and electronic air coolers; identify the major functional areas of a teletypewriter; and perform preventative and corrective maintenance on teletypewriters.

Instruction: Lectures and hands-on laboratory exercises cover fault identification and correction. Equipment and training materials used in the course are block diagrams of the system, AN/BSC-1 trainers, and digital multimeters.

Credit Recommendation: In the vocational certificate category, 2 semester hours in teletypewriter maintenance and 2 in electrical blueprint reading (4/96).

NV-1715-1810

Trident Exterior Communications Subsystem
Antenna/Antenna Interface
Subsystem Basic Maintenance

Course Number: A-101-0173; A-101-0173C.

Location: Trident Training Facility, Bangor, Bremerton, WA.

Length: 5 weeks (160 hours).

Exhibit Dates: 8/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to state the operational characteristics and capabilities of the C-10443/BSC-1 control interface unit, SA-2197/96 frequency switching unit, CV-3514/BSC-1 converter switching unit, CU-2270/BRC antenna coupler, and AN/BRR-6 towed buoy antenna; describe the functional operation of the antenna subsystems to support preventive and corrective maintenance; and define the procedures to disassemble, repair, and reassembly of the various subsystems.

Instruction: Lecture and hands on laboratory exercises cover fault identification and correction, alignment procedures using DVMs, signal generators, oscilloscopes, frequency converters, and subsystem trainer.

Credit Recommendation: In the vocational certificate category, 3 semester hours in antenna systems laboratory (4/96).

NV-1715-1811

Trident Sonar Technician Submarine (STS)
Consolidated Maintenance

Course Number: A-130-0353.

Location: Trident Training Facility, Kings Bay, GA; Trident Training Facility, Bangor, Bremerton, WA.

Length: 23 weeks (902 hours).

Exhibit Dates: 8/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance on the Trident sonar detection and tracking group and its subsystems.

Instruction: Lecture and laboratory exercises cover the maintenance of various subsystems related to a computer-controlled sonar detection, classification, and tracking system, including power control and distribution, systems interfaces, and underwater communications systems.

Credit Recommendation: In the vocational certificate category, 6 semester hours in systems troubleshooting and fault identification on the subordinate level (4/96).

NV-1715-1812

Relocatable Over The Horizon Radar

Course Number: J-221-0302.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 4-5 weeks (208 hours).

Exhibit Dates: 6/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate watch equipment and to stand watch in a military-specific over-the-horizon control and command center.

Instruction: Group-paced lectures, laboratories, and simulated situations are used to create operational proficiency on the watch equipment. Topics covered include control panel operation and maintenance, control center procedures, and safety precautions.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/96).

NV-1715-1813

1. Naval Tactical Command System Afloat (Force Level) Maintenance
2. Naval Tactical Command System Afloat Maintenance 10-17

Course Number: *Version 1:* J-150-2306. *Version 2:* J-150-2306.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA; Advanced Electronics School, San Diego, CA.

Length: *Version 1:* 4 weeks (160 hours). *Version 2:* 9 weeks (360 hours).

Exhibit Dates: *Version 1:* 8/95–Present. *Version 2:* 6/93–7/95.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to operate, maintain, and repair electronic communications circuits and large screen display devices. *Version 2:* Upon completion of the course, the student will be able to operate, maintain, and repair electronic communications circuits; high, low, and medium resolution monitors; and audio/video electronic switching circuits.

Instruction: *Version 1:* This course is group-paced with lectures, laboratories, and practical exercises that discuss CRTs, audio-video switching circuits, and high resolution monitors. *Version 2:* Group-paced lectures, laboratories, and practical exercises present topics on CRTs, audio-video switching circuits, color high resolution monitors, and TIMS military-specific computer system.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer display maintenance and repair and 3 in electronic communications (5/96). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer display maintenance and repair, 3 in electronic communications, and 2 in computer systems maintenance and repair (5/96).

NV-1715-1814

Tactical Support Center Communications Operator

Course Number: J-201-0816.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 8 weeks (320 hours).

Exhibit Dates: 3/92–Present.

Learning Outcomes: Before 3/92 see NV-1715-1176. Upon completion of the course, the student will be able to operate and coordinate various subsystems of the antisubmarine warfare tactical communications platform, including computers, HF modems, HF receivers, cryptographic systems, recording/reproduction equipment, electronic switching system, and signal processes and multiplexers.

Instruction: Methods of instruction include lecture and performance laboratory. Topics include communications security, authentication, ASW aircraft, radiotelephone, search and rescue procedures, antennas, frequency selection, voice systems, transceivers, transponder/reproducers, electronic switching systems, voice systems signal flow, multiplexers, cryptographic equipment, modems, data link systems, HF receivers, remote control systems, signal processors, data bases, and data transfer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications (5/96).

NV-1715-1815

Naval Command Control System Ashore Maintenance Technician

Course Number: J-221-0389.

Location: Fleet Combat Training Center, Atlantic, Dam Neck, Virginia Beach, VA.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/96–Present.

Learning Outcomes: Before 1/96 see NV-1715-1177. Upon completion of the course, the student will be able to operate, troubleshooting, and perform corrective maintenance on color large screen displays, microcomputer-based communications equipment, and telecommunications equipment. Students also are trained in UNIX shell programming and UNIX system administration.

Instruction: Lectures, demonstrations, and practical exercises provide instruction in network management, UNIX programming architecture, file management systems, shell structures, peripheral interface procedures, colored large screen equipment, and maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer system troubleshooting and maintenance and 3 in UNIX shell programming (5/96).

NV-1715-1816

Aviation Technician Level 1 Strand, Class A1

Course Number: C-100-2017.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 15 weeks (524-526 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair avionics systems at the apprentice level.

Instruction: This course covers basic trigonometry; AC/DC electricity series and parallel LCR circuits; and basic electronic devices such as diodes, transistors, operational amplifiers, power supplies, voltage regulators, digital and microprocessor basics, communications electronic circuits, and radar. Learning methods include lectures, discussions, and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in DC/AC circuits, 3 in solid state electronics, 3 in electronic communications, and 3 in radar principles. For credit for the Common Core, see NV-1715-1819 (1/97).

NV-1715-1817

Aviation Technician O Level Strand, Class A1
(Aviation Technician Organizational Level Strand, Class A1)

Course Number: C-100-2018.

Location: Air Technical Training Center Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 5 weeks (171-174 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to function as an entry level avionics organizational maintenance technician.

Instruction: This course covers electronic subsystems found in aircraft avionics systems. Including transmitters, receivers, antennas, transmission lines, radar, navigation systems, and aircraft wiring and electrical systems. Emphasis is placed on troubleshooting and repair. Instructional methods include lectures, discussions, and laboratory assignments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft electrical and electronic systems. For credit for the Common Core, see NV-1715-1819 (1/97).

NV-1715-1818

Marine Air Traffic Control Basic Technician, Class A1

Course Number: C-100-2019.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 10-11 weeks (361 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair electronic equipment.

Instruction: The course covers basic mathematics, DC and AC electricity, series and parallel LCR circuits, basic electronic devices, operational amplifiers, power supplies, voltage regulators, digital and microprocessor electronics, and communications electronic circuits. Learning methods include classroom lectures, discussions, and laboratory assignments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in DC and AC electronics, 3 in solid state electronics, and 3 in electronic communications. For credit for the Common Core, see NV-1715-1819 (1/97).

NV-1715-1819

Aviation Technician Common Core, Class A1

Course Number: C-100-2020.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 7 weeks (260 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will have the basic knowledge in aircraft fundamentals and electronics/electricity.

Instruction: The course covers basic aircraft fundamentals as related to avionic training, including basic algebra, electric circuit fundamentals, series and parallel AC and DC circuits, basic electronic test equipment, electronic devices and components, soldering, and digital circuit fundamentals. Instructional methods include lectures and discussions and laboratory assignments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to electronics, 2 in introduction to aircraft systems, and 3 in solid state electronics (1/97).

NV-1715-1820

Aviation Electrician's Mate Strand, Class A1

Course Number: C-602-2039.

Location: Air Technical Training Center, Pensacola, FL; Air Technical Training Center, Memphis, Millington, TN.

Length: 13 weeks (520 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform routine and scheduled maintenance on aircraft electrical, instrument, and navigational systems.

Instruction: This course covers aircraft wiring, lighting circuits, troubleshooting electric circuits, solid state electronics, aircraft generators and voltage regulators, power distribution systems, aircraft control surfaces, landing gear, ignition systems, fuel quantity systems, and aircraft instruments. Instructional methods include classroom lectures and discussions, and laboratory assignments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft electrical systems, 3 in solid state electronics, and 3 in aircraft instrument systems. For credit for the Common Core, see NV-1715-1819 (1/97).

NV-1715-1821

Marine Air Traffic Control and Landing Systems Systems Analysis, Class M3

Course Number: C-103-2112.

Location: Air Technical Training Center, Pensacola, FL.

Length: 3-4 weeks (128 hours).

Exhibit Dates: 4/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a supervisor for Marine air traffic control and landing systems equipment maintenance operations and embarkation procedures during field operations that establish expeditionary airfields.

Instruction: This course covers the operation of navigational aids, radar operation, and communications equipment operation. Methodology includes lectures, demonstrations, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in radar fundamentals and 1 in AC communications (8/96).

NV-1715-1822

E-6A Airborne Communications Officer

Course Number: C-2D-3503.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 2 weeks (80 hours).

Exhibit Dates: 6/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify the capacity and location of nine aircraft generators; identify the various communications systems onboard that rely on these generators; identify various components of seven interconnecting communications systems and subsystems including message processors, teletype, UHF, inflight performance monitoring system, and VLF transmitters and receiving subsystems; and extend and retract long trailing wire antenna.

Instruction: Lectures cover aircraft power generators seven main VLF, UHF, teletype communication systems and subsystems; and long trailing wire antenna extend and retract exercises. A written test is administered at the end of the course.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in communications systems (4/97).

NV-1715-1823

E-6A Mission Avionics System Organizational Maintenance

Course Number: C-102-4502.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 18 weeks (720 hours).

Exhibit Dates: 10/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to: analyze AC power distribution circuits including circuit breakers and busses generator control; describe concepts of servos, amplifiers, filter circuits, modulators, A/D converters, preamplifiers, and modems; use block diagrams to describe HF and UHF transmitter/receiver systems for voice data and satellite systems including both wide and narrow band systems; describe, operate, and maintain various antenna systems; and operate related test equipment including multimeters, signal generators, wattmeters, and time domain reflectometer.

Instruction: Lectures, demonstrations, and hands-on laboratory exercises cover the introduction to communications systems (security and power distribution); voice communications (keyline, HF, UHF, voice); data communications (time division multiplexor, message processing, modems, simplex/duplex); UHF satellite (data); UHF transmitter/receiver, (antennas, wide and narrow band); very low frequency communications (frequency time standard, uninterruptible power supply, cathodes ray tube, notch filters, uninterruptible power supply theory); and VLF power amplifiers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications, 4 in digital communications, and 1 in aircraft radio systems (4/97).

NV-1715-1824

E-6A Flight Engineer Organizational Level Maintenance

Course Number: C-050-3502.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 18 weeks (672-720 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate knowledge of physical sciences and aircraft maintenance, including electrical, hydraulics, fuel, communications, navigation, landing gear, wheel brake, turbine engine, navigation, flight control, environmental control and lighting systems.

Instruction: Instruction includes traditional classroom instruction, laboratory exercises, computer-based training, and on-aircraft training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in physical science, and 1 in electrical, instruments/navigation/lighting theory; 1 in electrical, instruments/navigation/lighting laboratory; 1 in environmental, fuel, and oxygen theory; 1 in environmental fuel, and oxygen laboratory; 2 in turbine engines and auxiliary power unit theory; 2 in turbine engines and auxiliary power unit laboratory; 3 in wheel brakes, hydraulics, landing gear, and flight control theory; and 3 in wheel brakes, hydraulics, landing gear, and flight control laboratory (4/97).

NV-1715-1825

E-6A Communications Operator

Course Number: C-102-4501.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 9 weeks (360 hours).

Exhibit Dates: 9/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify components, and operate and troubleshoot the power distribution system, intercommunications subsystem, teletype subsystem, message processor, VLF transceiver, UHF and SATCOM subsystems, cassette recorders, and inflight performance monitor of an E-6A aircraft.

Instruction: Lectures, and laboratory (with written and laboratory examinations) cover an introduction to E-6A aircraft, communications system, integrated drive power generators, bus power control unit, batteries, intercommunications subsystem, keyline system, high frequency subsystem and antennas, communications security module and terminal unit, teletype subsystem (including full and half duplex circuits), frequency shift keying, time division multiplexing, TACAMO message processing subsystems, VLF transceivers, UHF and satellite communications systems; preflight circuit setup, fault isolation, and troubleshooting and repair of all systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems and 3 in radio/communications operator laboratory (4/97).

NV-1715-1826

E-6A Flight Deck Avionics Systems Organizational Maintenance

Course Number: C-102-3515.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 6 weeks (240 hours).

Exhibit Dates: 2/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify and select electrostatic discharge and electromagnetic pulse control methods; describe functioning of aircraft power distribution system, flight deck equipment and components, racks, and avionics systems, VHF and UHF intercommunications system, HF radio system, aircraft navigation systems, and navigational aids; including system purpose, power requirements, component location and functions, controls and indications, and signal flow perform operational checkout and troubleshooting of LTN-90, computer system, DAC, TACAN system, ANINC-550 LF automatic direction finder, marker beacon system, low range radio altimeter, and radar/sensor systems.

Instruction: Lectures, laboratories, demonstrations, audiovisual aids, and written and laboratory examinations cover technical manual use, control, aircraft power distribution, flight deck overview, VHF/UHF intercommunications systems, HF radio, secure voice system, inertial reference system, flight management computer system, D/A converter system, TACAN system, VHF navigation system, LF automatic direction finding system, marker beacon system, low range radio altimeter, weather and rendezvous radar systems, electronic support measures system, and flight recorder/locater system. Testing, fault isolation, and troubleshooting exercises are performed on actual systems for the lab experiments.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in communications/navigational systems theory and 2 in communications/navigational systems laboratory (4/97).

NV-1715-1827

E-6A Mission Avionics System Intermediate Maintenance

Course Number: C-102-4506.

Location: Naval Air Maintenance Training Detachment, Tinker AFB, Oklahoma City, OK.

Length: 15 weeks (580 hours).

Exhibit Dates: 7/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify, troubleshoot, and explain the operation of including ESD, gates, flip-flops, encoders, registers, buffers, code conversion, data multiplexing, and plasma displays; troubleshoot and explain microprocessor concepts, including RAM, ROM, control circuits, drive circuits, and printers; identify, troubleshoot, and explain electronic circuits, including voltage monitoring, LPMD drivers, power supplies, voltage-controlled oscillators, automatic gain control, phase locked loops, frequency converters; and operate electronic bench equipment, including signal generators, voltmeters, digital multimeters, oscilloscopes (storage and nonstorage), pulse generators, distortion analyzers, programmable waveform synthesizers, and frequency difference meters.

Instruction: Lecture, demonstration, hand-on laboratory exercises, and computer-based training provides review of basic circuit fundamentals, review of digital circuit fundamentals, basic digital circuits, microprocessor fundamentals and circuits, and a variety of fundamental electronic circuits voltage control oscillators, power supplies, automatic gain control, phase locked loops, and frequency converters in real applications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital devices and circuits, 4 in microprocessors and circuits, and 3 in electronic devices and circuits (4/97).

NV-1715-1828

General Purpose Electronic Test Equipment Repair and Calibration

Course Number: C-198-6671.

Location: Technical Training Unit, Keesler AFB, MS.

Length: 15 weeks (600 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, calibrate, analyze, troubleshoot, maintain, and repair general purpose electronic test equipment, including meters, oscilloscopes, frequency counters, spectrum analyzers, signal generators, attenuators, and resistors.

Instruction: Classroom written tests, laboratory audiovisuals demonstrations are course methods. Topics include calibration theory, use of standards (meters, oscilloscopes, electronic counters, signal generators, attenuators, resistors), equipment calibration, repair theory, troubleshooting, and safety procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic test equipment, calibration, and repair (4/97); in the upper-division baccalaureate category, 2 semester hours in electronic theory (4/97).

NV-1715-1829

Advanced Calibration Technician

Course Number: A-198-2011.

Location: Technical Training Unit, Keesler AFB, MS.

Length: 12 weeks (476 hours).

Exhibit Dates: 10/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to coordinate the standardized recall and scheduling of test and monitoring systems within a metrology and calibration program.

Instruction: Lectures and practical exercises cover all phases of test and monitoring systems, including resistance, impedance, voltage, and current; meter calibration, frequency calibration, and time and signal measurement; warfare analysis; oscilloscope calibration; signal generation; microwave theory and application; and sweep, frequency, and network analyzer measurements.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic test equipment calibration and 4 in introductory electronic/microwave theory and application (4/97).

NV-1715-1830

Interior Communications Principles

Course Number: A-623-0123.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2-3 weeks (90-91 hours).

Exhibit Dates: 9/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform normal operational procedures on ship's control station, missile compensation system, liquid flow indicating equipment, and the Mk-27 gyrocompass.

Instruction: Instruction is provided in a lecture and laboratory format covering the general operations and maintenance of the equipment identified above.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (4/97).

NV-1715-1831

Launcher Control Group Advanced Circuitry

Course Number: A-121-0538.

Location: Trident Training Facility, Kings Bay, GA.

Length: 2-3 weeks (68 hours).

Exhibit Dates: 2/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform corrective maintenance on a launcher control group using specific tools and fault isolation.

Instruction: Methods of instruction are lecture and laboratory experiences that cover basic theory, function, operation, and maintenance procedures and schematic diagrams, system test modes, and signal flow.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronics technology laboratory (4/97).

NV-1715-1832

Strategic Weapons System Support Indication Control Alarm System

Course Number: A-121-0541.

Location: Trident Training Facility, Kings Bay, GA.

Length: 2-3 weeks (63 hours).

Exhibit Dates: 10/91–Present.

Learning Outcomes: Upon completion of the course, the student will be able to discuss the function and operation of specified microprocessors.

Instruction: Classroom discussion and laboratory exercises are used.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in microprocessors (4/97).

NV-1715-1833

Trident 2 Missile Technician Replacement

Course Number: A-121-0563.

Location: Trident Training Facility, Kings Bay, GA.

Length: 19-20 weeks (573-574 hours).

Exhibit Dates: 9/93–Present.

Learning Outcomes: Upon completion of the course, the student will apply corrective maintenance skills, electronic troubleshooting skills, and basic computer processor application skills to the support of the Trident 2 strategic weapons system.

Instruction: Course instruction includes significant lecture and theory presentation with applied and hands-on laboratory experiences. Computer hardware, videos, and schematic diagrams are also used in this course.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 1 semester hour in microprocessors, 2 in electronic systems troubleshooting and maintenance, and 1 in electromechanical systems troubleshooting and maintenance (4/97).

NV-1715-1834

Trident 2 Missile Technician Conversion

Course Number: A-121-0564.

Location: Trident Training Facility, Kings Bay, GA.

Length: 7-8 weeks (295 hours).

Exhibit Dates: 9/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the Mk-98 MOD-1 fire control system.

Instruction: Lectures and practical applications in testing and maintenance procedures for the fire control system are employed.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/97).

NV-1715-1835

Trident 2 Fire Control Technician To Missile Technician Conversion

Course Number: A-121-0565.

Location: Trident Training Facility, Kings Bay, GA.

Length: 5-6 weeks (218 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will have the knowledge of system data flow, operation, testing, and preventive maintenance skills necessary to operate and maintain the Trident 2 (D-5) missile.

Instruction: Lectures and practical laboratory instruction cover basic data flow, systems knowledge, and preventive maintenance of the missile.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/97).

NV-1715-1836

AN/BQQ-5E V3/V4 Maintenance

Course Number: A-130-0340.

Location: Submarine School, New London, Groton, CT; Trident Training Facility, Kings Bay, GA.

Length: 11 weeks (266 hours).

Exhibit Dates: 6/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide corrective and preventive maintenance, including alignment, adjustments, and calibration procedures, operational test, diagnostic programs, and the use of special tools and test equipment on specified electronic and sensor equipment.

Instruction: Lectures and advanced laboratory exercises are used.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic troubleshooting laboratory (4/97).

NV-1715-1837

AN/BQQ-5E V3/V4 Basic Operator Conversion

Course Number: A-130-0343.

Location: Submarine Base, New London, Groton, CT; Trident Training Facility, Kings Bay, GA.

Length: 4 weeks (60 hours).

Exhibit Dates: 7/94–Present.

Learning Outcomes: Upon completion of the course, the student will have the basic knowledge to operate the AN/BQQ sonar set in all modes.

Instruction: Classroom and laboratory exercises cover the function and basic operation of specified sonar equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (4/97).

NV-1715-1838

AN/BQQ-5E Auxiliary Equipment

Course Number: A-130-0354.

Location: Submarine School, New London, Groton, CT; Trident Training Facility, Kings Bay, GA.

Length: 11-12 weeks (218 hours).

Exhibit Dates: 8/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic corrective maintenance functional tests and systematic fault isolation procedures and disassemble, repair, and reassemble sonar and auxiliary equipment.

Instruction: Lectures and practical exercises cover the theory of equipment operation, use of special tools and equipment, shop safety, and documented maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic systems troubleshooting and maintenance (4/97).

NV-1715-1839

AN/BPS-16 Radar and AN/SPA-25G Indicator Combined Maintenance

Course Number: A-233-0092.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 4-5 weeks (103 hours).

Exhibit Dates: 4/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic corrective and preventive maintenance on a Trident submarine radar system.

Instruction: Lectures and laboratory exercises cover the operation and basic maintenance of the radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in radar systems (4/97).

NV-1715-1840

6L16 Electrolytic Oxygen Generator Electrical Technician

Course Number: A-623-0039.

Location: Submarine Training Facility, Norfolk, VA; Submarine Training Facility, San Diego, CA; Submarine School, New London, Groton, CT; Submarine Training Center, Pacific, Pearl Harbor, HI; Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 3 weeks (102 hours).

Exhibit Dates: 12/96–Present.

Learning Outcomes: Upon completion of the course to performr the electrical maintenance on an oxygen generator.

Instruction: Approximately one-third of the course provides instruction in power supplies, contact annunciators, magnetic amplifier annunciators, readout circuits, and pressure controller systems. The balance of the course is devoted to troubleshooting and calibration.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/97).

NV-1715-1841

Controllers and Circuit Breakers Combined Maintenance

Course Number: A-662-0108.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 2-3 weeks (94 hours).

Exhibit Dates: 11/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on switch gear, controllers, and ARC fault detection systems.

Instruction: Classroom and practical laboratory exercises cover controls, electrical and electronic circuitry, electromechanical energy conversion, and electrical/electronics troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in industrial electronics (4/97).

NV-1715-1843

AN/BQQ-5E (V4) Consolidated Maintenance Conversion

Course Number: A-130-0344.

Location: Trident Training Facility, Kings Bay, GA.

Length: 5-6 weeks (219-220 hours).

Exhibit Dates: 6/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe documented and undocumented fault isolation and repair procedures and perform preventive maintenance procedures on specified sonar equipment.

Instruction: Lectures and laboratory exercises cover the theory, function, and preventive and corrective maintenance procedures of sonar equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic system troubleshooting and maintenance (4/97).

NV-1715-1844

Trident Fire Control Technician Maintenance

Course Number: A-150-0276.

Location: Trident Training Facility, Bangor, Bremerton, WA; Trident Training Facility, Kings Bay, GA.

Length: 43-44 weeks (869-870 hours).

Exhibit Dates: 8/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot, and repair all component parts of a data processing subsystem.

Instruction: Lectures and extensive hands-on applications cover disassembly, troubleshooting, and repair of all components in a computer data processing system. Practical exercises include detailed logic, circuit analysis, power supplies, input/output devices, and test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronic systems troubleshooting and maintenance, 6 in computer systems and organization, and 5 in computer systems troubleshooting and maintenance (4/97).

NV-1715-1845

Communications Noncommissioned Officer (NCO)

Course Number: K-201-3334.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 1-2 weeks (54-55 hours).

Exhibit Dates: 5/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to organize and manage communications systems.

Instruction: The course includes classroom instruction and laboratory with lectures, demonstrations, and practical exercises. Course includes design, maintenance, and management of a secure, reliable, and flexible communications system. The course stresses management and communications theory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic communications and 1 in communications systems management (10/97).

NV-1715-1846

Landing Force Ground Combat Element Communication Staff Planning

Course Number: K-4C-3331.

Location: Expeditionary Warfare Training Group, Pacific, San Diego, CA.

Length: 1-2 weeks (45 hours).

Exhibit Dates: 10/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan communications for amphibious operations including personnel, equipment, and supplies.

Instruction: Lectures, demonstrations, and practical applications cover planning for amphibious operations. Including the computerized systems to account for personnel, equipment, and supplies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to satellite communications (10/97).

NV-1715-1847

Basic Acoustic Analysis Refresher

Course Number: K-130-1074.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 2 weeks (71 hours).

Exhibit Dates: 1/96–Present.

Learning Outcomes: Upon completion of the course, the student will be provided with current sonar signatures.

Instruction: The course contains lectures and practical exercises relating to the most recent sonar signatures for ships and related equipment of all countries.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/97).

NV-1715-1848

Underwater Fire Control System Mk 116/7 Antisubmarine Control System Maintenance/Operator

Course Number: K-130-0281.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 17 weeks (332 hours).

Exhibit Dates: 4/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform routine preventive and corrective maintenance on the Mk 116 computer system and associated peripheral such equipment as magnetic tape units, teleprinters, and magnetic recorder/reproducers.

Instruction: This course contains both lectures and practical exercises relating to the basic theory, operation, and maintenance of such equipment as the AN/UYK-7 computer, the AN/UYK-43(V) computer, the TT-624(V) teleprinter, the OL-267(V) data terminal and the AN/UYH-3(V) magnetic disk set.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours computer systems troubleshooting and maintenance (10/97).

NV-1715-1849

Antisubmarine Warfare/Tactical Air Controller

Course Number: K-221-2503.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 10 weeks (392 hours).

Exhibit Dates: 7/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to coordinate the tactical employment of rotary/fixed-wing aircraft and the LAMPS Mk III weapon system and directly control the aircraft sensor configurations based on the type of mission and real-time data from the aircraft.

Instruction: Methods of instruction include lecture, overhead transparencies, charts, board cards, magnetic cards, and laboratory exercises.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/97).

NV-1715-1850

Digital and Electronics Training

Course Number: K-130-0271.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 13 weeks (337-455 hours).

Exhibit Dates: 1/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to analyze series-parallel and series parallel circuits DC and AC circuits; analyze, troubleshoot, and repair transistor amplifiers and waveshaping circuits; and analyze, troubleshoot, and repair basic digital circuits.

Instruction: Lecture and laboratory practice covers mathematics and practical analysis of DC and AC series, parallel and series-parallel circuits, transformers, synchros and servos, basic transistor theory, multistage amplifiers, pulse shaping circuits, power supplies, basic logic gates, flip-flops, decoders, encoders, and counters.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in DC circuits, 3 in AC circuits, 3 in solid state electronics, and 3 in digital principles (10/97).

NV-1715-1851

AN/SQQ-89(V)1/3 Sonar Watch Supervisor

Course Number: K-130-1102.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 4 weeks (146 hours).

Exhibit Dates: 10/92–4/98.

Learning Outcomes: Before 10/92 see NV-1715-1504. Upon completion of the course, the student will be able to supervise a sonar team in antisubmarine warfare operations; recommend a sonar search plan; obtain and evaluate data; and supervise search methodology.

Instruction: Lectures and practical exercises cover search methodology using equipment in the sonar suite.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/97).

NV-1715-1852

Basic Acoustic Analysis

Course Number: K-130-1128.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 6 weeks (240 hours).

Exhibit Dates: 12/95–Present.

Learning Outcomes: Upon completion of the course, the student will apply fundamentals of acoustic signals to aid in the identification of surface ships, submarines, and torpedoes.

Instruction: The course contains lectures and practical exercises in the fundamentals of acoustic wave propagation, the mechanics of sound production by propellers and other propulsion systems, signatures for various types of ships and devices, and the recognition of specific signatures for ships and torpedoes of various countries.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to acoustics (10/97).

NV-1715-1853

Sonar AN/SQS-53C Maintenance, Class C

Course Number: K-130-1106.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 22 weeks (490-800 hours).

Exhibit Dates: 2/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, and repair the AN/SQS-53C sonar system consisting of transmitters, receivers, power control and distribution, power surplus, system controller, signal/data processor, peripheral I/O devices, data storage units, computer consoles, and operator terminals.

Instruction: Lectures, laboratory, and fault simulation exercises cover operation, maintenance, troubleshooting, repair, and testing techniques for each subsystem and the evaluation of overall system performance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance and 3 in computer systems troubleshooting and maintenance (10/97).

NV-1715-1854

Underwater Fire Control Mk 116/4 Operator and Maintenance, Class C

Course Number: K-130-0247.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 25 weeks (534-875 hours).

Exhibit Dates: 7/97–Present.

Learning Outcomes: Before 7/97 see NV-1715-0268. Upon completion of the course, the student will be qualified to operate, maintain, and repair an underwater battery fire control system.

Instruction: Lectures and practical exercises cover numbering systems, digital logic, torpedo maintenance, general computer architecture and theory, and the AN/UYK-7 computer set and peripherals. In computer architecture topics covered include functional operation of digital computers, processors, memories, input/output, microprocessors, machine and assembly language programming, and mapping. A detailed study of the AN/UYK-7 computer, including CPU, main memory, power supply, and peripheral tape units is included as well as troubleshooting procedures, circuit measurements, diagnostic software, and systems level maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital fundamentals, 3 in computer architecture, and 6 in computer system maintenance and repair (10/97).

NV-1715-1855

Sonar AN/SQS-56 Maintenance

Course Number: K-130-0202.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/91–Present.

Learning Outcomes: Before 1/91 see NV-1715-0272. Upon completion of the course, the student will be able to maintain, troubleshoot, and repair the a sonar system consisting of transmitters, receivers, power control system controller, data processor, transducer arrays and interfaces, and display console.

Instruction: Lectures, laboratories, and fault simulation exercises cover the basic operation, maintenance, troubleshooting, repair, and testing techniques for each subsystem and the evaluation of overall system performance at the board and component level.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance and 3 in electronic systems troubleshooting and maintenance (10/97).

NV-1715-1856

Surface Sonar Technician, Class A

Course Number: K-130-0037.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 6 weeks (176 hours).

Exhibit Dates: 6/96–Present.

Learning Outcomes: Before 6/96 see NV-1715-0423. Upon completion of the course, the student will understand basic ocean acoustics, sonar fundamentals, antisubmarine warfare fire control fundamentals, range prediction, passive and active operations, and antisubmarine warfare administration in accordance with the most current intelligence data.

Instruction: Lectures and practical exercises cover the physics of underwater sound propagation; the components of active and passive sonar systems; operation of fire control systems; operation of auxiliary underwater equipment; aural familiarization and classification of underwater sounds; and use of voltmeters, multimeters, oscillators, counters, and oscilloscopes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in physics of underwater acoustics and 1 in basic electronic test equipment (10/97).

NV-1715-1857

Integrated AN/SQR-19(V) Towed Array and AN/SQQ-28(V) Sonobuoy Sensors Maintenance

Course Number: K-130-1123.

Location: Fleet Antisubmarine Warfare Training Center, San Diego, CA.

Length: 30 weeks (491-1000 hours).

Exhibit Dates: 5/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the function of integrated towed arrays and sonobuoy sensors and perform preventive and corrective maintenance on the systems, including system control panel, power distribution equipment, magnetic disk set, data terminal set, recorders, control unit, interface signal switching unit, signal conditioner and receiver, spectrum analyzer, and computer display set.

Instruction: Methods of instruction include group paced lectures and laboratory work for preventive and corrective maintenance, including operational tests, fault isolation, diagnostic program use and postrepair procedures observing personnel and equipment safety precautions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (10/97).

NV-1715-1859

Mk 86 Mod 9 Class C Gun Fire Control System Maintainer/Operator

Course Number: A-113-0174.

Location: Service School Command, Great Lakes, IL.

Length: 22-33 weeks (920 hours).

Exhibit Dates: 6/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair and operate the Mk 86 gun fire control system.

Instruction: Group-paced lectures and laboratory activities on the analysis, troubleshooting, and maintenance of power systems, radar system, electronic frequency converter unit, transmitter unit, antenna unit, control amplifier interface, and video amplifier interface.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications, 3 in radar systems, and 3 in electronic systems troubleshooting and maintenance (10/97).

NV-1715-1860

Radiation Detection Indication, and Computation (RADIAC) Equipment Calibration and Repair

Course Number: A-670-0020.

Location: Service School Command, Great Lakes, IL.

Length: 5 weeks (190 hours).

Exhibit Dates: 6/96–Present.

Learning Outcomes: Before 6/96 see NV-1715-0545. Upon completion of the course, the student will be able to operate and maintain instruments used in the measurement of radioactive sources; operate, calibrate and do corrective maintenance on nutron survey meters, dosimeter reader, scintillation meter, tritium calibrators, and gamma alarm meters; define terms used in basic nuclear physics; discuss the medical aspects of radioactivity, and test for radioactive leaks; and meet the Atomic Energy Commission requirements.

Instruction: Group-paced lecture and practical laboratory demonstrations and performance exercises on RADIAC Calibrator Set AN/UDM-1 Gamma Alarm Monitor BZ-216, Low Survey Meters AN/PDR-27, High Survey Meters AH/DPR-43, Alpha Survey Meter AN/PDR-56, Neutron Survey Meter AN/PDR-70, and Tritium Air Monitor AN/PDR-73.

Credit Recommendation: In the vocational certificate category, 3 semester hours in technical physics (10/97); in the lower-division baccalaureate/associate degree category, 3 semester hours in radiation instrument maintenance (10/97).

NV-1715-1861

Vertical and Short Take-Off Optical Landing System (VSTOL)

Course Number: A-670-0064.

Location: Service School Command, Great Lakes, IL.

Length: 2 weeks (80 hours).

Exhibit Dates: 10/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to state the function, location, and documentation of the VSTOL OLS equipment; and describe the theory needed to perform all preventive and basic corrective maintenance of the equipment.

Instruction: Includes lectures, demonstrations, and performance activities on EMI filter and power supply, power step-down transformer, filter capacitors, electronics enclosure assembly, indicator display assembly, and preventive and corrective maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronics troubleshooting and maintenance (10/97).

NV-1715-1862

Mine Hunter Coastal Machinery/Ship Control System Maintenance

Course Number: A-651-0123.

Location: Service School Command, Great Lakes, IL.

Length: 5 weeks (200 hours).

Exhibit Dates: 2/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate an understanding of the knowledge required to complete follow-on training in performing maintenance of the machinery/ship control system; perform routine preventive maintenance and repair on the system; and describe the theory necessary to support all corrective maintenance on the equipment or program of the machinery/ship control system.

Instruction: Includes lectures, demonstrations, and performance activities on electromechanical systems, digital systems, man-machine interface subsystem, preventive and basic corrective maintenance, data acquisition subsystem, uninterruptable power supply, bell/data logger printer, and machinery/ship control system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic system troubleshooting and maintenance (10/97).

NV-1715-1863

Electronics Technician Communications Strand, Class A

Course Number: A-100-0146.

Location: Service School Command, Great Lakes, IL.

Length: 14 weeks (553 hours).

Exhibit Dates: 2/97–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the principles, rules, and concepts of communications which are necessary to troubleshoot transmitters and receivers; state how electromagnetic interference affect radio wave propagation; explain the operating principles of transmission lines; describe the characteristics of an antenna in terms of polarization, gain, and radiation resistance; and describe the operational characteristics and subsections of a radar receiver.

Instruction: Includes lecture, demonstrations, and performance exercises on radio receivers, radio transmitters, fault isolation and repair of faults, antenna systems, radar power distribution, and phase-lock loops.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in communications (with radar endorsement) (10/97).

NV-1715-1864

Electronics Technician Radar Strand Class A

Course Number: A-100-0147.

Location: Service School Command, Great Lakes, IL.

Length: 13 weeks (514 hours).

Exhibit Dates: 5/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive maintenance on electronic equipment; use and interpret technical manuals and schematics; comprehend the principles, rules, and concepts of radar which are necessary to troubleshoot and solve problems; describe the characteristics of an antenna in terms of polarization, gain, and radiation resistance; and use authorized methods to isolate faults which cannot be located using procedures contained in prescribed maintenance documentation.

Instruction: Includes lecture, demonstrations, and performance exercises on radio transmitter and receiver; communication principles; radar principles; operational description of the AN/SPS-64 radar set; and basic operation and basic corrective maintenance of the CV-3989/sp signal converter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in radar theory, operation, and maintenance (with radio endorsement) (10/97).

NV-1715-1865

Fleet Electronics Technician

Course Number: A-102-0317.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7-8 weeks (280-320 hours).

Exhibit Dates: 7/92–Present.

Learning Outcomes: Upon completion of the course, the student will have acquired the basic knowledge and skills to complete advanced electronic equipment maintenance training.

Instruction: Group-paced lectures and performance-oriented training in a combined classroom/laboratory setting cover basic electricity, AC/DC circuit analysis, linear power supplies, audio amplifiers, solid state devices, use of the basic test equipment, and preventive and corrective maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in AC/DC circuit analysis (1/98).

NV-1715-1866

Commercial Satellite Equipment Maintenance

Course Number: A-102-0396.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 8/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to define station keeping, understand task or functions of commercial satellites; describe the use of test equipment required for maintenance of a modem; define the maintenance policy for a FDM multiplexer; describe the physical interface between a spectrum analyzer and related external equipment; disassemble, repair, and reassemble a frequency exciter; describe the functional areas of a FM satellite receiver; and describe the physical interface between an up converter and related equipment.

Instruction: Group-paced lectures and laboratory exercises cover digital audio tape recorder, CODEX 3390 modulator/demodulator (modem), Firebird 6000 test set, spectrum analyzer, frequency exciters, and multiplexer/demultiplexer.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic communications (nonvoice) (2/98).

NV-1715-1867

Subsurface Cryptologic Maintenance

Course Number: A-102-0405.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 20 weeks (800 hours).

Exhibit Dates: 10/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair subsurface cryptologic systems and equipment using prescribed documentation procedures and complete advanced circuit analysis to the authorized maintenance level.

Instruction: Lectures, demonstrations, and group-paced exercises cover subsurface cryptologic maintenance; radio frequency communications; receiver and converter theory; microelectronic theory including integrated circuits, digital logic, multiplexers/demultiplexers, etc; radio direction finder set, special receiver, and preventive and corrective maintenance for receivers; and soldering, electronic repair, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications, 3 in microelectronics, and 3 in electronic systems troubleshooting and maintenance (2/98).

NV-1715-1868

Combat Direction Finding Operator

Course Number: A-231-0089.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 6 weeks (240 hours).

Exhibit Dates: 3/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a combat direction finding system.

Instruction: Group-paced lectures, demonstrations, and laboratory exercises cover the general, physical, functional, interface, and operational description of the data management subsystem; data processing systems; operations of the AN/SRS-1 combat direction finding system; communication and report writing; and cryptologic product management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer applications (2/98).

NV-1715-1869

Direct Support Operator

Course Number: A-231-0075.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (320 hours).

Exhibit Dates: 11/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply the principles, rules, and concepts to solve given problems and to perform assigned tasks on cryptologic fleet operation units afloat.

Instruction: Group-paced lectures, practical demonstrations, and laboratory exercises cover security, battle group organization, maritime command information strategy, ships' exploitation equipment, and fleet system orientation.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/98).

NV-1715-1870

Communications Signals Collection and Processing

Course Number: A-231-0450.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 19-20 weeks (700 hours).

Exhibit Dates: 7/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of operator/analyst and use selected electronic equipment to acquire, display, analyze, demodulate, demultiplex, identify, record, and report non-Morse signals in accordance with appropriate directives.

Instruction: Lectures, demonstrations, group-paced performance exercises, and laboratory activities cover mathematical topics on signed number, scientific notation, dimensional analysis, logarithms, and decibels; radio wave propagation and antenna selection; cryptologic non-Morse search operations; VHF/UHF; radio receivers; dynamic signal analyzer; operation of the digital sonagraph; introduction to the Tektronix 400 MHz oscilloscope; synthesizer/generation, frequency counter, and demodulator; and modulation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in mathematics, 3 in electronic communications, and 3 in electronic systems troubleshooting and maintenance (2/98).

NV-1715-1871

Advanced High Frequency Direction Finding (HFDF) Operations

Course Number: A-231-0017.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 10/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate HFDF outstation at the apprentice level under normal conditions.

Instruction: Group-paced lectures cover the basic operation of the Universal M-8000; basic operation of the narrow band system, description of the screener control report panel, and operation of semiautomatic and automatic direction finding subsystem.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (2/98).

NV-1715-1872

High Frequency Direction Finding (HFDF) Operator

Course Number: A-231-0094.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8-9 weeks (329 hours).

Exhibit Dates: 6/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to define the terms and abbreviations applicable to high frequency direction finding (HFDF); prepare and interpret HFDF reports; define the system management and operational roles within the HFDF network; define the terms, abbreviations, and symbols used with the outstation communications subsystem (OCS) to support normal operation; and describe all major and associated components of the OCS.

Instruction: Group-paced lecture and laboratory exercises are used to provide the student with instruction on outstation operations and programs, high frequency direction finding and outstation communication subsystem.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/98).

NV-1715-1873

Battle Force ELINT Analyst

Course Number: A-231-0076.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8 weeks (280 hours).

Exhibit Dates: 2/95–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe radio telephone protocol and procedures; define the mission of the air warfare, undersea warfare, and mine warfare task; explain the tactical application of cryptologic information; state the function of the Office of Naval Intelligence; state the mission of cryptologic shore support activities; and list the platforms/systems capable of providing over the horizon targeting.

Instruction: Lecture and laboratory use the standard tactical receive equipment display computer to create, delete, merge, and maintain electronic intelligence on a target country using available resources.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/98).

NV-1715-1874

Combat Direction Finding Maintenance

Course Number: A-102-0350.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 11-12 weeks (465 hours).

Exhibit Dates: 10/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate a combat direction finding (CDF) system; perform organizational level maintenance; identify the significant physical features of controls, displays, and indicators located on the CDF system; align, adjust, and calibrate the CDF; and describe the operational characteristics and capabilities of the CDF system.

Instruction: Group-paced lectures, practical demonstrations, and laboratory work are course methods.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electronic systems troubleshooting and maintenance (2/98).

NV-1715-1875

Advanced Communications Signals Analysis

Course Number: A-232-0452.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 19 weeks (760 hours).

Exhibit Dates: 4/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to define terms associated with the UNIX operating system; explain UNIX file and directory architecture; demonstrate a basic understanding of the UNIX operating system; define the terms and abbreviations associated with advanced modulation formats, modems, digital communications system; perform analysis on global system for mobile communications; and understand networks protocols and configurations.

Instruction: Group-paced lectures, practical demonstrations, and laboratory work is used to train experienced non-Morse collection personnel to be subject matter experts in signal search, analysis, and development.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronic communications (nonvoice/Morse) (2/98).

NV-1715-1876

1. Cryptologic Technician Administrative, Class
2. Cryptologic Technician Administrative, Class A

Course Number: *Version 1:* A-510-0510. *Version 2:* A-510-0510.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: *Version 1:* 8-9 weeks (332 hours). *Version 2:* 8 weeks (320 hours).

Exhibit Dates: *Version 1:* 3/98–Present. *Version 2:* 11/94–2/98.

Learning Outcomes: *Version 1:* Before 11/94 see NV-1715-0400. Upon completion of the course, the student will be able to type 30 words per minute at 98 percent accuracy; identify the terms associated with computer system technology; state the purpose of computer system peripherals; identify the types of software associated with operating systems, applications, and network software (Windows 95); set up a stand-alone personal computer system; format a disk using Windows; and identify programs in the Microsoft Office package. *Version 2:* Upon completion of the course, the student will be able to use word processing microcomputer software; describe the procedures for using data base management microcomputer software applications in an official environment; describe office personnel, practices, and operations; prepare and process local letters/certificates of appreciation/commendation; receive, sort, and distribute incoming mail; type 30 words per minute; and manage office files.

Instruction: *Version 1:* This course includes group-paced lectures and laboratory experiences using a PC workstation and Windows 95 operating system/software. *Version 2:* This course includes group-paced instruction using interactive courseware and computer-based training, supported by lecture and laboratory periods with practical applications.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer applications (2/98). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in office procedures (2/98).

NV-1715-1877

High Frequency Direction Finding (HFDF) Maintenance

Course Number: A-102-0322.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 21 weeks (840 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the entire AN/FSQ-123 narrowband system and portions of the AN/FSQ-117 wideband system used for crosshair communications and direction finding. The student will also be able to perform preventive and corrective maintenance on DEC PDP-11 systems down to the lowest replaceable unit (LRU).

Instruction: This course consists of group-paced lectures, demonstrations, and laboratory exercises on preventive maintenance on the DEC PDP-11 computer system and peripherals; PDP-11/34 hardware/operation; preventive maintenance and troubleshooting of computer systems and peripherals to the LRU; DEC power supplies; systems operation and diagnostics; power/timing distribution; PDP-11 series instruction set; number systems; diagnostic programs; core memory and parity; bootstrap terminator; and various registers found in the PDP-11, CPU, real-time clock, and interface cards; and PDP-11 system operations and troubleshooting.

Credit Recommendation: In the vocational certificate category, 6 semester hours in electronic systems troubleshooting and maintenance (2/98); in the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (2/98).

NV-1715-1878

AN/WSQ-5 Operator
(AN/WSQ-5 Cluster Spectator Operator)

Course Number: A-233-0119.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 2 weeks (68 hours).

Exhibit Dates: 6/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate the cluster spectator receiving system under supervision.

Instruction: Group-paced lecture and laboratory cover introduction to submarines and system capabilities of the AN/WSQ-5.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/98).

NV-1715-1879

Outstation Communications System
(Flaghoist) Maintenance

Course Number: A-102-0363.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 12 weeks (420 hours).

Exhibit Dates: 1/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to state the purpose of Uncrypt Flaghoist Vax equipment and associated DEC peripherals; describe the theory necessary to understand the performance of the system; and operate, maintain, and repair the Flaghoist System Micro Vax II computer and peripherals. The student will also be able to perform preventive and corrective maintenance on PDP-11 DEC systems down to the lowest replaceable unit.

Instruction: Group-paced lectures, laboratory experiences, and timed fault isolation exercises are used to prepare the student for preventive and corrective maintenance. The course also includes PDP-11 series instruction set, number systems, and diagnostic programs; core memory and parity, bootstrap terminator; and various registers found in the PDP-11; CPU, real-time clock, and interface cards; and PDP-11 system operations and troubleshooting. Topics covered include digital bus theory, bus devices, and multiprogramming environment; preventive and basic corrective maintenance of the disk drive and associated equipment; preventive and corrective maintenance of the MXT-1200 printer; and documented fault isolation and repair on the Flaghoist system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer systems troubleshooting and maintenance (2/98).

NV-1715-1880

Aviation Electronic Warfare Operator

Course Number: C-233-0120.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7 weeks (280 hours).

Exhibit Dates: 9/96–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of an antisubmarine warfare operator.

Instruction: Group-paced lectures and exercises cover radar systems, including plotting codes and tactics, sonar and sonar operations, and fundamentals of oceanography.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in oceanography and 1 in radar systems (2/98).

NV-1715-1881

AN/BRD-7, AN/WYQ-1(V), AN/BRQ-1(V)
Combined Maintenance

Course Number: A-102-0128.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 7 weeks (288 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, troubleshoot, maintain, and repair the AN/BRQ-1 and AN/WYQ-1 systems.

Instruction: Lectures, group-paced activities, and laboratory activities cover receivers and their basic operation, preventive and corrective maintenance, advanced theory of operation, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (2/98).

NV-1715-1882

AN/WSQ-5(V) Cluster Spectator Combined
Maintenance

Course Number: A-233-0088.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 8-9 weeks (352 hours).

Exhibit Dates: 2/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair the cluster spectator system to the highest level supported by documentation.

Instruction: Group-paced lectures, demonstrations, and laboratory activities on basic operation of the AN/WSQ-5(V) cluster spectator, signal intercept file and signal work area, theory of the cluster spectator, theory and preventive maintenance, fault isolation and corrective maintenance of the control/ancillary equipment groups, and troubleshooting the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (2/98).

NV-1715-1883

AN/WLR-18(V) Classic Salmon Combined
Maintenance

Course Number: A-233-0090.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 4 weeks (160 hours).

Exhibit Dates: 8/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to to maintain the AN/WLR-18(V) countermeasures receiving system.

Instruction: Group-paced lectures, demonstrations, and laboratory activities cover description of the classic Salmon system; basic operation of the receiver; preventive maintenance of the receiving system; basic corrective maintenance; types of signals, signal flow, sequential operation, and indicators; RF distribution group; and alignment and adjustment procedures for operator interface equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (2/98).

NV-1715-1884

Subsurface Cryptologic Maintenance Pipeline

Course Number: A-233-0089.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 20 weeks (800 hours).

Exhibit Dates: 1/94–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, and repair the AN/WSQ-5(V) system, AN/BRQ-1 system, AN/WYQ-1 system, and AN/WLR-18(V) countermeasures receiving system.

Instruction: Group-paced lectures, demonstrations, and laboratory activities cover basic theory operation of the AN/WSQ-5(V) cluster spectator, signal intercept file, and signal work area; theory, fault isolation, and corrective and preventive maintenance of the control/ancillary equipment groups; operation and preventive and corrective maintenance of receivers; description of the Salmon system, including types of signals, signal flow, sequential operation, and indicators; RF distribution group; and alignment of operator equipment. This course consists of A-102-0128 (NV-1715-1881); A-233-0090 (NV-1715-1883); and A-233-0088 (NV-1715-1882).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in electronic systems troubleshooting and maintenance (2/98).

NV-1715-1885

Outboard Systems Maintenance

Course Number: A-102-0325.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 22-23 weeks (904 hours).

Exhibit Dates: 5/93–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform preventive and corrective maintenance on the outboard systems and units.

Instruction: This course includes lectures, group-paced activities, and laboratory activities on basic electronics and test equipment; troubleshooting, and maintenance of countermeasures receiving set; display circuitry and data processing, frequency measures, and backlog circuits; data processing set and data terminal set; VHF/UHF multicoupler and receiver circuitry; computer display set; and troubleshooting the entire system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic electronics, 3 in computer systems and organization, and 3 in computer systems troubleshooting and maintenance (2/98).

NV-1715-1886

Intermediate Communications Signals Analysis

Course Number: A-232-0451.

Location: Technical Training Center, Corry Station, Pensacola, FL.

Length: 19 weeks (760 hours).

Exhibit Dates: 3/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to define terms and abbreviations that are associated with pulse modulation; describe the encoding/decoding of PAM, PDM/PWM, and PCM; define terms that are associated with frequency division multiplexing; perform signal classification on most non-Morse signals; perform signal analysis using computer-based analysis techniques; define the purpose of multiplexing in communications; state the function of the quandary demodulator; describe the advantages/disadvantages of packet switching networks; describe the different types of communications architectures; describe the most common types of transmission protocols; define the basic operation of the codex 2340 modem; and define terms and abbreviations associated with amplitude, frequency, phase, component, and intensity modulation formats.

Instruction: This course consists of group-paced lectures and exercises covering the duties of the operator/analyst research in a position and use the tools of signal. The trainee is trained to use selected electronic equipment to acquire, display, and analyze non-Morse signals and to use tools of the signal analyst, with emphasis on computer-based analysis techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronic communications (nonvoice/Morse) (2/98).

NV-1715-1887

Advanced Electronics Technical Core

Course Number: A-100-0139.

Location: Service School Command, Great Lakes, IL.

Length: 19 weeks (760 hours).

Exhibit Dates: 10/97–Present.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate a sound knowledge of basic electricity and basic electronics theory; identify, troubleshoot, and correct problems to the component level in a variety of electronic systems; use and interpret equipment technical manuals; operate and apply electronic test equipment; and display a knowledge of the planned maintenance system.

Instruction: The course presentation includes lectures, demonstration, group-paced performance activities, and laboratory exercises that include direct current theory and DC test equipment; alternating current theory and AC test equipment; semiconductor theory; amplifiers; solid state power supplies; shaping circuits; receiver fundamentals; soldering; digital devices; 386 microprocessors, ADP, and fiber optics; and electronic troubleshooting and maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in DC and AC circuits, 3 in solid state electronics, 3 in digital principles, and 3 in communications (10/97).

NV-1716-0001

Dry Cleaning Specialist

Course Number: A-840-0010.

Location: Fleet Training Center, Norfolk, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 5/92–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use and handle cleaning solvents and materials, use and care for equipment used in dry cleaning operations; and demonstrate proper check-in and checkout procedures for customer garments.

Instruction: Students will learn from a combination of hands-on, visuals, lectures, and demonstrations. Topics covered include laundry and dry cleaning chemicals, equipment use, and safety inspection.

Credit Recommendation: In the vocational certificate category, 3 semester hours as an elective in dry cleaning/laundry (11/95).

NV-1717-0014

Leadership and Management Education and Training (LMET) for Leading Petty Officers

Course Number: A-500-0034.

Location: Human Resources Management Detachment, Rota, Spain; Various training centers, US.

Length: 2 weeks (70 hours).

Exhibit Dates: 1/90–3/90.

Objectives: To provide leading petty officers with modern concepts and methods for leadership development and human resource use.

Instruction: Course content covers concepts which maximize student growth in the areas of leadership development and motivational concepts. Topics include establishing authority, time management, methods of developing subordinates, self-motivation, employee discipline techniques, and managerial styles. Students are actively involved by role playing, model building, goal setting, and performance analysis.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in industrial management, industrial psychology, leadership development, or a management elective (11/81).

NV-1717-0015

Leadership and Management Education and Training (LMET) for Chief Petty Officers

(Leadership and Management Education and Training (LMET) For Leading Chief Petty Officers)

Course Number: A-500-0036.

Location: Human Resources Management Detachment, Rota, Spain; Various training centers, US.

Length: 2 weeks (70-80 hours).

Exhibit Dates: 1/90–3/90.

Objectives: To provide leading chief petty officers with modern concepts and methods for leadership development and human resource use.

Instruction: Course content covers concepts which maximize student growth in the areas of leadership development and motivational concepts. Topics include establishing authority, time management, methods of developing subordinates, self-motivation, employee discipline techniques, and managerial styles. Students are actively involved by role playing, model building, goal setting, and performance analysis.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in industrial psychology, leadership development, or a management elective (12/89).

NV-1717-0016

Surface Warfare Split Tour Engineer Officer

Course Number: A-4H-0060.

Location: Surface Warfare Officer School Command, Newport, RI.

Length: 11-14 weeks (408 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To provide advanced engineering to unrestricted line officers who are enroute to engineer officer billets in steam propulsion ships.

Instruction: Through individualized instruction, officers are provided the necessary knowledge to effectively manage the engineering department of a naval ship. The course includes heat transfer and fluid flow, electrical theory and systems, main propulsion systems, auxiliary systems, damage control, water chemistry, automatic boiler controls, and engineering organization and management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic marine engineering and 2 in maintenance management (11/82).

NV-1717-0017

Surface Warfare Officer Basic

Course Number: A-4H-0118.

Location: Surface Warfare Officers School Command, Coronado, CA; Surface Warfare Officers School Command, Newport, RI.

Length: 17-18 weeks (674-688 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To prepare newly commissioned line officers for junior officer assignment in surface warfare units and to provide a performance-oriented foundation for promotion.

Instruction: This managerial course provides basic instruction in navigation, seamanship, and ship handling; external communications; steam diesel and gas turbine propulsion and auxiliary systems; damage control; inspection and safety; and naval ordnance. Also included are instruction in human resource management, correspondence, training, material management, engineering administration and operations, professional development, and leadership and management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic seamanship or 3 in a technical elective (11/82); in the upper-division baccalaureate category, 3 semester hours in personnel management, 3 in leadership development, industrial psychology, industrial management, or a management elective (11/82).

NV-1717-0018

Surface Warfare Officer Advanced Command

Course Number: A-4H-0111.

Location: Surface Warfare Officer School Command, Newport, RI.

Length: 6-9 weeks (320 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To prepare senior grade officers to command surface warfare units by providing fleet-oriented training.

Instruction: The course includes training in personnel leadership and management, inspection, supply management, safety, and seamanship. Technical topics briefly touched upon include nuclear weapons; navigation; communications; surveillance systems; and sonar, missile, or torpedo systems, including Tartar, Terrier, Seasparrow, ASROC, and Mk 46.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in ship management (11/82).

NV-1717-0019

Surface Warfare Officer Department Head

Course Number: A-4H-0107.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 18-24 weeks (735-780 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To prepare commissioned officers to perform leadership and and supervisory duties aboard ship.

Instruction: The training emphasizes departmental, system, and unit interdependence. The course includes theoretical, technical, and practical instruction pertinent to command-at-sea, including lectures and problem solving exercises in fundamentals of electricity, computers, fire control, explosives, launching systems, communications systems, intelligence, nuclear weapons, mathematics, physics, and high-pressure steam systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in physics (mechanics and thermodynamics), 2 in basic electricity, and 3 in basic marine engineering (11/82); in the upper-division baccalaureate category, 3 semester hours in industrial management, industrial psychology, leadership development, or a management elective (11/82).

NV-1717-0020

Surface Warfare Officers Advanced Executive Command

Course Number: A-4H-0112.

Location: Surface Warfare Officers School Command, Newport, RI.

Length: 6-7 weeks (280 hours).

Exhibit Dates: 1/90–11/92.

Objectives: To train Navy personnel in shipboard operations and management.

Instruction: Classroom instruction and practical exercises cover shipboard operation and management, including maintenance management, seamanship, navigation, rules of the road, ship handling, cargo stowage, underway replenishment, ordnance, nuclear propulsion, and small craft operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in ships operations and management or 3 in basic seamanship (11/82).

NV-1717-0021

Leadership Management Education and Training (LMET) Instructor

(Leadership Management Education and Training, Class C1)

Course Number: A-012-0045.

Location: Amphibious School, Little Creek, Norfolk, VA; Leadership and Organizational Effectiveness School, Millington, Memphis, TN.

Length: 10 weeks (400 hours).

Exhibit Dates: 1/90–3/90.

Objectives: After 3/90 see NV-1717-0024. To provide selected enlisted and officer personnel with knowledge and skills necessary to instruct in a specific two-week Leadership Management Education course offered at US Navy schools and provide a general background in classroom instruction.

Learning Outcomes: Upon completion of the course, the student will be able to articulate modern principles of course design, practice techniques of creating a positive classroom environment, practice techniques of managing group learning, demonstrate feedback counseling and goal setting skills in a classroom setting, demonstrate practical sensitivity to EEO issues in a classroom, exhibit competence in negotiations and group process in the classroom setting, prepare teaching plans and other instructional materials, and evaluate classroom performance of peers and students.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in instructional strategies and teaching methods and 3 in practice teaching (2/85).

NV-1717-0023

Navy Leader Development Program (NAVLEAD) for Chief Petty Officers

Course Number: A-500-0036.

Location: Various locations, Wordwide.

Length: 1 week (40 hours).

Exhibit Dates: 10/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify the components which characterize motivation, supervisory and leadership skills, and personal skills which will increase effectiveness as a unit leader.

Instruction: Course includes lectures, class discussions, simulations, case studies, and daily logs to reinforce experiential learning which can be applied to a management setting. The course does not reenforce learning through written evaluation.
